THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 368—No. 1. TUESDAY, MARCH 6, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. Patent Office, *Washington, Feb. 23, 1928.*

Weeber & Don, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Farmer Seed & Nursery Co., 918 Fourth Street west, Faribault, Minn., for registration of a trade-mark and trade-mark registered December 30, 1913, No. 94,778, to Weeber & Don, 114 Chambers Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Weeber & Don at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said Weeber & Don, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

U. S. Patent Office, *Washington, Feb. 15, 1928.*

Joseph A. Arment, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Pacific Coast Biscuit Company, Central Building, Seattle, Wash., for registration of a trade-mark and trade-mark registered July 1, 1902, No. 38,542, to Joseph A. Arment, No. 9 North Sixth Street, Portland, Oreg., and a notice of such declaration sent by registered mail to said Joseph A. Arment at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Joseph A. Arment, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

NOTICE.—AMENDMENT TO RULES OF PRACTICE.

PARAGRAPHING OF SPECIFICATIONS.

Attention is called to the amendment of rule 45, which reads as follows:

"In order to facilitate printing, each paragraph or claim should be completed on the page upon which it is begun and should not be split between two pages except where the length of a paragraph or claim requires more than one full page."

The purpose of this amendment is to facilitate the work of the Printing Office. That Office has found it expedient in printing specifications to divide the work on any one specification among different printers and since the pages of the specification can not be cut and the parts pasted together it necessitates, in cases where a paragraph or a claim is continued from one page to the next, the carrying of the page from one typesetter to another. It will therefore be seen that if the specifications are prepared as indicated in the amended rule, the work of the Printing Office will be very much facilitated with a consequent saving of time and expense.

If typewriting the specification as above outlined should necessitate leaving a considerable blank at the bottom of any one page, a diagonal line may be drawn across this space before the application is executed.

February 8, 1928.

WM. A. KINNAN,
Acting Commissioner.

Condition of Applications Under Examination at Close of Business February 24, 1928.

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

THREE IN ONE OIL COMPANY *v.* THE LOBL MANUFACTURING COMPANY.

No. 1,984. Decided December 5, 1927.

1. TRADE-MARK—GOODS—SAME DESCRIPTIVE PROPERTIES. Hot-water bottles, ice bags, and fountain syringes *Held* not to constitute goods of the same descriptive properties as oil.

2. SAME—CORPORATE NAME. The term "Three in One" *Held* not to constitute the corporate name of the Three In One Oil Company and the term "3 in 1" *Held* registrable for hot-water bottles, ice bags, and fountain syringes, notwithstanding the prior use of the name Three in One Oil Company by a company manufacturing oil.

APPEAL from the Commissioner of Patents. Affirmed.

Mr. Jas. L. Steuart for Three in One Oil Company.

Mr. L. B. Kemon for The Lobl Mfg. Company.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

Appellee company applied for registration of a trade-mark "3 in 1," alleged to have been used by it on hot-water bottles, ice bags, and fountain syringes. Appellant, the Three In One Oil Company, a corporation, opposes the registration of the mark on two grounds: first, that the opposer has, for about 30 years past, been engaged in the business of manufacturing and selling oil under the trade-mark "3 in 1"; and, second, on the ground that Three In One is the dominating feature of its corporate name.

From the decision of the Commissioner, dismissing the opposition and permitting the registration of appellant's mark, the case comes here on appeal.

Under section 5 of the Trade-Mark act of February 20, 1905, it is provided—

> that no mark by which the goods of the owner of the mark may be distinguished from other goods of the same class shall be refused registration as a trade-mark on account of the nature of such mark * * * provided that no mark which consists merely in the name of an individual, firm, corporation, or association, not written, printed, impressed or woven in some particular or distinctive manner, or in association with a portrait of the individual, or merely in words or devices which are descriptive of the goods with which they are used, or of the character or quality of such goods, or merely a geographical name or term, shall be registered under the terms of this act.

[1] We are of opinion that the goods upon which these marks are used are not of the same descriptive qualities to the extent of prohibiting the registration of the mark. This brings us to the right of appellee company to register as its trade-mark a part of the corporate name of appellant corporation.

[2] In the case of *American Steel Foundries v. Robertson, Commissioner, et al.*, 269 U. S. 372, the court had under consideration the right of the Foundries Corporation to appropriate as a trade-mark the word "Simplex," which it was claimed was the dominating feature of the opposer's corporation, the Simplex Heating Company. It was found, as here, that the goods on which the Foundries Company used this mark were not of the same descriptive properties as the goods on which the Heating Company used the same mark. As to the right of the Foundries Company to appropriate "Simplex," notwithstanding it was part of the name of the Heating Company, the court found that—

> the word "simplex" is only a portion of the corporate name; its use by plaintiff is upon articles, the like of which has never been manufactured or sold by the defendant corporation; it comprises the whole or a part of about sixty registrations, by nearly as many different parties upon many kinds of merchandise; and it forms part of the names of other corporations in the country.

In the present case, it appears that there are about 75 registrations in the Patent Office of the trade-mark "3 in 1;" and that "Three In One" is part of the name of many corporations doing business in various lines throughout the country. In this respect the Foundries case is controlling.

It is insisted, however, that the words "Three In One" are the salient feature in the name of appellant corporation. The words "Three In One" merely qualify the main feature of the corporate name "Oil Company." Three In One standing alone would signify nothing as identifying appellant corporation, since it is a qualifying feature in the names of many corporations. As said by the court in the Foundries case, quoting from the opinion of the Commissioners of Patents—

> It is a fact that the word "Simplex" has been in such wide and varied use in this country, not only as a trade-mark but as part of a firm or corporation name, that everybody has heretofore considered something more than the word "Simplex" necessary to identify a corporation. * * * The word "Simplex" does not identify any corporation in particular, for the simple reason that it is equally the name of various corporations. In short, if one referred to "The Company Simplex" without anything else, it would not be known to what he was referring.

On the authority of this case alone we can base our decision. Of course, where the entire corporate name is appropriated, the rule of the statute is absolute in terms and such a mark would be denied registration; but, as said in the Foundries decision—

> Where less than the whole name has been appropriated, the right of registration will turn upon whether it appears that such partial appropriation is of such character and extent that, under the facts of the particular case, it is calculated to deceive or confuse the public to the injury of the corporation to which the name belongs.

It is clear that there is no such confusion in the present case, and that the decision of the Commissioner dismissing the oppositions and directing registration to appellee corporation is right.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

THREE IN ONE OIL COMPANY *v.* BOSTON BRASS COMPANY.

No. 1,985. Decided December 5, 1927.

TRADE-MARKS—GOODS—SAME DESCRIPTIVE PROPERTIES.

Boiler relief valves *Held* not goods of the same descriptive properties as oil.

APPEAL from Commissioner of Patents. Affirmed.

Mr. Jas. L. Steuart for Three In One Oil Company.

Mr. Geo. P. Dike and *Mr. A. V. Cushman* for Boston Brass Company.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

This appeal is by the Three In One Oil Company from the decision of the Commissioner of Patents dismissing the oppositions to the registration of the trade-mark "2 in 1," used on boiler relief valves by appellee, Boston Brass Company. In this case, as in the case of *Three In One Oil Company* v. *Lobl Manufacturing Company* [368 O. G. 3] this day decided, there is no confusion that can possibly arise from the use of the marks, since the goods on which the marks are used are not of the same descriptive properties. Neither can confusion arise or any right inure to the opposer from the registration of the mark, since "2 in 1" is not even a part of appellant's corporate name.

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

THREE IN ONE OIL COMPANY *v.* BOSTON BRASS COMPANY.

No. 1,986. Decided December 5, 1927.

TRADE-MARKS—GOODS—SAME DESCRIPTIVE PROPERTIES.

Boiler relief valves *Held* not goods of the same descriptive properties as oil.

APPEAL from Commissioner of Patents. Affirmed.

Mr. Jas. L. Steuart for Three in One Oil Company.

Mr. Geo. P. Dike and *Mr. A. V. Cushman* for Boston Brass Company.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

Appellant, Three In One Oil Company, opposed the registration of the trade-mark "3 in 1" by appellee, Boston Brass Company, which alleges use of the trade-mark on boiler relief valves, while appellant has for many years been manufacturing and selling oil under its registered trade-mark "3 in 1."

It is clear that no confusion can arise from the use of the marks on the respective goods to which the mark is applied. It is insisted, however, that appellee company is appropriating the corporate name of the oil company. It is unnecessary to discuss this proposition in view of our decision this day delivered in *Three In One Oil Company* v. *Lobl Manufacturing Company* [368 O. G. 3.]

The decision of the Commissioner is affirmed.

Court of Appeals of the District of Columbia.

EDGAR-MORGAN COMPANY *v.* ANDERSON.

No. 1,990. Decided December 5, 1927.

TRADE-MARKS—SIMILARITY.

A mark for stock feed consisting of the word "Creamo" and the representation of a mule's head appearing in a circle *Held* deceptively similar to a previously-used mark for stock feed consisting of the words "Old Beck" and a red disk having thereon the representation of a mule's head.

APPEAL from the Commissioner of Patents. Reversed.

Mr. E. A. Wallace for Edgar-Morgan Co.

Mr. L. B. Kemon for Anderson.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

Appellant, Edgar-Morgan Company, filed a petition for the cancellation of the trade-mark "Creamo" placed above a circle in which appears the head of a mule. The mark is used on oats for use as stock feed. The petitioner claims damage through prior use upon stock feed of a mark which consists of the words "Old Beck" and a red disk underneath upon which appears the head of a mule.

No testimony was taken by the appellee; hence the earliest date to which he is entitled is his filing date, February 10, 1923. The testimony of petitioner shows that his mark has been employed by stamping it upon burlap bags in which the feed is packed, and on which appears the large red disk with a mule's head prominently displayed, and above the disk the words "Old Beck." While the position of the mule's head is slightly different in each case, it is set forth as a silhouette, and the difference is so slight that it would not be observed by the ordinary person. The only difference, therefore, between the marks are the words "Creamo" in the one instance and "Old Beck" in the other.

Cancellation was ordered by the Examiner of Interferences, and his decision was reversed by the Commissioner. We think the decision of the Examiner was right. While it is true that pictures of stock used in connection with stock feed are descriptive, the registrant in this case, as pointed out by the Examiner—

> has not distinguished its mark from that used by the petitioner as is required of traders using descriptive elements of another's mark.

The decision of the Commissioner of Patents is reversed.

Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

852,848, H. K. Sandell, Coin-actuated device for controlling the operation of coin-operated machines; 1,198,860, Lesley & Enz, Circuit controller for mechanically-playing instruments; 1,198,861, Lesley & Schoen, Circuit controller, filed Dec. 7, 1927, D. C., N. D. Ill. (E. Div.), Doc. 7694, *Mills Novelty Co.* v. *The Marquette Piano Corp.*

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,439,495, H. M. Williamson, Radio receiving apparatus, decided January 23, 1928, claims 6 and 10.

Pat. 1,477,957, C. L. Hinkle, Apparatus for the manufacture of vinegar, decided November 17, 1926, claims 1 and 2.

Pat. 1,515,430, C. E. Browne, Reamer, decided January 17, 1928, claims 1 and 3.

Pat. 1,573,528, M. M. Sorensen, Footwear, decided January 16, 1928, claim 4.

Pat. 1,585,204, W. D. Pack, decided October 27, 1927, claim 4.

Final decisions in interference have been rendered against the following trade-marks:

T. M. 160,419, Candy, Collins-Hencke Candy Co., San Francisco, Calif. Registered October 24, 1922. Decided February 14, 1928.

T. M. 179,296, Ladies' hats, Pauline Miller, doing business as Pauline Miller Co., San Francisco, Calif. Registered February 5, 1924. Decided January 14, 1928.

T. M. 224,794, Asphalt in solid mastic or liquid form and asphalt felt, Roofings Incorporated, New York, N. Y. Registered March 8, 1927. Decided February 15, 1928.

Adjudicated Patents.

(C. C. A. N. Y.) The Adelmann patent, No. 1,272,883, for ham boiler, claim 1 *Held* not infringed. *Ham Boiler Corporation* v. *Hugo*, 23 F. (2d) 163.

(D. C. Ga.) The Finley patent, No. 1,341,458, for method of building or resurfacing highways, claims 1 to 4 *Held* valid and infringed. *Finley* v. *MacDougald Construction Co.*, 23 F. (2d) 204.

(D. C. Ga.) The Finley patent, No. 1,411,777, for method of treating roadways, claim 1 *Held* invalid. *Id.*

(C. C. A. Pa.) The Eschenbach patent, No. 1,468,289, for drier for printing presses, claims 1 and 2 *Held* invalid. *Eschenbach* v. *Miller Saw Trimmer Co.*, 23 F. (2d) 145.)

(C. C. A. N. Y.) The Adelmann patent, No. 1,497,885, for corn-beef cooker, claims 1 and 8 *Held* not infringed. *Ham Boiler Corporation* v. *Hugo*, 23 F. (2d) 163.

Notices of Cancellation.

U. S. PATENT OFFICE, *Washington, Feb. 15, 1928.*

The Rotor Vacuum Cleaner Company, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of The Rotor Vacuum Cleaner Company, Inc., of 308 West One hundred and thirty-third Street, New York, N. Y., No. 99,066, dated August 11, 1914, and the notice of such proceeding sent by registered mail to the said The Rotor Vacuum Cleaner Company, Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The Rotor Vacuum Cleaner Company, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

U. S. PATENT OFFICE, *Washington, Feb. 7, 1928.*

Klorx Company, its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Clorox Chemical Corporation, of Oakland, Calif., to effect the cancellation of the trade-mark registration of Klorx Company, of 1512 Marion Street, Columbia, S. C., No. 227,417, dated May 3, 1927, and the notice of such proceeding sent by registered mail to the said Klorx Company at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Klorx Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

WM. A. KINNAN,
First Assistant Commissioner.

U. S. PATENT OFFICE, *Washington, Feb. 10, 1928.*

The Squirrel House, Inc., its assigns or legal representatives, take notice:

An application for cancellation has been filed in this Office by Planters Nut & Chocolate Co. to effect the cancellation of trade-mark registration No. 122,999, granted October 1, 1918, to The Squirrel House, Inc., of 911 Western Avenue, Seattle, Wash. The records of this Office show that Mason, Fenwick & Lawrence appear as attorneys for the applicant and the registrant. The Office letter notifying the registrant of this fact sent to the above address having been returned by the post office as undeliverable, notice is hereby given that unless said The Squirrel House, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

M. J. MOORE,
Acting Commissioner.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 6, 1928.

[VOL. 368. No. 1.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 254,501. N. V. NEDERLANDSCHE KUNSTZIJDEFABRIEK, Arnhem, Netherlands. Filed Sept. 8, 1927.

DISCRELLA

Particular description of goods.—Raw Wool, Artificial Straw, Artificial Horsehair, Staple Fibres, and Mixed Fibres in the Raw State of Silk, Wool, Cotton, Mercerized Cotton, and Linen, and Staple Fibres and Mixed Fibres in the Raw State of Artificial Silk, Artificial Wool, Artificial Cotton, Artificial Mercerized Cotton, and Artificial Linen.

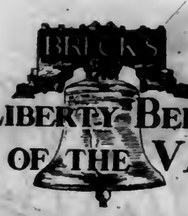
Claims use since July 22, 1927.

Ser. No. 254,505. N. V. NEDERLANDSCHE KUNSTZIJDEFABRIEK, Arnhem, Netherlands. Filed Sept. 8, 1927.

MODERELLA

Particular description of goods.—Raw Wool, Artificial Straw, Artificial Horsehair, Staple Fibres, and Mixed Fibres in the Raw State of Silk, Wool, Cotton, Mercerized Cotton, and Linen, and Staple Fibres and Mixed Fibres in the Raw State of Artificial Silk, Artificial Wool, Artificial Cotton, Artificial Mercerized Cotton, and Artificial Linen.

Claims use since July 22, 1927.



Ser. No. 254,508. N. V. NEDERLANDSCHE KUNSTZIJDEFABRIEK, Arnhem, Netherlands. Filed Sept. 8, 1927.

SOBRETA

Particular description of goods.—Raw Wool, Artificial Straw, Artificial Horsehair, Staple Fibres, and Mixed Fibres in the Raw State of Silk, Wool, Cotton, Mercerized Cotton, and Linen, and Staple Fibres and Mixed Fibres in the Raw State of Artificial Silk, Artificial Wool, Artificial Cotton, Artificial Mercerized Cotton, and Artificial Linen.

Claims use since July 22, 1927.

Ser. No. 258,568. JOSEPH BRECK & SONS CORPORATION, Boston, Mass. Filed Dec. 7, 1927.

No claim is made to the "Lily of the Valley" apart from the mark as shown.

Particular description of goods.—Flower Bulbs.

Claims use since Nov. 15, 1927.

CLASS 2.

Receptacles.

Ser. No. 237,377. EARL C. MAXWELL COMPANY, INCORPORATED, Brooklyn, N. Y. Filed Sept. 17, 1926.

MAXWELD

Particular description of goods.—Welded Metal Tanks—Namely, Gasoline-Storage Tanks, Fuel-Oil-Storage Tanks, Paint and Chemical Storage Tanks, Compressed-Air-Storage Tanks, Cold-Water-Storage Tanks.

Claims use since Aug. 1, 1926.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 234,162. EMANUEL S. SILVERMAN, doing business as Insurance Men's Supply Co., Brooklyn, N. Y. Filed July 3, 1926.

IMSCO'S

Particular description of goods.—Portfolios.

Claims use since Jan. 1, 1921.

Ser. No. 260,248. U. S. HAME COMPANY, Buffalo, N. Y. Filed Jan. 17, 1928.

624

Particular description of goods.—Hames.
Claims use since Nov. 19, 1927.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 250,661. CLARENCE N. WILLIAMS, doing business as Trid Products Co., Fresno, Calif. Filed June 16, 1927.

Particular description of goods.—Cleaning and Washing Powder.
Claims use since Mar. 1, 1927.

Ser. No. 259,149. U. S. SANITARY SPECIALTIES CORPORATION, Chicago, Ill. Filed Dec. 19, 1927.

SOAPERFECT

Particular description of goods.—Compound Adapted for Use in Cleaning and Polishing Enameled, Porcelain, Painted, and Similar Surfaces.
Claims use since Feb. 10, 1927.

Ser. No. 260,404. J. C. PENNEY COMPANY, Wilmington, Del., and New York, N. Y. Filed Jan. 20, 1928.

PENIMAID

Particular description of goods.—Silver Polish.
Claims use since Aug. 3, 1927.

Ser. No. 260,413. SOLARINE COMPANY, Baltimore, Md. Filed Jan. 20, 1928.

NICOLIN

Particular description of goods.—Metal Polish.
Claims use since Apr. 1, 1926.

Ser. No. 260,478. THE J. B. WILLIAMS COMPANY, Glastonbury, Conn. Filed Jan. 21, 1928.

RONDO

Particular description of goods.—Soap.
Claims use since Dec. 30, 1927.

CLASS 6.

Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 240,684. GERHARD F. SCHMIDT, G. M. B. H., Munich, Germany. Filed Nov. 27, 1926.

SOLGEN

Particular description of goods.—Syrup Against Coughing, Preparations for Destroying Animals and Plants, Preparations for Preserving Victuals, and Fire-Extinguishing Preparations.
Claims use since Nov. 20, 1924.

Ser. No. 242,047. PAUL PETER MÜLHENS, doing business as Eau de Cologne- & Parfümerie-Fabrik "Glockengasse No. 4711" gegenüber der Pferdepost von Ferd. Mülhens, Cologne-on-the-Rhine, Germany. Filed Dec. 28, 1926.

All wording appearing in the drawing with the exception of the name "Ferd. Mülhens" is disclaimed apart from the mark shown in the drawing. The drawing is lined to indicate the colors blue and gold.
Particular description of goods.—Hygienic Hair Wash.
Claims use since March, 1926.

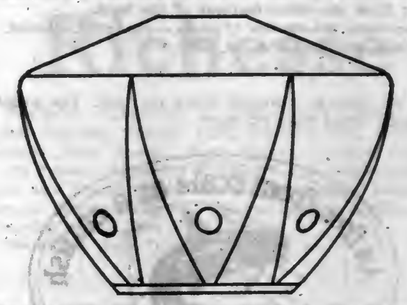
Ser. No. 243,623. RALPH B. RANDALL, Seattle, Wash. Filed Jan. 31, 1927.

MAGOTITE

Particular description of goods.—Insecticide.
Claims use since July 1, 1924.

Ser. No. 254,081. DAVID LAKEN, doing business as the 9 to 9 Pharmacal Co., Philadelphia, Pa. Filed Aug. 29, 1927.

LAXATIVE TRADE 9 P.M. TO A.M. 9 MARK HEALTH



The words "Laxative" and "Health" as well as the words "Trade-Mark" are disclaimed apart from the mark shown.
Particular description of goods.—Laxative Medicine and Pharmaceutical Preparations.
Claims use since Dec. 24, 1925.

Ser. No. 254,341. F. R. ARNOLD & COMPANY, New York, N. Y. Filed Sept. 3, 1927.

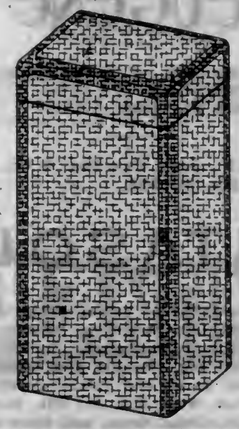
Particular description of goods.—Perfume and Toilet Water.
Claims use since Apr. 29, 1926.

Ser. No. 254,342. F. R. ARNOLD & COMPANY, New York, N. Y. Filed Sept. 3, 1927.

Particular description of goods.—Perfume and Toilet Water.
Claims use since Nov. 25, 1925.

Ser. No. 255,377. M. HATAE, doing business as M. Hatae & Company, also doing business as Smoca Manufacturing Co., San Francisco, Calif. Filed Sept. 29, 1927.

SMOCA



Particular description of goods.—Tooth Powder.
Claims use since Aug. 15, 1926.

Ser. No. 256,389. AMERICAN DRUG & CHEMICAL CO., Minneapolis, Minn. Filed Oct. 21, 1927.

CHLORO-ZOL

Particular description of goods.—Antiseptic, Germicidal, and Deodorant Preparations.
Claims use since on or about May 27, 1925.

Ser. No. 258,108. BISODOL CO. INC., New York, N. Y. Filed Nov. 28, 1927.

The trade-mark consists in coloring yellow each of five sides of the container and providing each such side

with a gold-colored border. The exclusive use of the representation of the carton or container is disclaimed apart from the other features of the mark.

Particular description of goods.—Antacid Digestant.

Claims use since Feb. 14, 1922.

Ser. No. 258,157. WILSON-SPEAR CO., INC., Los Angeles, Calif. Filed Nov. 28, 1927.

The words "Free from Scale" form a part of the registration sought only in association with the other features of the mark shown in the drawing.

Particular description of goods.—Boiler Composition to Prevent Deleterious Action of Waters When Used in Steam Boilers.

Claims use since Mar. 6, 1925.

Ser. No. 258,444. A/S VITANOVA LTD., Oslo, Norway. Filed Dec. 5, 1927.

Particular description of goods.—Emulsions of Cod-Liver Oil and Cod-Liver Oil.

Claims use since April, 1927.

Ser. No. 259,301. EUGENE LTD., New York, N. Y. Filed Dec. 23, 1927.

EUGÈNE

Particular description of goods.—Sachets and for Wave-Setting Preparations.

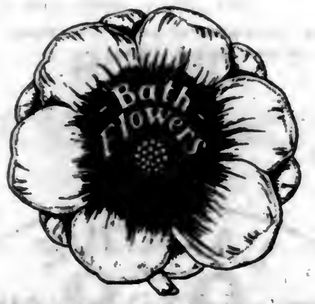
Claims use since May, 1922.

Ser. No. 259,409. JOHN CAMPBELL & CO., New York, N. Y. Filed Dec. 28, 1927.

VITASOL

Particular description of goods.—Compound for Wetting Out, Boiling Out, Bleaching, Scouring, Softening, Soaking, Throwing, Degumming, Dyeing, Finishing, Weighting, Lubricating, Cleaning, and Rendering Hygroscopic All Fibres, Yarns, and Fabrics Consisting of and Made from Cotton, Wool, Silk, Art Silk, Rayon, Tussah, Jute, Hemp, Sisal, China, Grass, and Other Fibres of an Animal, Vegetable, or Chemical Nature.

Claims use since May 5, 1927.



Ser. No. 259,545. ISAAC EUSTER, doing business as Euster Herb Co., Middlesboro, Ky. Filed Dec. 31, 1927.

RIFIA

Particular description of goods.—Medicinal Tonic for the Stomach, Kidneys, Bladder, High Blood Pressure, Pellagra, Rheumatism, and Nervous System.

Claims use since Sept. 1, 1927.

Ser. No. 259,623. DERMAY PERFUMERS INC., New York, N. Y. Filed Jan. 3, 1928.

Particular description of goods.—Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eyedrops, Hand Lotions, Skin Lotions, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Powders, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Deodorants, Disinfectants, Aspirin, Bay Rum, Perfumes, and Toilet Waters.

Claims use since Dec. 24, 1927.

Ser. No. 259,673. H. E. BUCKLEN & COMPANY, New York, N. Y. Filed Jan. 4, 1928.

No claim is made to the words "Brand" or "Laxative" or to the representation of the bottle appearing in the drawing.

Particular description of goods.—Preparation for the Treatment of Constipation.

Claims use since Nov. 30, 1917.

Ser. No. 259,776. GEORGE P. MCSHERRY, doing business as McSherry Drug Co., Hillsdale, Mich. Filed Jan. 6, 1928.

ENDACOLD

Particular description of goods.—Preparation Used in the Treatment of Colds, LaGrippe, Neuralgia, and Headache.

Claims use since Aug. 24, 1927.

Ser. No. 259,862. GEORGE E. MAY, Amarillo, Tex. Filed Jan. 9, 1928.

EUCA-BALM

The word "Balm" is not claimed apart from the showing made in the drawing.

Particular description of goods.—Ointment for the Treatment of Neuralgia, Rheumatism, Sore Throat, Sprains, Soreness in Chest, Muscular Pains, Insect Bites, Stings, Coughs, Chest Colds, Croup, Asthma, and Hay Fever.

Claims use since September, 1925.

Ser. No. 259,878. THE SALOL CHEMICAL COMPANY, INC., Chicago, Ill. Filed Jan. 9, 1928.

Fenosol

Particular description of goods.—Antiseptic and Germicide.

Claims use since Nov. 15, 1927.

Ser. No. 259,925. WILLIAM FREDERICK RETT, doing business as Nu-Ka-Na Remedy Company, Jersey City, N. J. Filed Jan. 10, 1928.

REP

Particular description of goods.—Deodorant Insecticide.

Claims use since on or about Aug. 15, 1927.

Ser. No. 259,974. TEMMLER-WERKE VEREINIGTE CHEMISCHE FABRIKEN HERMANN TEMMLER, Berlin-Johannisthal, Germany. Filed Jan. 11, 1928.

Phenapyrin

Particular description of goods.—Medical Preparation for Headaches, Migraine, Neuralgia, Fever, Grippe, Infections, and Pain after Dental Operations.

Claims use since July, 1916.

Ser. No. 260,018. RICHARD HUDNUT, New York, N. Y. Filed Jan. 12, 1928.

Richesse

Particular description of goods.—Cold Cream, Bath Salts, Perfume, Almond Meal, Toilet Cerate, Headache Cologne, Face Powder, Bath Powder, Talcum Powder, Tooth Powder, Tooth Paste, Toilet Water, Smelling Salts, Skin and Tissue Cream, Lip Rouge, Sachet, Vanishing Cream, Compact Powder, Compact Rouge, Brilliantine, Cleansing Cream, and Bath Crystals.

Claims use since Dec. 24, 1927.

Ser. No. 260,020. NATHAN KAPLAN, Allentown, Pa. Filed Jan. 12, 1928.

Particular description of goods.—Anæsthetic Used in the Painless Extraction of Teeth.

Claim use since Jan. 15, 1922.

Ser. No. 260,188. THE MUTUAL DRUG COMPANY, Cleveland, Ohio. Filed Jan. 16, 1928.

The drawing is lined to indicate the color red.

Particular description of goods.—Epsom Salt.

Claims use since Jan. 13, 1928.

Ser. No. 260,189. ED. J. NEWMAN, Grand Island, Nebr. Filed Jan. 16, 1928.

PLANTINE

Particular description of goods.—Cut-Worm and Gopher Repellent.

Claims use since Dec. 20, 1927.

Ser. No. 260,197. FREDERICK STEARNS & Co., Detroit, Mich. Filed Jan. 16, 1928.

SYMPATOL

Particular description of goods.—Preparation Useful in the Treatment of Asthmatic and Such Other Conditions as are Benefited by the Use of the Pressure-Raising Principle of the Suprarenal Gland.
Claims use since about Jan. 9, 1928.

Ser. No. 260,200. THE UPJOHN COMPANY, Kalamazoo, Mich. Filed Jan. 16, 1928.

Effora

Particular description of goods.—Pharmaceutical Preparation to be Used as a Mouth Wash.
Claims use since Dec. 21, 1927.

Ser. No. 260,251. ABBOTT LABORATORIES, North Chicago, Ill. Filed Jan. 18, 1928.

CINCHOPYRINE

Particular description of goods.—Antirheumatic, Antiacid, and Analgesic.
Claims use since Nov. 1, 1927.

Ser. No. 260,267. GLAZIER LABORATORIES INC., Hollywood, Calif. Filed Jan. 18, 1928.

ZINTANAL

Particular description of goods.—Antiseptic Powder for the Douche.
Claims use since Apr. 1, 1921.

Ser. No. 260,271. IRWIN, NEISLER & Co., Decatur, Ill. Filed Jan. 18, 1928.

SODINCO

Particular description of goods.—Effervescing Salts with Fruit Acids for Treating Acidosis.
Claims use since Jan. 5, 1927.

Ser. No. 260,392. KONS LABORATORIES, Omaha, Nebr. Filed Jan. 20, 1928.

STOMA-KONS

Particular description of goods.—Capsulated Stomachic Gas Eliminant.
Claims use since October, 1926.

Ser. No. 260,588. LOUIS PHILIPPE, INC., New York, N. Y. Filed Jan. 24, 1928.

SUNRISE

Particular description of goods.—Face Creams, Face Powders, Rouge, and Lip Sticks.
Claims use since Nov. 15, 1927.

Ser. No. 260,589. LOUIS PHILIPPE, INC., New York, N. Y. Filed Jan. 24, 1928.

SUNDOWN

Particular description of goods.—Face Creams, Face Powders, Rouge, and Lip Sticks.
Claims use since Nov. 15, 1927.

Ser. No. 260,590. LOUIS PHILIPPE, INC., New York, N. Y. Filed Jan. 24, 1928.

SUNBIRD

Particular description of goods.—Face Creams, Face Powders, Rouge, and Lip Sticks.
Claims use since Nov. 15, 1927.

Ser. No. 260,591. LOUIS PHILIPPE, INC., New York, N. Y. Filed Jan. 24, 1928.

SUNFLAME

Particular description of goods.—Face Creams, Face Powders, Rouge, and Lip Sticks.
Claims use since Nov. 15, 1927.

CLASS 7.

Cordage.

Ser. No. 259,774. ABE MASKOW, doing business as Maskow Cord and Trimming Co., New York, N. Y. Filed Jan. 6, 1928.

MASKORD

Particular description of goods.—Picture Cords.
Claims use since Dec. 30, 1927.

Ser. No. 260,599. TUBBS CORDAGE CO., San Francisco, Calif. Filed Jan. 24, 1928.

SUPERCORE

Particular description of goods.—Manila Rope.
Claims use since Jan. 5, 1928.

CLASS 9.

Explosives, Firearms, Equipments, and Projectiles.

Ser. No. 259,749. SAFETY MINING COMPANY, Chicago, Ill. Filed Jan. 5, 1928.

CARDOX

Particular description of goods.—Explosives.
Claims use since Nov. 19, 1927.

Ser. No. 260,854. H. SILANDER & Co., LIMITED, London, England. Filed Jan. 28, 1928.

WHIRLIGIG

Particular description of goods.—Matches.
Claims use since December, 1920.

CLASS 10.

Fertilizers.

Ser. No. 260,538. VIRGINIA-CAROLINA CHEMICAL CORPORATION, Richmond, Va. Filed Jan. 23, 1928.

BLOOMAID

Particular description of goods.—Fertilizers.
Claims use since Dec. 19, 1927.

CLASS 11.

Inks and Inking Materials.

Ser. No. 258,978. SCRIPTEX INK AND PASTE CO., Philadelphia, Pa. Filed Dec. 15, 1927.

Scriptex

Particular description of goods.—Writing Inks.
Claims use since 1919.

CLASS 12.

Construction Materials.

Ser. No. 257,229. FIREPROOFING CHEMICAL COMPANY, Los Angeles, Calif. Filed Nov. 8, 1927.

NORON

Particular description of goods.—Wood Which has Been Treated with a Certain Chemical Process by Which It is Rendered Fireproof.
Claims use since June 1, 1927.

Ser. No. 259,289. THE SPARTA CERAMIC COMPANY, East Sparta, Ohio. Filed Dec. 23, 1927.

GOLDEN PHEASANT

Particular description of goods.—Decorative Floor and Wall Tiles.
Claims use since June 28, 1926.

Ser. No. 259,755. THE BARRETT COMPANY, New York, N. Y. Filed Jan. 6, 1928.

TAR-ROK

Particular description of goods.—Liquid or Liquefiable Bituminous Construction Material.
Claims use since on or about Feb. 4, 1910.

CLASS 13.

Hardware and Plumbing and Steam-Fitting Supplies.

Ser. No. 241,798. U. S. MANUFACTURING CORPORATION, Decatur, Ill. Filed Dec. 21, 1926.

Pop-Frier

The word "Frier" is disclaimed apart from the mark as shown.
Particular description of goods.—Corn Poppers and Frying Utensils for Household Use.
Claims use since May 10, 1926.

Ser. No. 251,496. GAT GUN LUBRICATING CORPORATION, Oakland, Calif. Filed July 5, 1927.

Get a Gat-Gun

Particular description of goods.—Flexible Metal Conduits for Grease Guns.
Claims use since Feb. 15, 1926.

Ser. No. 254,170. ROMEO A. CASAROTTI, Oakland, Calif. Filed Aug. 31, 1927.

CASA

Particular description of goods.—Toilet Tank Ball Cocks and Trough Ball Cocks.
Claims use since Feb. 15, 1926.

Ser. No. 256,851. WOLVERINE TUBE COMPANY, Detroit, Mich. Filed Oct. 31, 1927.

Particular description of goods.—Copper, Brass, and Aluminum Tubing, Plain and Formed.
Claims use since about July 1, 1927.

Ser. No. 259,258. STEWART-WARNER SPEEDOMETER CORPORATION, Chicago, Ill. Filed Dec. 22, 1927.

Stewart-Warner

The trade-mark includes the word "Stewart" in the form of a facsimile of the signature of John K. Stewart, founder and first president of this corporation, and the name "Warner" is displayed in a style consistent with said facsimile signature.
Particular description of goods.—Tire Chains.
Claims use since Dec. 5, 1927.

Ser. No. 259,440. COLUMBIA SANITARY MANUFACTURING COMPANY, Louisville, Ky. Filed Dec. 29, 1927.

The drawing is lined to represent the color yellow for the lettering, the background green, and the border purple.
Particular description of goods.—Bathtubs, Washstands, Toilet Bowls, Flush Tanks, and Kitchen Sinks.
Claims use since Oct. 11, 1927.

CLASS 14.

Metals and Metal Castings and Forgings.

Ser. No. 246,922. MUELLER BRASS CO., Port Huron, Mich. Filed Apr. 4, 1927.

"MUELLERIZED"

Particular description of goods.—Ingots, Pigs, Rods, Forgings, and Castings of Nonferrous Metal.
Claims use since on or about Feb. 28, 1927.

CLASS 16.

Paints and Painters' Materials.

Ser. No. 255,479. BEAUTEXT COMPANY, San Francisco, Calif. Filed Oct. 1, 1927.

BEAUTEXT

Particular description of goods.—Painters' Decorating Materials—Namely, Metallic Powder and Colors in the Nature of Paint Pigments for Finishing Art Relief Decoration, Preparation in the Nature of Plastic Paint for Producing Relief Effect in Decoration; Bronzing Powder, Paint Solvent and Thinner, and Dry and Ready-Mixed Paints.
Claims use since Mar. 1, 1927.

Ser. No. 257,990. NATIONAL VARNISH COMPANY'S CHEMICAL DIVISION, INC., Long Island City, N. Y. Filed Nov. 23, 1927.

Particular description of goods.—Concrete-Floor Paint and Liquid Masonry-Coating Paint.
Claims use since July 19, 1927.

Ser. No. 257,992. THE PEERLESS CARBON BLACK COMPANY, Pittsburgh, Pa. Filed Nov. 23, 1927.

The drawing is lined for the color red.
Particular description of goods.—Carbon Black for Paints, Lacquers, Enamels, and for Use in Ebonizing Wood.
Claims use since about Feb. 15, 1926.

Ser. No. 258,563. ANTI RUST PAINT MANUFACTURING CO., New Brunswick, N. J. Filed Dec. 7, 1927.

ANRUSCO

Particular description of goods.—Canned Paint in Solution.
Claims use since Mar. 6, 1924.

Ser. No. 258,828. PEPER BROTHERS, INC., doing business as Mammoth Paints & Color Works, New York, N. Y. Filed Dec. 12, 1927.

SOLARAY

Particular description of goods.—Ready-Mixed Flat Paint Having a Linseed-Oil Base, Which is Made in Various Colors.
Claims use since Mar. 1, 1927.

Ser. No. 258,829. PEPER BROTHERS, INC., doing business as Mammoth Paint & Color Works, New York, N. Y. Filed Dec. 12, 1927.

ARTSEAL

Particular description of goods.—Ready-Mixed Paint Having Linseed-Oil Base, Which is Made in Various Colors.
Claims use since Mar. 1, 1927.

Ser. No. 258,830. PEPER BROTHERS, INC., doing business as Mammoth Paint & Color Works, New York, N. Y. Filed Dec. 12, 1927.

UNION COAT

Applicant makes no claim for the word "Coat" apart from the mark shown in the drawing.
Particular description of goods.—Ready-Mixed Paint Having Linseed-Oil Base, Which is Made in Various Colors.
Claims use since Mar. 1, 1927.

Ser. No. 258,872. JOHN C. P. HELM, doing business as Helm Laboratories, New Orleans, La. Filed Dec. 13, 1927.

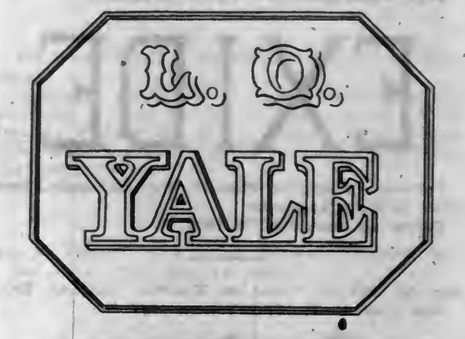
Particular description of goods.—Waxes—Namely, Floor Waxes, Both Liquid and Paste; Floor Oils; Floor, Furniture, and Automobile Polishes; Linoleum Polishes; and Preservatives.
Claims use since Nov. 5, 1923.

Ser. No. 259,218. ROBERT DOKE ROBINSON, doing business as Hy-Tone Products, Kansas City, Mo. Filed Dec. 21, 1927.

HY-TONE

Particular description of goods.—Automobile Cleaner Polish and Restorative for Duco-Lacquer and Pyroxolyn-Enamel Surfaces, in Powdered and Liquid Form.
Claims use since June, 1927.

Ser. No. 260,578. MCKESSON & ROBBINS, INCORPORATED, Bridgeport, Conn. Filed Jan. 24, 1928.



AUTOTONE

Particular description of goods.—Automobile Polish.
Claims use since Jan. 21, 1928.

CLASS 17.

Tobacco Products.

Ser. No. 257,434. ROSE OSTERWEIS, doing business as Lewis Osterweis & Sons, New Haven, Conn. Filed Nov. 11, 1927.

No claim is made to the exclusive use of the word "Yale" apart from the mark as shown in the drawing.
Particular description of goods.—Cigars.
Claims use since Mar. 18, 1873.

CLASS 19.

Vehicles, Not Including Engines.

Ser. No. 259,249. MOTOR VEST INC., Newark, N. J. Filed Dec. 22, 1927.

MOTOR-VEST

Particular description of goods.—Vehicle Radiator Protectors Made of Combinations of Fabric and Metallic Structures.
The descriptive word "Motor" is disclaimed apart from the mark as shown.
Claims use since Oct. 15, 1927.

CLASS 21.

Electrical Apparatus, Machines, and Supplies.

Ser. No. 235,171. SAFETY ELECTRIC PRODUCTS CO., Los Angeles, Calif. Filed July 26, 1926.

Diamond-S

Particular description of goods.—Externally-Operated Switches, Switchboards, Panel Boards, Box Hangers, Copper Ground Strip, Cut-Out Cabinets, Pumping-Plant Panels, Exit Boxes, Sectional Wiring Trough, Motor Lead Boxes, Ground Clamps, Porch Collar Straps.
Claims use since Feb. 1, 1926.

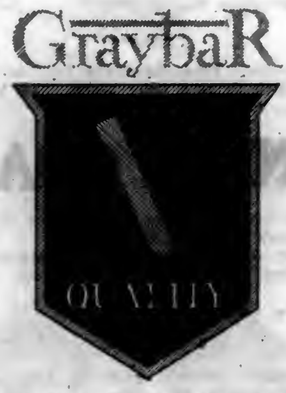
Ser. No. 245,032. SERVWELL SALES CORPORATION, Chicago, Ill. Filed Feb. 28, 1927.

SERVWELL

Particular description of goods.—Electrical Apparatus—Namely, Battery Chargers, Growlers, Single Magnet Chargers, Drills, Portable Grinders, and Bench Grinders.
Claims use since fall of 1924.

Ser. No. 251,725. THE ELECTRIC STORAGE BATTERY COMPANY, Philadelphia, Pa. Filed July 9, 1927.

EXIDE



Particular description of goods.—Current-Supply Power Units for Radio Apparatus.
Claims use since Sept. 4, 1925.

Ser. No. 251,734. GRAYBAR ELECTRIC COMPANY, INC., New York, N. Y. Filed July 9, 1927.

No claim is made to the exclusive use of the word "Quality" apart from the mark as shown in the drawing. The lines in drawing are for shading only.
Particular description of goods.—Telephone Annunciators, Residence Annunciators, Burglar-Alarm Annunciators, Hotel Annunciators, Hospital Annunciators, and Annunciators Used in Connection with Interphones, Autotransformers, Electric Batteries and Electric-Battery Holders, Battery Lamps and Lanterns, Electric Bells, Bell-Ringing Transformers, Buzzers, Circuit Breakers, Electric Conduits, Duct Logs for Electrical Conductors, Conduits and Fittings, Electric Dishwashers, Electric Fans, Electric-Lighting Fixtures, Electric Floor Polishers, Electric Hammers; Reflector Heaters, Air Heaters, and Water Heaters; Electric Incandescent Lamps, Insulating Compound, Electric Insulators and Supports, Interphones, Electric-Arc Lamps, Line Poles, Loud-Speaking Telephone Systems and Apparatus, Power Boards, Electric Power and Light Outfits, Electric Power Switches, Electric Pumps, Electric Ranges, Battery-Charging Rectifiers, Electric Sewing Machines, Code-Calling Systems for Industrial Plants and the Like, Sockets, Electric-Lamp Sockets, Electric Stoves, Electric Tape, Telephone Transmitter Arms and Brackets, Toasters, Electric Transformers, Electric Utility Motors, Wall Plates for Switches and Electrical Appliances, Electric Warming Pads, Electrical Water-Pumping Systems, and Water Heaters.
Claims use since January, 1926.

Ser. No. 251,735. GRAYBAR ELECTRIC COMPANY, INC., New York, N. Y. Filed July 9, 1927.

No claim is made to the exclusive use of the word "Quality" apart from the mark as shown in the drawing. The lines on the drawing are for shading only.
Particular description of goods.—Telephone Annunciators, Residence Annunciators, Burglar-Alarm Annunciators, Hotel Annunciators, Hospital Annunciators, and Annunciators Used in Connection with Interphones, Autotransformers, Electric Batteries and Electric-Battery Holders, Battery Lamps and Lanterns, Electric Bells, Bell-Ringing Transformers, Buzzers, Circuit Breakers, Electric Conduits, Duct Logs for Electrical Conductors, Conduits and Fittings, Electric Dishwashers, Electric Fans, Electric-Lighting Fixtures, Electric Floor Polishers, Electric Hammers; Reflector Heaters, Air Heaters, and Water Heaters; Electric Incandescent Lamps, Insulating Compound, Electric Insulators and Supports, Interphones, Electric-Arc Lamps, Line Poles, Loud-Speaking Telephone Systems and Apparatus, Power Boards, Electric Power and Light Outfits, Electric Power Switches, Electric Pumps, Electric Ranges, Battery-Charging Rectifiers, Electric Sewing Machines, Code-Calling Systems for Industrial Plants and the Like, Sockets, Electric-Lamp Sockets, Electric Stoves, Electric Tape, Telephone Transmitter Arms and Brackets, Toasters, Electric Transformers, Electric Utility Motors, Wall Plates for Switches and Electrical Appliances, Electric Warming Pads, Electrical Water-Pumping Systems, and Water Heaters.
Claims use since January, 1926.

Ser. No. 251,737. GRAYBAR ELECTRIC COMPANY, INC., New York, N. Y. Filed July 9, 1927.

GraybaR

Particular description of goods.—Telephone Annunciators, Residence Annunciators, Burglar-Alarm Annunciators, Hotel Annunciators, Hospital Annunciators, and Annunciators Used in Connection with Interphones, Autotransformers, Electric Batteries and Electric-Battery Holders, Battery Lamps and Lanterns, Electric Bells, Bell-Ringing Transformers, Buzzers, Circuit Breakers, Electric Conduits, Duct Logs for Electrical Conductors, Conduits and Fittings, Electric Dishwashers, Electric Fans, Electric-Lighting Fixtures, Electric Floor Polishers, Electric Hammers; Reflector Heaters, Air Heaters, and Water Heaters; Electric Incandescent Lamps, Insulating Compound, Electric Insulators and Supports, Interphones, Electric-Arc Lamps, Line Poles, Loud-Speaking Telephone Systems and Apparatus, Power Boards, Electric Power and Light Outfits, Electric Power Switches, Electric Pumps, Electric Ranges, Battery-Charging Rectifiers, Electric Sewing Machines, Code-Calling Systems for Industrial Plants and the Like, Sockets, Electric-Lamp Sockets, Electric Stoves, Electric Tape, Telephone Transmitter Arms and Brackets, Toasters, Electric Transformers, Electric Utility Motors, Wall Plates for Switches and Electrical Appliances, Electric Warming Pads, Electrical Water-Pumping Systems, and Water Heaters.
Claims use since January, 1926.

Ser. No. 255,424. ADOLPH G. WUEST, doing business as Active Elevator Company, Philadelphia, Pa. Filed Sept. 30, 1927.

Particular description of goods.—Electric Dumb-Waiters and Electric Elevators.
Claims use since January, 1926.

Ser. No. 256,097. BROOKLYN METAL STAMPING CORP., Brooklyn, N. Y. Filed Oct. 15, 1927.

Via-Rad

Particular description of goods.—Phonograph Reproducers Utilizing Electrical Means for Reproduction.
Claims use since Dec. 15, 1926.

Ser. No. 257,455. THERMA FABRIK FÜR ELEKTRISCHE HEIZUNG A.-G. VORMALS S. BLUMER, Schwanden, Switzerland. Filed Nov. 11, 1927.

Eutherme

Particular description of goods.—Electrical Heating and Cooking Apparatus Consisting of Flatirons, Hot Plates, Family and Hotel Ranges, Family and Hotel Baking Ovens, Boiling Vessels, Egg Boilers, Coffee Percolators, Tea and Hot-Water Kettles, Tipping Boilers, Hot Cupboards, Warming Plates, Curling-Tongs Heaters, Toasters, Foot Warmers, Stoves and Radiators for Every Use, Water Heaters, Boilers, Bathroom Boilers, Heating Elements Therefor, and Electrical Switches.
Claims use since Apr. 6, 1921.

Ser. No. 259,935. THE UNION METAL MANUFACTURING COMPANY, Canton, Ohio. Filed Jan. 10, 1928.

The word "Metal" is disclaimed apart from the mark shown.
Particular description of goods.—Metal Lighting Standards or Bases for Electric Lights, Exterior Metal Lighting Fixtures for Electric Lights, Metal Trolley Poles, Metal Transmission Poles, Metal Telephone Poles, and Metal Telegraph Poles.
Claims use since Nov. 25, 1927.

Ser. No. 260,077. THE UNITED ELECTRIC COMPANY, Canton, Ohio. Filed Jan. 13, 1928.

The Ambassador

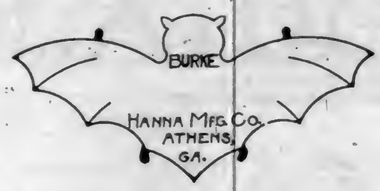
Particular description of goods.—Electrically-Operated Vacuum Cleaners.
Claims use since Dec. 29, 1927.

Ser. No. 260,496. ELECTRIC VACUUM CLEANER COMPANY, INC., Cleveland, Ohio. Filed Jan. 23, 1928.

Premier Junior

Particular description of goods.—Electric Vacuum Cleaners and Parts Thereof.
Claims use since Sept. 7, 1927.

Ser. No. 260,725. FREED-EISEMANN RADIO CORPORATION, Brooklyn, N. Y. Filed Jan. 27, 1928.



Radiette

Particular description of goods.—Radio Receiving Sets.
Claims use since Jan. 18, 1928.

CLASS 22.

Games, Toys, and Sporting Goods.

Ser. No. 256,405. THE HANNA MANUFACTURING COMPANY, Athens, Ga. Filed Oct. 21, 1927.

The geographical term "Athens, Ga." is hereby disclaimed apart from the mark shown in the drawing.
Particular description of goods.—Baseball Bats.
Claims use since Aug. 15, 1927.

Ser. No. 257,726. CHILDREN'S VEHICLE CORPORATION, East Templeton, Mass. Filed Nov. 18, 1927.

SPEEDMOBILE

Particular description of goods.—Toy Automobiles, Children's Automobiles, and Wheel-Goods Toys of All Descriptions—Namely, Airplanes, Scooters, Jingle Cars, Children's Bicycles, Coaster Wagons, and Velocipedes.
Claims use since May 28, 1927.

Ser. No. 259,895. THE CREEK CHUB BAIT CO., Garrett, Ind. Filed Jan. 10, 1928.

PIKIE MINNOW

The word "Minnow" is disclaimed apart from the mark as shown.
Particular description of goods.—Artificial Baits.
Claims use since April, 1920.

CLASS 23.

Cutlery, Machinery, and Tools, and Parts Thereof.

Ser. No. 243,835. GUSTAV WIEDEKE COMPANY, Dayton, Ohio. Filed Feb. 4, 1927.

ROYAL

Particular description of goods.—Tube and Flue Expanders, Tube and Flue Cutters, Tube and Flue Beading Tools.
Claims use since Jan. 5, 1927.

Ser. No. 250,929. W. N. MATTHEWS CORPORATION, St Louis, Mo. Filed June 22, 1927.

HINGLOX

Particular description of goods.—Earth Augers.
Claims use since Dec. 1, 1926.

Ser. No. 252,273. PARROTT DRY PROCESS STREET CLEANER COMPANY, New York, N. Y. Filed July 19, 1927.

Polly

Particular description of goods.—Street-Cleaning Machines.
Claims use since July 8, 1927.

Ser. No. 257,353. FIREKING FIRE EXTINGUISHER COMPANY INC., Seattle, Wash. Filed Nov. 10, 1927.

Fireking

Particular description of goods.—Portable Hand Type of Apparatus for Quenching Fires.
Claims use since Apr. 15, 1926.

Ser. No. 258,667. BAKERS' EQUIPMENT CO., St. Louis, Mo. Filed Dec. 9, 1927.

TROHOIST

No exclusive claim is made to the representation of a hoist machine apart from the mark shown.
Particular description of goods.—Bakers' Hoisting Machinery.
Claims use since July, 1926.

Ser. No. 259,973. THE SUPERKEEN COMPANY, INC., Salisbury, N. C. Filed Jan. 11, 1928.

SUPERKEEN

Particular description of goods.—Razor Sharpeners.
Claims use since Oct. 20, 1927.

CLASS 24.

Laundry Appliances and Machines.

Ser. No. 259,703. UNITED STATES HOFFMAN MACHINERY CORPORATION, New York, N. Y. Filed Jan. 4, 1928.

VALETOR

Particular description of goods.—Garment Presses.
Claims use since Nov. 14, 1927.

CLASS 26.

Measuring and Scientific Appliances.

Ser. No. 242,980. JEAN BERGMANN, doing business as Continentale Buro-Reform, Berlin, Germany. Filed Jan. 18, 1927.

CORRENTATOR

Particular description of goods.—Circulating Machines.
Claims use since Jan. 2, 1923.

Ser. No. 259,390. WILLIAM J. CAMERON, doing business as Cameron's Surgical Specialty Co., (Not Inc.), Chicago, Ill. Filed Dec. 28, 1927.

MYOCULATOR

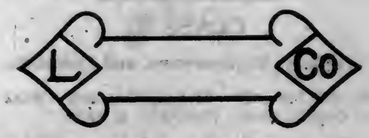
Particular description of goods.—Instrument for Examining, Testing, Measuring, and Exercising the Eyes.
Claims use since Feb. 1, 1927.

Ser. No. 259,683. INTERNATIONAL NEWSREEL CORPORATION, New York, N. Y. Filed Jan. 4, 1928.

INTERNATIONAL NEWSREEL

No claim is made to the word "Newsreel" apart from the mark shown.
Particular description of goods.—Motion-Picture Films.
Claims use since Dec. 1, 1925.

CLASS 27.



Horological Instruments.

Ser. No. 259,794. A. COHEN & SONS CORP., New York, N. Y. Filed Jan. 7, 1928.

ADMIRATION

Particular description of goods.—Clocks, Watches, Watchcases, Watch Movements, and Parts Thereof.
Claims use since January, 1927.

Ser. No. 259,918. L. LEWITT & CO., INC., New York, N. Y. Filed Jan. 10, 1928.

Particular description of goods.—Watchcases.
Claims use since January, 1922.

Ser. No. 260,100. A. COHEN & SONS CORP., New York, N. Y. Filed Jan. 14, 1928.

OWL

Particular description of goods.—Clocks, Watches, Watchcases, Watch Movements, and Parts Thereof.
Claims use since January, 1927.

Ser. No. 260,140. PHINNEY-WALKER COMPANY, New York, N. Y. Filed Jan. 14, 1928.

CONSUL

Particular description of goods.—Clocks and Watches.

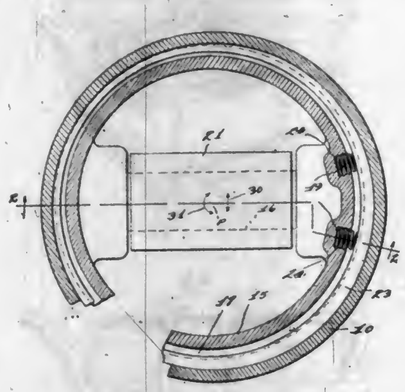
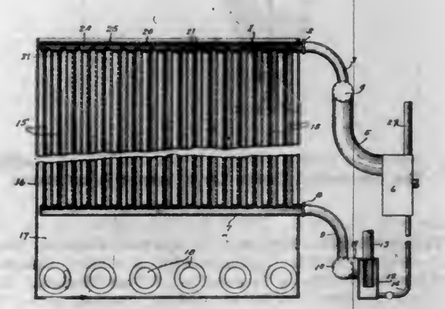
REISSUES



MARCH 6, 1928.

16,893. SUCTION CLEANER. HOWARD EARL HOOVER, Glencoe, Ill., assignor, by mesne assignments, to The Hoover Company, North Canton, Ohio, a Corporation of Ohio. Filed Dec. 14, 1925. Serial No. 75,458. Original No. 1,364,761, dated Jan. 4, 1921, Serial No. 277,472, filed Feb. 17, 1919. Renewed Nov. 4, 1920, Serial No. 421,791. 7 Claims. (Cl. 15—8.)



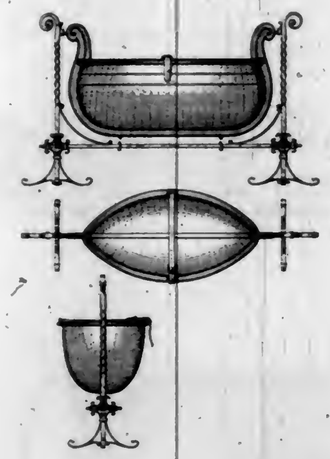
1. A suction cleaner casing having a rotatably mounted brush in combination with a fan and motor and means for driving the fan and brush from the motor, the common axes of fan and motor downwardly and rearwardly inclined.

16,894. INTERNAL-COMBUSTION ENGINE. ALANSON P. BRUSH, Detroit, Mich., assignor to The Simplex Piston Ring Co. of America, Inc., Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 29, 1927. Serial No. 216,323. Original No. 1,299,674, dated Apr. 8, 1919, Serial No. 217,652, filed Feb. 16, 1918. 2 Claims. (Cl. 74—108.)

1. In an engine, the combination of a cylinder, a piston therein having operative clearance, a connecting rod, a wrist pin which pivotally connects the connecting rod with the piston, said piston having a circumferentially extending groove therein adjacent said wrist pin, a member radially movable in said groove peripherally bearing against the cylinder wall and resilient means between said member and piston yieldingly tending to push the piston across the cylinder in one direction of the length of said connecting rod pin.

16,895. STEAM GENERATOR. WALTER DOUGLAS LA MONT, Larchmont, N. Y., assignor, by mesne assignments, to La Mont Corporation, New York, N. Y., a Corporation of New York. Filed July 9, 1927. Serial No. 204,634. Original No. 1,545,668, dated July 14, 1925, Serial No. 268,651, filed Dec. 28, 1918. 23 Claims. (Cl. 122—39.)

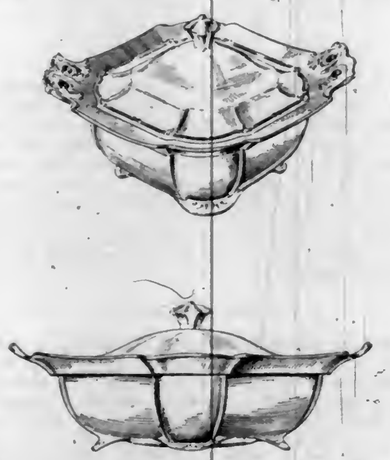
1. The method of generating steam in a heated tube having one end closed to the discharge of steam and higher than the other, which consists in forcing water into the upper end of said tube, and directing the water toward the wall of said tube, said water being continuously introduced in such quantity as continuously to maintain a film on said wall throughout a substantial portion of the length of the tube and to leave the center of the tube unobstructed, and discharging from the lower end of the tube the steam and unevaporated water arriving at said end.



16,896. BONDING ACTUATED CARBON. ARTHUR B. RAY, Bayside, N. Y., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed Sept. 7, 1927. Serial No. 218,105. Original No. 1,565,328, dated Dec. 15, 1925, Serial No. 511,171, filed Oct. 28, 1921. 2 Claims. (Cl. 252—3.)

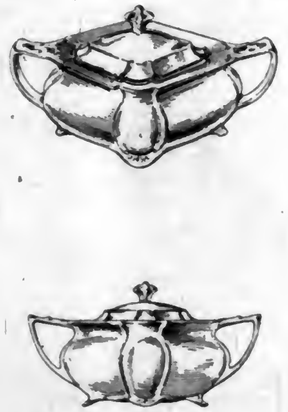
1. A process of bonding activated carbon which comprises associating such carbon with a sugar and thermally decomposing said sugar to give a carbonaceous bonding residue.

DESIGNS



MARCH 6, 1928.

74,587. BABY CRIB. PETER ARNAO, Brooklyn, N. Y. Filed Dec. 14, 1927. Serial No. 24,480. Term of patent 14 years.

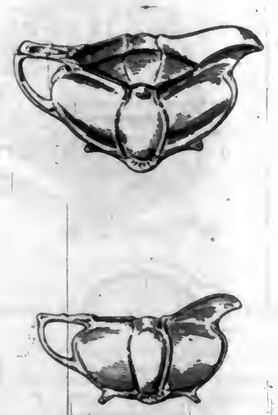


The ornamental design for a baby crib, as shown.

74,588. DISH. KENNETH P. BEATTIE, Hopkins, Mich., assignor to The Taylor, Smith & Taylor Company, Chester, W. Va., a Corporation of West Virginia. Filed Dec. 27, 1927. Serial No. 24,655. Term of patent 3½ years.

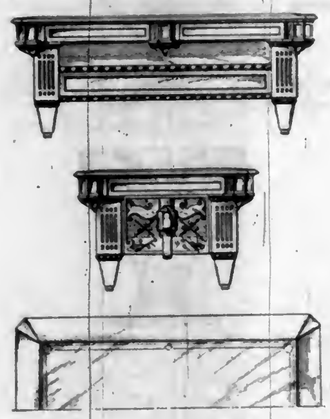
The ornamental design for a dish, substantially as shown.

74,589. SUGAR BOWL. KENNETH P. BEATTIE, Hopkins, Mich., assignor to The Taylor, Smith & Taylor Company, Chester, W. Va., a Corporation of West Virginia. Filed Dec. 27, 1927. Serial No. 24,656. Term of patent 3½ years.



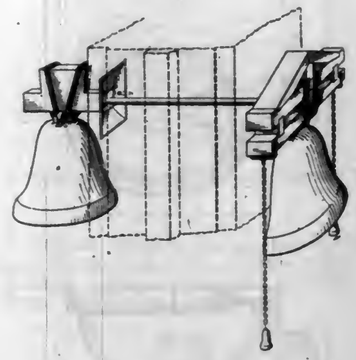
The ornamental design for a sugar bowl, substantially as shown.

74,590. TEAPOT. KENNETH P. BEATTIE, Hopkins, Mich., assignor to The Taylor, Smith & Taylor Company, Chester, W. Va., a Corporation of West Virginia. Filed Dec. 27, 1927. Serial No. 24,657. Term of patent 3½ years.



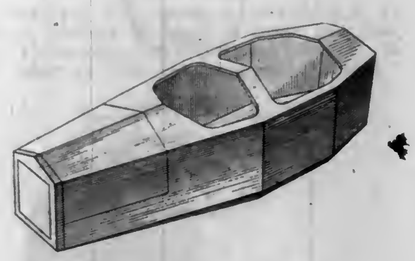
The ornamental design for a teapot, substantially as shown.

74,591. PITCHER. KENNETH P. BEATTIE, Hopkins, Mich., assignor to The Taylor, Smith & Taylor Company, Chester, W. Va., a Corporation of West Virginia. Filed Dec. 27, 1927. Serial No. 24,658. Term of patent 3½ years.



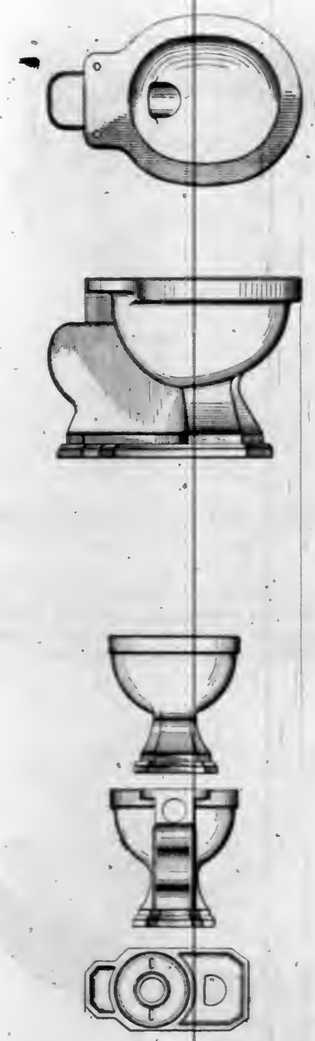
The ornamental design for a pitcher, substantially as shown.

74,592. BILLIARD TABLE OR SIMILAR ARTICLE. ARCHIE H. BECHTOL, Daytona Beach, Fla., and WALTER A. TRATSCH, Chicago, Ill. Filed Oct. 13, 1927. Serial No. 28,746. Term of patent 14 years.



The ornamental design for a billiard table or similar article as shown.

74,593. DOOR SIGNAL. GEORGE S. BEST, San Diego, Calif. Filed Nov. 4, 1925. Serial No. 15,389. Term of patent 3½ years.

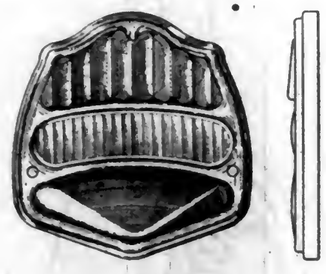


The ornamental design for a door signal as shown.

74,594. AUTOMOBILE BODY. ANTHONY BIZZARRI, New York, N. Y., assignor, by mesne assignments, to Specialty Patents Holding Co., Inc., New York, N. Y., a Corporation of New York. Filed July 2, 1926. Serial No. 18,232. Term of patent 3½ years.

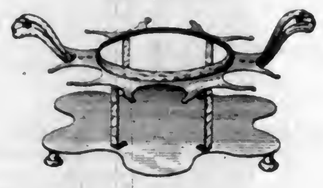
The ornamental design for an automobile body as shown.

74,595. CLOSET BOWL. JOHN B. COXON, Kokomo, Ind., assignor to Kokomo Sanitary Pottery Company, Kokomo, Ind. Filed Sept. 21, 1926. Serial No. 19,138. Term of patent 14 years.



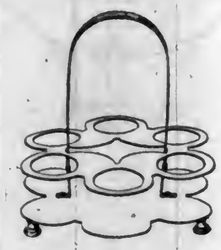
The ornamental design for a closet bowl, as shown and described.

74,596. CLOSET BOWL. JOHN B. COXON, Kokomo, Ind., assignor to Kokomo Sanitary Pottery Company, Kokomo, Ind. Filed Sept. 21, 1926. Serial No. 19,139. Term of patent 14 years.



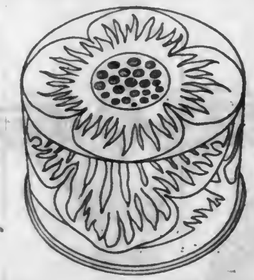
The ornamental design for a closet bowl as shown and described.

74,597. VEHICLE LAMP DOOR. HARRY C. DOANE, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed June 13, 1927. Serial No. 22,419. Term of patent 14 years.



The ornamental design for a vehicle lamp door as shown.

74,598. HOLDER FOR GLASSES. SIMON W. FARBER, Brooklyn, N. Y. Filed Sept. 21, 1927. Serial No. 23,493. Term of patent 14 years.



The ornamental design for a holder for glasses substantially as shown.

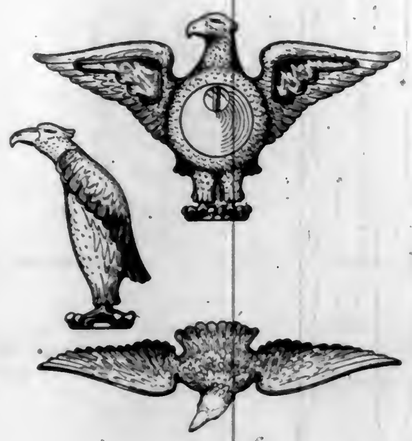
74,599. HOLDER FOR GLASSES. SIMON W. FARBER, Brooklyn, N. Y. Filed Sept. 21, 1927. Serial No. 23,497. Term of patent 14 years.

The ornamental design for a holder for glasses substantially as shown.

74,600. TOILET-POWDER BOX. GUY T. GIBSON, New Rochelle, N. Y., assignor to Guy T. Gibson Inc., New York, N. Y., a Corporation of New York. Filed Dec. 28, 1927. Serial No. 24,678. Term of patent 14 years.

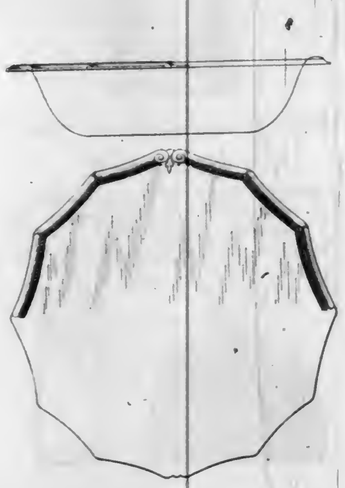
The ornamental design for a toilet powder box as shown.

74,601. BOTTLE. PAUL A. GINTER, Toledo, Ohio, assignor to The American Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Dec. 10, 1926. Serial No. 20,012. Term of patent 14 years.



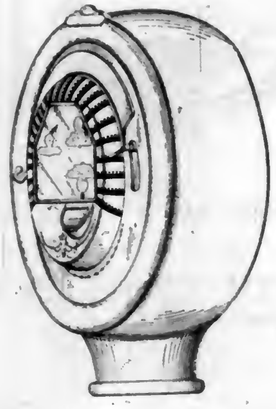
The ornamental design for a bottle, substantially as shown.

74,602. BOTTLE. LOUIS HALK, Hackensack, N. J., assignor to Northam Warren Corporation, New York, N. Y., a Corporation of New York. Filed Oct. 19, 1927. Serial No. 23,787. Term of patent 14 years.

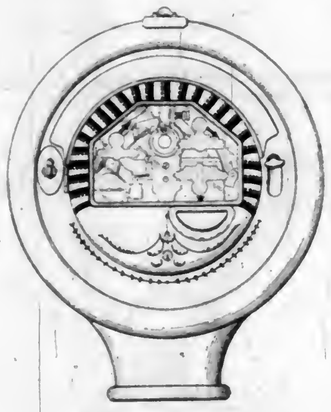


The ornamental design for a bottle as shown.

74,603. TEMPERATURE-INDICATING HOUSING. ABE HARTMAN, Brooklyn, N. Y. Filed July 15, 1926. Serial No. 18,366. Term of patent 14 years.

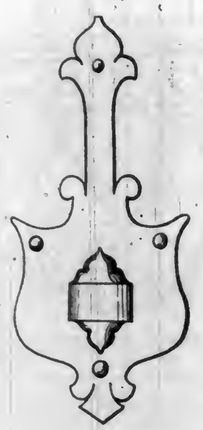


The ornamental design for a temperature indicating housing as shown.



74,604. BOWL OR SIMILAR ARTICLE. HARRISON HEBBARD, East Orange, N. J., assignor to Dominick & Haff, Inc., Newark, N. J., a Corporation of Delaware. Filed Sept. 20, 1927. Serial No. 23,474. Term of patent 7 years.

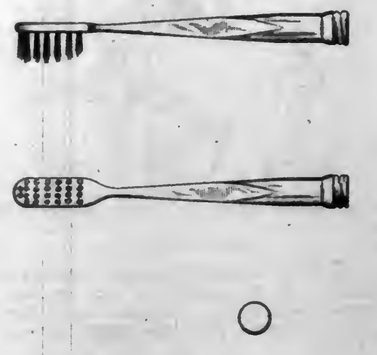
The ornamental design for a bowl or similar article as shown and described.



74,605. HEAD OF A PRINTING SCALE. GUSTAV F. HOCHRIEM, Chicago, Ill., assignor to Rhodes-Hochriem Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed May 18, 1927. Serial No. 21,963. Term of patent 3½ years.

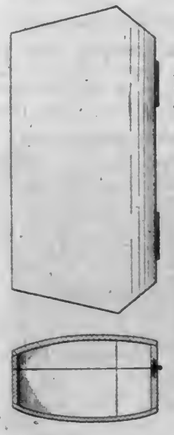
The ornamental design for a head of a printing scale, as shown.

74,606. WALL PLATE FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. HARRY R. HOLDEMAN, Los Angeles, Calif., assignor to The J. M. Feldman Co. Inc., Los Angeles, Calif. Filed Dec. 19, 1927. Serial No. 24,524. Term of patent 3½ years.



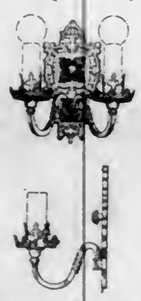
The ornamental design for a wall plate for lighting fixtures or similar articles as shown.

74,607. SPINDLE FOR LIGHTING FIXTURES OR SIMILAR ARTICLES. HARRY R. HOLDEMAN, Los Angeles, Calif., assignor to The J. M. Feldman Co. Inc., Los Angeles, Calif. Filed Dec. 19, 1927. Serial No. 24,525. Term of patent 3½ years.



The ornamental design for a spindle for lighting fixtures or similar articles, as shown.

74,608. TOOTHBRUSH. ROBERT WOOD JOHNSON, New Brunswick, N. J., assignor to Johnson & Johnson, New Brunswick, N. J., a Corporation of New Jersey. Filed Apr. 21, 1927. Serial No. 21,658. Term of patent 14 years.

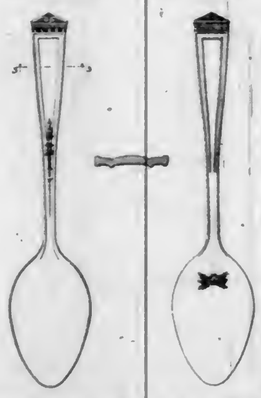


The ornamental design for a toothbrush, as shown.

74,609. CANTEEN BOX. RUDOLF KIENINGER, Chicago, Ill. Filed Dec. 27, 1926. Serial No. 20,158. Term of patent 3½ years.

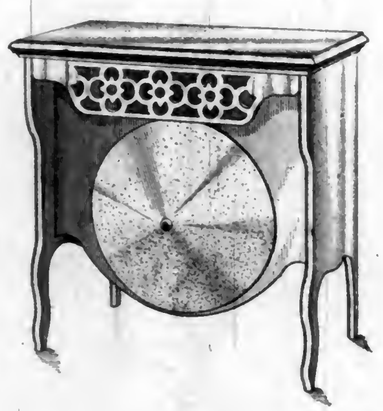
The ornamental design for a canteen box, as shown.

74,610. WALL LIGHTING FIXTURE. ARTHUR KRAUSE, Woodhaven, N. Y., assignor to Lion Electric Manufacturing Company, Inc., a Corporation of New York. Filed Oct. 4, 1927. Serial No. 23,624. Term of patent 7 years.



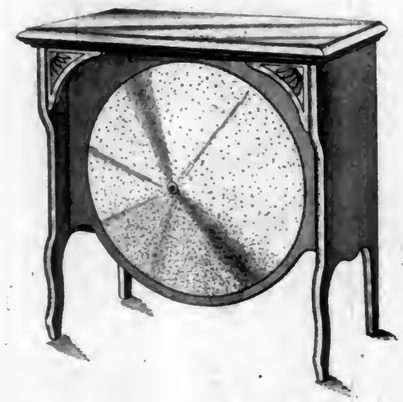
The ornamental design for a wall lighting fixture as shown.

74,611. WALL LIGHTING FIXTURE. ARTHUR KRAUSE, Woodhaven, N. Y., assignor to Lion Electric Manufacturing Company, Inc., a Corporation of New York. Filed Oct. 4, 1927. Serial No. 23,625. Term of patent 7 years.



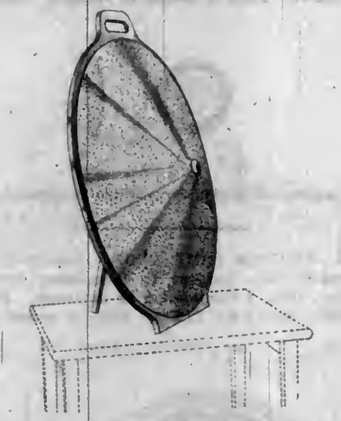
The ornamental design for a wall lighting fixture, as shown.

74,612. SPOON OR SIMILAR ARTICLE. THOMAS B. LASHAR, Fairfield, Conn., assignor to Associated Silver Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1926. Serial No. 19,612. Term of patent 14 years.



The ornamental design for a spoon or similar article as shown

74,613. RADIOCONSOLE. GEORGE W. LYONS, Oak Park, Ill. Filed Feb. 14, 1927. Serial No. 20,751. Term of patent 7 years.



The ornamental design for a radioconsole, as shown.

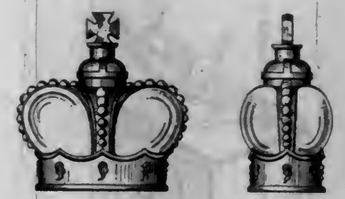
74,614. RADIOCONSOLE. GEORGE W. LYONS, Oak Park, Ill. Filed Feb. 14, 1927. Serial No. 20,752. Term of patent 7 years.

The ornamental design for a radioconsole, as shown.

74,615. SOUND-REPRODUCING APPARATUS. GEORGE W. LYONS, Oak Park, Ill. Filed Feb. 14, 1927. Serial No. 20,755. Term of patent 7 years.

The ornamental design for a sound reproducing apparatus, as shown.

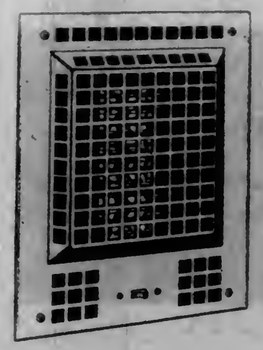
74,616. LACE TRAY COVER OR THE LIKE. SALIM N. MALLOUK, Brooklyn, N. Y. Filed Dec. 18, 1926. Serial No. 20,074. Term of patent 3½ years.



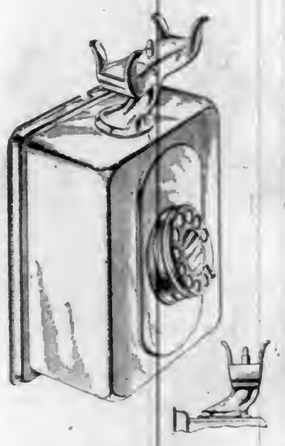
The ornamental design for a lace tray cover or the like, substantially as shown.

74,617. PERFUME CONTAINER. CHARLES LIONEL MARCUS, New York, N. Y. Filed July 26, 1923. Serial No. 6,871. Term of patent 14 years.

The ornamental design for a perfume container as shown and described.

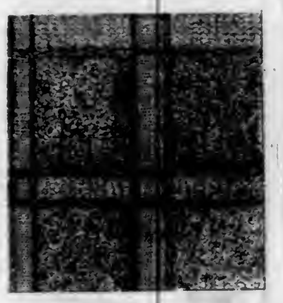


74,618. BOTTLE OR SIMILAR CONTAINER. GEORGE MATCHABELLI, New York, N. Y., assignor to Prince Matchabelli Perfumery, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 5, 1927. Serial No. 23,635. Term of patent 7 years.



The ornamental design for a bottle or similar container, as shown.

74,619. ELECTRIC HEATER. FRANCIS H. MCCORMICK, Glen Ellyn, Ill., assignor to Edison Electric Appliance Company, Incorporated, Chicago, Ill., a Corporation of New York. Filed July 11, 1927. Serial No. 22,726. Term of patent 3½ years.

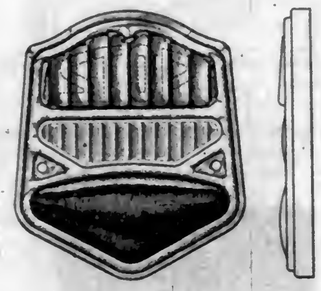


The ornamental design for an electric heater substantially as shown.

74,620. TELEPHONE SET. HERBERT F. OBERGFELL, River Forest, Ill., assignor to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Oct. 22, 1927. Serial No. 23,846. Term of patent 14 years.

The ornamental design for a telephone set, as shown.

74,621. TOWELING FABRIC. RUSSELL L. O'KEEFFE, San Francisco, Calif., assignor to Hale Bros., Inc., San Francisco, Calif., a Corporation of California. Filed July 13, 1925. Serial No. 14,068. Term of patent 14 years.

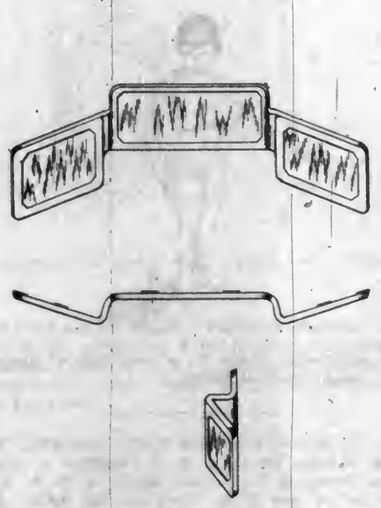


The ornamental design for a toweling fabric, substantially as shown and described.

74,622. BADGE. FREDERIC C. W. PARKER, Oak Park, Ill., assignor to Kiwanis International, Chicago, Ill., a Corporation of Illinois. Filed May 23, 1927. Serial No. 22,136. Term of patent 14 years.

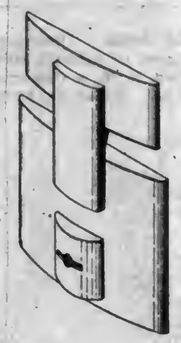
The ornamental design for a badge as shown.

74,623. VEHICLE LAMP DOOR. LESLIE O. PARKER, Anderson, Ind., assignor to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 2, 1927. Serial No. 22,279. Term of patent 14 years.



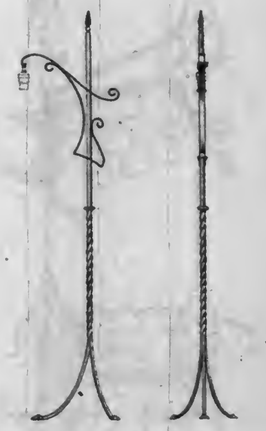
The ornamental design for a vehicle lamp door as shown.

74,624. DOOR HANDLE. RALPH S. ROBERTS, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 28, 1927. Serial No. 24,324. Term of patent 7 years.



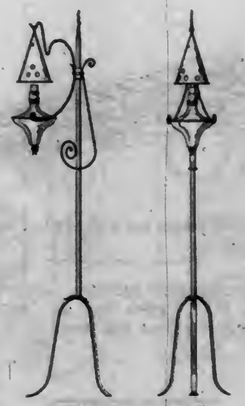
The ornamental design for a door handle substantially as shown.

74,625. COMBINED REAR AND SIDE VIEW MIRROR FOR AUTOMOBILES. JOSEPH F. RIVARD, Detroit, Mich. Filed May 4, 1927. Serial No. 21,859. Term of patent 7 years.



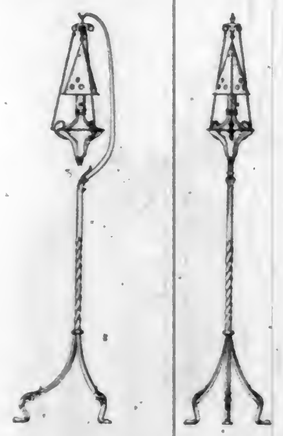
The ornamental design for a combined rear and side view mirror for automobiles as shown.

74,626. LOCK OR SIMILAR ARTICLE. JOHN B. RUSS, Shelton, Conn., assignor to The Bassett Metal Goods Company, Inc., Derby, Conn., a Corporation of Connecticut. Filed Dec. 14, 1927. Serial No. 24,475. Term of patent 7 years.



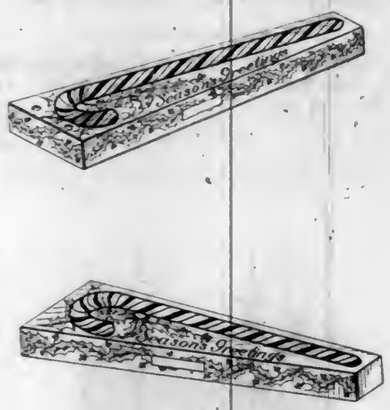
The ornamental design for a lock or similar article as shown.

74,627. BRIDGE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Dec. 31, 1927. Serial No. 24,707. Term of patent 3½ years.



The ornamental design for a bridge lamp, as shown.

74,628. BRIDGE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Dec. 31, 1927. Serial No. 24,708. Term of patent 3½ years.



The ornamental design for a bridge lamp, as shown.

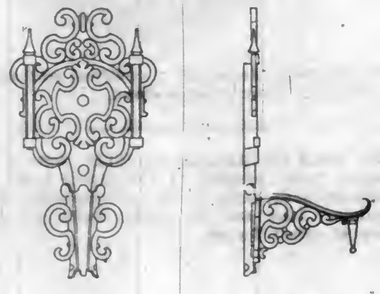
74,629. BRIDGE LAMP. JOHN B. SALTERINI, New York, N. Y. Filed Dec. 31, 1927. Serial No. 24,709. Term of patent 3½ years.

The ornamental design for a bridge lamp, as shown.

74,630. CANDY BOX. MORRIS SAVAGE, Philadelphia, Pa. Filed Dec. 21, 1927. Serial No. 24,572. Term of patent 14 years.

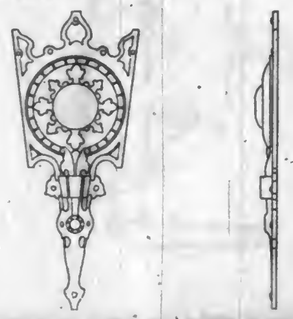
The ornamental design for a candy box as shown.

74,631. EMBROIDERED EDGING. HENRY SCHWARBER, Weehawken, N. J. Filed Oct. 29, 1927. Serial No. 23,923. Term of patent 3½ years.



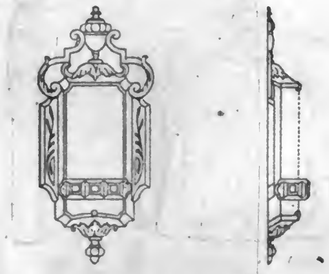
The ornamental design for embroidered edging, as shown.

74,632. LAMP BASE OR ANALOGOUS ARTICLE. PHILIP SILBERHARTZ, Brooklyn, N. Y., assignor to Majestic Lamp Works, New York, N. Y., a Partnership consisting of Philip Silberharts, Jacob Silberharts, and Harry Scheiner. Filed Nov. 23, 1927. Serial No. 24,252. Term of patent 3½ years.



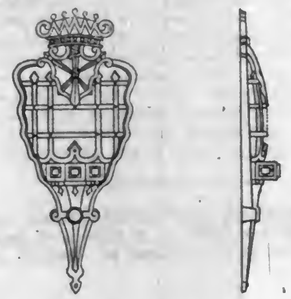
The ornamental design for a lamp base or analogous article, substantially as shown.

74,633. LIGHTING-FIXTURE WALL BRACKET. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 20, 1927. Serial No. 23,811. Term of patent 3½ years.



The ornamental design for a lighting fixture wall bracket as shown.

74,634. BRACKET BACK. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 20, 1927. Serial No. 23,813. Term of patent 3½ years.



The ornamental design for a bracket back as shown.

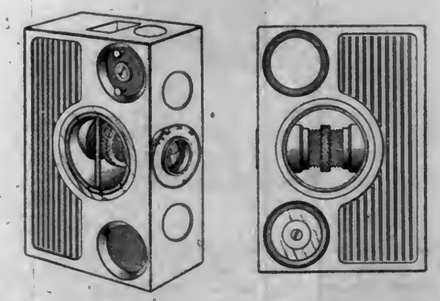
74,635. BRACKET BACK. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 20, 1927. Serial No. 23,814. Term of patent 3½ years.

The ornamental design for a bracket back as shown.

74,636. BRACKET BACK. THEODORE SHAPIRO, Brooklyn, N. Y., assignor to Artcraft Metal Stamping Corporation, Brooklyn, N. Y., a Corporation of New York. Filed Oct. 20, 1927. Serial No. 23,815. Term of patent 3½ years.

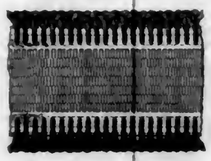
The ornamental design for a bracket back as shown.

74,637. DRESS. GRACE TANCILL, St. Louis, Mo. Filed May 2, 1927. Serial No. 21,814. Term of patent 14 years.



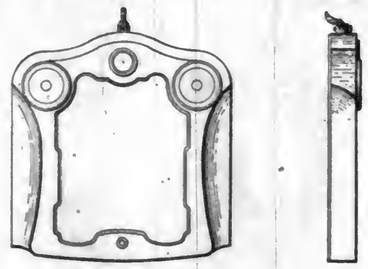
The ornamental design for a dress, substantially as shown and described.

74,638. COMBINED ASH TRAY AND BUTT EXTINGUISHER. JOHN F. THIESSEN, Los Angeles, Calif. Filed Sept. 27, 1927. Serial No. 23,560. Term of patent 7 years.



The ornamental design for a combined ash tray and butt extinguisher as shown.

74,639. CAMERA CASING. ALEXANDER FERDINAND VICTOR, New York, N. Y. Filed June 24, 1926. Serial No. 18,166. Term of patent 14 years.

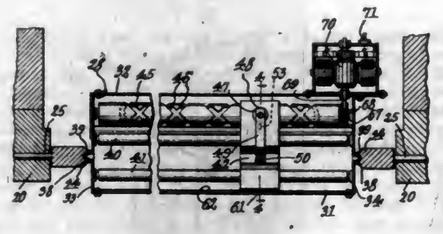


The ornamental design for a camera casing as shown.

74,640. ELASTIC GARTER WEBBING. FREDERICK J. ZIMMERER, Jr., Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn. Filed June 8, 1927. Serial No. 22,367. Term of patent 7 years.

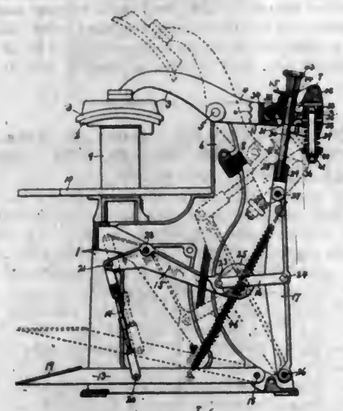
The ornamental design for an elastic garter webbing, as shown.

74,641. VEHICLE RADIATOR COVER. JAMES ZALLAS, Detroit, Mich. Filed Oct. 19, 1927. Serial No. 23,806. Term of patent 7 years.



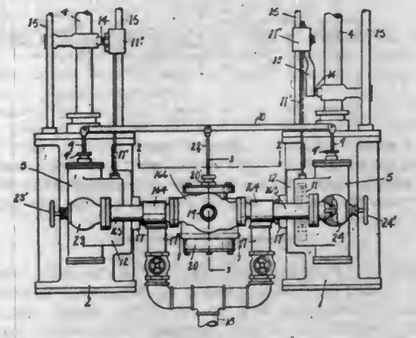
The ornamental design for a vehicle radiator cover, as shown.

PATENTS



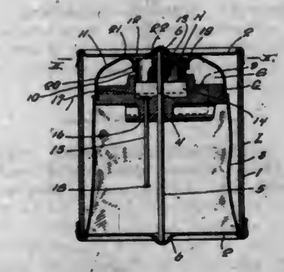
GRANTED MARCH 6, 1928.

1,661,152. WINDSHIELD WIPER. GEORGE A. ARIENS, Jeffersonville, Ind. Filed May 19, 1926. Serial No. 110,171. 10 Claims. (Cl. 15—253.)



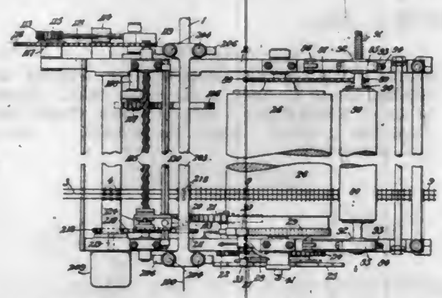
1. In apparatus of the character described, a windshield frame having a transparent pane held within the frame with the upper edge thereof spaced from the upper bar of said frame, a housing mounted within the frame above the pane, said housing having a tight joint with the frame and pane and having a longitudinal opening, a carriage mounted to travel longitudinally within the housing, a stem secured to the carriage and passing through the opening, and a wiper secured to the stem.

1,661,153. GARMENT-PRESSING MACHINE. HERBERT G. BEEDS, Pawtucket, R. I. Filed Jan. 11, 1927. Serial No. 160,369. 15 Claims. (Cl. 68—9.)



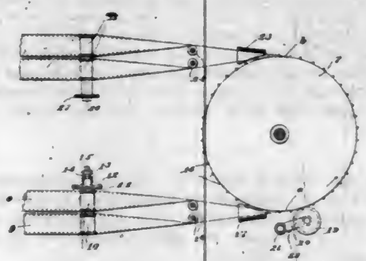
1. In a garment pressing machine having a frame and a movable pressing element, a toggle having one of its members fulcrumed on the frame and its other member operatively connected to said element, and pedal-operated means for applying force to said one member in the direction of flexion of the toggle joint and substantially normal to a direct line between said joint and frame-fulcrum of the said one member in both extreme positions of adjustment.

1,661,154. VALVE MECHANISM FOR STEAM ENGINES. JOHN C. BIRD, Battle Creek, Mich., assignor to Union Steam Pump Company, Battle Creek, Mich. Filed Feb. 21, 1927. Serial No. 169,915. 4 Claims. (Cl. 121—115.)



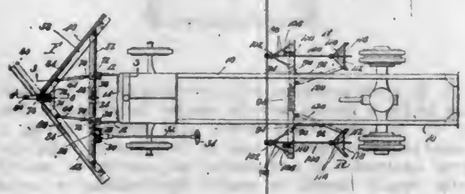
2. In a synchronizing valve structure, the combination of a plurality of engines with piston valves, a synchronizing valve connected to be operated by the pistons of said piston valves, a cut-off valve for cutting off one or the other of said cylinders, a casing with by-pass passage therethrough, and a plug valve with stem connected to the cut-off valve to be opened when the cut-off valve is closed.

1,661,155. VOICE DEVICE. ANDREW FUERTINGER, New York, N. Y., assignor, by mesne assignments, to Voices Incorporated, Wilmington, Del., a Corporation of Delaware. Filed Mar. 20, 1925. Serial No. 17,104. 9 Claims. (Cl. 46—46.)



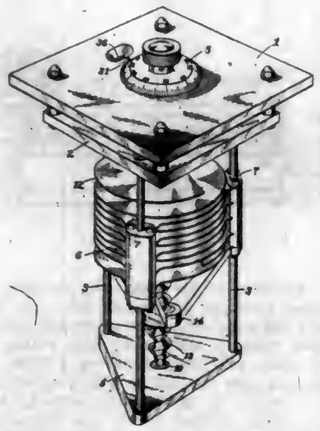
1. In sound producing and controlling devices, a sounding device, a gravity movable member for causing a flow of air to operate said device, said member having a sound emission opening, and an independent valve element unattached to said member and movable by gravity with respect thereto to control the emission of sound through said opening, and means cooperatively engaging one of said parts to effect a relative gravitational movemove between said parts and produce an articulated emission of the sound.

1,661,156. PRODUCTION OF WELDED WIRE FABRIC AND APPARATUS THEREFOR. ALAN ARMSTRONG, Tynemouth, England, assignor to Pilkington Brothers Limited, Liverpool, England, a British Company. Filed Nov. 18, 1924, Serial No. 750,715, and in Great Britain Nov. 20, 1923. 32 Claims. (Cl. 140—112.)



1. In apparatus of the type described for producing welded wire fabric, the combination with welding dies and means adapted to support warp wires between said dies, of means adapted to feed a weft wire from a source of supply across the warp wires and axially along a line between the welding dies by traction on the free end of the said weft wire.

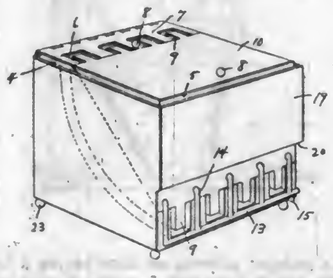
1,661,157. CINEMATOGRAPHIC APPARATUS. JOSEPH A. BALL, Cambridge, ERNEST A. GALLISON, Watertown, and EASTMAN A. WEAVER, Brookline, Mass., assignors to Technicolor Motion Picture Corporation, Boston, Mass., a Corporation of Maine. Filed July 21, 1923. Serial No. 652,893. 31 Claims. (Cl. 101—130.)



4. Cinematographic apparatus comprising means for continuously advancing two films in synchronism along adjacent paths, and means in the rear of said means for conjointly retarding the two films severally to register the portions intermediate the two means.

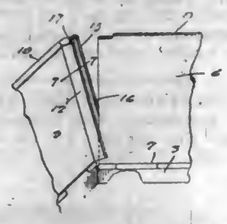
1,661,158. HIGH-SPEED TRACTION SNOWPLOW. THOMAS J. BALL, Boston, Mass. Filed Jan. 12, 1924. Serial No. 685,925. 3 Claims. (Cl. 37—44.)

1. In combination with a motor vehicle, a snow plow frame mounted at the forward end of the chassis including two vertically slidable plow supporting bars guided in fixed sleeves, a snow plow pivotally connected at its rear portion to the lower ends of said bars permitting the plow to tilt on meeting an obstruction by turning upward on said connection to said bars and then to lift bodily by sliding said bars upward through their sleeves, and means operatively connected to said bars under control from the cab for adjusting the height of the plow at will.



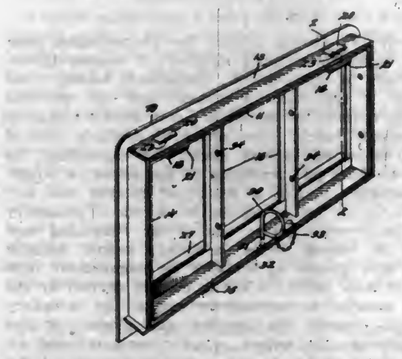
1,661,159. RADIOCONDENSER. JAMES BARNETT, Baltimore, Md. Filed May 29, 1923. Serial No. 642,215. 8 Claims. (Cl. 175—41.5.)

1. A condenser comprising electrodes consisting of electrically conducting material in the form of helically warped surfaces, the helically warped surfaces being composed of segmental elements so assembled as to give in effect continuous helically warped surfaces.



8. In an electrical condenser, a helical stator consisting of a plurality of perforated discs cut through from the perforations therein to the peripheries thereof and formed into helical convolutions, and arranged with the end of one such convolution in contact with the end of another such convolution, and means to support the helix thus formed.

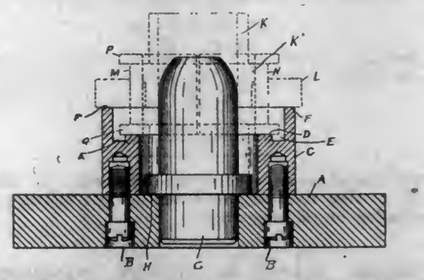
1,661,160. AIR COOLER. JAMES F. BAUMGARDNER, Stoneboro, Pa. Filed Mar. 28, 1927. Serial No. 179,114. 3 Claims. (Cl. 62—69.)



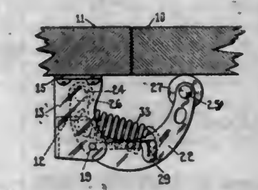
1. In a structure, of the class described, an air cooler comprising a box-like device composed of a pair of complemental sections, each section comprising a hollow ice container, one section being formed with channels, the other section being formed with tongues telescoping into and spaced from the walls of said channels, to provide curved air circulating passages.

1,661,161. FOLDING EGG CASE. GAEL LOHR BROUGHER, Orion, Kans. Filed Mar. 12, 1926. Serial No. 94,234. 1 Claim. (Cl. 220—6.)

A folding egg case comprising a bottom, side walls hinged at their lower edges to the respective sides of the bottom, end walls hinged at their lower edges to the respective ends of the bottom, the sides of each end member having inwardly directed flanges merging into U-channel bars having their bights disposed outwardly and their sides in parallelism with the flanges, one of said sides of the U-channel bars abutting the respective flange, said channel bars being adapted to receive the ends of the respective side wall whereby the side walls and the end walls are locked in vertical box forming relation.



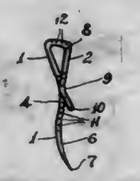
1,661,162. WINDOW. ROBERT H. BLISS, Syracuse, N. Y. Filed June 24, 1927. Serial No. 201,256. 8 Claims. (Cl. 189—69.)



1. In a window, in combination, a frame, a hook-shaped hinge member secured to the upper side of said frame, a sash fitting closely within said frame, said sash being provided on its upper side with a slot into which the shank of said member extends, and a flat pivot bar provided on said sash adjacent the slot for pivotally supporting the same upon said hook, the width of said bar being greater than the open width of said hook so that it rests upon the upstanding end thereof, but the thickness of said bar being less than the open width of said hook so that the bar will drop edgewise into the hook opening as the window is swung open, the distance between the upstanding end of said hook and the inner face of said frame being greater than the width of said bar to permit the sash to be removed from said hook when opened approximately ninety degrees.

1,661,163. LOADING BLOCK FOR ASSEMBLING HALF BEARINGS FOR MACHINING. LOWELL C. BLOMSTROM, Detroit, Mich., assignor to Federal Mogul Corporation, Detroit, Mich., a Corporation of Michigan. Filed Aug. 6, 1927. Serial No. 211,086. 6 Claims. (Cl. 29—89.)

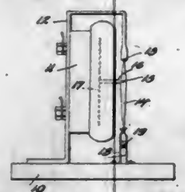
1. A loading device for bearings, comprising a supporting base, a central locating stud adapted to be removably engaged by a shell-supporting dummy, and a concentrically disposed encircling shell having a plurality of supporting surfaces whereon one edge of the bearing and its temporary encircling and clamping ring may be respectively rested at desired elevations relatively to the middle lengthwise point of the dummy and of the bearing shells respectively.



1,661,164. DOOR CHECK AND HOLDER. ALBIN F. BRAFF and FRITZ OTTOSON, Superior, Wis. Filed May 21, 1924. Serial No. 714,794. 3 Claims. (Cl. 292—79.)

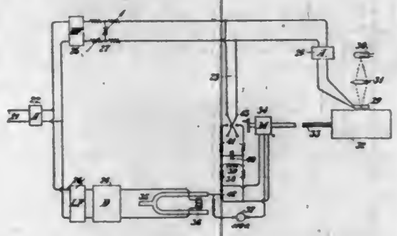
2. In a door check comprising a housing containing a pivotally mounted checking and holding means, a rigid carrying frame pivotally secured to the housing and rigidly secured at a multiplicity of points, to the checking and holding means.

1,661,165. PAPER FASTENER OR CLIP. JAMES NISBET CAMERON, Johannesburg, Transvaal, South Africa. Filed Jan. 18, 1927. Serial No. 160,947. 2 Claims. (Cl. 24—85.)



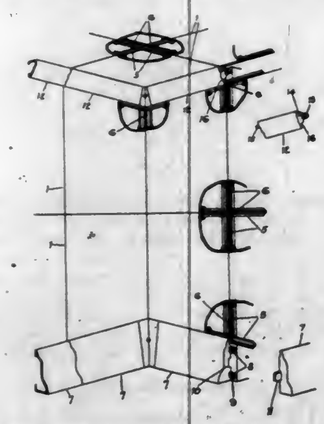
1. A device of the nature indicated, comprising a front part in the form of a frame, a back part in the form of a pointed pin, and a part connecting said pointed pin at the top to the top corner of said frame, the pin being shaped to project forwards into the frame and to co-operate with said frame to grip the material between them, the frame being bent from the top corner rearwardly in the direction of the pin and then bent forwardly in the direction of the bottom corner, as set forth.

1,661,166. RELAY. THADDEUS STEPHENS CASNER, Plainfield, N. J., assignor to Radio Electric Clock Corporation, New York, N. Y., a Corporation of New Jersey. Filed Apr. 23, 1925. Serial No. 25,390. 4 Claims. (Cl. 200—91.)



1. In a relay of the class described, in combination, a vibratory diaphragm, a pair of flexible contact car-

rying members normally in mutual engagement, a pivoted lever disposed between said members and connected to

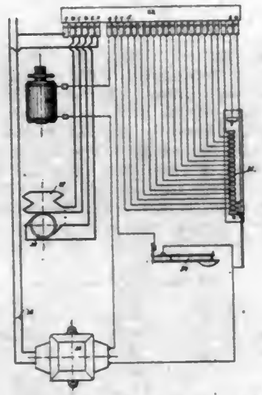


said diaphragm so as to strike the members in alternation to keep them separated due to their inertia during vibration of the diaphragm.

1,661,167. SYSTEM OF PICTURE TRANSMISSION. ALVA B. CLARK, Brooklyn, and DANFORTH K. GANNETT, Jackson Heights, N. Y., assignors to American Telephone and Telegraph Company, a Corporation of New York. Filed Jan. 23, 1925. Serial No. 4,322. 13 Claims. (Cl. 178—7.)

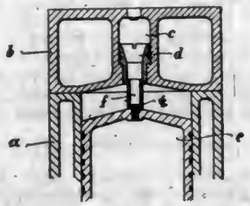
1. The method of producing a picture at the receiving end of a picture transmitting system, which consists in superposing a faint dot pattern on the picture so that this pattern will appear in the parts of light shade of the picture but will be substantially masked in the parts of dark shade.

1,661,168. PANELED WALL FACING. RAYMOND H. DAVIS, JOSEPH MILEWSKI, and MICHAEL MALONEY, Cleveland, Ohio. Filed Sept. 15, 1926. Serial No. 135,519. 4 Claims. (Cl. 189—88.)



1. A wall construction including sheet metal panels having edges thereof reversely bent to provide laterally facing channels, a sound deadening backing for the sheet metal panels, and retaining strips provided with suitably spaced flanges adapted to receive and engage the channels of the panels.

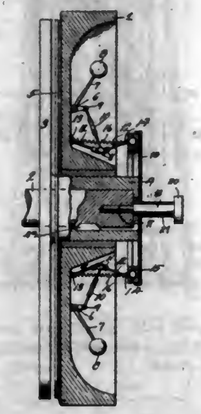
1,661,169. MANUFACTURE OF COMPOSITIONS OR PREPARATIONS WITH CELLULOSE DERIVATIVES. HENRY DREYFUS, London, England. Filed May 26, 1923, Serial No. 641,761, and in Great Britain July 13, 1922. 12 Claims. (Cl. 134—79.)



12. A composition of matter comprising ethyl cellulose, trichloro tertiary butyl alcohol and acetone.

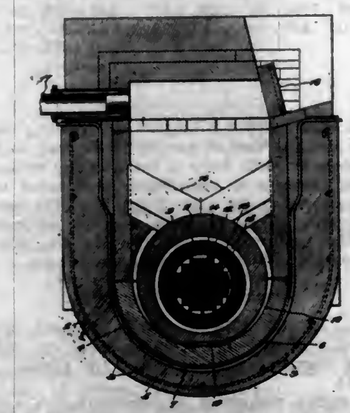
1,661,170. ELECTRIC DRIVING SYSTEM. JACOB DRUKKER, Amsterdam, Netherlands. Filed Jan. 7, 1927, Serial No. 159,729, and in the Netherlands Sept. 14, 1925. 7 Claims. (Cl. 172—239.)

1. An electric driving system for phonographs, comprising a motor; a rotating element; a member traveling relatively to said element; connections leading from the motor to the rotating element and the traveling member to operate the same; a motor circuit including current supply means; two series of contacts, one of which is connected in said ciriuit for controlling the starting, stopping and reversing of the motor; a circuit having included therein a source of current and certain contacts of the second series; a set of secondary contacts each connected to one of the remaining contacts of the second series; a rotary switch cylinder provided with groups of contacts for engagement with contacts of both series; a spring contact carried by the traveling member to successively engage the secondary contacts to control the opening and closing of the circuits through the switch cylinder contacts; and an electromagnetic device in the second-named circuit for stepping the switch cylinder each time that circuit is closed.



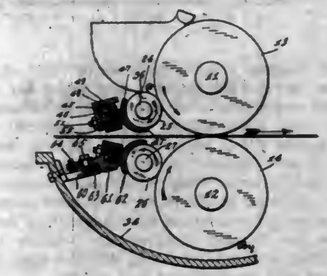
1,661,171. INTERNAL-COMBUSTION ENGINE. KARL EIERMANN, Munich, Germany, assignor to the Firm: Colo-Diesel-Motorengesellschaft m. b. H., Munich, Germany. Filed Apr. 14, 1924, Serial No. 706,700, and in Germany Apr. 18, 1923. 1 Claim. (Cl. 123—33.)

An internal combustion engine for practicing the method hereinbefore described, comprising in combination, a cylinder having an ignition chamber, a reduced neck for said ignition chamber, a working piston reciprocating in the engine cylinder, a sleeve member on the top of the piston in intimate sliding contact with the neck of the



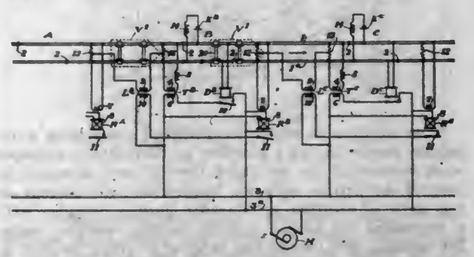
ignition chamber when the piston approaches its upper dead center position, and perforations at the base of the said sleeve member providing the only means of communication between the ignition chamber and the compression chamber of the cylinder upon the projection of said sleeve member into the neck of the ignition chamber.

1,661,172. CLUTCH. JAMES CARLTON ENGLAND, Dilsboro, N. C. Filed Sept. 9, 1925. Serial No. 55,314. 1 Claim. (Cl. 192—105.)



A clutch comprising a drive shaft, a drive disc carried by said shaft, a hub carried by the drive disc, a pulley forming a clutch element slidably mounted on the hub and cooperating with the drive disc, bell crank levers mounted on the pulley, weights carried by one of the arms of said levers, inwardly and outwardly extending connecting rods connected to the other arms of the bell crank levers, a thrust collar, arms pivotally connected to the thrust collar and to the pulley and extending towards each other and out of alinement with each other, said connecting rods having their inner ends pivotally connected to the adjacent ends of the arms and forming means whereby said inner ends of the arms will be moved to positions beyond alinement and spring means cooperating with the arms for maintaining the same out of alinement.

1,661,173. ELECTRIC FURNACE. CHARLES B. FOLEY, Fort Wayne, Ind., assignor to Charles B. Foley, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 23, 1922, Serial No. 545,983. Renewed July 27, 1926. 13 Claims. (Cl. 266—1.5.)

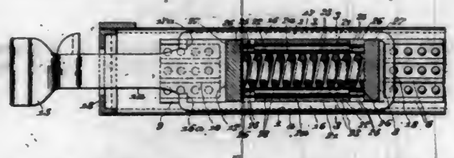


3. An electric induction furnace, comprising a crucible having a tube passing therethrough and cooperating with the sides and bottom thereof to form a closed channel opening into the crucible on opposite sides, the axis of the bore of said tube being located a substantial distance below the axis of the periphery thereof.

1,661,174. GLUE SPREADER. HARRY G. FRANCIS, Rushville, Ind. Filed Feb. 14, 1927. Serial No. 167,989. 7 Claims. (Cl. 91—51.)

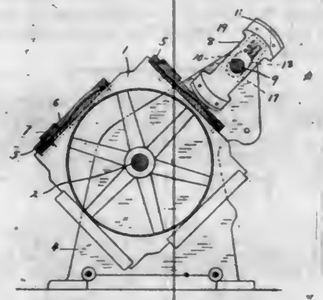
3. In a device for applying glue to material, the combination of a spreader roll, means for applying glue to said roll, a scraper roll for limiting the thickness of the glue film adhering to said spreader roll, journals in which said scraper roll is rotatably mounted, and means for supporting said scraper roller at one or more points between said journals, said supporting means including one or more shoes adapted to bear against said scraper roll, spring means for holding said shoes against said scraper roll, and means for varying the pressure exerted by said spring means.

1,661,175. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. ROBERT M. GILSON, Pittsburgh, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 22, 1926. Serial No. 136,931. 5 Claims. (Cl. 246—34.)



2. In combination, a stretch of railway track divided into a plurality of successive track sections by pairs of staggered insulated joints, a checking relay and a source of energy connected in parallel across the rails between the joints of each pair, and means controlled by each checking relay for supplying track circuit current to the rails of an adjacent section.

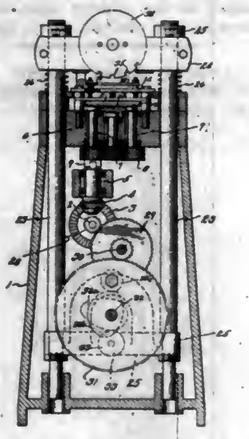
1,661,176. STEEL RAIL. HERMANN GINK, Ansbach, Germany. Filed Sept. 26, 1925, Serial No. 58,938, and in Germany Oct. 9, 1924. 1 Claim. (Cl. 238—150.)



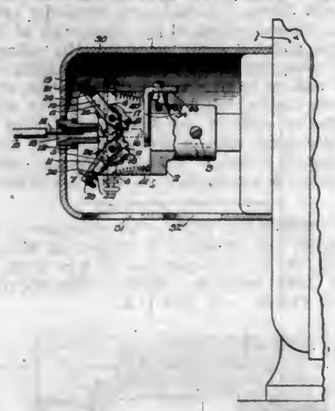
As a new article of manufacture a steel rail having a content of manganese, amounting to from 1¼% to 2%, a content of silicium amounting to from 0.25% to 0.50% and a content of carbon amounting to from 0.20% to 0.45%, said contents of silicium and carbon ranging inversely or approximately inversely relatively to each other.

1,661,177. BUFFER MECHANISM. WILLIAM HAMILTON, Newark, Ohio. Filed Apr. 22, 1924. Serial No. 708,145. 16 Claims. (Cl. 213—22.)

1. Draft rigging comprising a draw bar, and buffer mechanism intervening between said draw bar and the vehicle and comprising a chamber, a series of members of relatively soft compressible resilient material therein, resilient means within said chamber between which and the wall of said chamber said compressible members are confined, the material from which said resilient means is formed differing in character from said compressible resilient material, and means for transmitting force from said draw bar to said compressible members for compressing them and for developing friction upon the wall structure of said chamber and said means.



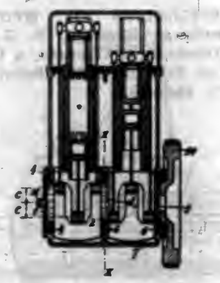
1,661,178. STAMPING OR EMBOSSING MACHINE. CONRAD JOBST, Toledo, Ohio, assignor to The Toledo Automatic Brush Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed June 6, 1923. Serial No. 643,683. 6 Claims. (Cl. 101—5.)



1. A machine of the class described comprising a rotatable carrier having a plurality of tangentially arranged work holders on the periphery thereof, each arranged to support an article with its lengthwise axis tangent to the circle of rotation, a rotatable member provided with a segmental die having a rigid working surface, means for rotating said carrier and member in timed relation to cause said die to roll upon the work in successive work holders, and means allowing a relative yielding between said die and the work when in engagement.

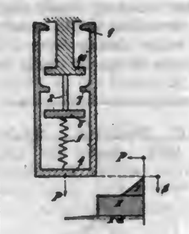
1,661,179. MULTIPLE DRILLING MECHANISM. CONRAD JOBST, Toledo, Ohio, assignor to The Toledo Automatic Brush Machine Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 19, 1925. Serial No. 10,289. 8 Claims. (Cl. 144—94.)

1. In a multiple drill, the combination of a plurality of parallelly arranged plates having drill receiving apertures therein arranged in a predetermined pattern, the same in each plate, of drills engaging the apertures of one of said plates and provided with similar offset crank portions engaging the corresponding apertures of another of said plates, an imperforate plate adjacent to the crank receiving plate and forming a thrust bearing for the ends of said crank portions, means for simultaneously oscillating said crank receiving plate and imperforate plate to simultaneously rotate all of said drills, a fixed bed for supporting said plates and an anti-friction bearing between said bed and said imperforate plate for receiving the end thrust of the drills while permitting the free oscillation of said plate.



1,661,180. INSULATED-WIRE STRIPPER. LAWRENCE JOHNSON, Chicago, Ill., assignor to Johnson & Wentink, Chicago, Ill., a Partnership consisting of Lawrence Johnson and Alfred N. Wentink. Filed Sept. 10, 1924. Serial No. 736,843. 7 Claims. (Cl. 81—9.5.)

1. In a wire stripper, a continuously rotating head, a guide for the insertion of wire to be stripped, and cutting members pivotally hung to swing axially within said head, said members by centrifugal force urged into a plane transverse to the axis of the head, the members axially yielding to the incoming wire but returning to their initial position upon withdrawing the wire and penetrating the insulation while thus returning.



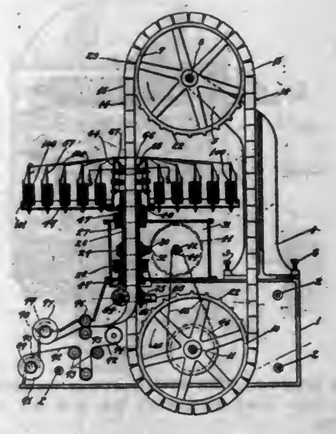
1,661,181. CRANK SHAFT. HUGO JUNKERS, Dessau, Germany. Filed Nov. 17, 1921, Serial No. 515,986, and in Germany Feb. 17, 1921. 3 Claims. (Cl. 74—38.)

1. An engine comprising in combination, a cylinder, two pistons adapted to simultaneously reciprocate in said cylinder in opposite directions, a three throw crank shaft having a middle crank operatively connected with the inner piston and two outer cranks operatively connected with the outer piston and extending oppositely to and having smaller radii than said middle crank, a

circular disc carrying one of said outer cranks, a bearing for said disc, permitting angular movement of said disc, and a crank case constructed to permit of removal of the crank shaft in an axial direction.

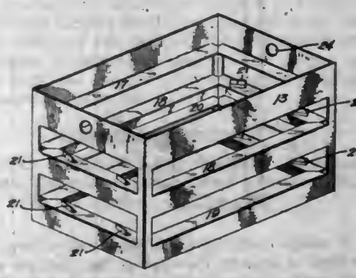
1,661,182. SHOCK-ABSORBING MEANS. HUGO JUNKERS, Dessau, Germany. Filed May 6, 1922, Serial No. 558,901, and in Germany May 6, 1921. 14 Claims. (Cl. 267—60.)

1. The combination with two relatively movable parts, of a shock absorbing device comprising a permanently deformable substantially inelastic member.



1,661,183. WALL-FORMING MEMBER. HUGO JUNKERS, Dessau, Germany. Filed Mar. 30, 1927, Serial No. 179,531, and in Germany Apr. 3, 1926. 14 Claims. (Cl. 72—35.)

2. Wall-forming member comprising a metal skin, a heat insulating layer, a layer of hardened, plastic, mineral matter on said heat insulating layer and a watertight skin on said mineral layer.

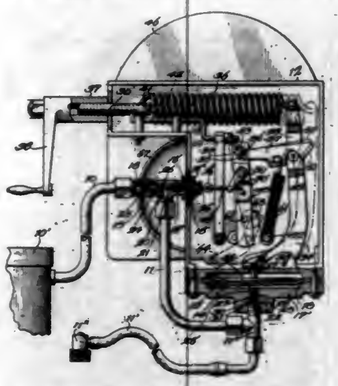


1,661,184. MEANS FOR MAKING WARPLESS TIRE FABRICS IN CONTINUOUS ROLLS. CORNEL KMENTT, Youngstown, Ohio. Filed Dec. 28, 1925. Serial No. 77,948. 18 Claims. (Cl. 154—1.)

1. In a machine for making tubular fabrics, a drive-sprocket and a driven sprocket; an endless mandrel trained about said sprockets and comprising a plurality of rigid sections, and connecting links for hingedly joining said sections; said links being disposed in parallel eccentric relation to the longitudinal axis of said sections

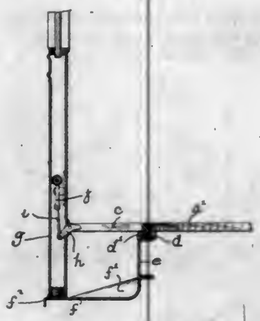
and adjacent said sprockets whereby said sections will jointly form a substantially rigid continuous body when traveling rectilinearly and open up outwardly when traveling around said sprockets.

1,661,185. CHEST HAVING REMOVABLE LINER AND TRAYS. RALPH A. LINDSEY, Minneapolis, Minn. Filed July 26, 1926. Serial No. 124,901. 4 Claims. (Cl. 220—1.)



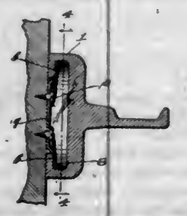
1. A sheet metal rectilinear chest liner having drawer openings in its sides, tray-supporting flanges at the tops of said openings and drawer-supporting flanges at the bottoms thereof, said flanges being cut and pressed from the liner, a tray removably supported in the liner on the tray-supporting flanges, and a drawer movable into and out of the liner through one of said openings and slidably supported on said drawer-supporting flanges.

1,661,186. AIR-SERVICE EQUIPMENT. THOMAS M. MANSON, Toronto, Ontario, Canada, assignor to Service Station Equipment Company, Bryan, Ohio, a Corporation of Ohio. Filed Oct. 7, 1926. Serial No. 140,222. 3 Claims. (Cl. 50—5.)



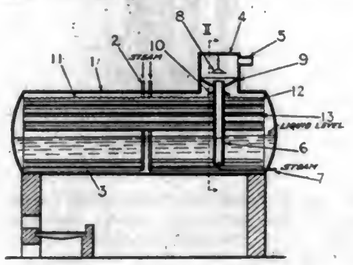
1. The combination with a source of air under pressure; of piping through which air is conveyed from said source to a receiver; a valve between said source and piping; mechanism in controlling relation to said valve and connected with the piping and operable by air admitted thereto from said piping to enable closure of the valve, said mechanism being regulable to enable the

closure of the valve at selected air pressure; and adjustable means for holding the valve open in opposition to the valve closing effect of said mechanism to permit



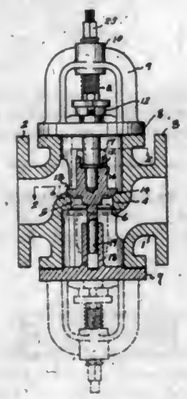
air to be supplied to the receiver at any required higher pressure than that permissible by said air operated mechanism.

1,661,187. VEHICLE BODY. ALFRED F. MASURY and CHARLES FROESCH, New York, N. Y., assignors to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 4, 1925. Serial No. 73,077. 4 Claims. (Cl. 296—25.)



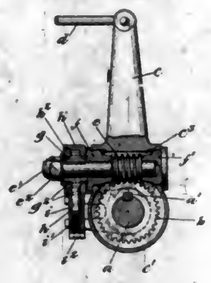
1. In a vehicle body having a floor and a step below the floor level, a door at the edge of the step, an articulated floor section carried with the door, and means carried with the door and automatically operable upon movement of the door to move said section between a position in continuation of the floor and a position uncovering the step.

1,661,188. WALL FIXTURE. ALBERT K. MATTHEWS, Oak Park, Ill. Filed Dec. 6, 1926. Serial No. 153,024. 2 Claims. (Cl. 248—20.)



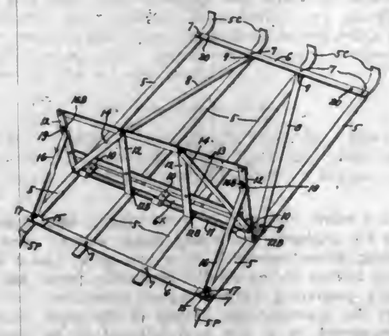
1. A wall fixture including an attaching plate having offset resilient end portions provided with apertures, a fixture having a hollow base for the reception of the plate, and means on one of the members operated by the rotation of the fixture relative to the plate for engaging in the apertures of the plate to hold the fixture and plate against accidental relative rotation.

1,661,189. DISTILLATION OF HYDROCARBONS. MERLE R. MEACHAM, Elizabeth, N. J., assignor to Standard Oil Development Company, a Corporation of Delaware. Filed June 25, 1923. Serial No. 647,517. 6 Claims. (Cl. 196—85.)



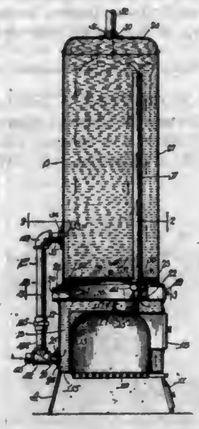
1. Apparatus of the character described which comprises a still, multi-perforated steam inlet pipes along the bottom of the still, an open-ended circulating tube projecting upwardly into the still from a point near the bottom, a steam jet beneath said circulating tube, deflector plates and a trough near the upper end of the circulating tube for receiving liquid discharged from the tube, said trough extending longitudinally of the still and having its side walls shaped with liquid distributing edges, and a plurality of spaced liquid distributing baffles under the trough.

1,661,190. VALVE. WILLIAM J. MEAD, Galveston, Tex. Filed May 13, 1927. Serial No. 191,146. 8 Claims. (Cl. 251—155.)



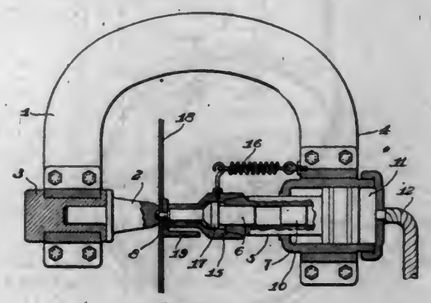
1. A device of the character described including a casing having a fluid conduit therethrough, a web in the casing having an opening which forms a continuation of said conduit, said web being formed with valve seats, one on each side of said opening, removable end plates carried by the casing, a yoke carried by one of said end plates and formed with an internally threaded bearing, a valve stem threaded through said bearing and passing through the corresponding end plate, a valve having a swivelling connection with said stem and adapted to cooperate with one of said seats to open or close said opening and a detachable split-nut retaining the valve on the stem.

1,661,191. AUTOMATIC BRAKE-ADJUSTING MECHANISM. GABRIEL MIDBOE, Brooklyn, N. Y., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 8, 1927. Serial No. 159,880. 1 Claim. (Cl. 188—196.)



In an automatic brake adjusting mechanism, means for applying the brake, mounting means therefor, a brake lever associated therewith, a cylindrical housing receiving the brake applying means, a similar housing therein disposed transversely of the first housing, a worm wheel carried by the applying means and received within the first housing, a shaft transverse to the applying means and carried by the second housing, a worm mounted on the second shaft and engaging the worm wheel, a ratchet and pawl mechanism carried by the second shaft outside the second housing, an arm carried by the ratchet and pawl device, and spaced lugs upon the first named mounting means, said arm extending between the lugs whereby predetermined movement of the lever with respect to the mounting means causes the arm to engage a lug to effect the operation of the ratchet mechanism.

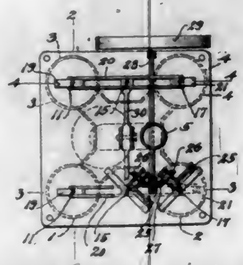
1,661,192. PORTABLE ROOFING HOLDER. ELMER M. NELSON, St. Paul, Minn. Filed Sept. 7, 1927. Serial No. 217,998. 2 Claims. (Cl. 304—20.)



1. In a portable roofing holder, a quadrangular base with parallel skid bars turned upwardly at their front ends and a number of said bars bent downwardly and pointed at their rear ends, a quadrangular frame pivotally mounted transversely on said base and intermediate its ends, said frame adapted to be raised vertically with relation to the base and means for holding said frame in its upright position, said latter means comprising a number of brace bars each pivotally mounted with one end to the rear part of the base and adapted to removably engage the upper or free edge portion of said frame with its free end, and means securing each said brace to the frame.

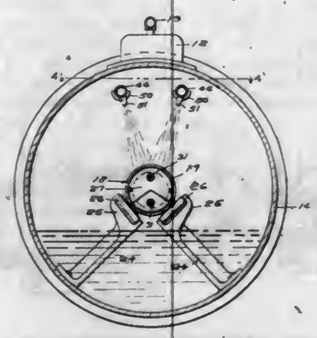
1,661,193. WATER HEATER. JESSE H. NEWPORT, Kenilworth, Ill. Filed Dec. 28, 1922. Serial No. 609,380. 3 Claims. (Cl. 122—15.)

1. In a heater of the character described, the combination with a water chambered fire pot having a horizontal partition near the top thereof and said partition being provided with a flue passageway therethrough; of a separate water storage tank supported on said fire pot and having a bottom wall spaced above the said horizontal partition to thereby provide with the latter a supplemental flue chamber and a direct heating surface on the bottom wall of the tank; a pipe connection between the tank and the fire pot located exteriorly thereof; a second pipe connection between said tank and the fire pot and located within the confines of the side walls of the tank and the fire pot, the said second connection comprising a detachable union; and means providing access from the exterior of the heater to said union for manipulating the latter.



1,661,194. RIVETING APPARATUS. RAYMOND S. OSBORNE, Cincinnati, Ohio. Filed Feb. 3, 1925. Serial No. 6,554. 2 Claims. (Cl. 78—48.)

1. In a jam riveter, the combination of a yoke comprising a pair of arms, a rivet set rigidly borne by one yoke arm and a hammer riveter mounted on the other yoke arm, said riveter including a single barrel in axial alinement with the rivet set and slidable in the yoke arm, means for forcing said barrel toward the rivet set, a work clamping sleeve firmly seated on the inner end of the hammer barrel having an annular face in axial alinement with the rivet set and normal to such axis, pro-

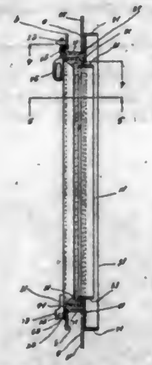


vided with a clearance bore for the upset head of the rivet and with a larger bore intermediate said face and the end of the hammer barrel, a hammer having portions fitting the hammer barrel and the clearance bore of the clamping sleeve and having a collar in the larger intermediate bore of said sleeve, and a reciprocating piston back of and adapted to strike the inner end of the hammer.

1,661,195. BALANCED PUMP. ADELBERT F. PARKER, Ogden, Utah; Wynne M. Parker, administrator of the said Adelbert F. Parker, deceased. Filed Jan. 9, 1923. Serial No. 611,584. 7 Claims. (Cl. 103—206.)

1. A pump including a pair of working cylinders and a pair of balancing cylinders, a pair of working pistons mounted in each working cylinder, telescoping piston rods for the working pistons, a balancing piston mounted in each balancing cylinder, a piston rod for each balancing piston, separate lever connections between the piston rod of the balancing piston and the piston rods of the working pistons of each pair whereby the working pistons have a differential movement, and means for causing the pressure due to the head against which the pump is operating to act upon the balancing pistons in such a manner as to counterbalance the pressure on the working pistons.

1,661,196. APPARATUS FOR CRACKING OIL. ROYAL S. PERSHING, Fort Worth, Tex. Filed Oct. 28, 1924, Serial No. 746,434. Renewed July 21, 1927. 6 Claims. (Cl. 196—121.)

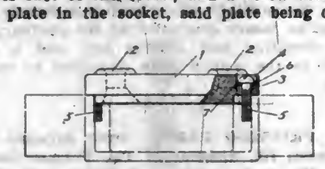


2. In apparatus of the character described, a still, a plurality of spaced supports having rollers mounted within the still, a metallic container supported by the rollers, electrical heating means within the metallic container, means for spraying oil upon the metallic container, and means whereby the vapors generated may pass from the still

1,661,197. GAME. ALBERT P. RICHARDSON, Salem, Mass., assignor to Parker Brothers, Inc., Salem, Mass., a Corporation of Massachusetts. Filed Dec. 8, 1927. Serial No. 238,521. 6 Claims. (Cl. 273—102.)

1. A game target adapted to be applied to a standard, the target having a spring clamp for removably attaching it to an edge of the standard, so that the target will be dislodged only by a direct hit.

1,661,198. WINDOW FRAMING. EDWARD M. RUNDGREN, Chicago, Ill., assignor to Western Architectural Iron Company, Chicago, Ill. Filed Oct. 19, 1925. Serial No. 63,210. 4 Claims. (Cl. 189—69.)



1. A window construction comprising a main framing having an outwardly projecting flange and an inwardly projecting flange connected by a web part; and a sash framing having an outwardly projecting flange and an inwardly projecting flange adapted respectively to seat against the corresponding flanges of the main framing and connected by a web part adapted to be situated opposite the web part first mentioned; a lateral flange on the inwardly projecting flange of the sash framing to engage with the edge of the inwardly projecting flange of the main framing; and means for securing the sash framing in place, substantially as described.

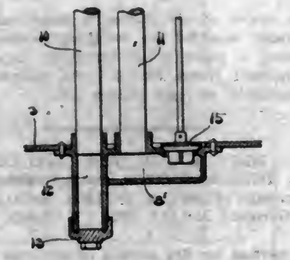
1,661,199. CONTAINER COVER. HOWARD A. SELAH, Erie, Pa., assignor to Erie Malleable Iron Company, Erie, Pa., a Corporation of Pennsylvania. Filed Dec. 26, 1924. Serial No. 758,137. 2 Claims. (Cl. 247—15.)

1. In a container cover, the combination of a cover having an opening therethrough adapted to receive a

securing screw, said opening terminating in a socket on the outer face of the cover; and a screw retaining perforated plate in the socket, said plate being of initially

greater diameter than the socket, and said plate being of soft material with its edges cupped in engagement with the walls of the socket.

1,661,200. TOILET ARTICLE. SAMUEL SPITZ, New York, N. Y. Filed Aug. 24, 1927. Serial No. 215,006. 7 Claims. (Cl. 132—84.)

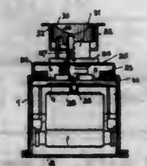


1. In a toilet article, a handle, a brush holder pivotally mounted on one end of the handle, a brush detachably secured in said holder and shaped to brush the surfaces of the teeth, a second brush pivoted to the other end of the handle and shaped to brush between the teeth, and a spring-mounted on the handle and engaging with the brush holder at one end and the brush at the other end to hold them against inadvertent pivotal movement.

1,661,201. PROCESS OF MAKING STARCH PRODUCTS. ERNST STERN, Charlottenburg, Germany. Filed Mar. 20, 1926, Serial No. 96,331, and in Germany Aug. 5, 1924. 22 Claims. (Cl. 127—33.)

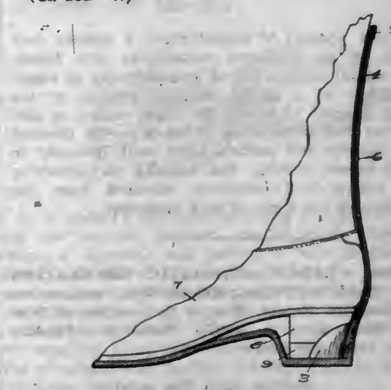
1. A process consisting in that a composition of starch and of a compound of alkaline earths capable of precipitating the composition in water is mixed with at least one additional agent of salt character consisting of anionic and cathionic ingredients and soluble in water, at least one of the ingredients named being capable of forming with the starch a starch composition soluble in the solvent named.

1,661,202. TANK-CAR SIPHON VALVE. EDWIN S. THAYER, Oakdale, Pa. Filed Jan. 26, 1925, Serial No. 4,712. Renewed Dec. 20, 1927. 9 Claims. (Cl. 137—21.)



2. In combination with a tank, a siphon having its inlet leg mounted in a sump in the tank, and a valve for controlling the admission of liquid into the sump, the outlet leg of said siphon being connected to a discharge pipe.

1,661,203. PROCESS FOR THE RAPID EVAPORATION TO DRYNESS OF AMMONIUM-NITRATE SOLUTIONS. CARLO TONIOLO, Milan, Italy. Filed Jan. 27, 1926, Serial No. 84,251, and in Italy Feb. 7, 1925. 4 Claims. (Cl. 23—103.)

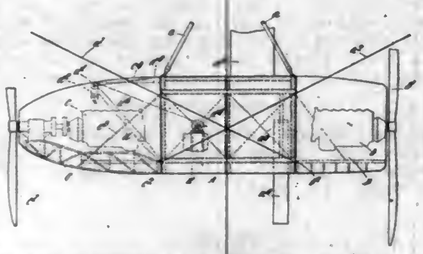


1. The process of preparing dry ammonium nitrate which comprises incorporating a hot concentrated ammonium nitrate solution with a mass of dry ammonium nitrate while blowing air through said dry nitrate.

1,661,204. WRITING DEVICE. WALTHER VOITH, St. Polten, near Vienna, Austria. Filed Oct. 24, 1924, Serial No. 745,581, and in Austria Oct. 31, 1923. 6 Claims. (Cl. 281—11.)

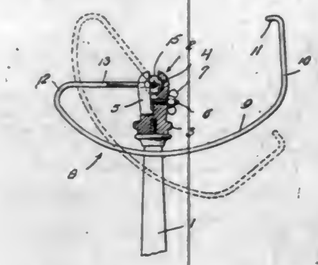
1. In a device comprising a casing, a window therein, and a strip for a manuscript under said window, said strip being guided within said casing, the combination of a runner arranged above said window, means for guiding said runner longitudinally to said window, a slide guided upon said runner transversely of its longitudinal movement, and a sleeve, said sleeve carrying a stylus, said sleeve being supported by said slide, said sleeve being movable perpendicularly to said strip, a spring tending to move said sleeve away from said strip, and a knob fixed to said sleeve, said sleeve being movable in all directions parallel to said strip while being pressed against it.

1,661,205. ARCTIC APPLIER AND REMOVER. CARL R. WAGNER and CLYDE E. RUBOTTOM, Peoria, Ill. Filed Sept. 29, 1927. Serial No. 222,718. 3 Claims. (Cl. 132—7.)



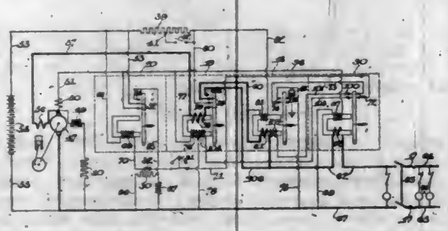
1. In an arctic applier and remover the combination of a heel guard adapted to be placed on the heel of a shoe, and a flexible member attached to the guard and passing to the upper portion of an arctic.

1,661,206. LIGHTER-THAN-AIR AIRCRAFT. BARNES NEVILLE WALLIS and CHARLES DENNISTON BURNEY, Westminster, London, England, assignors to Airship Guarantee Company, Limited, Westminster, England, a British Company. Filed Sept. 17, 1927, Serial No. 220,245, and in Great Britain Sept. 17, 1926. 6 Claims. (Cl. 244—6.)



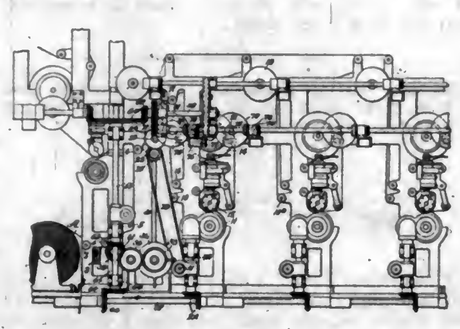
1. An engine car for an airship, comprising a permanent section to which the drag wires and suspension

wires are connected and which surrounds the access tank to the airship and a removable section which contains the engine and its propeller and which is



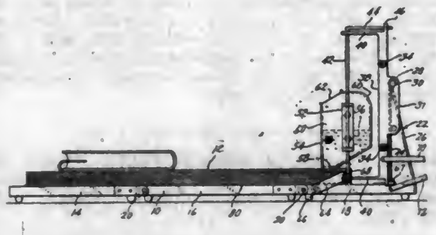
detachably connected to the permanent section so that when necessary it can be removed without disturbing the controls and fixtures etc. in the permanent section.

1,661,207. DISPLAY RACK. SAMUEL L. WEAVER, Chicago, Ill., assignor to J. Howard Steiner, Leo Schoneberg, and Harry Silvers, Chicago, Ill. Filed Jan. 8, 1927. Serial No. 159,915. 2 Claims. (Cl. 211—163.)



1. As a new product of manufacture, a display rack in the form of an elongated rectangular wire frame, having its central portion bowed longitudinally to represent a segment of a circle, one end portion of the frame being directed at substantial right angles to said bowed portion and terminating in an inwardly directed hook, the opposite end portion being bent inwardly to overlie the bowed portion and forming an attaching extension, and a ball connector mounted upon the central portion of the bight of said extension.

1,661,208. LARGE AUTOMATIC GENERATING PLANT. EARL R. WITZEL, Kohler, Wis., assignor to Kohler Company, Kohler, Wis., a Corporation of Wisconsin. Filed May 14, 1927. Serial No. 191,421. 4 Claims. (Cl. 290—30.)



2. In combination with the automatic control switching mechanism for gas-engine-operated generating units of the demand starter type having a control relay for starting and stopping the unit depending on a demand on the mains provided with a holding coil in series with the mains, an auxiliary relay having a coil in series with the mains, means controlled by the auxiliary relay for short circuiting said holding coil, and a second holding coil on the control relay controlled by the auxiliary relay.

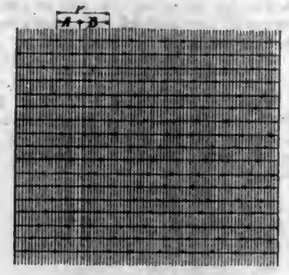
1,661,209. PRINTING PRESS. OTTO RICHARD WOLF, River Forest, Ill., assignor to The Tribune Company, Chicago, Ill., a Corporation of Illinois. Filed June 12, 1922. Serial No. 567,624. 28 Claims. (Cl. 101—152.)

1. In a printing press having printing units, a web feed device and a drive, the combination of driving means for said device and driven by said drive, said means including differential driving elements, and continuously operated adjustable elements for varying the driving effect of one side of the differential driving elements.

1,661,210. WRAPPER-PASTING DEVICE. HARRIE P. WOOD, Leonia, N. J. Filed July 22, 1926. Serial No. 124,199. 9 Claims. (Cl. 93—68.)

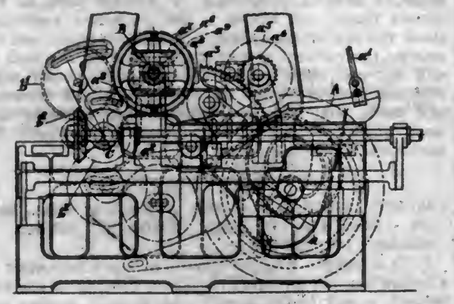
1. In a device of the character described, a suitable base, a frame mounted for swinging movement relative to said base, a plurality of vertically arranged guides mounted in said frame, and a paste receptacle or tank slidably mounted on said guides.

1,661,211. METHOD FOR THE DRY COOLING OF COKE. REINHARD WUSSOW, Charlottenburg, near Berlin, Germany. Filed Oct. 19, 1926, Serial No. 142,693, and in Germany Jan. 17, 1923. 2 Claims. (Cl. 202—11.)



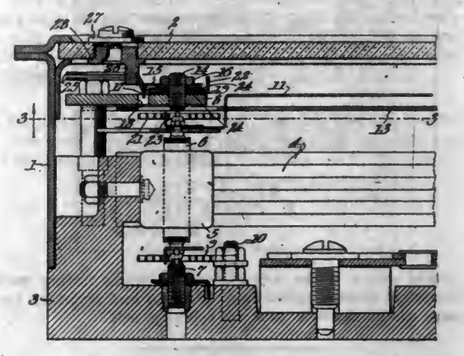
1. The method for dry cooling of hot coke and production of water gas, which comprises cooling the coke by circulating a gaseous carrier medium, chemically inert with respect to the coke, through the lower portion only of a vertical column of the coke, the upper portion of the column being at a temperature sufficient to carry out the water gas reaction; injecting into the circulating

gaseous medium, while out of contact with the coke, a spray of water to cool said medium and to produce steam; allowing gas to pass through the column from the lower



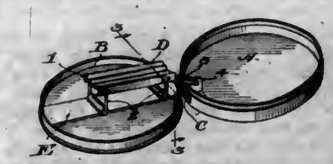
portion of the column to the top thereof; and withdrawing at the top of the column the water gas formed by the reaction of the steam with the hot coke.

1,661,212. HACKLING MACHINE. THOMAS BARBOUR, Belfast, Ireland. Filed June 3, 1926. Serial No. 113,520, and in Great Britain June 16, 1925. 1 Claim. (Cl. 19—127.)



A hackling machine having a series of hackles each provided with a row of pins, the pins of the successive hackles being arranged in diagonal paths, and said paths being spaced apart different distances, in order that some of the pins of each hackle are made to intersect spaces which would prevail if the pins of the hackles were spaced apart regularly.

1,661,213. HACKLING MACHINE. THOMAS BARBOUR, Belfast, Ireland. Filed June 3, 1926, Serial No. 113,521, and in Great Britain June 16, 1925. 9 Claims. (Cl. 19—70.)

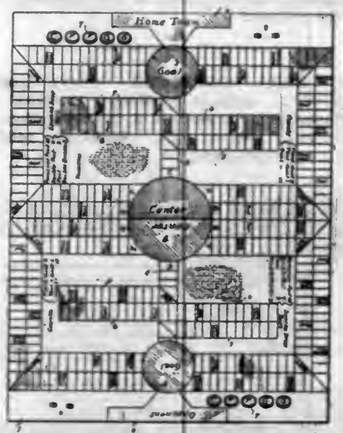


1. In a hackling machine, mechanism for reciprocating the material and actuating hackling means to operate on the material, and including a differential motion device so controlled by the movement of said material and driving the hackling means as to produce a uniform hackling action without regard to the direction of movement of the material.

1,661,214. ZERO CORRECTOR. GRANT CARPENTER, Newark, N. J., assignor to Weston Electrical Instrument Corporation, Newark, N. J., a Corporation of New Jersey. Filed Nov. 6, 1926. Serial No. 146,766. 4 Claims. (Cl. 116—129.)

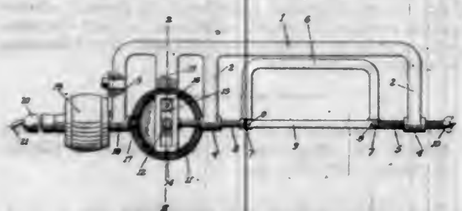
1. A zero adjuster comprising a spring abutment, a corrector plate at each side of said abutment and in surface contact therewith, means pressing said plate and abutment into frictional engagement to prevent relative angular movement thereof, extensions on said corrector plates, and an eccentric cooperating with said extensions for adjusting said plates.

1,661,215. SMOKER'S APPLIANCE. DANIEL W. CAUSEY, Norfolk, Va. Filed Aug. 12, 1926. Serial No. 128,791. 8 Claims. (Cl. 131—51.)



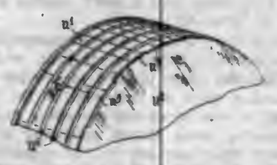
8. A smoker's appliance including a receptacle comprising two cup-like sections, one of which constitutes a cover, a cigarette rest having a base member rigidly fitted into one of the receptacle sections, and a plate member provided with swinging supports connected with the base member and with the plate member, and means causing the automatic raising of the plate member with its supports upon the removal of the cover section of the receptacle, and for the depression of the plate member upon replacing said cover section.

1,661,216. BASKET-BALL GAME. SAMUEL DESTEFANO, Monessen, Pa. Filed May 9, 1927. Serial No. 190,074. 1 Claim. (Cl. 273—85.)



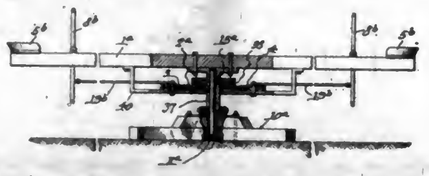
A game of the character specified comprising a base having a playing field delineated thereon, and including a centrally disposed space divided to provide two starting points, and a space at each end of the base representing a goal, a line of spaces extending longitudinally from each starting point, thence extending laterally and across the base from one side to the opposite side and returning and making connection with the goal, and other lines of spaces extending laterally in opposite directions

from each starting point, thence along the marginal edges of the base and returning and connecting with the goal,



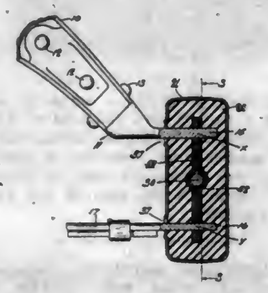
certain spaces of the several lines of spaces having data imprinted thereon indicating the move and count of the game pieces movable over the playing field.

1,661,217. POWER-DRIVEN BUTCHER SAW. FRED FARRELL, Sacramento, Calif. Filed Mar. 8, 1926. Serial No. 93,030. 2 Claims. (Cl. 143—68.)



1. A power saw comprising a main frame, an auxiliary frame transversely alined with the main frame, longitudinally alined stems projecting from the ends of the auxiliary frame and slidable in the main frame, means mounted in connection with the stems for supporting a saw in longitudinal alinement with the stems, a motor axially alined with the stems mounted on the main frame beyond the auxiliary frame, a slotted crosshead mounted on the adjacent stem, the slot of said crosshead being at an angle to the stem, a gear driven from the motor mounted on the main frame and to one side of the crosshead in a plane parallel thereto, and a block turnably mounted on the gear eccentric to the axis thereof and riding in the slot to impart longitudinal reciprocating movement to the crosshead and stem with the rotation of the rear.

1,661,218. BRAKE DRUM. JENÖ FEJES, Budapest, Hungary. Original application filed May 28, 1926, Serial No. 112,343. Divided and this application filed Dec. 30, 1926. Serial No. 158,067. 2 Claims. (Cl. 188—218.)

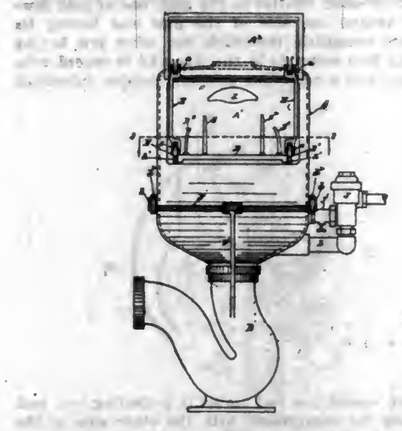


1. A brake drum for wheels of motor and other vehicles comprising a cylindrical portion (u_1), and a disc-like portion (u_2), both portions being made of sheet-iron and edge-welded together and the said cylindrical portion (u_1) of sheet iron being made of a strip having dovetailed ends butt-welded along the edges, as set forth.

1,661,219. MERRY-GO-ROUND. CYRUS WEST FIELD, Wauseon, Ohio; Cora Bell Maxwell, executrix of Cyrus W. Field, deceased, assignor to Cora Bell Maxwell, Delta, Ohio. Filed Feb. 7, 1925. Serial No. 7,655. 2 Claims. (Cl. 272—33.)

1. In a device of the character described, a base, a casting supported on the base and having an upper reduced end portion, shaft extending upwardly from the base, a beam having seats at its ends, a bracket extending downwardly from the beam and having an opening to receive the reduced end portion, a gear on the shaft, a plurality of gears carried by the bracket, manually controlled means for operating the last mentioned gears, to rotate the beam, and anti-friction means for supporting the weight of the beam.

1,661,220. SPRING SHACKLE. HARVEY D. GEYER, Dayton, Ohio, assignor to The Inland Manufacturing Company, Dayton, Ohio, a Corporation of Delaware. Filed May 18, 1926. Serial No. 109,979. 6 Claims. (Cl. 267—30.)

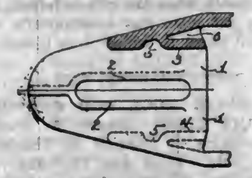


1. In combination with a vehicle spring and chassis frame, a shackle comprising: a member fixed to the chassis frame and having a flat projection positioned above the end of the spring, a rubberized fabric web extending transversely to and linking together the ends of said flat projection and spring, a flexible rubber block confining said projection and spring end and enclosing said fabric web, and a metallic housing confining said block under compression and isolated from both the spring and frame member.

1,661,221. BEDPAN WASHER. GEORGE F. HALL, Erie, Pa. Filed Dec. 15, 1926. Serial No. 155,012. 5 Claims. (Cl. 141—1.)

1. In a bed-pan washing apparatus, the combination of a hollow box-like structure having an opening in one side thereof, a door hinged at one edge of said opening and adapted to close said opening, a holder frame hinged to said box-like structure, and to said door, whereby when said door is closed said holder frame is folded into said box, a jet spray adapted to direct a jet of water against

the upper side of said holder frame, means to secure a bed-pan on said holder, and a valve mechanism adapted

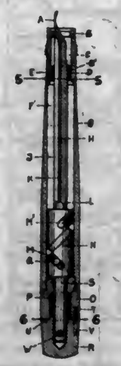


to be tripped by said holder when a pan is secured thereon and it is folded into said box, whereby said pan will be cleansed.

1,661,222. ELECTRIC HEATER. WILLIAM C. HUNT, Toronto, Ontario, Canada. Filed Mar. 12, 1927, Serial No. 174,868, and in Canada Feb. 17, 1927. 10 Claims. (Cl. 219—34.)

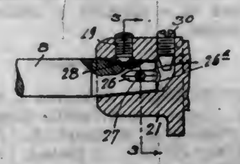
1. An electric heater comprising a reflector plate; a block of insulating material secured to the plate; terminals for the connection of conductors secured thereto and accessible at the back of the plate; arms at the front of the plate connected with the terminals; a core of insulating material for resistance wiring; resistance wiring carried thereby; metal caps adapted to disengageably receive the ends of the core; means for detachably securing said caps to the aforesaid arms; and means for detachably securing the ends of the resistance wiring to said metal caps.

1,661,223. COUPLER YOKE. GEORGE T. JOHNSON, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed Dec. 16, 1924. Serial No. 756,342. 8 Claims. (Cl. 213—70.)



1. A draft yoke for cars having a hooded end with a floor and a roof, the opposed surfaces of the floor and the roof being parallel with the longitudinal axis of the yoke and arranged to closely engage the top and bottom of a coupling shank, said surfaces having transverse channels between their ends and the rear portions of the roof and floor being vertically expanded and provided with sockets in their rear edge portions.

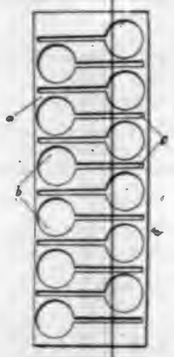
1,661,224. PRIMARY GALVANIC BATTERY. ERNST WALDEMAR JUNGNER, Kneippbaden, Sweden. Filed June 1, 1920, Serial No. 385,785. and in Sweden Feb. 14, 1919. 3 Claims. (Cl. 136—122.)



1. A porous electrode for electric batteries, consisting of porous carbon the pore walls of which are coated with a thin layer of paraffine in such manner that the natural pore volume of the carbon is maintained to an essential degree.

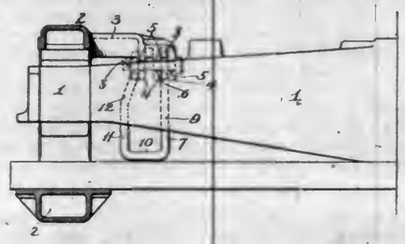
1,661,225. FOUNTAIN PEN. THEODOR KOVÁCS, Berlin, Germany. Filed Mar. 6, 1926, Serial No. 92,807, and in Germany Mar. 3, 1925. 7 Claims. (Cl. 120—49.)

1. A fountain pen comprising an inkholder, a feed bar, means for reciprocating said feed bar in said inkholder, a nib at the outer end of said feed bar at one side thereof, a ring holding said nib on said feed feed bar, said feed bar defining an air channel extending along the side of said feed bar where said nib is secured thereto so as to be covered at its end by said nib, and also defining capillary ink grooves extending along the bottom of said air channel into the vicinity of the point of said nib, said air channel being of such area, and said capillary grooves extending into said inkholder so far as to permit ink to flow downwardly from such passage when said fountain pen is held with the nib up, a shoulder at the end of said inkholder which is adapted to cooperate with said ring on said feed bar to close said inkholder, and a shoulder at the rear of said first-mentioned shoulder which is adapted to cooperate with said ring in the retracted position of said feed bar so as to constitute with said ring an annular space which is so narrow as not to permit air to pass when it is filled with ink.



1,661,226. SHAFT COUPLING. ARTHUR MARTIN, Pittsburgh, Pa. Original application filed Aug. 27, 1924, Serial No. 734,464. Divided and this application filed Feb. 20, 1925. Serial No. 10,595. 2 Claims. (Cl. 64—89.)

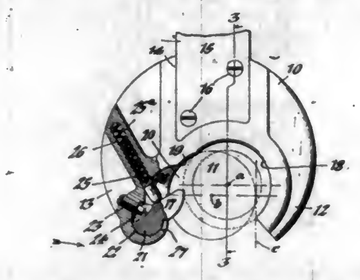
1. Driving mechanism comprising a driving shaft, a driven shaft, one of said shafts having a tapered end and



the other being provided with a tapered socket, a set screw carried by the socket and having a tapered point, the tapered shaft end having a recess adapted to be engaged by said tapered screw point, the said recess and screw being normally slightly offset longitudinally of the shaft so that when the screw is driven down the tapered shaft end will be drawn tightly to its seat within the socket, and a second tapered screw carried by said socket in position to be brought into engagement with the end of said tapered shaft when drawn to its seat by the first-named screw and start it from its seat.

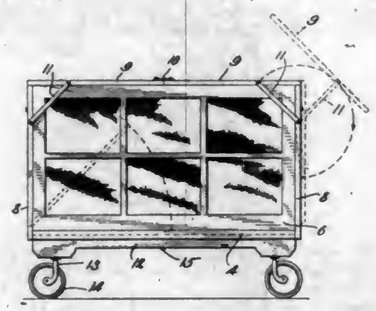
1,661,227. UTENSIL FOR MOLDING SUGAR SWEETMEATS. HUGH MCALLISTER, Wishaw, Scotland. Filed Mar. 25, 1926, Serial No. 97,415, and in Great Britain Apr. 3, 1925. 1 Claim. (Cl. 107—19.)

A device for the rapid manufacture of lollipops, untouched by hand, comprising a mold sheet of rubber formed with through-orifices of the size and shape of lollipops, and stick-guiding slots, one intersecting each hole.



1,661,228. BRAKE HANGER. JOHN STEWART MCPHERSON, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed July 16, 1925. Serial No. 44,044. 4 Claims. (Cl. 188—209.)

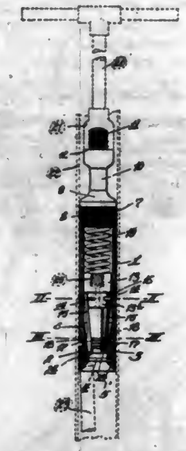
1. In a car brake hanger mechanism, the combination of a car truck side frame, a hanger bracket on the side frame, a brake hanger, and means whereby the hanger may be suspended at a plurality of selected distances from the side frame.



1,661,229. PIPE WRENCH. GUSTAVUS A. MONTGOMERY, Titusville, Pa., assignor to Titusville Forge Co., Titusville, Pa., a Corporation of Maryland. Filed Mar. 6, 1924. Serial No. 697,241. 5 Claims. (Cl. 81—97.)

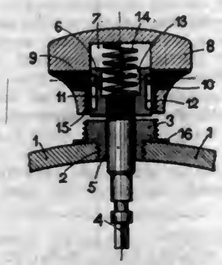
1. A wrench of the character described, comprising a head having a pipe-receiving opening and opposing jaws, the mouth of said opening being contracted and of a size to pass over the pipe to be turned while its body portion is of such dimensions as to permit a lateral movement of the wrench relative to the pipe, one of said jaws extending around one side of the pipe and having its bearing face concentric therewith, the other jaw having its opposing face eccentric to the pipe and in spaced relation thereto, and a releasable gripping member fulcrumed

on said last- named jaw and normally projecting into said head-opening for engagement with the other side of the pipe, said gripping member being arranged to grip the pipe when the wrench is turned but permitted to be released therefrom when the wrench is pulled in a direction away from the pipe, or to be automatically displaced from the opening-mouth when the wrench is thrust over the pipe.



1,661,230. CRIB. FRANK FETZER MORRISON, Charlotte, N. C. Filed Feb. 8, 1926. Serial No. 86,858. 1 Claim. (Cl. 5—97.)

A collapsible crib including a bottom, wheel supported strips hingedly connected thereto and foldable thereagainst, means extending through the bottom and strips for holding them against relative movement, said means being removable, side and end panels hingedly connected to the bottom and foldable relative thereto, top panels adapted to rest upon the side and end panels when set up for use, links constituting the sole connections between the top and end panels, said links being connected to the side edges of the top and end panels to provide abutments for limiting outward swinging movement of the side panels, each top panel, when the crib is folded, being movable to positions flat upon and substantially within the bounds of the end panel to which it is linked.

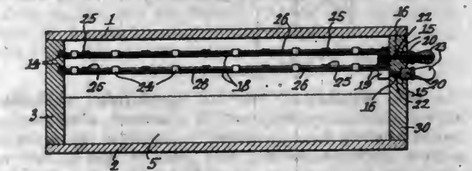


1,661,231. GRIPPING TOOL FOR ENGAGING AND PULLING PUMP RODS. JOSEPH W. OBERBECK, St. Louis, Mo., assignor of one-half to Charles A. Winston, Bowden, Okla. Filed Aug. 13, 1923. Serial No. 657,047. 5 Claims. (Cl. 294—102.)

3. A gripping device comprising a tubular member, a reciprocal supporting block having a reduced end, a plurality of outwardly projecting pins extending from the reduced end of said block, a gripping jaw loosely mounted on each of said pins, said tubular member adapted to retain said jaws on said pins, and means

provided in said member whereby said jaws will be moved towards each other when said block is moved in one direction in said member.

1,661,232. KEYLESS WATCH. GEORGES PERRET, La Chaux-de-Fonds, Switzerland, assignor to Hans Wilsdorf, Bienne, Switzerland. Filed Oct. 19, 1926, Serial No. 142,725, and in Switzerland Oct. 30, 1925. 1 Claim. (Cl. 58—63.)



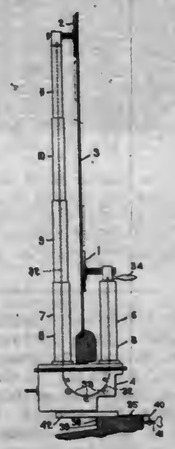
A keyless watch including a winding stem provided with an external head of larger diameter than said stem, a winder screwing upon a fixed part of the watch casing and being recessed to receive said head, a pin and slot connection between said head and winder compelling them to rotate together while at the same time permitting independent reciprocatory movement of said members, the end walls of said slot cooperating with said pin to cause said stem and winder to reciprocate together at the ends of their range of independent reciprocatory movement, one of said members being formed endwise with a recess, and a spring held in compression within said recess between said members.

1,661,233. PRODUCT KILLED HOG CHOLERA VIRUS AND PROCESS OF PRODUCING IT. JOHN REICHEL, Philadelphia, Pa. Filed Feb. 16, 1925. Serial No. 9,706. 3 Claims. (Cl. 167—10.)

2. The process of obtaining killed hog cholera virus, consisting in adding to a definite quantity of live virulent hog cholera virus in the form of defibrinated blood 0.5% phenol, and subjecting the mixture to a temperature of from 5° to 10° C. for from thirty to ninety days, sufficient to check bacterial growth, and then a temperature of about 37° C. for about thirty days, to kill all bacterial contamination and the hog cholera virus.

3. Killed hog cholera virus, dissociated from live virulent hog cholera virus, as a non-infective and immunizing agent against hog cholera when injected into susceptible hogs in doses of from 5 cc. to 50 cc. for each fifty pounds or fractin thereof per hog, and made from live virulent hog cholera virus mixed with a preservative and subjected to temperatures of from 5° to 10° C. for from thirty to ninety days and thereafter to a temperature of about 37° C. for a period of about thirty days.

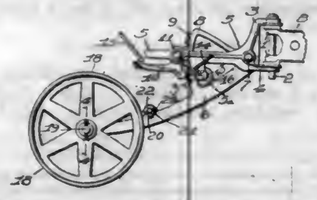
1,661,234. CALCULATING MACHINE. ULYSSES GRANT ROBINSON, Oelrichs, S. Dak. Filed Dec. 11, 1926. Serial No. 154,246. 1 Claim. (Cl. 45—2.)



In a device of the class described, a cabinet comprising sides, one of the sides having an external guide groove and having a slot communicating with the groove, the other of the sides having an internal guide groove, a carrier one edge of which is mounted slidably in the internal groove, a slide rod mounted to reciprocate in the external groove, and spaced connections joining the slide rod with the other edge of the carrier, one of the connections being movable in the slot.

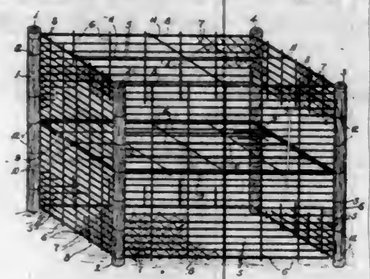
1,661,235. METHOD OF TREATING ELECTRONIC-EMISSION DEVICES. MAURICE D. SABREY, Cleveland, Ohio, assignor to Kemet Laboratories Co. Inc., a Corporation of New York. Filed Oct. 21, 1925 Serial No. 64,056. 8 Claims. (Cl. 250—27.5.)

1. Method of treating electronic emission devices to improve their emissive characteristics, comprising superheating the cathode in presence of a high anode potential to reduce the emissivity, and thereafter further heating the cathode in absence of anode potential.



1,661,236. WINDOW-WASHING DEVICE. HARRY SEBELL, Boston, Mass. Filed Mar. 12, 1925. Serial No. 14,885. 8 Claims. (Cl. 15—103.)

3. In a window cleaner, the combination with two cleaning elements, of a forked supporting frame for



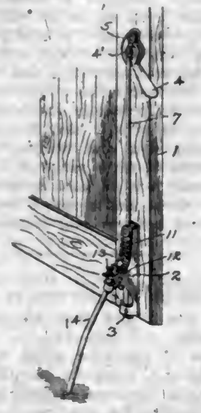
supporting said elements on opposite sides of a pane to be cleaned, the arms of the forked frame being extensible and contractible and means for simultaneously extending one arm and contracting the other.

1,661,237. GAUGE WHEEL FOR AGRICULTURAL IMPLEMENTS. STANLEY W. SHAW, Galesburg, Kans. Filed Feb. 14, 1927. Serial No. 168,196. 3 Claims. (Cl. 97—189.)

1. The combination with an agricultural implement having a ground-working tool, of a bracket, a supporting member having arms arranged to straddle the bracket, a pivot pin for connecting said arms to said bracket to swing the support in a horizontal plane, an arm pivotally mounted on said support, a locking quadrant carried by the arm, means carried by the support for guiding the arm and the quadrant in their pivotal movement with respect to the support, a bell crank lever pivotally secured to said support and having a tooth arranged to cooperate with said quadrant for locking the latter in a plurality of shifted positions, a spring secured at one end to said support and the other end to the tooth for normally holding the tooth in its locking position, means for moving the bell crank lever to release the tooth, and a gauge wheel pivotally mounted at one end of said arm.

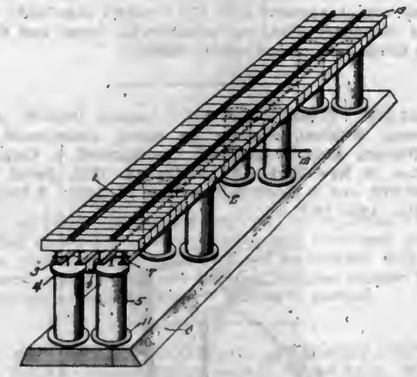
1,661,238. ROCK PACK, PILLAR, OR LIKE SUPPORT FOR USE IN MINE WORKINGS. JOHN SLOAN, Johannesburg, Transvaal, South Africa. Filed Mar. 31, 1926, Serial No. 98,920, and in the Union of South Africa May 30, 1925. 7 Claims. (Cl. 61—42.)

1. A support for use in mine workings, including a skeleton metal cage for holding filling material packed in said cage, so that the cage serves to maintain the filling material in position until it takes the pressure or weight of the hanging wall or roof of the working, as set forth.



1,661,239. SPRAY GUN AND MEANS FOR OPERATING THE SAME. EMIL STEPHAN, Bridgman, Mich., assignor to W. H. Gast, Bridgman, Mich. Filed Aug. 20, 1925. Serial No. 51,501. 9 Claims. (Cl. 91—45.)

3. A spray gun comprising an integral handle having an air passageway therethrough, a mouth piece, an air passageway in said gun communicating with the air passageway in said handle, and means disposed in alignment with the air passageway in said gun and substantially adjacent one end thereof for manually closing said air passageway, said means comprising a disc adapted to be placed against the adjacent end of the air passageway in said gun, and spring means for normally holding said disc away from the air passageway in said gun.



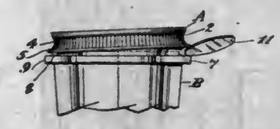
6. A spray gun having a mouth piece, an air passageway in said gun, means for conveying a liquid to the center of said mouth piece, said mouth piece comprising a valve body having a longitudinally extending opening therethrough, the outer end of said valve body having a conical-shaped annular flange integral therewith, means connecting said opening with said liquid-conveying means, a valve disposed in said opening and adapted to be moved into engagement with said flange for controlling the amount of liquid passing through said opening, a disc disposed concentric with said valve body and having openings therein in communication with the air passageway in said gun, an air control housing disposed concentric with said valve body, and means for holding said air control housing in engagement with said disc, said air control housing having air passageways therein adapted to be brought into alignment with two of the openings in said disc, the passageways in said air control housing being adapted to cause the air from said passageways to intersect at a point in alignment with the liquid opening in said valve body for ejecting the liquid in a vertically extending flat spray.

1,661,240. DOORSTOP. FRANK C. TRIMBACH, Dayton, Ohio. Filed July 28, 1924. Serial No. 728,660. 10 Claims. (Cl. 292—5.)

1. In a door stop, a brace rod adapted to drag upon the floor or ground idly as the door is opened permitting free movement of the door in one direction when said brace rod is in operative position, but adapted by its thrust engagement with the ground or floor to prevent the return movement of the door, a pivotal mounting for said brace rod, permitting the movement of the rod to and from operative positions, and a door stop for holding the door against free movement a reciprocatory link simultaneously controlling the adjustment of the rod and stop, and a pivoted operating handle to which the link is connected, the pivoted handle being adjustable beyond dead center positions at the opposite limits of its range of movement to lock said brace rod and stop in their operative and inoperative positions.

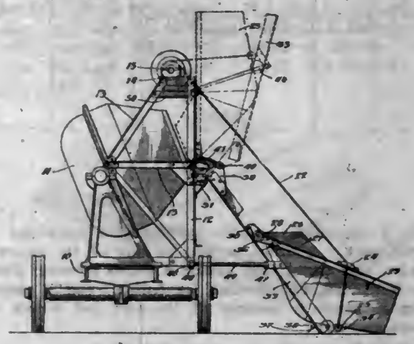
1,661,241. WEIGHING SCALE. FRANK TROTT, Harvey, Ill., assignor to Harriett V. Trott, Harvey, Ill. Filed May 5, 1924. Serial No. 711,166. 4 Claims. (Cl. 265—47.)

3. A weighing scale comprising fixed piers, a weigh bridge supported on said fixed piers, each of said piers having a cavity therein, a fluid in said cavity adapted through free flow to indicate the deformation of said piers when loaded and means actuated by said fluid for indicating said deformation in terms of load weight.



1,661,242. HIGHWAY MARKER. JAMES R. TRUXAL, Greensburg, Pa. Filed Nov. 9, 1926. Serial No. 147,331. 4 Claims. (Cl. 94—1.5.)

4. A highway marker comprising an elongated relatively narrow body formed of cushioning material and having its under face adapted to rest flat upon a highway and its upper face arcuate in cross section for its full width, and a reinforcing strip extending longitudinally in said body and embedded in the under face thereof intermediate its width, said strip being formed with openings adapted to receive fasteners to secure the marker upon the surface of a highway.

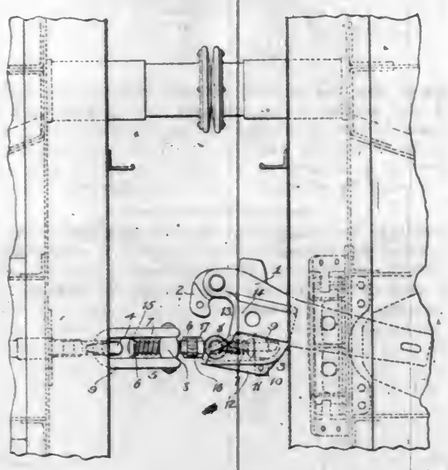


1,661,243. PACKAGE AND CLOSURE MEANS. CLIFFORD W. VESSY, Cleveland, Ohio, assignor to Anchor Cap & Closure Corporation, Long Island City, N. Y., a Corporation of New York. Filed Feb. 27, 1924. Serial No. 695,393. 2 Claims. (Cl. 215—46.)

1. A package comprising a container having an annular horisontally projecting abutment spaced from the mouth thereof, a substantially cylindrical sealing zone adjacent the mouth of the container, and an annular recess between the abutment and the sealing zone; in combination with a cap comprising a skirt having an annular inwardly formed concave bead frictionally engaging the cylindrical zone of the container, said annular bead in the skirt being corrugated transversely to provide for expansion, and a wire edge on said skirt

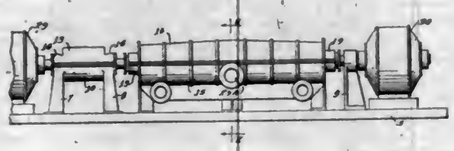
spaced from the annular abutment and from the bottom of the annular recess, whereby the package may be opened either by pressing the sealing zone of the container against the cap bead to flatten and expand the same or by placing an instrument under the wire edge and using the annular abutment as a fulcrum.

1,661,244. LOADER FOR CEMENT MIXERS. CARL J. WESTLING, Waterloo, Iowa, assignor to Construction Machinery Company, Waterloo, Iowa, a Corporation of Iowa. Filed Feb. 18, 1924. Serial No. 693,408. 12 Claims. (Cl. 214—103.)



1. The combination with a supporting frame having a cement mixer mounted thereon, of a loading device for said mixer comprising a pair of spaced angle bars each having one end thereof connected with said frame and the other end thereof inclined outwardly and downwardly away from said frame to constitute a track, a skip mounted to travel on said track, said skip having spaced front and rear rollers, a cable attached to said skip in the rear of the forward rollers thereof, a stop for arresting the foward end of said skip adjacent said cement mixer to cause said skip to swing about the axis of the forward rollers thereon to discharge material from said skip into said mixer, and interlocking means on said skip and track to retain said track in position for transportation with the rollers resting on their respective tracks.

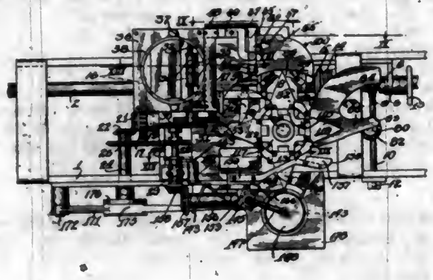
1,661,245. BEARING COMPOSITION. HARRY M. WILLIAMS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 22, 1923. Serial No. 640,796. 7 Claims. (Cl. 75—1.)



1. The process of producing porous bodies capable of absorbing liquid and having a surface adapted to be used in rubbing contact with another body, which consists in mixing fine metallic particles comprising copper and tin, capable of cohering when subjected to relatively high temperatures, with finely divided particles of a chemical compound of tin and antimony; molding the mixture under high pressure into the desired form, and heating the molded form of a temperature and for a length of time sufficient to effect cohesion of the said metallic particles.

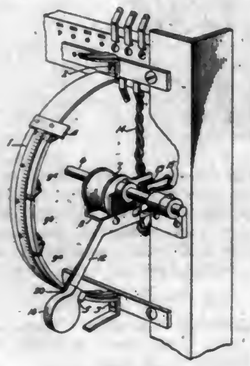
1,661,246. TRANSITION CAR COUPLING. HARRY HAMILTON WOLFE, Columbus, Ohio, assignor to The Buckeye Steel Castings Company, Columbus, Ohio. Filed May 8, 1925. Serial No. 28,878. 2 Claims. (Cl. 213—112.)

1. A transition coupler comprising a drawhead provided with a guard arm at one side of its transverse center, said guard arm having a recess opening through its front end and through its bottom, and a coupling member pivotally secured at its rear end within said recess.



1,661,247. SCREW PUMP. FRANK F. AMBROSE, Los Angeles, Calif. Filed Apr. 19, 1926. Serial No. 102,869. 4 Claims. (Cl. 103—127.)

1. In a screw pump a pump chamber casing divided horizontally and longitudinally on the center line of the screws, said casing having formed in the upper portion a pumping chamber and in the lower portion an inlet chamber, said chambers having ports in the lower member of the casing, there being a suction port at each end and a discharge port in the center of said lower casing member.



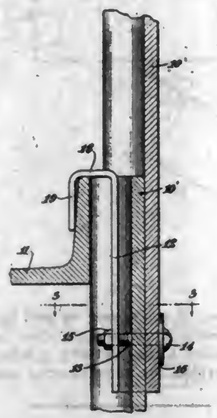
1,661,248. DISH-FORMING MACHINE. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., a Corporation of Illinois. Filed Dec. 10, 1925. Serial No. 74,439. 71 Claims. (Cl. 93—36.)

63. In a sundae dish forming machine the combination with an automatic blank centering device, a rotatable cam blade, a stationary blade, and a rotatable gripper adapted to carry a plurality of dish blanks in spaced relation in consecutive order from said centering mecha-

nism into engagement with the rotatable cam blade and said stationary blade to automatically crease and form the blanks into conical sundae dishes.

1,661,249. TIMING DEVICE. GERALD DEAKIN, Antwerp, Belgium, assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed May 18, 1925, Serial No. 30,970, and in Great Britain June 26, 1924. 3 Claims. (Cl. 161—19.)

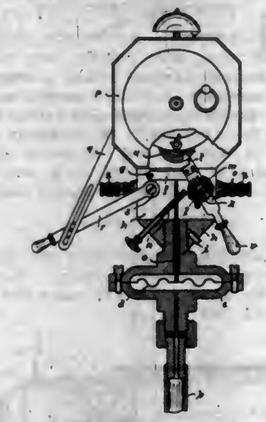
1. A timing device comprising a horizontal shaft rotating at a definite speed, an indicating member loosely mounted therein, a graduated scale vertically mounted in an arc of a circle associated with said member, an electromagnet mounted on said member and surrounding the shaft for clutching the member into engagement with the shaft so that it is driven upward along the scale to indicate the length of time the electromagnet is energized.



1,661,250. FLOUR-TREATING PROCESS. FREDERICK L. DUNLAP, Chicago, Ill., assignor to Industrial Appliance Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 16, 1923. Serial No. 675,039. 4 Claims. (Cl. 99—10.)

3. Wheat flour having an alkalinity substantially within the range represented by pH—9 to pH—12.

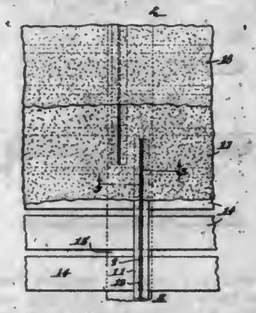
1,661,251. FASTENER. RALPH E. FERY, Ambler, Pa., assignor to Asbestos Shingle, Slate & Sheathing Company, a Corporation of Pennsylvania. Filed Apr. 14, 1926. Serial No. 101,883. 8 Claims. (Cl. 189—3.5.)



1. The combination with corrugated sheet material, and a metal support, of a fastening member attached to the corrugated sheet material between the corrugations by a

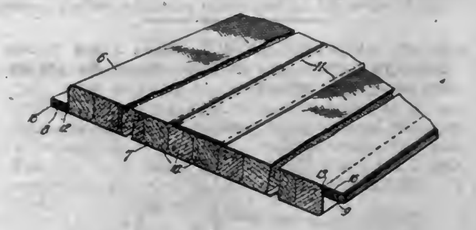
bolt passing through a perforation in the crown of a corrugation, said fastening member comprising a resilient body portion extending beyond said metal support provided with a perforation adjacent its outer end to permit said bolt to pass therethrough, a section bent at

a right angle to said body portion, and a second section bent at an acute angle to said first mentioned section to provide a wedging member for engagement with said metal support, said bolt and said wedging member being located at opposite ends of said body portion.



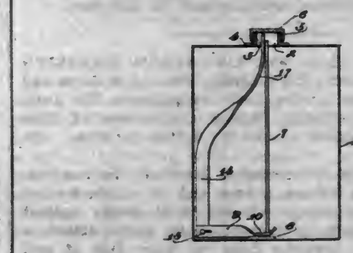
1,661,252. GAS-CONTROL APPARATUS. RICHARD FRICKE, Liepzig-Kleinzschocher, and HANS MROSS, Pretzsch-on-the-Elbe, Germany. Filed Oct. 21, 1925, Serial No. 64,061, and in Germany Aug. 6, 1924. 4 Claims. (Cl. 18—7.)

1. Gas control apparatus for vulcanizers and the like comprising a member displaceable by steam pressure, a gas valve influenced by said member, an alarm influenced by said valve, a closing spring connected with said valve and a locking member for said spring arranged to be thrown out by said displaceable member.



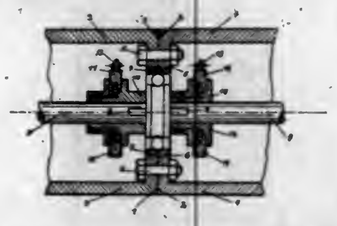
1,661,253. PLASTER GAUGE. AUGUST J. FRITZ, Chicago, Ill. Filed July 6, 1925. Serial No. 41,000. 3 Claims. (Cl. 72—116.)

1. A plaster gauge and anchor for use in association with studding and lathing comprising associated gauge strips for determining the thickness of the plastering from the lathing; base flanges on said strips for resting



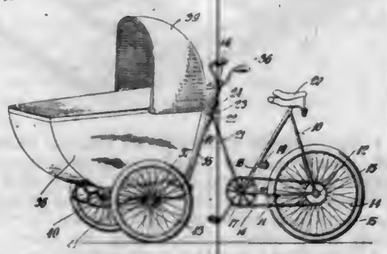
on the lathing and extending along the studding for forming therewith keyways in which to enter and key the plastering, substantially as described.

1,661,254. PIPE COVERING. WILLIAM R. GILLIES, Chicago, Ill., assignor to Union Asbestos & Rubber Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1926. Serial No. 83,461. 10 Claims. (Cl. 154—44.)



1. A pipe covering adapted to be wrapped circumferentially around the pipe with its seam extending longitudinally thereof, comprising a fabric casing filled with a relatively pliable heat insulating material across the greatest portion of its width, and marginal portions of relatively stiffer asbestos board along the lateral edges of said casing, said marginal portions being overlapped in a seam extending longitudinally of the pipe.

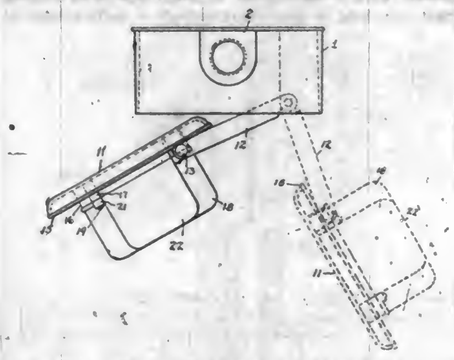
1,661,255. BARREL AGITATOR. FRED H. HAYWOOD, Cleveland, Ohio. Filed Mar. 7, 1925, Serial No. 13,800. Renewed Oct. 17, 1927. 10 Claims. (Cl. 259—107.)



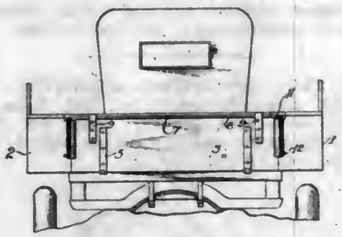
1. In combination with a barrel having an opening, a rod secured within the barrel and extending from a point opposite the opening to said opening, a blade turnably mounted on said rod, a second blade pivotally attached to the free end of the first-mentioned blade and extending upwardly toward the top of the rod.

1,661,256. COMBINED COUPLING AND BEARING. JOHANN JACOB KNYSER, Aarau, Switzerland. Filed June 22, 1925, Serial No. 38,893, and in Germany Apr. 3, 1925. 3 Claims. (Cl. 308—178.)

1. A spinning and twisting machine beam comprising aligned beam sections having contacting end walls, shaft sections within the beam sections and constituting one continuous spindle actuating shafting, bearings having their seat in the end walls of two adjoining beam sections so as to be in a reciprocal centering and aligning interrelation therewith and forming means for supporting the shaft sections within the beam sections of which the bearing seating end walls are forming a portion, and means on the ends of each shaft section and on the bearings for clutching the shaft sections together while permitting mounting and dismounting of each shaft section while all of the bearings remain seated in their respective beam section end walls.



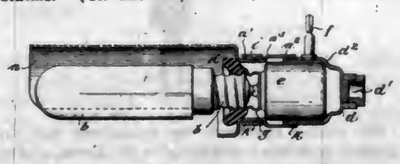
1,661,257. BICYCLE CARRIAGE. EMMA KIRCH, Wilkes-Barre, Pa. Filed Jan. 12, 1927. Serial No. 160,561. 1 Claim. (Cl. 208—45.)



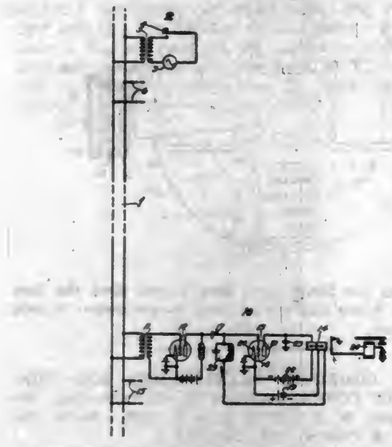
In combination with a bicycle, of a carriage, a rod extending upwardly from the rear of said carriage, a pair of pivoted sleeve sections on said bicycle, said sections engaging said rod, a slotted lug on one of said sections, another lug on the other section, a headed plunger rod engaging said lugs and resilient means on said plunger for to normally prevent disengagement of said lugs.

1,661,258. CASE FOR FIRE-ALARM SIGNALING MECHANISM AND THE LIKE. FRANCIS B. LOVE and BOYD H. SMITH, Shelby, Ohio, assignors to The Auto-Call Company, Shelby, Ohio, a Corporation of Ohio. Filed Feb. 17, 1925. Serial No. 9,830. 1 Claim. (Cl. 177—377.)

In an article of the character described, the combination of a casing having a base and an outwardly extending flange, a closure adapted to fit snugly against the edge of said flange throughout its entire extent, a flange projecting inwardly from the inner face of said closure and spaced from said casing flange when said parts are engaged, a housing engaged upon the inner edge of said closure flange, a pair of parallel bracket arms positioned respectively on opposite sides of said housing and in spaced relation thereto, a pair of bosses, within the casing flange and spaced from the edge thereof, having pivoted pins to engage with apertures formed in the inner ends of said bracket arms, removable locking pins engaged through said pivot pins to detachably hold said bracket arms thereon and a pair of apertured ears on the inner wall of said closure on the side opposite the position of the bosses on said casing to receive pivot pins extending through apertures in the opposite ends of said bracket arms, whereby a wide range of motion may be provided for said housing and closure.

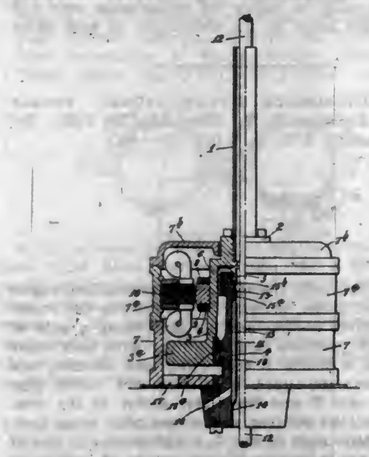


1,661,259. END-GATE FASTENER. NORRIS G. MORGAN, Galva, Ill. Filed Mar. 24, 1927. Serial No. 177,864. 7 Claims. (Cl. 296—57.)



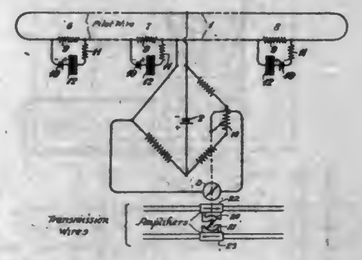
1. An end-gate fastener, comprising a lever adapted to be swivelly mounted with its axis parallel to and adjacent the upper edge of an end-gate and having offset ends, chains adapted to be secured to the extremity of each of said ends and to fixed supports, and means constraining a portion of each of said chains below said lever axis to lie parallel to said offset ends in normal position.

1,661,260. ELECTROLIER FOR SEWING MACHINES. ARTHUR MÜLLER, Lobenstein, Germany. Filed Mar. 8, 1926, Serial No. 93,341, and in Germany Mar. 19, 1925. 3 Claims. (Cl. 240—2.)



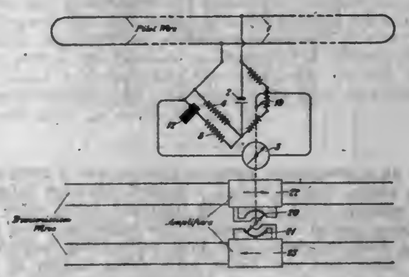
1. In an incandescent lamp fixture for a sewing machine or the like, the combination with an incandescent bulb and the insulation body containing the switch mechanism for said lamp, of a shield or reflector for said lamp having a reduced neck portion, a shell containing said body, said shield and shell being threadedly connected together to securely hold said body in position, and a clamping member mounted around said neck portion for adjustably suspending said fixture from the sewing machine.

1,661,261. SIGNAL-RECEIVING SYSTEM. PAUL B. MURPHY, Nyack, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Feb. 9, 1925. Serial No. 7,745. 17 Claims. (Cl. 178—88.)



1. The method of equalizing the effects of alternating signaling currents of different strengths on a receiving device, which comprises transmitting current variations corresponding to the received signaling currents through branched paths having different volt-ampere characteristics, the characteristics of the paths being such that for weak incoming signaling currents the current output of one of said paths predominates over the current output of the other path in a certain ratio and for stronger received signaling currents said certain ratio of the current outputs of the two paths is substantially maintained and opposing the outputs of said paths upon the receiving device.

1,661,262. SPINDLE FOR TEXTILE-SPINNING APPARATUS AND MEANS FOR DRIVING IT. FREDERICK NEWTON, Derby, England, assignor to Celanese Corporation of America, a Corporation of Delaware. Filed June 29, 1925, Serial No. 40,310, and in Great Britain June 30, 1924. 13 Claims. (Cl. 118—43.)

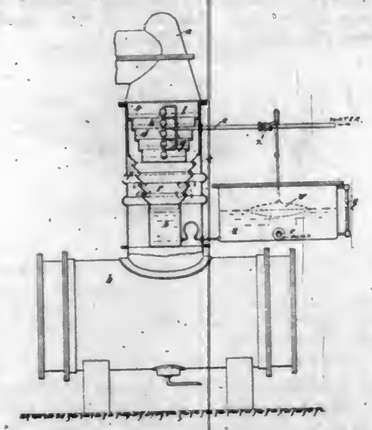


1. A spindle device for textile spinning machines, characterized in that the spindle is freely supported below the part on which the bobbin is carried, on a single support and extends below this point of support as a skirt, so that the spindle is freely suspended on said single support.

1,661,263. METHOD OF AND MEANS FOR REGULATING THE TRANSMISSION OVER ELECTRIC CIRCUITS. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Feb. 19, 1923. Serial No. 620,094. 21 Claims. (Cl. 178—44.)

16. In a signaling system, a plurality of transmission circuits subject to similar conditions, means associated with one of the circuits and adapted to change the electrical characteristics thereof in response to humidity variation, means associated with said circuit and responsive to changes in the electrical characteristics thereof, and means controlled by said latter responsive means for adjusting the transmission equivalent of the other circuits.

1,661,264. METHOD OF AND MEANS FOR REGULATING THE TRANSMISSION OVER ELECTRIC CIRCUITS. HARRY NYQUIST, Jackson Heights, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Original application filed Feb. 19, 1923, Serial No. 620,094. Divided and this application filed Oct. 2, 1924. Serial No. 741,256. 18 Claims. (Cl. 178—44.)

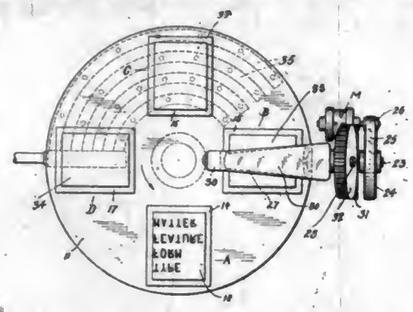


4. As means for compensating for the effect of humidity variations on the transmission equivalent of repeatered circuits, an auxiliary circuit including an element whose conductivity varies with humidity change, a current indicating device responsive to changes in the electrical characteristics of said auxiliary circuit, and a device designed to vary the gain of the repeaters in response to the current in, and in accordance with the indications of, said current indicating device.

1,661,265. CONDENSING APPARATUS. HEINRICH MAX OLBRICHT, Brunn, Czechoslovakia. Filed Nov. 23, 1926, Serial No. 150,282, and in Czechoslovakia Nov. 20, 1925. 2 Claims. (Cl. 261—118.)

1. An exhaust steam heat trap and condenser, comprising a casing, means for injecting water into the cas-

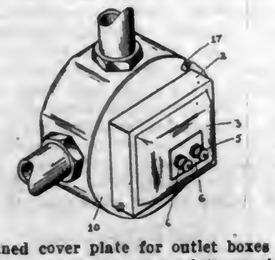
ing, vertically spaced cylindrical impact surfaces for injected water, and a separator below said impact surfaces,



said separator comprising vertically arranged concentric conical surfaces spaced apart for permitting the passage of steam.

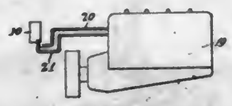
1,661,266. COMPRESSOR PUMP. DALLAS D. PARSHALL, Detroit, Mich. Filed June 2, 1924. Serial No. 717,341. 3 Claims. (Cl. 230—228.)

1. In a compressor pump, a cylinder and a reciprocatory piston therein having a limited clearance between the adjacent head faces, and inlet and outlet valve assemblies located in recesses in the respective faces and lying flush therewith, said inlet valve being located in the piston and said outlet valve being located in the head of the cylinder and comprising a disk forming a seat, a spacer above said disk, a ported disk above said spacer having a shouldered engagement with the head, and a valve located between said seat disk and apertured disk and of a thickness but slightly less than said spacer to provide only a limited lift for the valve.



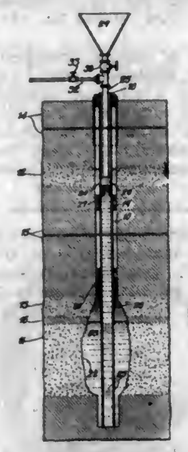
1,661,267. STEREOTYPE-MATRIX-MAKING MACHINE. GROVER M. REPP, New York, N. Y. Filed Feb. 28, 1927. Serial No. 171,442. 1 Claim. (Cl. 101—12.)

A machine for making stereotype matrices in a continuous circulating operation comprising a support having a plurality of seats thereon for receiving and holding a plurality of type forms upon which a like number of flongs may be placed in succession from a fixed position, means to actuate the support along a continuous path, means to operate upon the flongs in succession to cause the same to be properly molded in connection with the type forms while in motion, and means to cause the hardening of the flongs after such molding operation as they pass in succession along said path without the aid of human



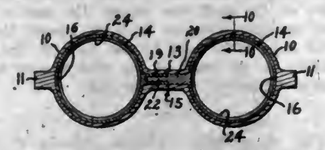
factors after the flongs have been placed upon the face of the type forms and are returned in succession to said fixed position.

1,661,268. COMBINED TRANSFORMER AND CONDUIT-BOX COVER. ARTHUR E. RITTENHOUSE, Honeoye Falls, N. Y. Filed May 1, 1926. Serial No. 106,093. 6 Claims. (Cl. 247—1.)



1. A combined cover plate for outlet boxes and transformer casing comprising a cover plate provided with a depression centrally of said plate and adapted to receive a portion of the transformer windings to locate said transformer in a predetermined position on said cover plate, a casing covering the remainder of the transformer core and windings and means for fastening said casing to said cover plate to clamp the transformer core and windings in the place in the depression in said cover plate.

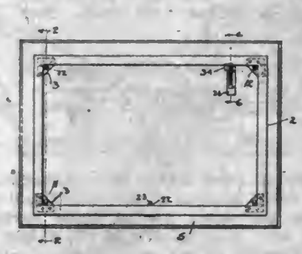
1,661,269. AUTOMOBILE WATER GAUGE. THOMAS H. ROEKE, Brooklyn, N. Y. Filed July 20, 1925. Serial No. 44,643. 1 Claim. (Cl. 265—46.)



In combination with a water cooled combustion engine having a water jacket, a device for indicating the condition of the water cooling medium comprising a pair of parallel vertical columns communicating with each other at the bottom, a double T supporting said columns, one column adjacent the other, a delivery and return pipe connected to said T and the water jacket of the combustion engine, the delivery and return pipe being positioned at opposite ends of the T, a hydrometer in one of said columns for indicating the percentage of anti-freeze mixture in the water cooling medium, one of said columns being closed at the upper end and open at the bottom adapted to permit the level of the water cooling medium to rise therein, the opposite column comprising a graduated thermometer adapted to be mounted vertically on the T, the water being adapted to circulate freely around the lower end of the thermometer in the T, and a casing having the columns and T mounted thereon.

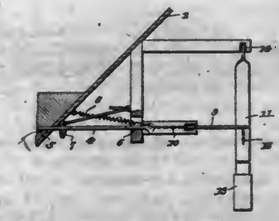
1,661,270. METHOD OF PLUGGING OR PACKING OFF STRATA IN WELLS. HARRY MOYER RYDER and LEON J. BAILEY, Bradford, Pa., assignors to Petroleum Reclamation Corporation, New York, N. Y., a Corporation of Delaware. Filed Jan. 19, 1927. Serial No. 161,993. 8 Claims. (Cl. 61—36.)

1. The method of plugging the space around a well casing, which consists in introducing into the well a sealing material in the presence of a displaceable liquid which has a specific gravity different from that of the sealing material, leaving said sealing material and displaceable liquid undisturbed until the sealing material moves into sealing position owing to the different specific gravities of said sealing material and displaceable liquid, and applying pressure to the sealing material after it is in sealing position.



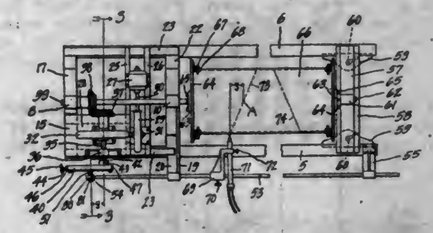
1,661,271. OPHTHALMIC MOUNTING. ELMER L. SCHUMACHER, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Jan. 22, 1926. Serial No. 83,001. 12 Claims. (Cl. 88—47.)

1. In a device of the character described, a composition frame having grooved rims and a bridge with a recess therein extending from groove to groove of the rims and a metallic frame having two separated rims seated in the grooved rims of the composition frame, each metallic rim having a projection extending into the recess of the bridge of the composition frame into engagement with each other.



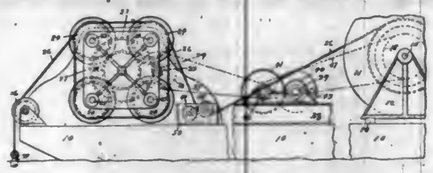
1,661,272. SAFETY LOCKING DEVICE FOR CASINGS. BOYD H. SMITH, Shelby, Ohio, assignor to The Autocall Company, Shelby, Ohio, a Corporation of Ohio. Filed Apr. 2, 1925. Serial No. 20,807. 7 Claims. (Cl. 200—54.)

1. An apparatus of the character described, having in combination a base plate, a plurality of posts secured to said base plate having cut away portions formed at the rearward sides thereof, a casing frame, plate secured to said frame and adapted to seat over said posts and to engage with the cut away portions thereof,



means to prevent disengagement of said frame from said posts, a tamper switch mounted on said base plate, and means carried by said frame for operating said tamper switch.

1,661,273. DOOR-CLOSING MECHANISM. OWEN P. SMITH, Miami, Fla.; Hannah M. Smith administratrix of said Owen P. Smith, deceased. Filed Aug. 12, 1926. Serial No. 128,808. 5 Claims. (Cl. 246—301.)

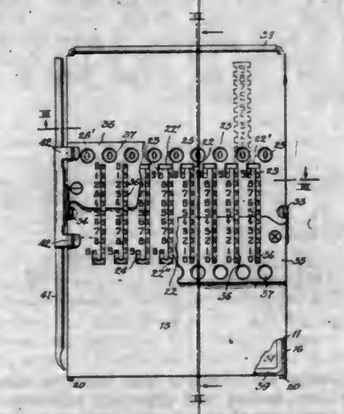


1. In a device of the class described, a door hinged at the top, a horizontally slidable rod arranged to extend beneath the door when the latter is open, a pendent releasing lever pivoted at its upper end and having its lower portion arranged to be struck by a moving car, and means for connecting the lever with the rod for withdrawing the same from beneath the open door when the said lever is struck by the car.

1,661,274. PIPE-CUTTING MACHINE. GEORGE R. STEERE and ALEXZANDER HURST, Owosso, Mich., assignors, by mesne assignments, to Semet-Solvay Engineering Corporation, New York, N. Y., a Corporation of New York. Filed Feb. 19, 1925. Serial No. 10,231. 14 Claims. (Cl. 266—23.)

1. A machine for cutting a pipe including means for mounting and rotating said pipe and automotic means for cutting said rotating pipe on a fixed angle extending in a plane which is less than ninety degrees to the axis of the pipe.

1,661,275. ANCHOR HOIST. IVER N. STENSLAND, Ketchikan, Territory of Alaska. Filed Mar. 5, 1926. Serial No. 92,651. 2 Claims. (Cl. 254—177.)

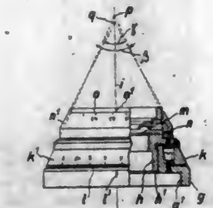


1. An anchor hoist having, in combination, a scow; a winding device mounted on one end of said scow comprising four gear-driven grooved drums having one intermediate drive gear for driving all of said drums in the same direction at the same speed; a cable storage spool rotatably mounted on the opposite end of said scow; an engine for driving said spool and winding device; friction drives between said engine and storage and winding drums; and brake means on said winding drum.

1,661,276. DOUBLE-END CONTROL. SVEN JULIUS STRID, Chicago, Ill., assignor to Fred Mathews, Chicago, Ill. Filed Jan. 21, 1926. Serial No. 82,794. 10 Claims. (Cl. 74—39.)

1. A control mechanism of the kind described comprising a plurality of bell-crank shafts, a stationary frame in which said shafts are mounted, a set of transmission elements extending from each end of said bell-crank shafts, connector devices interposed between the respective ends of the bell-crank shafts and transmission elements, and means for rendering one set of connector devices operative with respect to the bell-crank shafts and one set of transmission elements, and for rendering the other set of connector devices inoperative.

1,661,277. COMPUTING MACHINE. LUCIE THOMAS, Nowawes, near Potsdam, Germany; Lucie Menter, née Thomas, assignor to Jean Bergmann, Berlin, Germany. Filed Oct. 16, 1924, Serial No. 743,896, and in Germany Nov. 17, 1923. 13 Claims. (Cl. 235—69.)

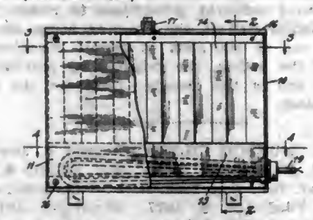


1. A computing machine having a plurality of parallel reciprocatory sliders having serrated lateral edges and the digits, 0, 1, 2, 3, 4, 5, 6, 7, 8, 9 thereon, and a front plate covering the sliders and having parallel slots each permitting access to eleven notches on one serrated edge of one slider, each end of each of the slots being provided with return extensions to expose two notches on the other serrated edge of the adjacent slider, the front plate having the digits 9, 8, 7, 6, 5, 6, 7, 8, 9 alongside each slot.

1,661,278. METHOD OF PREPARING PROGRESSIVE-BURNING SMOKELESS POWDER. BERNHART TROXLER, Kenvil, N. J., assignor to Hercules Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Nov. 16, 1926. Serial No. 148,772. 6 Claims (Cl. 52—20.)

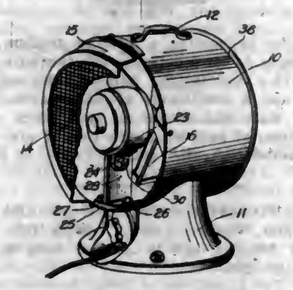
6. The method of coating smokeless powder grains with a deterrent substance, which includes subjecting the powder grains, a deterrent substance and a quantity of water only sufficient to moisten the surfaces of the powder grains to heat in the presence of air at a temperature not substantially above the melting point of the deterrent substance while agitating the powder grains.

1,661,279. MOUNT FOR PHOTOGRAPHIC OBJECTIVES. ERNST WANDERSLEB, Jena, Germany, assignor to the Firm Carl Zeiss, Jena, Germany. Filed June 1, 1927, Serial No. 195,840, and in Germany July 5, 1926. 2 Claims. (Cl. 95—45.)



1. Mount for objectives adapted to be fastened on a camera, comprising a tube adapted to receive optical elements of the objective, means for displacing this tube in the direction of its axis, these means comprising a ring, rotatable about the axis of the said tube, a scale fitted on this ring, and an index coacting with this scale, an iris-diaphragm and a second ring, rotatable about the axis of the mount and adapted to vary the aperture of the diaphragm, a second scale, fitted to this second ring and a second index coacting with this second scale, the surfaces of the said two rings containing parts of conical surfaces, on each of which there is disposed one of the said two scales, the points of the said conical surfaces lying on at least almost the same point of the object-side part of the axis of the mount and the angles on the tops of the said conical surfaces being at least almost of the same size.

1,661,280. NONSKID DEVICE. FRANK O. WELLS, Greenfield, Mass. Filed Mar. 3, 1927. Serial No. 172,819. 3 Claims. (Cl. 152—14.)

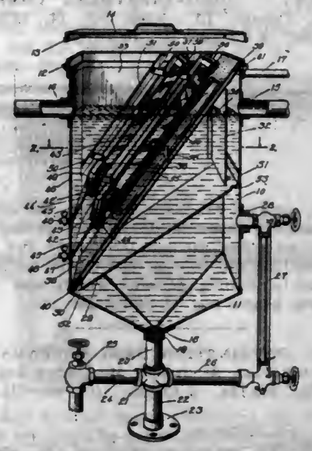


1. A plate for a non-skid tire chain comprising a member which is formed with a plurality of centrally located projections on its outer surface, transversely located webs for connecting the projections that are located adjacent the opposite ends of the plate but leaving a transversely located channel or passageway across the outer surface of the plate.

1,661,281. ELECTRIC RADIATOR. JOHN BILAN, Flint, Mich. Filed June 13, 1927. Serial No. 198,447. 3 Claims. (Cl. 219—38.)

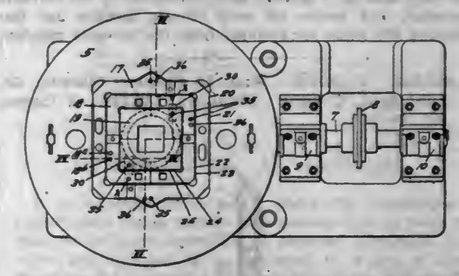
1. Electric radiator comprising a plurality of cells, a housing for said cells, a median baffle plate, said housing adapted to be supplied with a heating medium, and a means for electrically heating said medium to circulate the same through said cells around said baffle plate.

1,661,282. ELECTRIC HEATER. SAMUEL M. CARMEAN and JAMES H. CARMEAN, Kansas City, Mo. Filed Apr. 30, 1926. Serial No. 105,705. 5 Claims. (Cl. 248—14.)



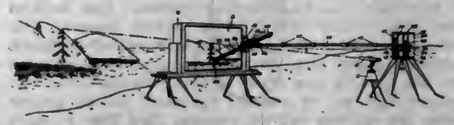
1. In a heater, a motor, a motor mounting comprising a bracket having a base portion and an upstanding portion offset from the vertical plane of the axis of the motor, an ear on said motor in the vertical plane of its axis and means for securing said ear to the upstanding portion of said bracket.

1,661,283. DOLL AND PLAYPEN. HERMAN V. ECKARDT, Brooklyn, N. Y., assignor to Strauss-Eckardt Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 22, 1927, Serial No. No. 162,824, and in Germany Dec. 17, 1926. 6 Claims. (Cl. 46—37.)



1. A toy set comprising, in combination, a simulated miniature playpen having a bottom wall and a side wall enclosure and a doll in said playpen simulating an infant at play, the playpen being dimensioned proportionate to the doll therein.

1,661,284. SEPARATOR. CLARENCE V. FUQUA and JOHN H. RICHA, Kansas City, Mo., assignors, by mesne assignments, to The Cleaners Equipment Corporation, Kansas City, Mo., a Corporation of Missouri. Filed Oct. 11, 1926. Serial No. 140,829. 9 Claims. (Cl. 210—43.)



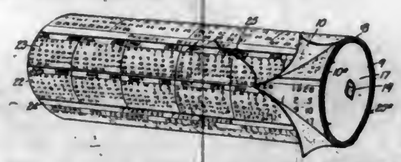
1. In a device of the character described, a tank having a partition therein dividing the same into an upper and a lower chamber, an inlet at one side of said upper chamber, an outlet at the other side thereof, a plurality of screens mounted between said inlet and outlet, said screens being arranged at an oblique angle and a plurality thereof comprising members of bolting cloth and inclined shelf-like members at the lower ends of said screens.

1,661,285. ROTARY DRILLING MACHINE. EDGAR E. GREVE, Bellevue, Pa. Filed Aug. 3, 1926. Serial No. 126,922. 6 Claims. (Cl. 255—23.)

1. In a rotary drilling machine, a rotary table having a bore, a bushing nested therein, and automatically operable locking means for locking the table and bushing against relative vertical movement characterized in that the locking means are actuated to lock said members together by positioning a member within the bushing.

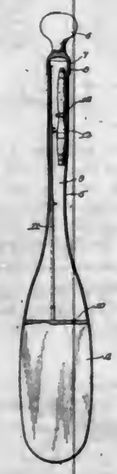
1,661,286. ATTACHMENT FOR REPRODUCING DEVICES. THEODORE N. HANSEN, Seattle, Wash. Filed June 6, 1927. Serial No. 196,912. 3 Claims. (Cl. 33—20.)

1. The combination with a screen and a sighting instrument, of an attachment for reproducing devices com-



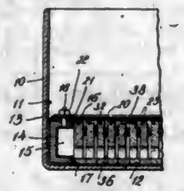
prising a control box, connecting means between said screen and box adapted for axial rotation, and a marker bar device arranged to be swung over the entire surface of the screen by axial rotation of said connecting means.

1,661,287. LIQUID-TREATMENT COMB. JOHN HENIGE, Chicago, Ill. Filed Oct. 14, 1925. Serial No. 62,390. 4 Claims. (Cl. 132—13.)



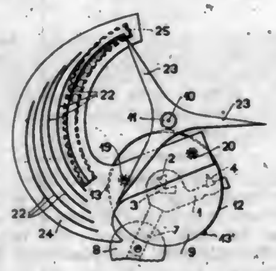
1. In a comb of the class described, the combination with a handle, a hollow head, and teeth having passages, of a tube extending through the handle and into said hollow head, the end of said tube within the head being closed, and a heating element within and removable through the handle end of said tube.

1,661,288. COMBINATION DESK CALENDAR. NEWTON S. HILLYARD, St. Joseph, Mo. Filed Aug. 1, 1927. Serial No. 209,734. 3 Claims. (Cl. 40—111.)



2. A calendar device comprising a supporting element having a sight opening, a member movably mounted within said supporting element, a plurality of tubular elements provided with calendrical indicia mounted one within another on said movable member, and positioned for exposure of portions of the outermost tubular element through said sight opening upon movement of the movable member, and means on each tubular member for disrupting the same for removal from the movable member.

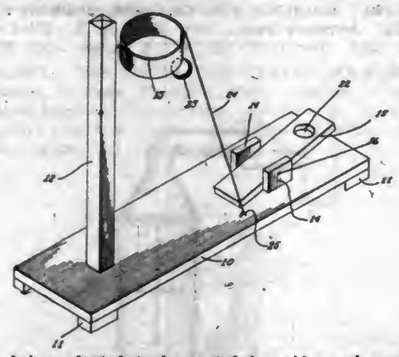
1,661,289. PADDLE. WILL L. HOLDER, Valdosta, Ga. Filed Sept. 7, 1926. Serial No. 133,744. 2 Claims. (Cl. 9—24.)



1. A paddle for a canoe comprising a narrow tubular stem, a comparatively short member removably secured to one end of the stem and shaped to form a hand-grip, and a substantially flat blade fixedly connected to the other end of said stem, the hollow portion of the stem forming a chamber of sufficient proportions to receive a fishing rod or similar article, the chamber being open at the said one end of the stem to permit insertion and removal of the article, the grip-member serving to close the open end of the chamber to retain the article in said chamber.

1,661,290. NUTSCH FILTER. JOSEPH E. JEWETT, Buffalo, N. Y., assignor to National Aniline & Chemical Company, Inc., New York, N. Y., a Corporation of New York. Filed Apr. 8, 1927. Serial No. 181,998. 10 Claims. (Cl. 210—149.)

2. A tile for supporting a filtering medium within a tank comprising in combination a substantially rectangular block having substantially parallel sides and a corrugated top; and a continuous abutment extending from one of the sides the length of said block and flush with the bottom of said block, the side of said abutment being substantially parallel with the sides of said block.

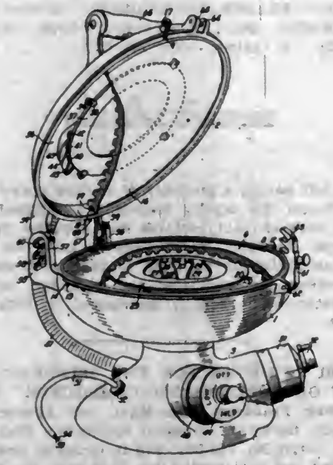


1,661,291. AUTOMATIC WEIGHING APPARATUS. RUDOLF JOKSCH, Vienna, Austria. Filed July 25, 1927, Serial No. 208,154, and in Austria June 5, 1926. 7 Claims. (Cl. 265—62.)

1. An automatic weighing apparatus in which the load is balanced by a weighted lever and in which the indicator mechanism comprises a gearing imparting a rotation to the indicator shaft for more than one turn wherein the dial is connected with the weighing lever and is moving with the same in front of the rotating pointer, thus allowing graduation on a spiral like cycloidal curve which permits a rotational indication movement of more than a full turn to the pointer without returning to the same graduation mark.

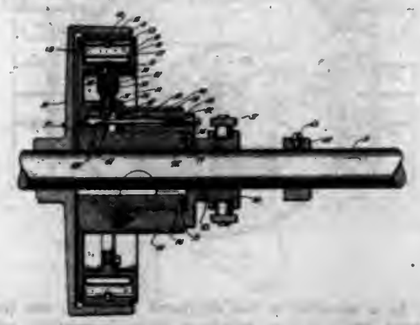
1,661,292. TOY. STEPHAN KLAUS, Hawthorne, N. J. Filed Feb. 17, 1927. Serial No. 168,858. 1 Claim. (Cl. 46—37.)

A toy comprising a rectangular base, a vertical post square in cross section extending upwardly from said base near one end, a basket open at the top and bottom mounted on the upper end of said post, a pair of spaced-apart uprights on said base near the end opposite to the post, a straight platform mounted pivotally between said uprights, a coiled spring mounted beneath the pivotal axis of said platform, one of the ends of said coiled spring seating upon said base, the opposite end of said coiled spring seating upon the under side of said platform, the coiled spring normally urging one end of said platform to contact with said base and raising the opposite end, said platform having an opening in the raised end, a ball larger than said opening in said platform, said



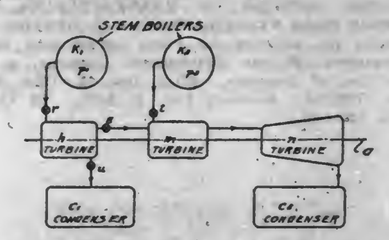
ball being adapted to be seated in said opening and a string attached to said ball, the opposite end of said string being anchored to said base adjacent the end of said platform which contacts with said base, and the anchored end of said string being located at an acute angled position from said basket.

1,661,293. PRODUCTION OF AROMATIC KETONIC COMPOUNDS. FREDERICK H. KRANZ, Buffalo, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 2, 1926. Serial No. 99,406. 8 Claims. (Cl. 260—64.)



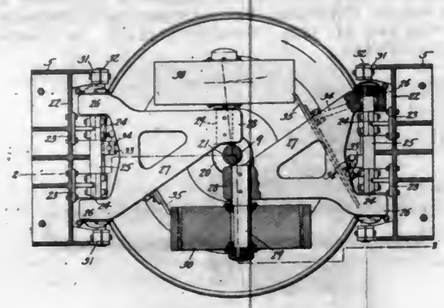
8. A process for the production of 4.4'-tetramethyldiaminodiphenylthioketone which comprises boiling with agitation under a reflux a mixture of approximately ten parts of 4.4'-tetramethyldiaminodiphenylmethane and fifteen parts of a fifty percent caustic soda solution containing approximately sixteen parts of sulfur.

1,661,294. TOASTER. CHARLES A. LEMASTER, Kansas City, Mo. Filed Mar. 21, 1927. Serial No. 176,934. 4 Claims. (Cl. 53—5.)



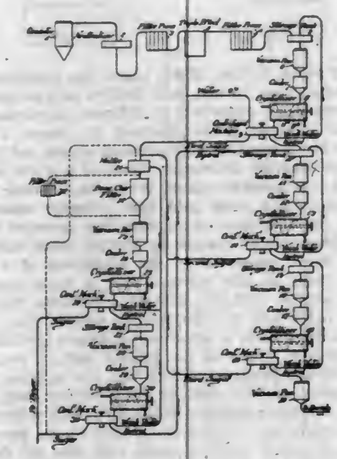
2. In a toaster, a base, a cover member, a removable griddle in the base, and a removable griddle in the cover co-operating with the first named griddle, means for adjustably hinging the cover to the base, and means opposite to the hinging means for adjustably supporting the cover in parallel alignment with the base.

1,661,295. FLUID-PRESSURE DEVICE. BERT A. LINDERMAN, New York, N. Y., assignor to Linderman & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 17, 1924. Serial No. 744,111. 16 Claims. (Cl. 192—88.)



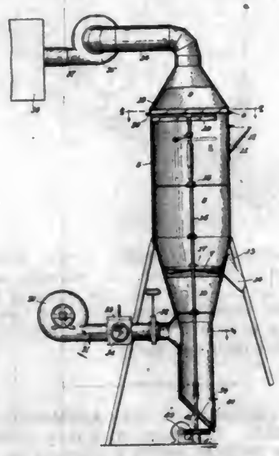
1. A fluid pressure device comprising two members operatively associated to rotate relatively or to remain relatively at rest, devices for controlling said members including an inflatable actuator, a pump for forcing fluid into and out of said actuator, and a valve for controlling the passage of fluid to or from said actuator and means for operating the valve upon movement of the pump.

1,661,296. STEAM TURBINE POWER PLANT AND SYSTEM. FRANZ LÖSEL, Brunn, Czechoslovakia. Filed Aug. 15, 1924, Serial No. 732,307, and in Austria Sept. 24, 1923. 2 Claims. (Cl. 60—70.)



2. In a steam turbine power plant, the combination of a multistage steam turbine unit divided into at least two independent parts operating at different admission pressures and adapted to be operated in series, a steam generator for generating high pressure steam and another steam generator for generating steam of a lower pressure than said high pressure steam generator, a steam supply connection leading from said high pressure steam generator to the admission end of the high pressure turbine part, a steam supply connection leading from said lower pressure steam generator to the admission of a lower pressure stage of said turbine unit, a main condenser for said turbine unit, an exhaust connection line leading from the lowest pressure part of said turbine unit to said main condenser, a separate condenser provided for higher pressure stages of the turbine unit, a connection between said separate condenser and the exhaust of the high pressure turbine part of said turbine unit, valve means in the last-mentioned connection, and valve means in said connections leading from said steam generators to their respective turbine parts and also in the connection leading from the exhaust of the high pressure stage of said high pressure turbine part to the admission of said following part of the turbine for opening and closing the connections.

1,661,297. GRINDING PAN. WALTER EARL MCMURRAY, Clearfield, Pa., assignor to Clearfield Machine Company, Clearfield, Pa., a Corporation of Pennsylvania. Filed Apr. 14, 1927. Serial No. 183,778. 13 Claims. (Cl. 83—45.)



1. In a machine of the character described, the combination with a pan rotatable about a vertical axis, of roll-supporting arms pivotally-mounted on parallel axes transverse to a common plane including said vertical axis and having inwardly-presented contracted ends arranged on opposite sides of said plane, the pivotal bearings for each of said roll-supporting arms comprising bearing portions arranged on opposite sides of said plane, journal pins projecting laterally from the contracted inner ends of said roll-supporting arms and presented away from said plane, and rolls journaled on said pins and running in said pan.

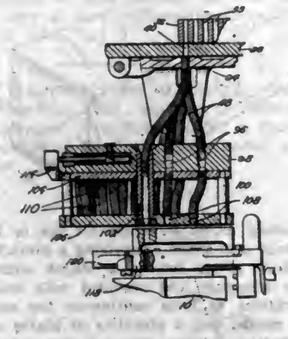
1,661,298. METHOD OF MANUFACTURING DEXTROSE FROM STARCH. WILLIAM B. NEWKIRK, Riverside, Ill., assignor, by mesne assignments, to International Patents Development Company, a Corporation of Delaware. Filed Apr. 25, 1924, Serial No. 708,916. Renewed Dec. 7, 1927. 23 Claims. (Cl. 127—46.)

1. Method of making a crystalline starch converted dextrose which comprises concentrating and crystallizing the converted liquor without precedent carbon filtration, and separating the dextrose crystals from the mother liquor while the magma is in a fluent state.

1,661,299. MACHINE FOR GRADING GROUND COFFEE. ANTHONY PERON, New York, N. Y. Filed Oct. 23, 1924. Serial No. 745,287. 9 Claims. (Cl. 209—29.)

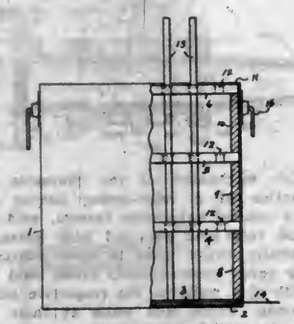
6. Apparatus of the character disclosed, comprising a casing having an intermediate compartment defined by upper and lower screens, the upper being of finer mesh than the lower and the lower defining a collection chamber in the bottom of the casing, an air blower having a discharge conduit opening into the collection chamber, a suction device having a suction conduit opening into the top of the casing above the fine screen, an upright shaft in the casing and brushes on said shaft cooperating with the screens.

1,661,300. TRANSMISSION BELT. HAROLD PERFALL, Philadelphia, Pa. Filed July 1, 1926. Serial No. 119,850. 4 Claims. (Cl. 74—62.)



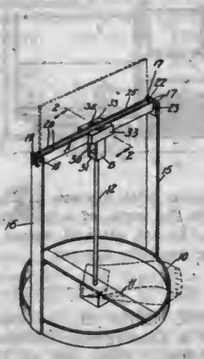
2. A belt having a plurality of shallow pockets on surfaces thereof for rapidly absorbing a confined air film created between said surfaces and a pulley operatively associated therewith, and means in said belt for providing an outlet for said air so that no pressure may exist between said surfaces and a pulley, said means being substantially equally distributed on both sides of the belt.

1,661,301. PROCESS FOR THE MANUFACTURE OF NEW ORGANIC ARSENIC COMPOUNDS. JOHANNES PFLEGER, Frankfort-on-the-Main, and AUGUST ALBERT, Munich, Germany. Original application filed Nov. 29, 1924, Serial No. 752,947, and in Germany Dec. 5, 1922. Divided and this application filed June 13, 1927. Serial No. 198,688. 11 Claims. (Cl. 260—14.)



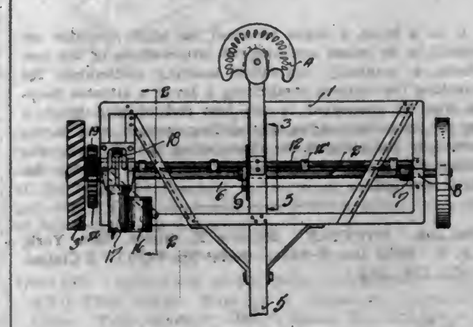
1. A process for the manufacture of new organic arsenic compounds which consists in reducing the condensation product of an organic arsenic compound containing carbonyl groups in non cyclical linkage with an nitrogen hydrogen compound containing the grouping $NH_2—\alpha—$ wherein α is carbon or oxygen and the amino hydrogens are reactive with carbonyl groups, the C=N bond in the resulting condensation product not being destroyed by the reducing process.

1,661,302. FASTENING CONDUCTING MECHANISM. ELMER R. POPE, Hamilton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 13, 1926. Serial No. 94,524. 18 Claims. (Cl. 1—39.)



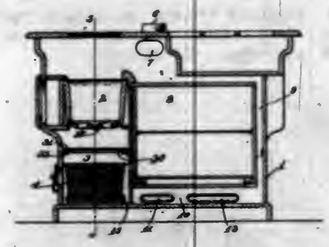
18. In a nail-loading mechanism, a nail-block having rows of nail-holding openings, a member having openings corresponding to a row of block-openings and with which said rows of block-openings may be successively alined, tubes leading from the openings, a foot-plate-section in which said tubes terminate, a tube fixed upon the foot-plate-section, and a turret rotatable about the axis of the fixed tube and provided with groups of tubes each including the fixed element and arranged to register with the tubes terminating in the foot-plate.

1,661,303. ELECTRODE RACK. HERMAN G. PRICE and BENJAMIN K. SMITH, Houston, Tex. Filed Feb. 24, 1927. Serial No. 170,714. 7 Claims. (Cl. 219—17.)



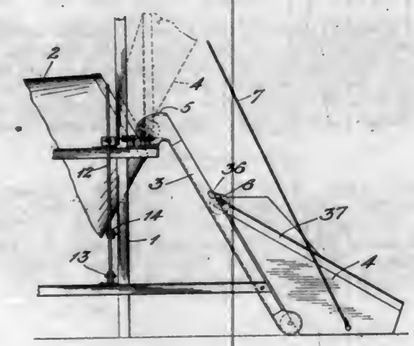
1. An electrode rack including a casing, an electrode support therein formed of nonfusible material, said support being also an electrical conductor, means for electrically connecting the support with the work and means in the casing for retaining the electrodes on said support, in spaced relation.

1,661,304. DISPLAY STAND. WILLIAM F. PRICE, Glastonbury, Conn. Filed Aug. 24, 1927. Serial No. 215,239. 8 Claims. (Cl. 211—59.)



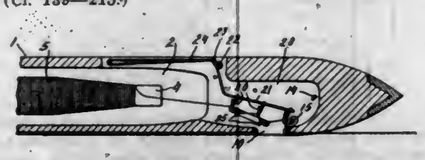
7. A display device having a base, a spindle extending upwardly therefrom, a pair of standards extending upwardly from said base, an element supported on and tying together the tops of said standards, said element having a groove in its upper surface to receive advertising matter, and a guard for said spindle carried by said element.

1,661,305. SUBSOIL CULTIVATOR. CLEMENT I. ROBERTS and BENJAMIN F. COLLIER, Albion, Wash.; said Collier assignor of one-eighth to Thomas A. Collier, Rockford, Wash.; and one-eighth to James F. Collier, Spokane, Wash. Filed Sept. 1, 1920. Serial No. 132,944. 1 Claim. (Cl. 97—144.1.)



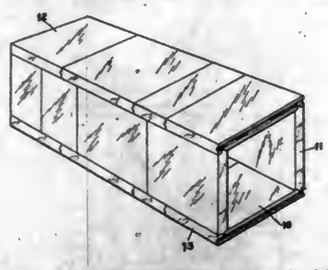
In a cultivator the combination with a main frame, supporting shaft and traction wheels, of a transversely extending sub-soil cutter blade, side arms rigidly secured to the blade and to said supporting axle, a ratchet lever rigid with the shaft and an arcuate rack plate fixed on the frame for co-action with the ratchet lever whereby the cutter blade may be rigidly maintained in operative position with its side arms disposed in a vertical plane, or rocked to adjusted position by means of the lever.

1,661,306. STOVE. ROBERT W. ROGERS, Framingham, Mass., assignor to Sterling Range and Furnace Corporation, Rochester, N. Y., a Corporation of New York. Filed May 18, 1922. Serial No. 561,813. 6 Claims. (Cl. 126—242.)



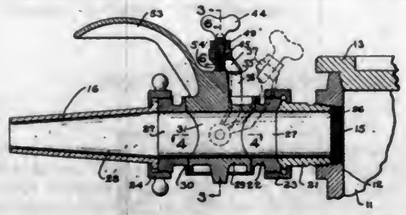
1. The combination with a stove having a fire pot and an ash pit beneath the same, of a vacuum exhauster communicating with the ash pit and means for temporarily sealing the latter from the fire pot.

1,661,307. HOIST. NILS M. ROSENDAHL, Waterloo, Iowa, assignor to Construction Machinery Company, a Corporation of Iowa. Filed Apr. 26, 1926. Serial No. 104,710. 3 Claims. (Cl. 214—103.)



1. In a hoist, a lower terminal, an upper terminal an element to be raised and lowered intermediate of the terminals, a manually controlled hoisting mechanism for operating the element comprising a lever, a slidable member directly connected to the free end of said lever, a dog for normally holding the sliding member, and means carried by the element for disengaging the dog from the sliding member when said element is in its extreme elevated position.

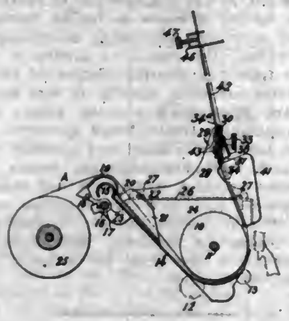
1,661,308. SHUTTLE. MILTON H. RUBIN, New York, N. Y. Filed Jan. 7, 1926. Serial No. 79,717. 3 Claims. (Cl. 139—215.)



1. A shuttle for automatic looms comprising a shuttle body having a recess for holding a bobbin, an opening through which the thread from the bobbin passes, and a thread tensioning and slack take-up device mounted within the shuttle comprising a resiliently pivoted member, rings on said member into which the thread is directed formed with a turn-in hook to prevent dislodgment of the thread, a plurality of hooks secured within the shuttle body and adapted to engage the thread, and a spring member acting upon the pivoted member so as to restrain said member around its pivot against the pull of the thread and away from the hooks whereby a tension is maintained upon the thread.

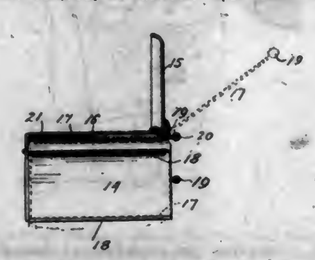
1,661,309. REFRACTORY MUFFLE. CHARLES W. SAXE, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed July 3, 1926. Serial No. 120,466. 2 Claims. (Cl. 25—144.)

1. A refractory muffle structure for use in high temperature furnace operations comprising a plurality of flat dense refractory plates having a length equal to the width of the structure and provided with tongues and grooves interfitting to form continuous top and bottom walls of the muffle, and a plurality of plates of similar material extending between the top and bottom which are provided with tongues and grooves interfitting to form the muffle sides, said side plates being arranged upon the bottom plates and adapted to support the top plates and provided with wide flat edges containing tongues adapted to engage grooves in the inner flat surfaces of the top and bottom plates, thereby providing an integral self supporting structure adapted to effectively resist the heat changes encountered in high temperature operations.



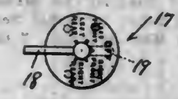
1,661,310. VALVE MECHANISM. OSCAR C. SCHMIDT, Cincinnati, Ohio, assignor to The Cincinnati Butchers' Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Sept. 29, 1924. Serial No. 740,443. 2 Claims. (Cl. 251—153.)

1. In valve mechanism of the character described, the combination of a valve-casing having a conical valve-seat, a conical valve-plug therein, said valve-casing and said valve-plug provided with passages which are substantially alined when in open relation and of substantially equal cross-sectional areas, said valve-plug provided with side walls at the respective sides of the passage therein, which side walls at their narrowest portion are of a width substantially equal to the diameter of said last-named passage, said valve-casing provided with lateral enlargements in which said side walls are received when said passages are alined, a yoke comprising side arms at the sides of said valve-casing, pivotal connecting means between the ends of said side



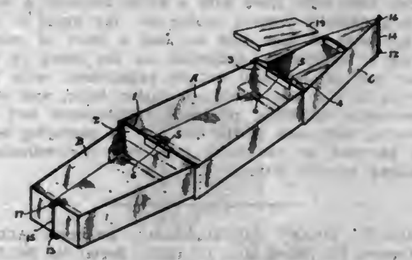
arms and said enlargements of said valve-casing, said side arms having recesses therein extending in the direction of said alined passages, said yoke provided with an extension extending along the axis of said valve-plug at the end of larger diameter of said valve-plug, means between said extension and said valve-plug whereby to adjustably seat said valve-plug in said valve-casing, means for fixing said last-named means for repeated similar reseatings of said valve-plug, and a handle for said valve-plug at the end of larger diameter of said valve-plug arranged to be moved to the right and to the left of said valve-casing for locating the major axis of said handle perpendicular to the axis of said alined passages in said valve-casing and parallel with said last-named alined passages for respectively open relation and closed relation of said valve, and the body portion of said handle at the respective sides of said major axis thereof received in said recesses in said arms at the respective sides of said valve-casing for complete openings of said valve.

1,661,311. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Sept. 6, 1924. Serial No. 736,216. 16 Claims. (Cl. 197—133.)



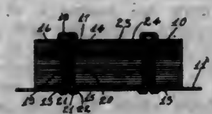
1. In a typewriting machine, the combination of a platen, a platen-frame upon which said platen is mounted, opposing side members carried by said platen-frame, a pair of standards having rightangular bearing plates removably secured upon said side members, rightangular lugs formed at the upper ends of said standards, a knife-bar extending longitudinally of said platen and having its opposing ends formed with vertical slots, the slotted ends of said knife-bar overlying said lugs, and set-screws projecting into said slots, tapped into said lugs and overlying said knife-bar to adjustably hold said knife-bar in position.

1,661,312. LUBRICATION INDICATOR. MARVIN SMITHEY, Lawrenceville, Va. Filed Dec. 26, 1923. Serial No. 682,703. 3 Claims. (Cl. 116—115.)



3. A speedometer having a cylindrical casing and a face plate with a slot for the display of the odometer dials, a supporting plate to which the speedometer casing is attached having a hole concentric with said casing and the odometer dials having distinctive markings and a circular series of tablets slidably mounted about the speedometer casing and movable back and forth through the hole in said supporting plate, said tablets being provided with textual matter referring to the dial markings of the odometer.

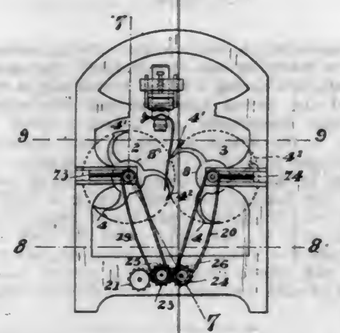
1,661,313. AUTOMOBILE TROUBLE LAMP. WALTER E. STEVENS and TORRENCE R. SEIPLE, Ashley, Pa. Filed Jan. 29, 1927. Serial No. 164,598. 1 Claim. (Cl. 240—8.2.)



In combination, a wheel fender, a lamp housing body carried at the under side of said fender and open at its lower side, and having a keeper at one end of its lower side and also having a lens at said side arranged to direct light downwardly and toward a wheel complementary to the fender, a lamp in said housing above said lens, and a cover of imperforate character hingedly connected to the housing body at one end of said lower side of the housing body and having a latch at its opposite end adapted to engage said keeper tongue of the housing body; said cover when its latch is disengaged from the keeper tongue being adapted to gravitate to and remain of itself in a pendent position at one end of said lens and at a substantial right angle thereto.

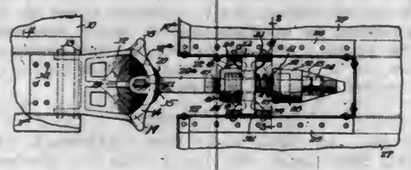
1,661,314. SECTIONAL BOAT. ADAM W. TRINIER, Parry Sound, Ontario, Canada. Filed Jan. 10, 1926. Serial No. 160,285. 5 Claims. (Cl. 9—2.)

1. A sectional boat, comprising a plurality of sections formed with water-tight bulkheads at the end adapted to be butted together, a keel extending across the joint and between the assembled sections, means intermediate of the length of the keel for securing said sections together and to the keel, and means for securing the ends of the keel to the end sections.



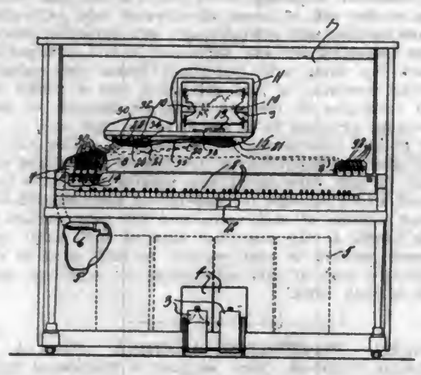
1,661,315. BINDING POST FOR CALENDAR PADS AND THE LIKE. WILLIAM T. SULLIVAN, Cincinnati, Ohio. Filed Mar. 1, 1927. Serial No. 171,890. 5 Claims. (Cl. 281—25.)

1. The combination of a base having a perforation therein, a sleeve having a bore in alignment with the perforation in the base, a flange carried by the sleeve



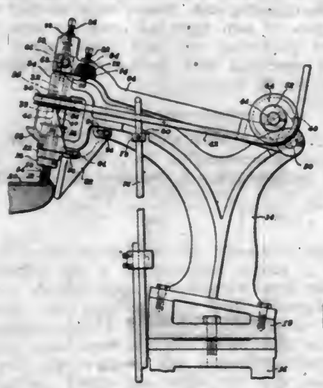
and contacting the base, a paper fastener comprising a pair of bendable arms, and a head on the paper fastener abutting one end of the sleeve, the bendable arms extending through the bore in the sleeve and through the perforation in the base having their ends bent upon the base for securing the base between the flange on the sleeve and the bent portions of the arms and for securing the sleeve at substantially right angles to the plane of the base.

1,661,316. SCUTCHING MACHINE. JOSEPH VAN STEENKISTE and JOSEPH VAN MAERCKE, Wevelghem, Belgium. Filed Mar. 12, 1924, Serial No. 698,703, and in Belgium Mar. 20, 1923. 7 Claims. (Cl. 19—13.)



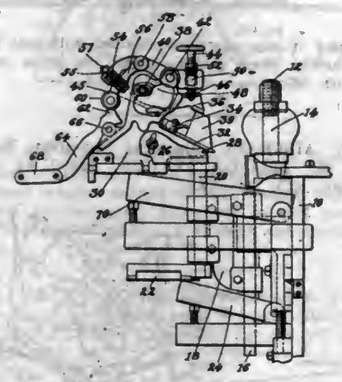
1. In a scutching machine, the combination with sets of scutching or swinging cylinders each turning in opposite directions of sets of longitudinally conveying flexible steel belts, lined with a woven material, a layer of longitudinally grooved rubber on the lining of one of the belts of each said set and a layer of rubber having a longitudinal projection on the lining of the other belt of the said set in engagement with the grooves in the first mentioned rubber layer, and of a transversely travelling returning flexible steel belt cooperating with each of the said sets of conveying belts and provided on the outer face with perpendicularly arranged parallel laths.

1,661,317. DRAFT MECHANISM. ANDREWS ALLEN, Glencoe, Ill. Filed Mar. 13, 1922. Serial No. 543,150. 5 Claims. (Cl. 213—46.)



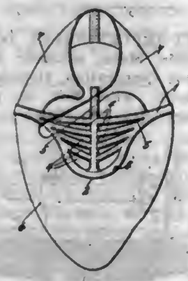
1. Draft mechanism for mine cars comprising in combination a draw bar having a shank portion, a coupler block through which the said shank extends, springs mounted upon said shank on each side of the coupler block and adapted to receive normal pulling and buffing strains, cup shaped members mounted upon the said shank within which the said springs are seated and adapted to transmit pulling and buffing strains to said coupler block when the said springs are compressed and means for securing the said coupler block to a mine car.

1,661,318. PNEUMATIC PIANO CONTROL. OTIS BALLARD, Toledo, Ohio. Filed Feb. 23, 1926. Serial No. 89,945. 3 Claims. (Cl. 84—155.)



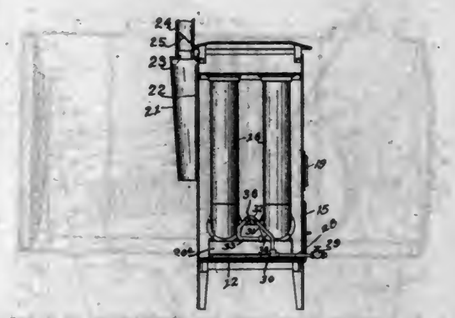
1. A player-piano having a spool-box, a tracker-board in said spool-box having a single line of apertures therein, notation motive elements controlled through a portion of said apertures, expression controlling elements controlled through the remaining portion of said apertures, ducts from the notation portion of said tracker-board apertures extending directly to said notation motive elements, duct communication means from said expression controlling tracker-board apertures, a member remote from said tracker-board and provided with ports to which said duct communication means extend, a second member provided with ports and coacting with said first member, and duct communication means from the ports of said second member extending to said expression controlling elements, said members being shiftable one as to the other for bringing said ports into and out of registry.

1,661,319. MACHINE FOR OPERATING UPON SOLES. FREDERIC E. BERTRAND, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 21, 1920. Serial No. 375,600. 27 Claims. (Cl. 12—17.)



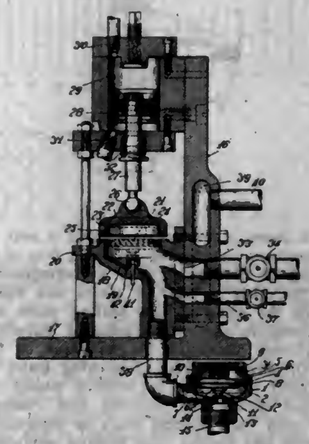
27. In a machine for operating on lasted shoes, in combination, means for turning up the channel flap at the toe of a shoe, means for enlarging the channel at the toe while said flap turning means is operating, a work gage having a gaging surface disposed in parallel relation to the axis of the tool for determining the location of the channel enlarging tool with respect to the work, said gage being mounted for adjustment toward and from the tool, and means associated with the gage for maintaining the parallel relation of its gaging surface with the tool axis in various positions of adjustment.

1,661,320. WOOD-HEEL-TURNING MACHINE. WALTER W. BRADBURY, St. Louis, Mo., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 28, 1927. Serial No. 195,117. 8 Claims. (Cl. 12—87.)



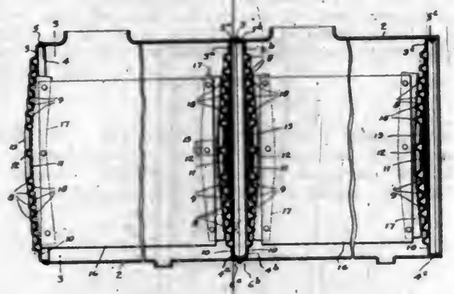
1. In a wood heel turning machine, a jack having a clamping face arranged to receive the heel-seat surface of a heel blank, a clamping member arranged to engage the toplift surface of the blank, a second clamping member arranged to force the first-named clamping member toward the clamping face, and a screw trunnioned in the second clamping member and engaging the first-named clamping member.

1,661,321. METHOD OF MAKING BOOTS OR SHOES. ARTHUR J. BRAUER, Glendale, and FREDERICK P. WAGNER, and WALTER S. OVERTON, St. Louis, Mo., assignors to Brauer Bros. Shoe Co., St. Louis, Mo., a Corporation of Missouri. Filed July 5, 1924. Serial No. 724,354. 7 Claims. (Cl. 12—146.)



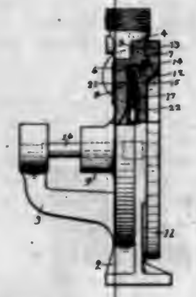
2. In the art of making shoes, the method comprising, cementing together an instep piece and its lining, perforating the closely adhering assembled parts, stitching the assembled perforated parts, and attaching the lined instep piece when so perforated and stitched, to the upper.

1,661,322. HEATER. THEODORE G. CRANE, Chicago, Ill. Filed Apr. 10, 1925. Serial No. 22,045. 4 Claims. (Cl. 126—95.)



1. In a heater of the class described, a casing having inlets for air and a flue connection, air flues leading into said casing near the bottom thereof and emerging from the top, a vaporizing burner within the casing adapted to heat said flues, and a cover for said casing centrally apertured and spaced above said casing whereby an additional quantity of air is mixed with that from the hot air flues to temper the same.

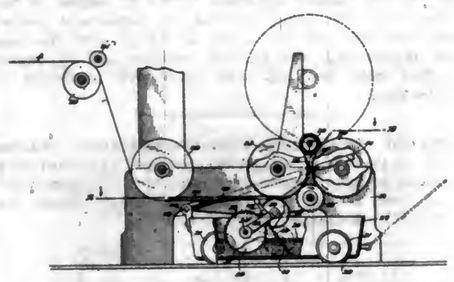
1,661,323. METHOD AND APPARATUS FOR SETTING THERMOSTATS. DAVID N. CROSTHWAIT, Jr., Marshalltown, Iowa, assignor to C. A. Dunham Company, Marshalltown, Iowa, a Corporation of Iowa. Filed Sept. 30, 1925. Serial No. 59,706. 16 Claims. (Cl. 73—51.)



1. The method of adjusting expansion thermostats consisting in assembling the thermostat with the member by which it is supported when in service, subjecting this assembly to the temperature and pressure under which the thermostat should expand to operative position, measuring the variation from standard of the expanded thermostat, and then adjusting the thermostat in the supporting member to compensate for the variation from standard.

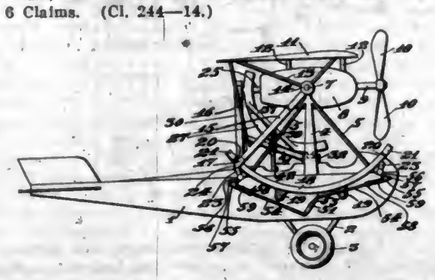
1,661,324. VEHICLE TANK. AUGUSTINE DAVIS, Jr., Covington, Ky. Filed May 19, 1924. Serial No. 714,223. 9 Claims. (Cl. 220—20.)

1. In a motor truck tank, the combination of a horizontal axis shell, a head having a peripheral flange, a weld joint uniting the flange to the shell, the body of the head being dished and being largely occupied by corrugations concentrically disposed within the flange, the central area of the head inside the innermost of the concentric corrugations containing crossing corrugations.



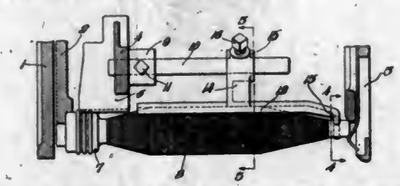
1,661,325. ROTARY PUMP. WILLIAM I. DERRICK, Davenport, Iowa. Original application filed May 4, 1922, Serial No. 558,452. Divided and this application filed July 23, 1926. Serial No. 124,365. 5 Claims. (Cl. 103—96.)

1. In a pump, a casing comprising a pair of complemental members each having a seating face of substantial width adapted to contact with a corresponding seating face of the other member, a closed and endless recess formed in the zone of said seating faces and defined by said members, said recess being of materially greater cross sectional dimension in the plane of the seating faces than normal thereto, a packing gland of deformable material adapted to be received wholly within said recess, and means for securing said casing members together with their seating faces in substantial contact to compress and deform said packing providing a liquid seal between said faces, the cross sectional area of said packing gland being materially smaller than the corresponding cross sectional area of said recess.



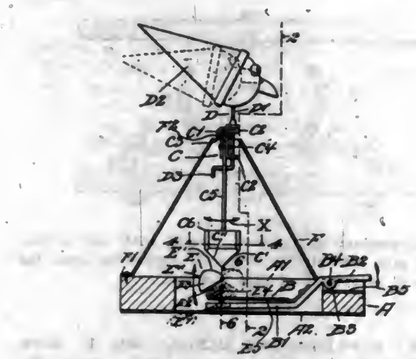
1,661,326. APPARATUS FOR FORMING AND HANDLING PAPER ROLLS. GEORGE W. DINGEE, Utica, N. Y. Filed June 8, 1922. Serial No. 566,831. 7 Claims. (Cl. 242—266.)

1. The combination with a paper winding mechanism having two spaced apart drums upon which a mandrel for winding the paper may rest, and devices for driving the drums; of an adhesive applying mechanism, and means



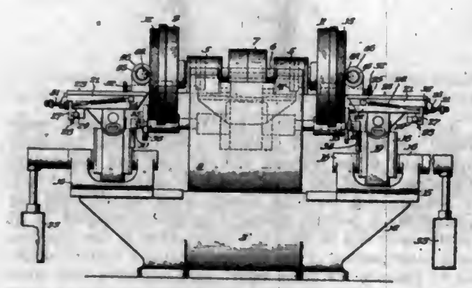
for bringing it into operative relation with one of the drums whereby paper passing about the drum may be coated with adhesive.

1,661,327. AIRCRAFT. DEMETRE DONCHEFF, East St. Louis, Ill. Filed Dec. 21, 1925. Serial No. 76,739. 6 Claims. (Cl. 244—14.)



1. In an aeroplane, a fuselage body, trunnion supports thereon, a motor housing having trunnions pivotally mounted on said supports on an axis transversely of said fuselage body, rocking frames movable with said motor housing, plane wings supported by said rocking frames so as to move in fixed relation to said motor housing, releasable latching means for holding said rocking frames in normal and operated positions, a laterally shiftable rack sector on said fuselage body, a pinion driven from the motor in said housing, said pinion being normally disengaged from said rack sector, and means controlled by the operator for shifting said rack sector to operatively engage the latter with said pinion, at will, whereby to shift said motor housing and said plane wings about said transverse axis on said fuselage body.

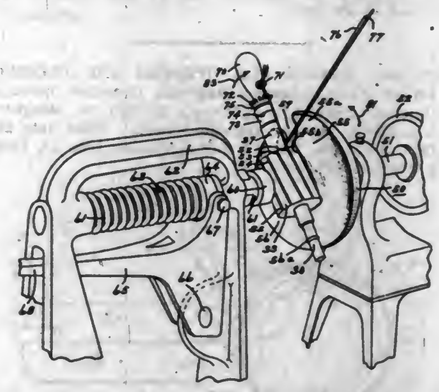
1,661,328. WEFT-REPLENISHING LOOM. CLARE H. DRAPER, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 21, 1925. Serial No. 70,469. 5 Claims. (Cl. 139—244.)



1. A weft replenishing loom having, in combination, a hopper, and a transferrer having a butt end engaging portion, an intermediate yarn engaging portion separate from the butt-engaging portion and provided with a tip engaging portion.

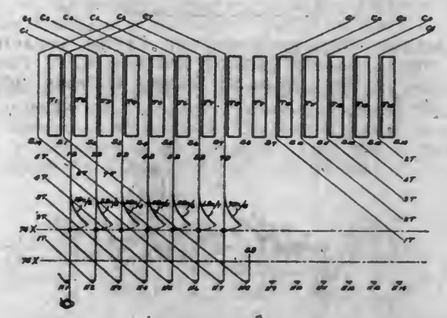
1,661,329. GAME DEVICE. EARL F. GALE, Los Angeles, Calif. Filed Feb. 16, 1927. Serial No. 168,741. 4 Claims. (Cl. 273—161.)

4. An index device comprising a rockable bracket, an index rotatably carried by and rockable with said bracket, a pendulous member secured to said bracket, and means to initiate an oscillatory movement to said pendulous member, said means being of a variable and non-selective character.



1,661,330. GRINDING MACHINE. EDWARD B. GARDNER, RALPH D. GARDNER, and JOHN NIELSEN, Beloit, Wis. Filed Jan. 4, 1923. Serial No. 610,548. 7 Claims. (Cl. 51—240.)

1. In a grinding machine the combination of a pair of grinding wheels, a work table for each wheel, means for yieldably urging said tables toward their respective wheels, adjustable means for limiting the extent of such movement, and counter-balanced means for automatically moving said tables parallel with the grinding faces of said wheels.

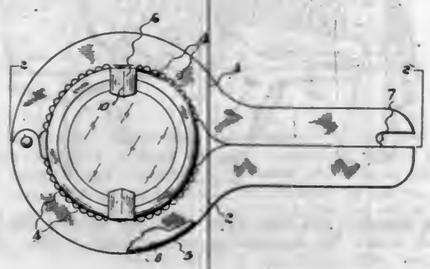


1,661,331. APPARATUS FOR WINDING ARMATURES. ALBERT B. GOMORY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Original application filed Feb. 3, 1923, Serial No. 616,842. Divided and this application filed Sept. 26, 1924, Serial No. 740,058. Renewed Aug. 11, 1927. 10 Claims. (Cl. 242—13.)

1. In a machine for winding armatures, the combination with a rotatable shaft; of a winding head mounted thereon and provided with a recess having a cylindrical wall adapted to receive an open slotted armature core assembled on an armature shaft, and having cheeks on opposite sides of the recess said cheeks merging with said cylindrical wall at edges angularly spaced in conformity with the angular spacing of certain armature core slots, and having scoop portions adjacent the ends of the recess which are spaced from the armature shaft, one of said scoop portions having a notch extending from the periphery of the head to facilitate moving

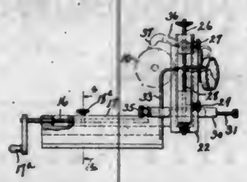
the armature coil ends away from the winding region; and means for maintaining an armature within said recess while permitting it to be rotated.

1,661,332. MANUFACTURE OF ARMATURES. ALBERT B. GOMORY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Continuation of application Serial No. 616,842, filed Feb. 3, 1923. This application filed Nov. 20, 1924. Serial No. 751,183. 5 Claims. (Cl. 171—206.)



1. The process of making an armature which includes winding successively upon an open slotted armature core a plurality of coils of wire, providing between successive coils a loop of wire one branch of which leads from the ending active-coil-side of the preceding coil and the other branch of which leads to the starting active-coil-side of the next succeeding coil; and in severing the loop branch leading to the starting active-coil-side of a preceding coil to provide separated coil leads for said preceding coil, and in bending the lead of starting active-coil-side of the preceding coil away from the winding region of the next coil to be wound before winding the next succeeding coil in order that the severed lead may be brought out between the end of the core and the wire conductors overlapping the end of the core.

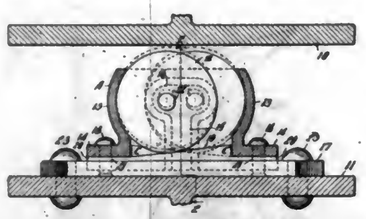
5. An armature for dynamo-electric machines comprising, in combination, a slotted core, a commutator, and a plurality of coils each embracing a plurality of core teeth, and having leads for connecting the coils with certain bars of the commutator, the coils overlapping each other at the ends of the core, each core slot receiving portions of a plurality of coils, the start and end



leads of coils underneath other coils and the start leads of coils overlying other coils in a core slot extending from the coils to the commutator from between the end of the core and the overlapping coil portions adjacent that end of the core.

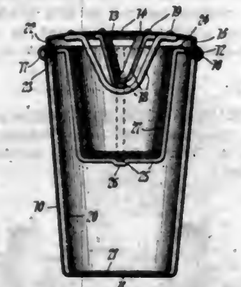
1,661,333. DEVICE FOR OPENING AND CLOSING FRUIT JARS. ARTHUR REGINALD GURNETT, Toronto, Ontario, Canada, assignor of one-half to Margaret Jean-Marie, Toronto, Ontario, Canada. Filed July 23, 1926, Serial No. 124,377, and in Canada June 28, 1926. 2 Claims. (Cl. 81—3.1.)

2. In a device of the character described, the combination of a pair of gripping members pivoted together at one end and shaped to form between them a substantially circular opening; a handle on each gripping member, and an upwardly and inwardly directed tongue on each gripping member said gripping members being provided with a flange extending substantially from end to end thereof and lying substantially at a right angle thereto.



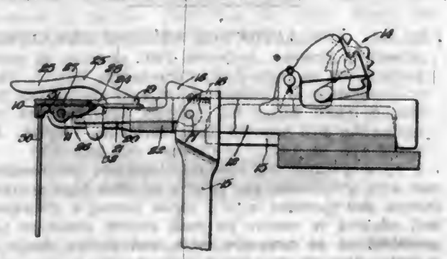
1,661,334. GEAR-ROUNDING-OFF LATHE ATTACHMENT. SOLOMON HELLCOTT, New York, N. Y. Filed Apr. 17, 1926. Serial No. 102,630. 6 Claims. (Cl. 90—3.)

1. A lathe attachment of the class described comprising a block, a hinged gauge carried by said block, said gauge having a slotted work engaging element slidable therethrough and interior reduction gearing cooperating therewith, a dial and indicating arms actuated by said gearing whereby the diameter of a gear being reduced may be determined at all stages of the continuous cutting operation and means for setting the gear to be cut on said block for contact with the said work engaging element.



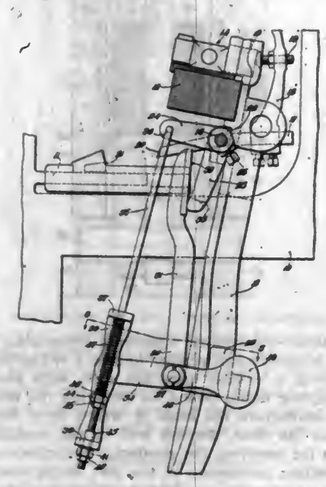
1,661,335. ANTIFRICTION BEARING. JOHN F. O'CONNOR, Chicago, Ill., assignor, by mesne assignments, to W. H. Miner, Inc., a Corporation of Delaware. Filed Jan. 18, 1924. Serial No. 686,945. 8 Claims. (Cl. 308—226.)

6. In an anti-friction bearing, the combination with relatively movable members; of a support on one of said members; a plurality of anti-friction elements interposed between said members, abutment means at opposite ends of said bearing engaged by each roller to limit the movement thereof in opposite directions; and means for elevating one of said rollers as it approaches one end of said support upon relative movement of said members to



cause independent engagement thereof with one or another of said anti-friction elements, depending upon the direction of movement of said members.

1,661,336. REFRESHMENT MIXER. GUS M. KATZ, New York, N. Y. Filed Feb. 17, 1925. Serial No. 9,729. 5 Claims. (Cl. 146—3.)

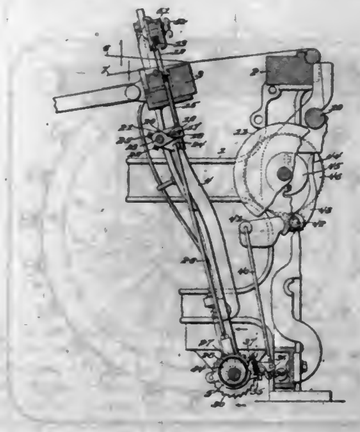


1. A refreshment shaker and top comprising an outer vessel, an inner vessel adapted to nest within the outer vessel and to be reversed and its open end inserted in the open end of the outer vessel to constitute a shaker, a common top for both vessels when nested, said top comprising a portion having a periphery adapted to fit in the outer end of the outer vessel when in one position, said outer portion of the top also having a portion adapted to embrace the outer vessel, said top when said inner vessel is nested in the outer vessel being adapted to cover both vessels and hold one nested within the other.

1,661,337. DETECTOR MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Dec. 5, 1924. Serial No. 754,064. 7 Claims. (Cl. 139—377.)

1. Detector mechanism for looms having, in combination, a detector slide, a detector fork carried by the slide provided with a tail, and a weft hammer provided with a weft hammer hook and a fork guard extending rearwardly from the weft hammer hook above the weft fork for engaging the fork upon excessive upward movement thereof.

1,661,338. SHUTTLE-BOX TENSION-CONTROLLING MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Mar. 9, 1925. Serial No. 13,948. 9 Claims. (Cl. 139—186.)

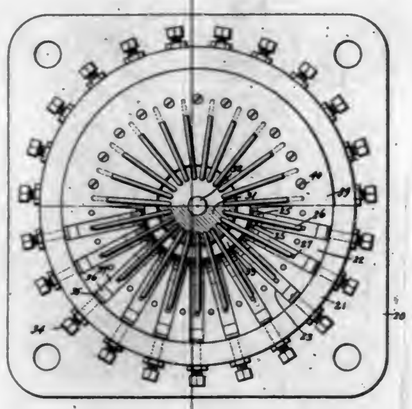


1. Shuttle box tension controlling mechanism for looms having, in combination, a lay, swords upon which the lay is mounted, shuttle boxes for the lay, binders for the shuttle boxes, pressure applying means for the binders comprising a bell crank lever having a long arm and a short arm pivoted on the sword below the lay, the long arm parallel to the sword, and the short arm extended substantially at right angles thereto, and yielding connections between the pressure applying means and the binders.

1,661,339. LOOM. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Apr. 30, 1927. Serial No. 187,818. 4 Claims. (Cl. 139—188.)

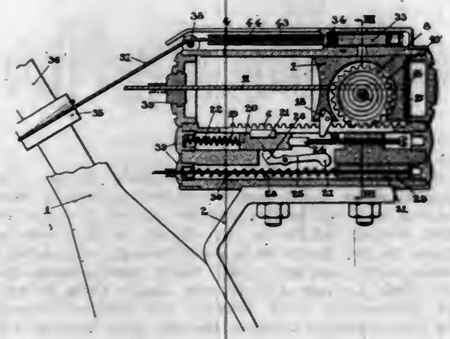
1. A loom having, in combination, a lay having a straight shuttle raceway and a curved reed supported on the lay to beat the weft laid by the shuttle in the shed into a curved fell from selvage to selvage, and a series of shuttle guiding teeth arranged in straight alinement in front of the curved reed to engage the back wall of the shuttle and guide it in a straight path and from contact with the curved reed.

1,661,340. LOOM. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 11, 1927. Serial No. 167,505. 8 Claims. (Cl. 139—188.)



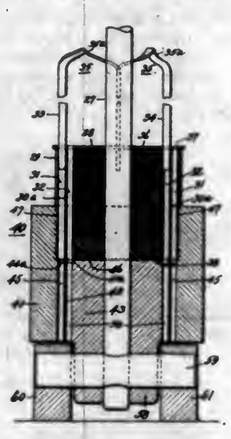
1. A loom having, in combination, a lay, a reed, and means for moving the reed slowly up and down during the operation of the loom, including a pawl and ratchet, means for supporting the ratchet for movement by the lay relatively to the pawl but through a distance insufficient to turn the ratchet one tooth, and eccentric means for slowly shifting the pawl in a direction to rotate the ratchet whereby the ratchet is rotated by a stroke of the lay through a distance that is only a fraction of the distance from one ratchet tooth to the next.

1,661,341. SIX-THROW FOUR-BEARING BALANCED CRANK SHAFT. JOHN A. OLDSON, Worcester, Mass., assignor to Wyman-Gordon Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 1, 1925. Serial No. 27,282. 1 Claim. (Cl. 74—38.)



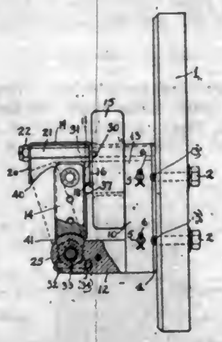
A six-throw four-bearing crankshaft, having two straight single cheeks and one curved connecting cheek between each end bearing and its adjacent intermediate shaft bearing and having two straight single cheeks between the two intermediate shaft bearings, and having a counterweight applied to each single cheek adjacent the end shaft bearings and to each single cheek between the intermediate shaft bearings and adjacent thereto, the counterweights adjacent the end shaft bearings substantially counterbalancing certain of the unbalanced dynamic forces generated by high speed rotation of the crankshaft, and the counterweights between the intermediate shaft bearings maintaining the static balance of the shaft, the center line of each end counterweight being offset from the projected center line of its supporting crank cheek at an angle of approximately 15° in one direction, and the intermediate counterweights being offset from their supporting crank cheeks and disposed at an angle of substantially 180° with respect to the end counterweights.

1,661,342. APPARATUS FOR ALIGNING ARMATURE-CORE LAMINÆ. WILLIAM E. PABST, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Aug. 21, 1926. Serial No. 130,617. 5 Claims. (Cl. 29—84.)



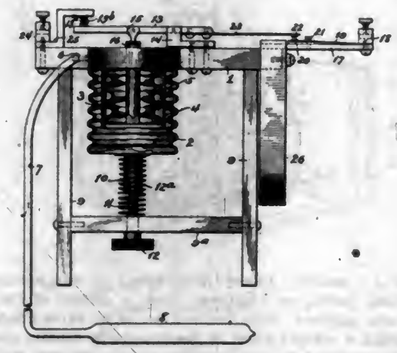
1. Apparatus for truing the slots of a laminated armature core assembled upon a shaft comprising, in combination, means for guiding the core for endwise movement, devices adapted to be received by the core slots for progressively displacing the laminations of the core angularly in order to force them into alinement, and means for pressing the core against said devices.

1,661,343. SIGNALING APPARATUS FOR VEHICLES, MORE PARTICULARLY FOR MOTOR CARS. JACQUES PARCQ, Paris, France. Filed Feb. 14, 1924, Serial No. 692,857, and in France Feb. 28, 1923. 3 Claims. (Cl. 177—337.)



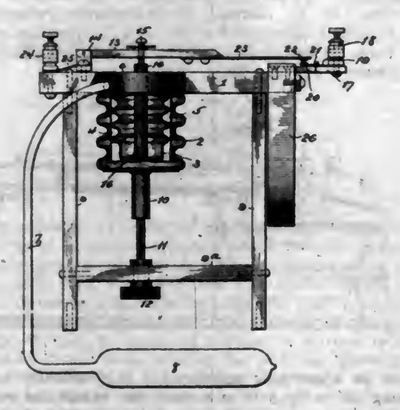
1. A vehicle signaling apparatus, comprising, a normally inactive stop signal, movable means to make the stop signal active, holding means to retain the stop signal in active condition, release means for the holding means operation of which release means permits the stop signal to become inactive, a connection between said release means and the accelerator control of the vehicle whereby operation of the accelerator causes operation of the release means.

1,661,342. APPARATUS FOR ALIGNING ARMATURE-LORA E. POOLE, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 28, 1926. Serial No. 118,875. 13 Claims. (Cl. 29—84.)



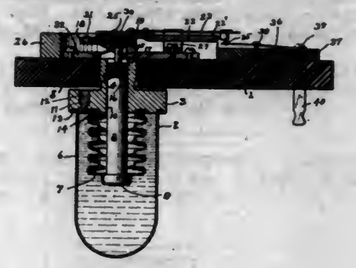
1. Armature assembling apparatus comprising, in combination, a cup-shaped member having a cylindrical recess for receiving a slotted armature core, each slot having non-conducting lining means for receiving the branches of hair-pin conductors the ends of which have been introduced into the slots, the end wall of the member having apertures for receiving the conductor branches and means for preventing movement of the slot lining means; and means for moving the conductors endwise relative to the core.

1,661,345. ALTERNATING-CURRENT MAGNET. CHARLES H. RIPPL, East Cleveland, Ohio, assignor to The Clark Controller Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 26, 1927. Serial No. 171,192. 5 Claims. (Cl. 175—338.)



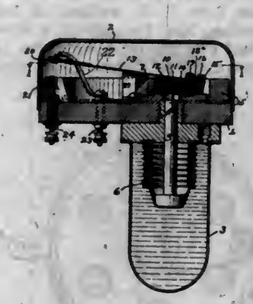
1. In A. C. magnet construction the combination of a U-shaped core provided with the magnet winding and having a curved end on one leg, and a faced end on the other leg, an armature having a curved end pivotally mounted about said first named leg to provide a curved air gap, said armature having a faced portion adpted to be drawn against said other leg, the pull through said faced surfaces of said core leg and armature being substantially at right angles to the pull between said armature and other leg at the pivotal connection and adjusting means at such pivotal connection to allow said two abutting faces to be brought into alignment.

1,661,346. THERMOSTATIC CONTROLLING MECHANISM. CHARLES BALDWIN SAWYER, Cleveland, Ohio, assignor to The Brush Laboratories Company, Cleveland, Ohio. Filed Nov. 17, 1922. Serial No. 601,652. 17 Claims. (Cl. 200—140.)



1. In mechanism of the character described, the combination of thermostatic means including two extensible cup-shaped bellows having their open ends connected to a closing member and having relatively movable closed ends disposed one within the other forming a fluid chamber between them, and electric circuit opening and closing means connected with the inner bellows.

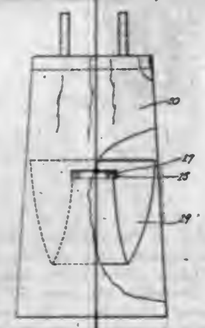
1,661,347. THERMOSTATIC CONTROLLING MECHANISM. CHARLES BALDWIN SAWYER, Cleveland, Ohio, assignor to The Brush Laboratories Company, Cleveland, Ohio. Filed Nov. 17, 1922. Serial No. 601,653. 13 Claims. (Cl. 200—140.)



1. In mechanism of the character described, the combination of a pivoted member including a flexible part carrying a contact, a contact cooperable with said first-mentioned contact, and a means cooperable with said pivoted member for moving it, whereby said member will have a toggle action to cause the contact carried thereby to wipe the other contact and also to separate one contact from the other, the connection between the contact carried by said pivoted member and the pivotal mounting therefor being substantially inextensible within the normal range of operation of the mechanism.

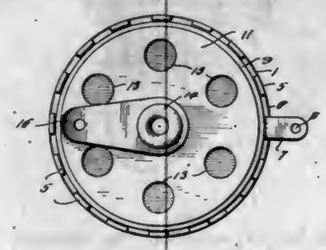
1,661,348. THERMOSTATIC CONTROL DEVICE. FRED W. GRUNDMAN, Cleveland, Ohio, assignor to The Brush Laboratories Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 4, 1923. Serial No. 629,820. 13 Claims. (Cl. 200—140.)

1. In mechanism of the character described, the combination with a support, of circuit opening and closing mechanism carried by said support, comprising a pivoted lever, means connected to the lever for movement therewith during normal operation of the device, said means carrying a contact engageable with a cooperable contact to close the electrical circuit, a temperature control device comprising an enclosed chamber completely filled with liquid not saturated with gases in solution within the operating range, said chamber having an expansible portion movable in response to changes in the volume of said liquid, a plunger carried by said expansible portion to cause said lever to move to circuit closing position, said means movable with the lever being connected thereto to permit relative movement with respect to said lever when the lever is further moved beyond a predetermined operating position after the contacts are engaged.



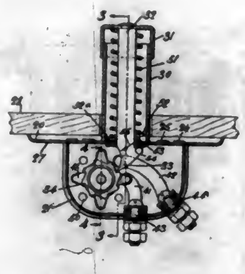
1,661,349. THERMOSTATIC CONTROLLING DEVICE. CHARLES B. SAWYER, Cleveland, Ohio, assignor to The Brush Laboratories Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1924. Serial No. 699,707. 25 Claims. (Cl. 200—140.)

1. A device for controlling the operation of heat transfer apparatus to maintain the temperature within predetermined limits which comprises in combination, a controlling means for the heat transfer apparatus, an actuator for the controlling means which comprises a sealed chamber with an expansible portion, means operatively connecting said portion with said controlling means, said connecting means being adapted to considerably magnify the motion of said controlling means, said chamber being completely filled with liquid not saturated with gases in solution within the operating range,



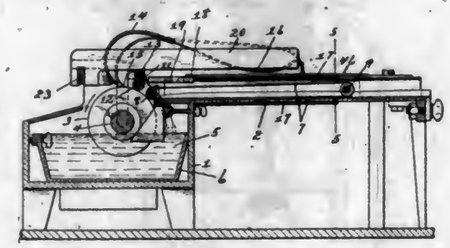
whereby movement of the expansible portion is solely dependent on the volume of the enclosed liquid and substantially independent of the forces opposing such movement.

1,661,350. LADY'S COMBINATION UNDERGARMENT. KATHERINE SCHMUTZLER, Glenside, Pa. Filed June 2, 1927. Serial No. 195,892. 1 Claim. (Cl. 2—73.)



A garment of the class described comprising an inverted T-shaped section of material consisting of an upper tapering portion and a lower longitudinal section of material, the juncture of both portions serving as the waist line, a strip having spaced apart buttons thereon secured to the longitudinal section below the waist line, an additional section of material of the same dimensions as the upper portion of the T-shaped section secured to the latter by stitching, a tab having a tapering outline and having its upper end secured to the additional section, said tab having buttonholes formed therein adapted to engage the buttons on the strip, the upper corners of the longitudinal portion being secured in overlapped relation to form a concealed slit.

1,661,351. ELECTRICAL CONDENSER. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Dubilier Condenser Corporation, New York, N. Y., a Corporation of Delaware. Filed Feb. 28, 1925, Serial No. 12,236. Renewed July 22, 1927. 15 Claims. (Cl. 175—41.)

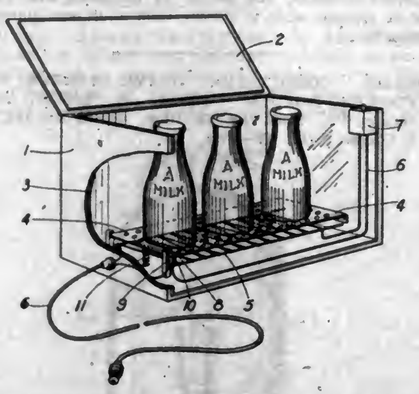


1. A condenser comprising plates mounted to be relatively movable, each of said plates having one or more recesses therein so that when said plates are adjusted to put the recesses of the two plates wholly or partially into or out of registry, the capacity of said condenser may be varied, and insulation between the plates and in contact with substantially the entire opposing surfaces thereof.

1,661,352. ELECTRIC SWITCH. WILLIS G. YOUNG, Dayton, Ohio, assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 30, 1925. Serial No. 26,954. 4 Claims. (Cl. 200—6.)

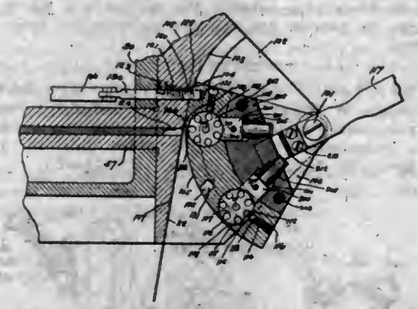
4. An electric switch comprising, in combination, a housing having an apertured cover, a portion of the edge of said aperture being inclined so as to extend into the housing, a ratchet wheel in the housing, a contact adapted to be operated by the rotation of the ratchet wheel, a plunger carried by the housing and adapted to operate with straight-line and swinging movement, said plunger extending through the aperture in the switch housing and having a pawl portion within said housing adapted to engage the ratchet wheel, a spring adapted to urge the plunger in one direction of its straight-line movement, a washer surrounding the plunger and engaged by one end of the spring, the one side of the washer resting upon the cover of the switch, and a roller interposed between the inclined edge of the cover aperture and the washer, said roller exerting a side pressure upon the plunger, due to the action of the spring, whereby the plunger is held in position in which the pawl portion thereof engages the ratchet wheel.

1,661,353. GUMMING MACHINE. WILLIAM G. ZEPP, Troy, N. Y., assignor to Whitehurst Printing and Binding Company, Troy, N. Y., a Corporation of New York. Filed Mar. 5, 1927. Serial No. 173,013. 9 Claims. (Cl. 91—58.)



1. In a gumming machine and in combination, a gumming roll in the path of a sheet fed through the machine; a conveyer movable above and transversely of the path of the sheet in advance of the gumming roll; and a stripper in the path of the gummed sheet and retroverted to overhang the path of the sheet in advance of the gumming roll above the plane of the conveyer.

1,661,354. ANTIFREEZE CONTAINER. WILLIAM W. AYER, West Englewood, N. J. Filed Mar. 17, 1927. Serial No. 176,187. 1 Claim. (Cl. 219—19.)

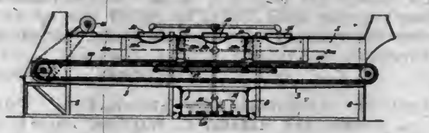


Anti-freeze apparatus comprising a container and means for closing the same against the admission of air, an electric circuit, a circuit closer, means whereby

the circuit closer is automatically operated by an article placed in the container, and a thermostatic circuit closer in said circuit arranged to break the circuit when the

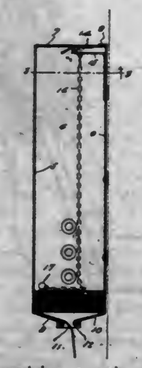
temperature in the container rises to a predetermined point, and to close the circuit when the temperature of the closed container falls to a predetermined point.

1,661,355. METHOD AND MACHINE FOR LINING AN ARMATURE CORE WITH A FLEXIBLE STRIP. RUSSELL W. BAKER, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 29, 1926. Serial No. 98,185. 10 Claims. (Cl. 29—84.)



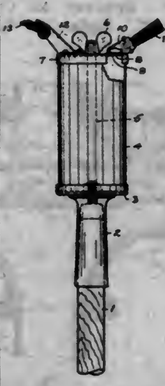
1. The method of lining an armature core with a flexible strip of insulating material, which includes pushing the strip into the core in a direction transverse to the core axis to form a narrow loop of material within the core, introducing a suitable tool into the end of the slot and narrow loop, moving the tool endwise of the core to cause the loop to be spread out and to conform to the side walls of the teeth defining the slot, and pushing a loop of material into a succeeding slot while the tool remains within the preceding slot.

3. A machine for lining an armature core with a flexible strip of insulating material, comprising, in combination, a core holder, means for introducing a loop of paper into a core slot, and means for spreading the loop to cause it to engage the sides of the core teeth defining the slot.



1,661,356. WASHING MACHINE. WENTWORTH V. BAKER, Detroit, Mich. Filed Sept. 15, 1926. Serial No. 135,684. 4 Claims. (Cl. 141—1.)

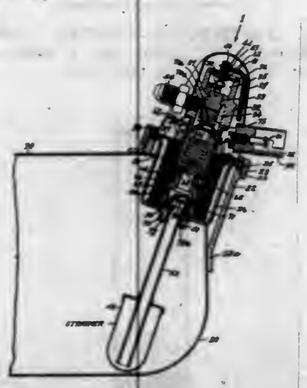
1. In a washer, an elongated casing, a conveyor mounted in said casing for the passage of articles therethrough, a cleaning fluid reservoir formed beneath and communicating with said casing, means for directing fluid towards said conveyor, a sloping drain plate



mounted at the top of said reservoir, and a trough formed at the lower end of said drain plate for receiving foreign matter washed down the plate.

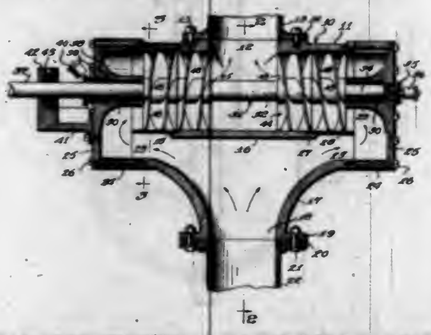
1,661,357. PAPER-TOWEL CABINET. NAPOLEON BOIVIN, Berlin, N. H. Filed Apr. 4, 1927. Serial No. 180,854. 2 Claims. (Cl. 312—61.)

1. A cabinet comprising a pair of hingedly connected sections having an opening in the bottom, means interiorly of the sections for holding the sections closed, a chain engaged with said means, a weight element on said chain adapted to project through the opening when the cabinet is empty.



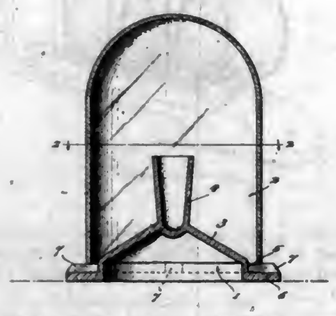
1,661,358. WINDOW-CLEANING DEVICE. GEORGE U. BRAKE, Fort Wayne, Ind. Filed Nov. 16, 1923. Serial No. 675,133. 1 Claim. (Cl. 15—126.)

In a window washing device, an open ended reservoir for washing liquid, a removable cover closing said open end, a bolt within the reservoir and removably supported in the bottom thereof and projecting through the cover, means on the bolt to clamp the cover on the reservoir, an elongated conduit, mounted on the cover, projecting over the edge thereof and communicating therethrough with the interior of the reservoir, the



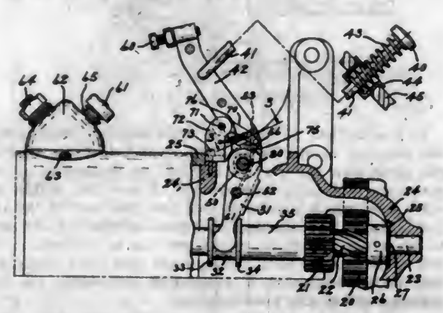
conduit being transverse to the longitudinal axis of the reservoir, and a fibrous brush removably mounted in the conduit and adapted to be moistened throughout its length by the liquid flowing by gravity into the conduit from the reservoir when the device is inclined downwardly.

1,661,359. LIQUID-SUPPLY APPARATUS. WILLIAM A. CHRYST and HERBERT C. WALTERS, Dayton, Ohio, assignors, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 28, 1925. Serial No. 33,469. 3 Claims. (Cl. 103—53.)



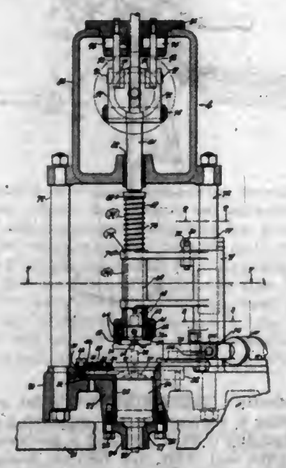
1. A liquid pump comprising, in combination, a nonmagnetizable cylinder, a magnetizable tubular piston slidable within the cylinder, an electromagnet surrounding the cylinder for operating the piston, a tubular duct connected with the cylinder outlet end and aligned with the cylinder and providing a pump outlet, a circuit breaker contact insulatingly supported by and within the tubular duct and in alignment with the piston, a movable contact located between the piston and stationary contact, and a spring located between the piston and movable contact and movable with the piston.

1,661,360. PUMP. RHEUBEN M. CLARK, Joplin, Mo. Filed June 4, 1927. Serial No. 196,565. 6 Claims. (Cl. 103—93.)



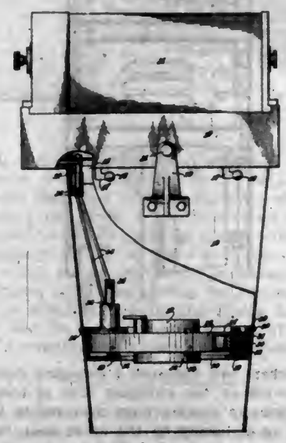
1. A pump comprising a casing including a cylinder having its ends spaced from the adjacent portions of the casing to provide inlet passages through which liquid is adapted to flow into the ends of the cylinder, said casing being provided with an outlet opening communicating with said cylinder centrally thereof, a shaft rotatably mounted in said casing and extending axially through said cylinder, a pumping element mounted on said shaft on each side of said outlet opening and rotatable in said cylinder, means for elongated said casing axially of said shaft to accommodate an additional pumping element adjacent each of said first named pumping elements, and means for elongated said cylinder at opposite ends to receive such additional pumping elements.

1,661,361. COMBINATION GRAVE MARKER AND FLOWER HOLDER. EDWARD H. COOLEY, Point Marion, Pa. Filed Oct. 18, 1926. Serial No. 142,389. 3 Claims. (Cl. 47—41.)



2. A device of the character described comprising a base having an elevated portion and a marginal flange surrounding the elevated portion, spacers projecting upwardly from the marginal flange of said base, a flower holding cup carried by the elevated portion of said base, and a transparent hood enclosing the elevated portion of said base, said hood being open at its bottom and resting upon said spacers with the portions of its lower edge between the spacers held above the flange to provide air passages between the hood and flange.

1,661,362. ENGINE-STARTING APPARATUS. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed July 11, 1924. Serial No. 725,522. 2 Claims. (Cl. 74—7.)

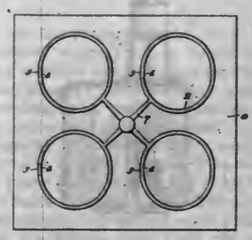


1. Engine starting apparatus comprising, in combination, a pinion adapted to engage and drive an engine gear and to be driven thereby when the engine becomes self-operative; of a motor; a spirally splined shaft operated by the motor and threadedly connected with the pinion whereby, when the engine drives the pinion, the pinion will be automatically demeshed; a lever for shifting the pinion into mesh with the engine gear; a controlling member for rendering the motor operative; a spring connecting said member and said lever whereby the latter is moved by movement of the member, and demeshing of the pinion is permitted regardless of the status of the control member; a device for latching the lever in pinion nonmeshing position if the member is held in operating position when the engine becomes self-operative; and means for unlatching said lever by the return of said member to normal position.

1,661,363. ARMATURE-ASSEMBLING APPARATUS. GEORGE W. ELSEY, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 12, 1926. Serial No. 80,760. 14 Claims. (Cl. 29—84.)

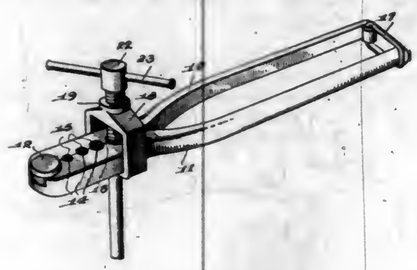
1. Armature assembling apparatus comprising, in combination, work holders adapted to hold an armature shaft and a commutator in alignment, power operated means for causing one of the holders to move axially relative to the other, and means for moving one of the holders relative to the other to cause the shaft and commutator to become aligned, and for effecting the operation of the power means after the holders are in alignment.

1,661,364. AERIAL CAMERA. SHERMAN M. FAIRCHILD, New York, N. Y. Filed Mar. 1, 1923. Serial No. 622,034. 9 Claims. (Cl. 95—12.5.)



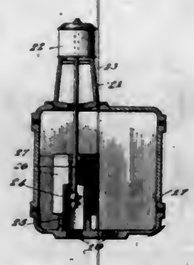
1. In a photographic apparatus, a camera, a detachable lens cone therefor, and means carried by the lens cone for pivotally supporting the camera to permit swinging movement of the latter on an axis having a predetermined position relative to the center of gravity of the apparatus.

1,661,365. PLIERS. NAPOLEON J. GENDRON, Seattle, Wash. Filed Mar. 4, 1926. Serial No. 92,305. 1 Claim. (Cl. 81—5.1.)



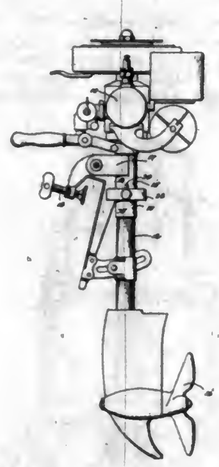
An implement for withdrawing cotter pins comprising interconnected jaws having flat meeting surfaces throughout their full widths, save that said jaws are each formed with a longitudinally arranged recess opening through the free end of the jaw, the recesses being closer to one side of the jaws than to the other, said jaws being further formed with a transverse semicylindrical recess which extends entirely across the jaw and into which the longitudinally ranging recesses merge, the semicylindrical recesses together forming a circular recess to substantially accommodate the head of a cotter pin and permit of access to the head of said cotter pin from opposite sides of the jaws, the disposition of the longitudinal recesses at different distances from the sides of the jaws providing for an increased leverage on the cotter pin as compared with a central disposition of such recesses.

1,661,366. PROCESS OF MAKING PISTON RINGS. HARRY S. GRAVES, Detroit, Mich., assignor to Spiral Piston Ring Company, Detroit, Mich., a Corporation of Michigan. Filed Oct. 15, 1924. Serial No. 743,688. 5 Claims. (Cl. 29—156.6.)



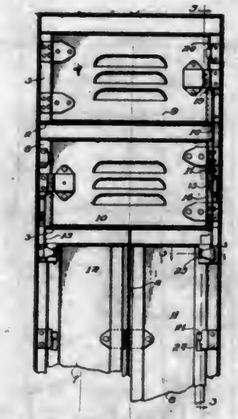
1. A process of making helical piston rings from flat split rings, consisting in assembling a plurality of flat split rings side by side with the split ends of said rings in proximity to one another, subjecting the assembled rings to sidewise pressure to convert each flat ring into a helix, and then heat-treating said helical rings while under pressure to set the helical contour of said rings.

1,661,367. TUBE-FLARING TOOL. BERNARD F. HELMINIAK, Milwaukee, Wis. Filed Sept. 26, 1925. Serial No. 58,792. 3 Claims. (Cl. 153—79.)



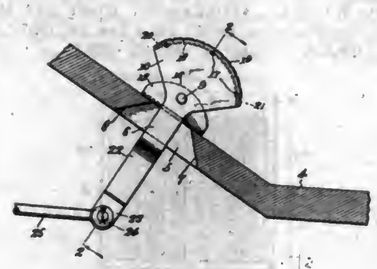
1. A tube flaring tool comprising a pair of levers pivotally connected together at one end thereof, enlarged abutting surfaces provided on said levers, said levers having semicircular grooves provided therein at said abutting surfaces for providing cylindrical openings when said levers are in abutting position, said grooves being beveled outwardly at their upper ends so as to enlarge the same, said grooves being provided for receiving tubes therein of various sizes, means for holding said levers in abutting position, a rectangular frame slidably mounted upon said levers adapted to be moved over the grooves provided in said levers, a bar threaded in said frame, means for rotating said bar for feeding the same towards or away from said cylindrical openings, and a tapered surface formed on the lower end of said bar for engaging into a tube received in a pair of the semi-circular grooves for flaring the end of said tube outwardly in engagement with the outwardly beveled portions of said semicircular grooves.

1,661,368. HOT-WATER HEATING SYSTEM. WILLIAM WALTER HUDSON, Salt Lake City, Utah. Filed Jan. 9, 1926. Serial No. 80,290. 3 Claims. (Cl. 237—63.)



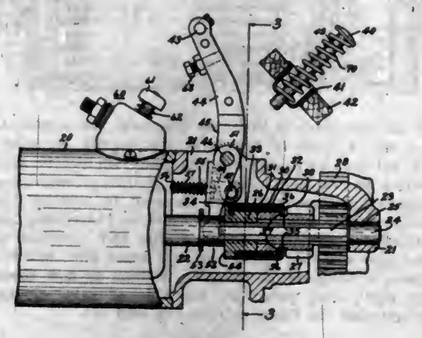
2. A circulation accelerator for hot water heating systems comprising a tank to be interposed between portions of the hot water supply line and effective to act as an expansion tank, a tube positioned within said tank and forming the inlet to the tank from the fluid circulating line, a shaft depending into the tank and axially within said tube, a screw propeller on the lower end of the shaft within the tube, and a series of radial blades carried by the tube and projecting beyond its outlet end to break up and prevent whirling of the water.

1,661,369. SWIVEL MOTOR. FINN T. IRGENS, Jackson, Mich., assignor to Lockwood Ash Motor Company, Jackson, Mich., a Corporation of Michigan. Filed Sept. 20, 1926. Serial No. 136,519. 11 Claims. (Cl. 115—18.)



1. A deflection compensating device for outboard motors including a support for the supporting shaft of the motor comprising a fixed part and a movable part which yieldably grips said shaft, and resilient means interposed between said parts to cushion the vibration of the motor.

1,661,370. LOCKER. EVERETT DEE KASER, Aurora, Ill., assignor to Durabilt Steel Locker Co., Aurora, Ill. Filed Mar. 7, 1927. Serial No. 173,561. 5 Claims. (Cl. 312—193.)



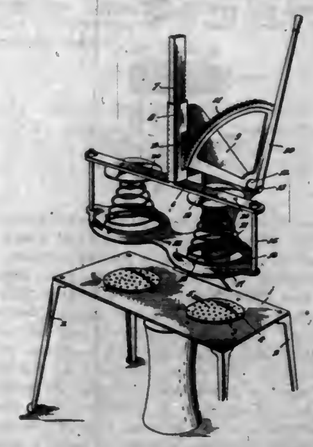
1. In a locker, two superposed swinging doors, a bar movably mounted on the swinging edge of one door for locking the same, a rocking lever mounted in the locker and adapted to be swung by the other door to obstruct the unlocking movement of said bar when both doors are closed and yielding means associated with said lever and bar so that said one door may be closed after said other door has been closed.

1,661,371. ACCELERATOR. SYLVESTER A. KEEFER, Manchester, Ga., assignor of one-third to James A. Johnson and one-third to Clarence N. Wisdom, Manchester, Ga. Filed Jan. 28, 1927. Serial No. 164,252. 2 Claims. (Cl. 74—81.)

1. An improved accelerator comprising in combination with a slotted vehicle floor board, an accelerator pedal composed of side segmental plates and an arcuate foot plate connected therebetween, a bracket plate secured to the floor board having upstanding ears for fitting between and against the central portions of the side segmental plates, a pivot bolt extending through said ears and through the side segmental plates, and a lever arm extending from one of the plates for attachment to the carburetor control and lying through the slot in the floor board.

1,661,372. ENGINE STARTER. FREDERICK C. KROEGER, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Dec. 7, 1925. Serial No. 73,939. 2 Claims. (Cl. 74—7.)

1. Engine starting apparatus comprising, in combination, a motor, a shaft operated by the motor, a sleeve driven by the shaft and movable along the shaft, a gear movable along the shaft, a clutch connecting the gear and sleeve and comprising axially aligned friction drums provided respectively by the gear and sleeve, and comprising a coiled spring frictionally engaging and encircling the drums, means for moving the clutch, sleeve and gear endwise along said shaft, and means for enclosing the spring and for preventing separation of the clutch drums while permitting relative rotary movement thereof.



1,661,373. TIRE. ALBERT KUSPER, Dayton, Ohio, assignor of one-half to Walter Stefanowski. Filed Feb. 2, 1927. Serial No. 165,385. 2 Claims. (Cl. 152—8.)

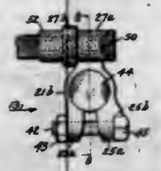
1. A puncture proof tire for motor vehicles comprising a resilient member positioned in a casing and supported by a rim, the said casing removably attached to the said rim, said resilient member provided with notched portions equally spaced on the periphery of the said resilient member, said notched portions each adapted to receive one extremity of coil springs, as a means of holding the said coil springs in a fixed position in the said casing;

a guard member positioned in the said casing outwardly of the said coil springs, said guard member provided with side extended elements formed inwardly therefrom, so as to prevent the said guard member from injuring the said casing.

1,661,374. DEVICE FOR EXPRESSING JUICES FROM FRUITS. JOHN S. LACEY, Columbus, Ohio. Filed Aug. 26, 1926. Serial No. 131,721. 10 Claims. (Cl. 100—42.)

1. In a device for expressing the juice from citrous fruits, a perforated support for a halved fruit, a supporting member movable toward and away from the fruit support and including an upper element, a lower element suspended therefrom and movable relative thereto and constructed to encompass the perforated support, and a compressing member movable with the supporting member and comprising a spiral disposed between and attached to the upper and lower elements of said member and having its coils of successively decreasing diameter whereby to successively engage and exert pressure against the exterior of the halved fruit from the outer to the central portion thereof upon movement of the supporting member toward the fruit support and consequent compression of the said compressing member.

1,661,375. CONDUCTOR CLAMP. EVERETT F. LEIGHTON, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 15, 1926. Serial No. 94,634. 5 Claims. (Cl. 173—259.)

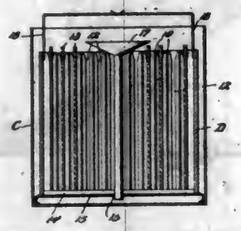


1. The method of making a conductor clamp for storage battery terminals which consists in providing an elongated piece of sheet metal with spaced holes equally

spaced from the shorter end edges of the piece and with annular flanges surrounding the holes and extending from the same side of the piece; in shaping those portions of the piece which extend between the flanges and the end edges so as to form the two half-tubular parts the concave surfaces of which face in the same direction

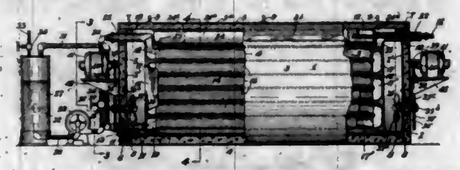
as the annular flanges; in bending the piece intermediate said holes so as to bring the flanges into opposite and aligned relation, and the half tubular parts opposite each other to form a wire receiving socket; and in splitting the intermediate bent portion through to the aperture surrounded by the flanges.

1,661,376. STORAGE-BATTERY TERMINAL CLAMP. EVERETT F. LEIGHTON, Anderson, Ind., assignor, by mesne assignments, to Delco-Remy Corporation, Dayton, Ohio, a Corporation of Delaware. Filed June 7, 1926. Serial No. 114,115. 1 Claim. (Cl. 173—259.)



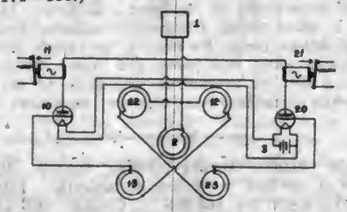
The method of making a storage battery terminal clamp which consists in providing a sheet metal blank including an elongated main portion, a pair of similarly shaped portions extending oppositely from the main portion adjacent one end thereof, a pair of similarly shaped portions extending oppositely from the main portion adjacent the other end thereof, and a pair of similarly shaped portions extending oppositely from the main portion intermediate the ends thereof; in bending said pairs of extensions about lines defining the sides of the main portion and in such a direction that the extensions are located beyond the same side of the main portion; in bending the main portion to form a split ring; in bending the free end of the members of each pair of end extensions toward each other to provide portions for retaining a clamping bolt and for receiving the head of the bolt and a clamping nut, respectively; and in bending the members of the intermediate pair of extensions toward each other and in shaping them for attachment to a conductor.

1,661,377. CORPSE-SUPPORTING REST. ADAM N. LUTZ, Sandusky, Ohio, assignor of one-half to Edward J. Rosino, Sandusky, Ohio. Filed July 9, 1926. Serial No. 121,285. 11 Claims. (Cl. 27—28.)



1. In an adjustable rest device such as described, a main base frame, a main adjustable supporting frame carried by the base frame, and another rest frame having side members pivoted within said main adjustable rest frame, the main adjustable rest frame and the rest frame carried thereby being adjustable so that opposite ends thereof will be elevated or lowered by their adjustment, and means to hold the two rest frames in adjusted positions.

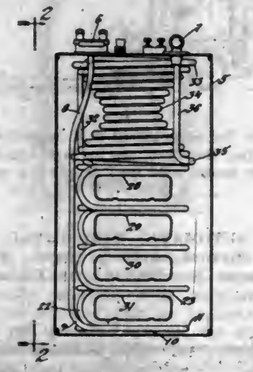
1,661,378. PHOTOGRAPHIC DEVELOPING, FIXING, AND WASHING APPARATUS. HARRY REX MCKELLAR, San Francisco, Calif. Filed Jan. 14, 1927. Serial No. 161,183. 3 Claims. (Cl. 95—100.)



1. In photographic apparatus of the kind described, a film or plate holder consisting of a rectangular frame open at the top and bottom and having flanges projecting inwardly from its lower side edges, the inner side walls of the carrier being formed with spaced vertical grooves, septa in said grooves dividing the carrier into a plurality of compartments, the inner side walls of the carrier being also formed with vertical grooves for the reception of plates or films between the first mentioned grooves.

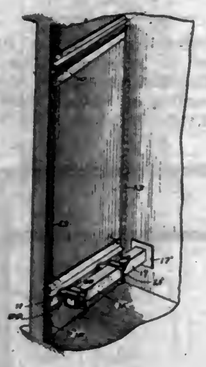
1,661,379. LIQUID-TREATING APPARATUS. HARVEY H. MILLER, Canton, Ohio, assignor to The H. H. Miller Industries Company, Canton, Ohio, a Corporation of Ohio. Filed June 28, 1923. Serial No. 648,334. 6 Claims. (Cl. 257—85.)

3. In apparatus of the class described, the combination of a vat, a treating apparatus stationarily mounted in said vat and extending longitudinally thereof in spaced relation to its side walls, said apparatus comprising a plurality of connected pipes disposed in vertical alignment, a supply means disposed above and extending longitudinally of said treating apparatus and provided with means for spraying liquid onto the upper pipe, means for causing a temperature changing medium to flow through said pipes, and means at one side of said apparatus for agitating the liquor delivered to said vat.



1,661,380. VARIOCOUPLER. EDMUND R. MORTON, New York, N. Y., assignor to Fairchild Aerial Camera Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 1, 1923. Serial No. 622,035. 7 Claims. (Cl. 171—119.)

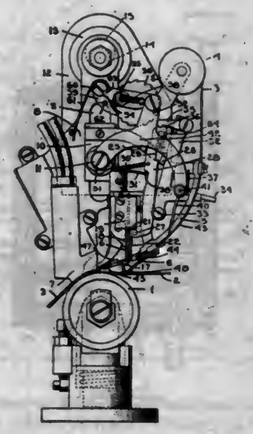
1. A vario-coupler comprising a plurality of secondary coils spaced transversely and connected to form a plurality of secondary circuits, and a primary coil spaced



axially from the secondary coils and movable transversely to the secondary coils to vary the distance between its axis and that of each of the secondary coils.

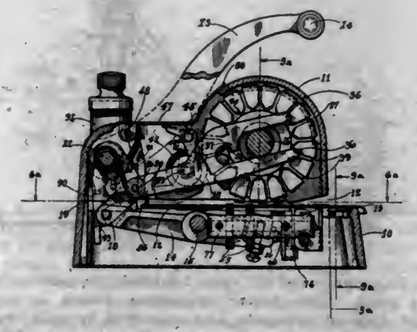
1,661,381. REFRIGERATION. OWEN F. NELSON, Detroit, Mich., assignor to Copeland Products Inc., Detroit, Mich., a Corporation of Michigan. Filed Jan. 28, 1926. Serial No. 84,478. 4 Claims. (Cl. 62—95.)

1. A refrigerating brine tank having ice tray sections therein, piping in said tank having an intake and outlet connection extending through the tank wall, said piping being extended from the intake to form coils directly under and over said tray sections and then to form coils removed from the tray sections.



1,661,382. BEAD HOLDER. WAYNE I. NOBLE, Chicago, Ill. Filed Oct. 5, 1925. Serial No. 60,557. 4 Claims. (Cl. 72—128.)

4. A bead or molding positioning device comprising an extensible post having ends adapted to abut against and frictionally engage the walls of a room, yielding means formed and arranged to urge endwise extension of said posts and a series of work-holding clamps slidably adjustable on said post.

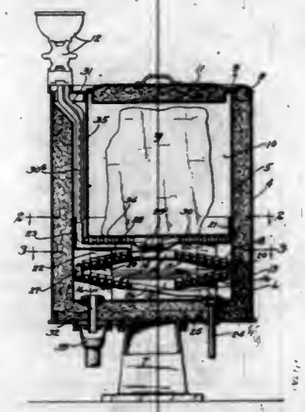


1,661,383. TAPING MACHINE. WALTER P. OSGOOD, Malden, Mass., assignor to Boston Machine Works Company, Lynn, Mass., a Corporation of Massachusetts. Filed May 26, 1924. Serial No. 716,042. 13 Claims. (Cl. 154—42.)

1. In a taping machine, the combination with means for progressively applying tape to the work, of means operable at the will of the operator but actuated by the tape-applying means to sever the tape, normally inactive tape-feeding means, means to actuate the tape-feeding

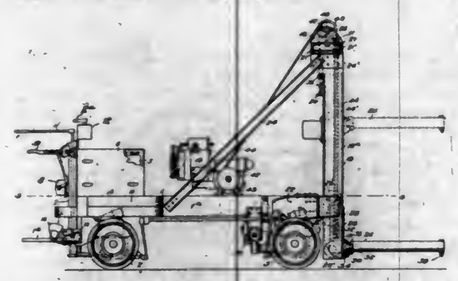
means by the tape-applying means, and means to control the time of operation of the tape-feeding means by the tape-severing means.

1,661,384. CHECKWRITER. WALTER B. PAYNE, Rochester, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Feb. 9, 1925. Serial No. 7,872. 14 Claims. (Cl. 197—6.4.)



1. In a printing apparatus, a type carrier, a shaft on which said carrier is rotarily supported for bringing a plurality of type forms thereon selectively to printing position, a platen for cooperation with the selected forms, actuating means comprising toggle members for effecting a relative impressing movement of the carrier and platen, and centering means supported and guided by the carrier shaft and having a connection with said toggle members for actuating said means to center the carrier in selected position.

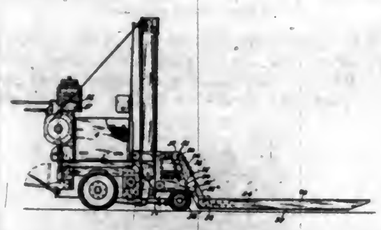
1,661,385. WATER-COOLING DEVICE. MERTON A. POCOCK, Minneapolis, Minn., assignor to Carter-Mayhew Manufacturing Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Mar. 4, 1927. Serial No. 172,643. 4 Claims. (Cl. 62—141.)



1. The combination with a refrigerator and a drinking fountain, of a plurality of superimposed pans within said refrigerator, a waste water conduit extended from said drinking fountain and delivering into one of said pans,

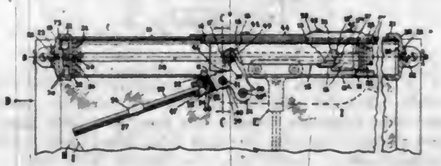
and a drinking water supply pipe extended to said drinking fountain and having coils located in the several pans and subject to exchange of temperature with the waste

water discharged through said pans, certain of said pans having spiral channels in which the coils of said drinking water supply pipe are placed.



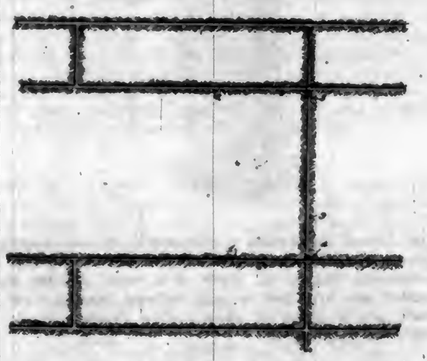
1,661,386. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 4, 1923, Serial No. 636,638. Renewed May 31, 1927. 8 Claims. (Cl. 214—65.)

1. In apparatus of the class described, the combination of a truck frame having supporting wheels, a guide frame disposed vertically and supported by said truck frame at one end thereof and extending above and below said frame, a member movable upwardly and downwardly in said guide frame, means carried by said truck frame and connected with said movable member for moving it, and an element trunnioned at its inner end on said movable member and extending horizontally therefrom for engagement with the lateral surfaces of a body by a thrust movement, whereby the latter may be lifted, said element engaging said movable member at a point remote from the axis of its trunnions to maintain said element against movement downwardly.



1,661,387. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 23, 1925. Serial No. 77,352. 10 Claims. (Cl. 187—11.)

8. In apparatus of the class described, the combination of a wheel mounted frame, a pair of guides thereon, a shoe slidably supported on said guides and having a pair of outwardly extending spaced supports formed with pairs of aligned openings, a load supporting member having a pair of arms formed with openings arranged to

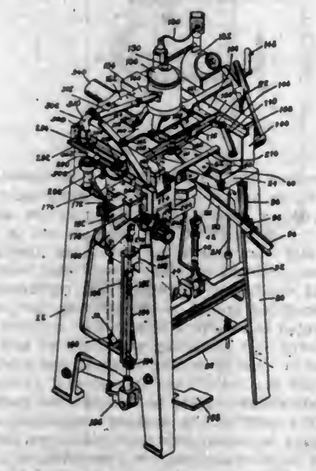


register with the openings in said supports, and pins removably fitting the openings in said supports and arms to removably mount said load supporting member on said shoe.

1,661,388. AUTOMATIC WINDSHIELD WIPER. EDMUND O. SATHER, Alameda, Calif. Filed July 14, 1927. Serial No. 205,740. 10 Claims. (Cl. 15—253.)

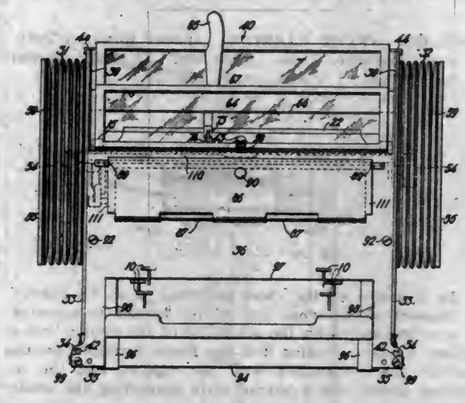
10. In a windshield wiper, a guideway, a wiper mounted on said guideway for reciprocation across the windshield in a longitudinal path, means for reciprocating said wiper, and means in the path of the wiper for engaging the same to swing it in an arc at the end of its longitudinal movement.

1,661,389. METHOD OF MINING OIL AND THE LIKE. EWART G. SINCLAIR, Maracaibo, Venezuela, assignor to The Midwest Refining Company, Denver, Colo., a Corporation of Maine. Filed Oct. 16, 1926. Serial No. 142,113. 6 Claims. (Cl. 262—1.)



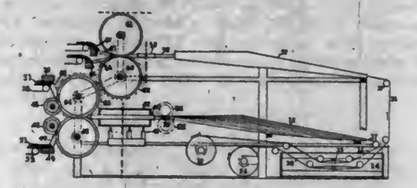
1. The method of extracting oil from formations intersected by spaced galleries and connected across cuts, which comprises sealing the cross cuts on each side of a given section of the formation against ingress of fluids, and inducing a fluid pressure in one gallery sufficient to cause a flow of the fluid pressure medium through the formation between the galleries, whereby the oil will be carried by said medium into the adjacent gallery.

1,661,390. METHOD AND MEANS FOR MINING OIL SANDS. EWART G. SINCLAIR, Maracaibo, Venezuela, assignor to The Midwest Refining Company, Denver, Colo., a Corporation of Maine. Filed Oct. 16, 1926. Serial No. 142,114. 4 Claims. (Cl. 262—1.)



1. The method of mining oil sands which comprises sinking a shaft to the sand, driving a tunnel into the sand in successive sections with connecting lateral gutters, lining the sections with an impervious sheathing offset from the lower portions of the side walls to form oil and gas chambers above the gutters, and exhausting the gas from said chambers.

1,661,391. HEEL-SEAT FITTING MACHINE. WILLIAM C. STEWART, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 18, 1924, Serial No. 738,449, and in Great Britain May 16, 1924. 51 Claims. (Cl. 12—17.)



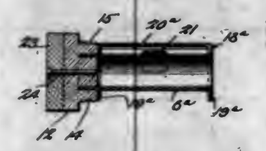
1. A heel seat fitting machine provided with a shoe support and a cutter arranged to trim surplus material from the entire periphery of the heel seat of a shoe carried on said support, said support and cutter being mounted to permit relative movement of the shoe and the cutter during the trimming operation in a path corresponding to the contour of the heel seat of a shoe, means for controlling the relative movement of the shoe and the cutter, a graduated dial, and means connecting said dial to said controlling means to vary the contour of the path of relative movement of the shoe and the cutter in accordance with the setting of the dial.

1,661,392. TYPEWRITER CABINET. BURNHAM C. STICKNEY, Elizabeth, N. J. Filed May 14, 1920. Serial No. 381,259. 48 Claims. (Cl. 197—186.)

1. A casing for a typewriting machine having keys, a frame and a platen-carriage traveling on the frame, said casing comprising a body embracing said frame and from which the keys project, said body having open ends through which the carriage may project as it travels beyond the frame, and chambers into which the carriage may run, said chambers extending laterally from said ends and being collapsible.

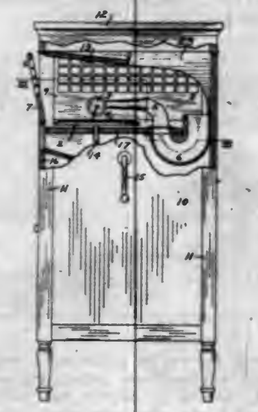
1,661,393. PAPER CORRUGATING AND CRINKLING. BURNHAM C. STICKNEY, Elizabeth, N. J. Filed Jan. 6, 1921. Serial No. 435,334. 17 Claims. (Cl. 154—30.)

1. An element for use in gathering a web into flutes or longitudinal corrugations, comprising a three-sided plate or frame having its base at the receiving end of the former, and having two convergent sides, a central rib into which the frame merges at its apex and over which the web folds along its median line, ripples disposed alongside of the converging edges of the frame and extending in the same direction, whereby the entire web is brought to a fluted condition, continuations of said lateral ripples, said continuations extending along each side of said central rib, to gradually bring the flutings of the web to the desired configuration, and means cooperative with said element for gathering the web longitudinally thereon.



1,661,394. STAMP HOLDER. ALBERT ROMAINE TALLMAN, Nashville, Tenn. Filed Aug. 20, 1925. Serial No. 51,415. 2 Claims. (Cl. 206—39.)

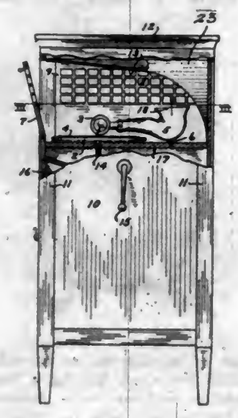
2. A device of the class described, comprising a support, a stamp carrier projecting from the support, and a movable stamp retainer disposed about the carrier,



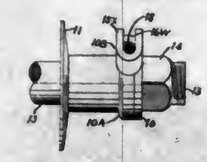
the length of the carrier being such that the retainer may be slid, toward the support, off a roll of stamps on the carrier.

1,661,395. STAMP CARRIER. ALBERT ROMAINE TALLMAN, Nashville, Tenn. Filed Aug. 22, 1925. Serial No. 51,786. 1 Claim. (Cl. 206—39.)

In a device of the class described, a stamp carrier, a support whereon one end of the carrier is mounted, a retaining means on the other end of the carrier, and a stamp winder including disk-like heads journaled on the carrier and cooperating with the support and the retaining means, and a narrow strip connecting the heads.



1,661,396. SOUND-REPRODUCING MACHINE. WILLIAM H. THOMMEN, Plymouth, Wis. Filed Sept. 27, 1920. Serial No. 413,111. 4 Claims. (Cl. 274—2.)

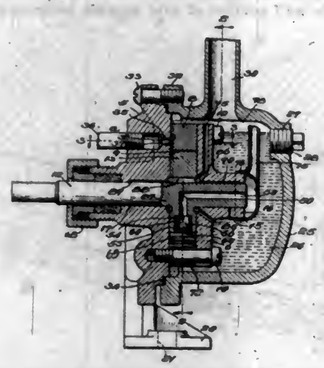


1. In combination, means for producing sound waves, a tone arm for conducting sound waves rearwardly away from said means and for initially amplifying said waves, means forming an initial amplifying chamber communicating with said tone arm, and means forming a single final amplifying and distributing chamber communicating directly with the delivery end of said initial amplifying chamber, said final amplifying chamber being open at the front and both sides and being bounded at the top and rear by a forwardly and two laterally and upwardly inclined intersecting surfaces for conducting sound waves delivered from said tone arm and from said initial amplifying chamber in forward and lateral directions.

1,661,397. SOUND-REPRODUCING MACHINE. WILLIAM H. THOMMEN, Plymouth, Wis. Filed Dec. 9, 1920. Serial No. 429,323. 3 Claims. (Cl. 274—2.)

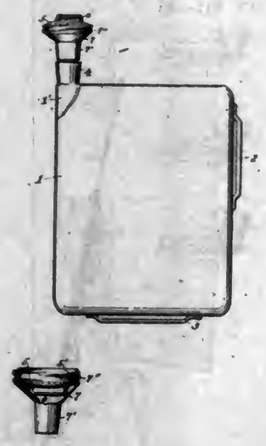
1. In combination, means for producing sound waves, a movable tone arm having an upwardly directed open trumpet shaped rear delivery end, and means forming a single final amplifying and distributing chamber communicating directly with the delivery end of said tone arm, said chamber being open at the front and both sides and the top and rear of said chamber being bounded by a forwardly and two laterally and upwardly inclined intersecting surfaces for conducting sound waves delivered from said tone arm in forward and lateral directions.

1,661,398. CABLE-SUPPORT BRACKET. ADOLPH J. TSCHIDA and THEODORE T. TSCHIDA, St. Paul, Minn. Filed Mar. 11, 1927. Serial No. 174,442. 1 Claim. (Cl. 248—31.)



A cable hanger bracket comprising a horizontal bushing with a flange at one end and an enlargement at its other end with an open cable receiving groove arranged transversely of the bore of said bushing and in spaced relation to said bore and a cap having an aperture for alinement concentrically with the bore of said bushing, an offset in said cap having a grooved part registering with said cable receiving groove in the bushing, said bushing and cap adapted to receive a bolt or like securing means with a threaded part projecting outwardly of said cap, a nut threaded on said projecting bolt end and adapted to clamp the said cap toward the face of said bushing and simultaneously clamp a cable in said grooved parts, said cable receiving part of the bushing comprising an upwardly opening U-shaped two part projection above the bore of said bushing and said cap provided with an inwardly directed wing jaw adapted to be pressed inwardly between the two parts of said U-shaped projection to clamp the cable

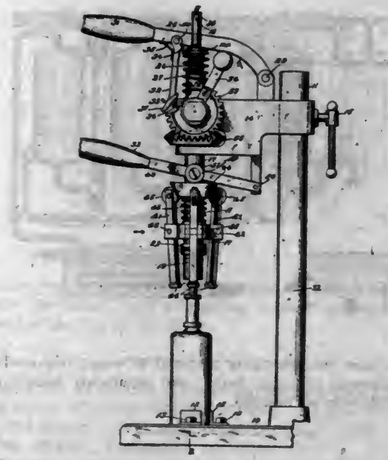
---



1,661,399. FLUID COMPRESSOR. WILLIAM WISHART, Clinton, Iowa, assignor to National Refrigeration Corporation, Beloit, Wis., a Corporation of Delaware. Filed Jan. 14, 1926. Serial No. 81,177. 6 Claims. (Cl. 230—154.)

1. In a compressor, the combination of a pair of relatively movable members spaced peripherally to define a compression chamber and engaging peripherally to form one end of said chamber, and a piston member carried

by one of said first members and movable with said member past the engagement of said member from one side of said engagement to the other continuously in the operation of the compressor, one of said members being positively adjustable to vary the point of engagement therebetween.



1,661,400. WATER BAG. WILLIAM E. YEHLE, New York, N. Y. Filed July 15, 1926. Serial No. 122,534. 2 Claims. (Cl. 299—102.)

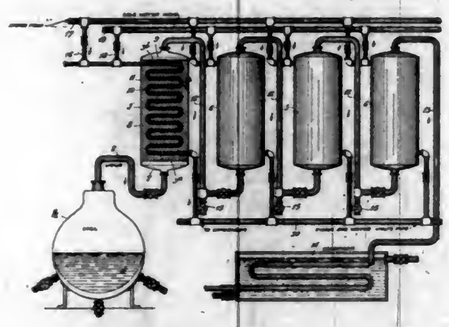
1. In a watering device, a convertible sprinkler head and combined funnel and strainer comprising a perforated section having a single externally threaded cylindrical flange, and a funnel-shaped body section having an internally threaded cylindrical flange on its larger end adapted to removably reversibly receive the threaded flange of the perforated section.

2. The combination with a receptacle having a single filling and pouring mouth, of a convertible sprinkler head and combined funnel and strainer adapted to be removably applied to the filling and pouring mouth of said receptacle, said convertible sprinkler head and combined funnel and strainer embodying a funnel member having a cylindrical flange on its larger end, and a rose having a single cylindrical flange removably secured in the larger end of said funnel member and invertible therein to have its perforated wall positioned within said larger end of the funnel member to act as a strainer for the latter.

1,661,401. BOTTLE-CAPPING MACHINE. LEONARD A. ARNSTEIN, New York, N. Y. Filed Apr. 23, 1923. Serial No. 633,875. 16 Claims. (Cl. 226—87.)

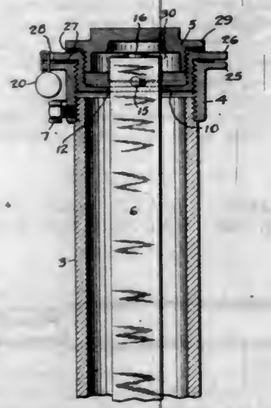
1. A machine of the character described comprising a base for a bottle or other container, a support, a plunger slidably mounted on said support, manually operable means for actuating said plunger to engage said bottle, yielding means interposed between said actuating means and said plunger for maintaining said plunger in engagement with the bottle under spring pressure, means for retaining said actuating means in depressed position, a cap-forming device rotatably mounted on said plunger, a manually operable lever controlling the position of said cap-forming device, and means for rotating said device whereby to secure a cap to said bottle or container, substantially as specified.

1,661,402. WRENCH. JAMES F. ASTLEY, Camden, N. J. Filed Apr. 1, 1925. Serial No. 19,942. 1 Claim. (Cl. 81—72.)



A pipe wrench including a body portion having a reduced end portion defining a shoulder at one end of the reduced end portion, said shoulder having an opening, said reduced end portion being cut away, a gripping member having an end disposed in the opening of the shoulder and having lateral wings formed with curved outer surfaces to rock in the cut away portion of the reduced end, said wings having substantially sharp lateral edges, said gripping member having a reduced outer end, and a collar positioned over the outer extremity of the reduced end portion, and over the reduced end of the outer gripping member to removably secure the gripping member to the body portion.

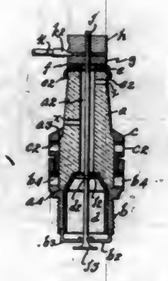
1,661,403. PROCESS OF SEPARATING LIQUIDS. OSCAR L. BARNEBEY, Cleveland, Ohio, assignor to American Solvent Recovery Corporation, a Corporation of Ohio. Filed Sept. 9, 1920. Serial No. 409,065. 9 Claims. (Cl. 196—94.)



1. The process of separating the constituents of liquid mixtures which consists in adsorbing the mixture in solid

adsorbing material, meanwhile substantially excluding diluent gases; progressively evaporating the adsorbed con-

stituents from the adsorbing material to separately evolve the constituents in vapor form; and separately collecting the constituents so evolved.



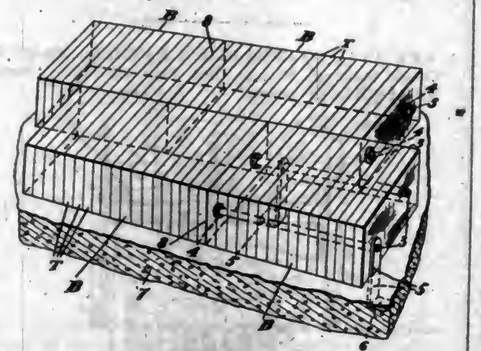
1,661,404. TANK-SEALING MEANS. CHARLES FREDERICK BERTSCHINGER, Jamaica, N. Y., assignor of three-fourths to Tide Water Oil Company, Bayonne, N. J., a Corporation of New Jersey. Filed Sept. 29, 1926. Serial No. 138,362. 10 Claims. (Cl. 220—86.)

6. Means of the character described comprising a fitting applicable to an entrance of a tank, a removable bushing screwed into said fitting and provided with an aperture, a gauge rod occupying said aperture and liftable therethrough but prevented from removal therefrom, flanges on said fitting and bushing providing means for the passage of a sealing element, and a closure plug screwed into said bushing and provided with a flange, packing means interposed between the fitting and bushing and another packing means interposed between the bushing and the flange of the closure plug.

1,661,405. SPARK PLUG. AMEL B. BEOLUSKA, Detroit, Mich. Filed Jan. 17, 1925. Serial No. 3,017. 7 Claims. (Cl. 123—169.)

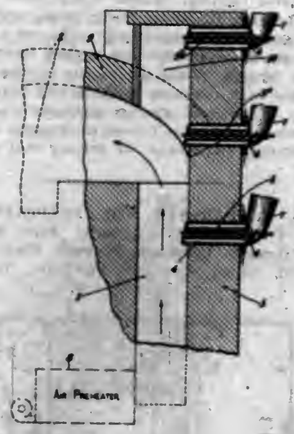
7. In a spark plug structure, the combination of an insulating body *a*, having a cavity at its lower end, a sleeve of conducting material engaging at its upper end around the lower end of said body and extending below said end, and a thimble of thin insulating material fitting against the inner wall of said sleeve and against the wall of said cavity at the upper closed end of said thimble, the lower or side wall portion of said thimble being in contact

with said sleeve to which it can lose heat rapidly, and the upper part of said thimble in contact with said insulating body to which the thimble will lose heat very slowly and therefore have a high temperature for the insulating material has a low rate of heat conductivity, the lower end of said thimble being open to the combustion chamber.



1,661,406. DISPLAY RACK. JAMES H. BURDETT, Homewood, Ill. Filed Nov. 21, 1924. Serial No. 751,321. 2 Claims. (Cl. 211—45.)

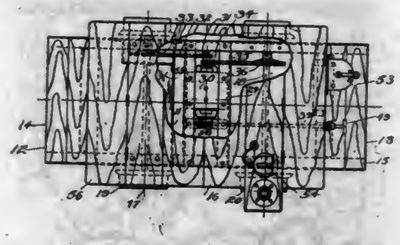
1. A display device for seed packets, comprising a board having a plurality of openings extending therethrough, a flexible strip secured to the top and bottom edges of each of said openings to form pockets, the length of each of said strips being such as to cause the bottom portions of the said pockets to fall a substantial distance below the bottom portions of said openings.



1,661,407. PAVING BLOCK. ALTON WEBSTER BUTLER, West Bridgewater, Mass. Filed Mar. 9, 1925. Serial No. 14,117. 2 Claims. (Cl. 94—12.)

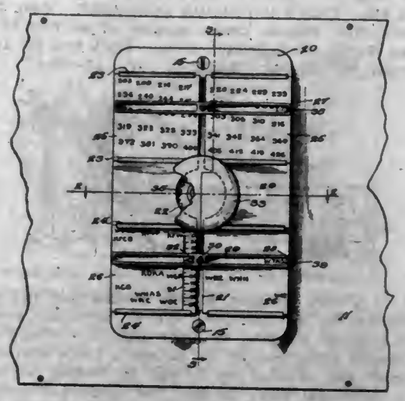
1. A pavement consisting of a plurality of paving blocks, each having a contour permitting it to be laid in close juxtaposition to other similar blocks, each block consisting of a plurality of relatively short laminæ of rubber and fabric assembled face to face in vertical edgewise relation and compressed to form a block of uniform dimen-

sions presenting a substantially continuous resilient, nonskid and noiseless tread surface composed entirely of the exposed upper edges of the rubber and fabric laminæ.



1,661,408. METHOD OF BURNING POWDERED COAL. WILLIAM B. CHAPMAN, New York, N. Y., assignor to Chapman Engineering Company, Mount Vernon, Ohio, a Corporation of Ohio. Filed July 21, 1921. Serial No. 486,353. 4 Claims. (Cl. 110—28.)

1. The method of burning powdered coal, which consists in forming outside of the combustion chamber proper an upwardly directed confined column of preheated air of restricted area moving with sufficient velocity to support substantially all the fuel particles, feeding powdered coal into such column and igniting the fuel therein, whereby the said column will arrest the fall of substantially all the fuel particles and prevent them from escaping without being ignited, and then passing the kindled fuel and air into the combustion chamber proper.



1,661,409. MOTOR CAR. JOHN L. CONNORS, Chicago, Ill., assignor to Morgan-Gardner Electric Company, Harvey, Ill. Filed Mar. 14, 1927. Serial No. 175,237. 6 Claims. (Cl. 105—102.)

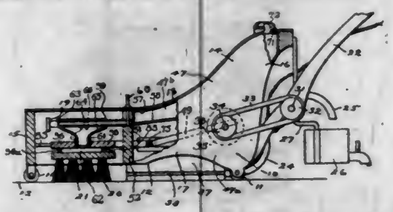
1. An electric motor car comprising a frame having the main longitudinal and transverse members formed of sheet steel, two pairs of wheels and axles adjustably secured directly to the frame, a motor mounted on the

frame, means for driving both pairs of wheels and axles from the motor, and a covering formed of wood or the like for the top of the frame.

1,661,410. LOGGING AND INDICATING DEVICE FOR RADIO TUNING INSTRUMENTS. JAMES P. COUGHLIN, Kansas City, Mo. Filed July 10, 1925. Serial No. 42,796. 2 Claims. (Cl. 116—124.)

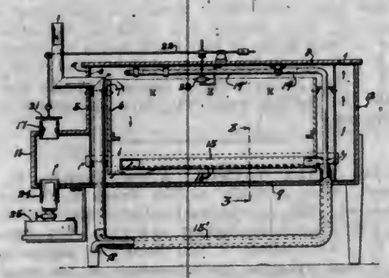
2. Logging and indicating means for radio receivers, the same comprising a panel mount including a base plate formed with a longitudinal slot, a slide member movable in said slot and provided at its ends with lugs, a cover plate attached to the base plate and formed with a slot to receive the lugs of the slide member, and provided with independent groups of indicating means designating wave lengths and stations, respectively, a finder for each group of indicating means connected to a lug of the slide member and overlying the cover plate, and a rotary tuning element passing through the slide member and the base and cover plates and geared to said slide member.

1,661,411. BABY WALKER. POWEL CROSLEY, Jr., Cincinnati, Ohio, assignor to The Frank F. Taylor Co., Norwood, Ohio, a Corporation of Ohio. Filed Nov. 20, 1922. Serial No. 602,241. 4 Claims. (Cl. 155—22.)



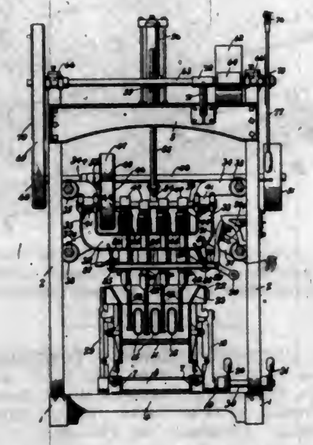
1. In a baby-walker, a seat structure, wheels on the rear of said structure, lateral casters on the front part of said structure, said casters being removable from said structure, and said structure having means to receive a substitute front rolling support, and means detachably

connected with said structure to confine and support the body of a child upright thereon when astraddle of said structure, said lateral casters serving to prevent lateral



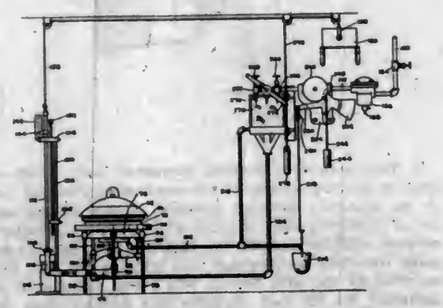
or forward diagonal tipping of said structure with the child supported as aforesaid, while permitting variable curvilinear travel of the structure.

1,661,412. ELECTRIC FLOOR SCRUBBER. CARL DEPTULA, New Britain, Conn., assignor of one-half to Albert Tereba, New Britain, Conn. Filed July 28, 1924. Serial No. 728,634. 5 Claims. (Cl. 15—50.)



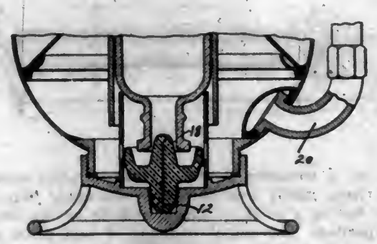
1. In a floor scrubber, a body divided into two compartments by a transverse vertical partition provided with openings adjacent its lower edge, one of said compartments being open at the bottom, a frame supporting a brush and mounted for to and fro sliding movement in a horizontal plane in said last mentioned compartment, a motor housed in the other of said compartments, said frame having extensions projecting through the openings in said partition, and driving connections intermediate said motor and extensions.

1,661,413. INCUBATOR. LOUIS DE VRIES, Chicago, Ill. Filed Sept. 13, 1926. Serial No. 135,024. 3 Claims. (Cl. 119—40.)



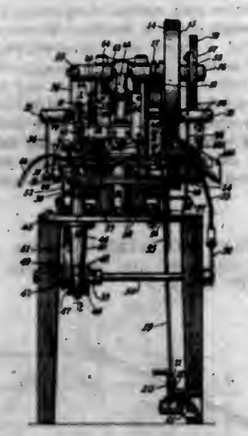
1. An incubator comprising a chamber with double walls forming hot air spaces around said chamber, a heating chamber at each end of said incubator, at the outside of the double walls, and heat transferring conduits connecting said heating chambers and extending through said hot air spaces.

1,661,414. CEMENT-BLOCK RAMMER. HARRY E. DUNN, Holland, Mich. Filed July 12, 1926. Serial No. 121,754. 14 Claims. (Cl. 25—41.)



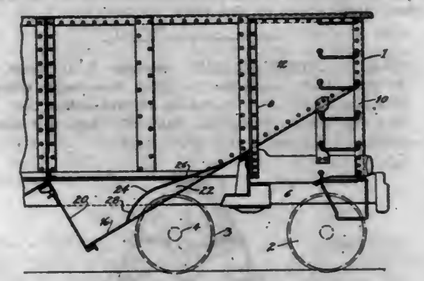
1. In a machine of the class described, a supporting frame having vertical spaced apart ends, a carriage mounted between the ends of said frame and adapted to move up and down thereon, a plurality of ramming elements mounted on said carriage, a shaft rotatably mounted on the carriage having a plurality of eccentrics thereon, one for each ramming member and bearing against the upper end thereof, springs normally tending to lift the ramming members and force their upper ends against said eccentrics, and means for driving said shaft.

1,661,415. APPARATUS FOR SUPPLYING LIQUID FUEL TO HEATING PLANTS. JOHN E. ERICKSON and WALTER F. ERICKSON, St. Paul, Minn. Filed Aug. 17, 1925. Serial No. 50,866. 1 Claim. (Cl. 158—36.)



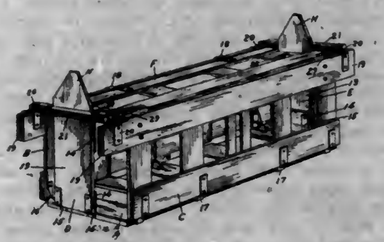
1. Apparatus for supplying liquid fuel to the heating plants comprising a burner, a pipe system connecting said burner with the source of supply, a receptacle included in said pipe system, two hand operated valves which cause the liquid fuel to pass into said receptacle in drops, and an automatically controlled valve which causes the liquid fuel to pass into said receptacle in variable quantity according to the amount of heat delivered by said burner.

1,661,416. STOPPER FOR ACID BOTTLES AND PROCESS FOR MAKING THE SAME. DANA ESTES, Brookline, Mass. Filed Jan. 24, 1925. Serial No. 4,534. 3 Claims. (Cl. 215—48.)



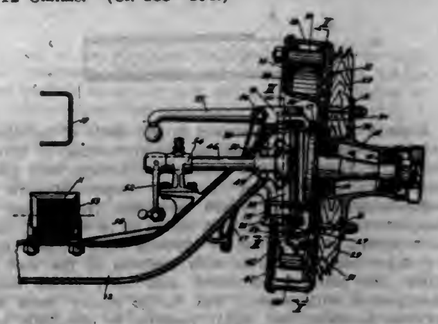
1. The combination, with an invertible fire extinguisher having an acid bottle, of a loose stopper for the bottle, subject to concussion within the extinguisher when the extinguisher is inverted and means to maintain the material thereof in stopper formation notwithstanding its fracture; said stopper comprising a body of vitrified earthly material; and said means comprising a rod, made of metal whose coefficient of expansion is close to that of said earthly material, penetrating said material and arranged in intimate clinging contact therewith, whereby fracture of the stopper is resisted, and there is a tendency of the fragments, if fracture occurs, to be held in the stopper formation by the said rod.

1,661,417. APPARATUS FOR MOUNTING INSERTS IN AND DRILLING BATTERY-JAR VENT CAPS. BENJAMIN A. EVANS and WILLIAM H. SLABAUGH, Cuyahoga Falls, Ohio, assignors to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed July 7, 1927. Serial No. 203,993. 10 Claims. (Cl. 29—38.)



1. Apparatus of the character described comprising means for propelling a succession of vent-caps past a drilling position and a baffle-mounting position, means timed with the propelling means for drilling vent-apertures in the successive caps at the drilling position and means timed with the propelling means for mounting baffle members in the successive caps at the baffle-mounting position.

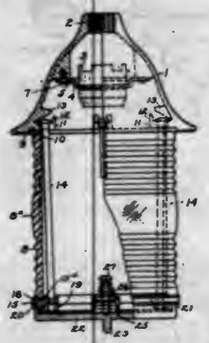
1,661,418. HOPPER CAR. IRA EVERETT, Allentown, and WILLIAM I. CANTLEY, Bethlehem, Pa. Filed June 6, 1927. Serial No. 196,826. 5 Claims. (Cl. 105—249.)



1. In a hopper car, an end slope sheet having a wheel hood therein, said hood being of greater length than the wheel diameter and having its greatest height above the slope sheet adjacent its lower end.

1,661,419. COLLAPSIBLE CRATE. CORNELL FLAGSTAD, Minneapolis, Minn., assignor of ninety-five one-hundredths to The Folding Crate & Box Company, Minneapolis, Minn., a Corporation of Minnesota. Filed June 12, 1926. Serial No. 115,638. 1 Claim. (Cl. 217—47.)

A collapsible crate comprising a base, having side and end sections hinged thereto, and a cover hinged to one of the side sections, a latch member carried by the other side section to receive a latch bolt carried by the cover, the construction of said latch member and bolt being such that they may be interlocked both when the crate is set up and when collapsed, and a catch carried by the cover near its hinged edge for interlocking engagement with an adjacent crate portion when the crate is collapsed.



1,661,420. BRAKE MECHANISM. HOWARD A. FLOGAUS, Toledo, Ohio. Filed Jan. 2, 1924. Serial No. 683,989. 12 Claims. (Cl. 188—194.)

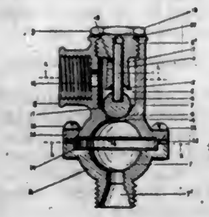
3. In a motor vehicle, the combination with a wheel and axle and a spindle and steering knuckle connecting

the same, of a brake for the wheel, an operating plunger therefor extending into the knuckle and having teeth formed thereon between the ends of the knuckle, and a member operatively engaging the teeth of the plunger to effect application of the brake.

1,661,421. SIGNAL LAMP. ROBERT J. GASKILL, Fort Wayne, Ind., assignor to The Gamewell Company, Newton, Mass., a Corporation of Massachusetts. Filed Nov. 15, 1924, Serial No. 750,037. Renewed Jan. 12, 1928. 5 Claims. (Cl. 240—11.)

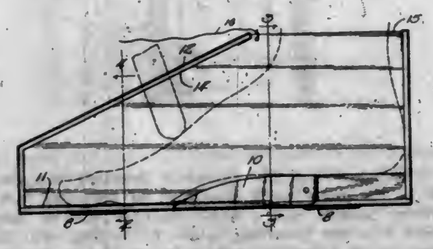
1. A signal lamp comprising a hollow canopy, a bottom member, a cylindrical lens between the canopy and the bottom member, a plurality of bifurcated lugs radiating from the inner wall of the canopy, the said inner wall adjacent the upper side of the slotted lugs being inclined upwardly and inwardly, an extension at the outer end of each bifurcation which projects toward the said inclined wall but is spaced therefrom, a plurality of bolts adapted to be inserted into the slots of the lugs respectively to cause their heads to engage the top side of the lugs upon opposite sides of the slots therein, the spacing between the inclined wall of the canopy and the upper ends of each pair of said extensions being such that the head of the bolt will pass through the same only when the bolt is inclined, the said wall also preventing vertical movement of the bolts when they are suspended on the lugs, the said bolts being extended through the interior of the lens and through the base, and means on the bolts to clamp the canopy and the bottom member upon opposite ends of the lens.

1,661,422. PLATE FOR DEADENING VIBRATION AND SOUND. WERNER GENEST, Berlin-Lichterfelde, Germany, assignor to The Korfund Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 25, 1925. Serial No. 71,402, and in Germany Nov. 27, 1924. 1 Claim. (Cl. 154—44.)



A plate capable of insertion in the walls of buildings and like structures for use in the preventing of transmission of vibrations and sound therethrough, said plate including a central layer of firmly compressed cork of sufficient elasticity to absorb vibrations transmitted to the plate through the wall in which it is mounted, and outer layers of cardboard on opposite sides of said central layer and engageable with surfaces of the wall in which said plate is embedded, said outer layers being impregnated with asphalt and tar to render them impervious to water and highly resistive to chemicals and said outer layers being capable of absorbing sound vibrations transmitted to said plate through the atmosphere.

1,661,423. ENVELOPE OPENER. CHARLES C. GRUHLER, Fort Thomas, Ky. Filed Jan. 24, 1927. Serial No. 163,100. 3 Claims. (Cl. 164—44.)



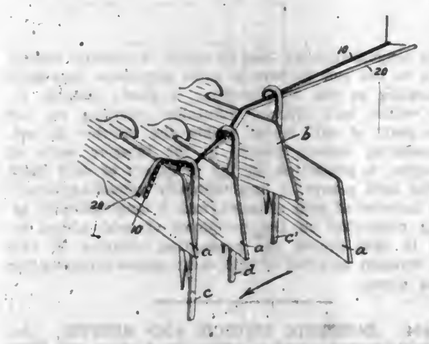
1. In a trimming device, a base, a plate secured to and rising rigidly from said base, the upper edge of said plate having a notch, a trimming knife having one of its end portions disposed at one side of said plate, a pivot for said knife connecting it with said plate, and a lug rigid with said knife and projecting laterally therefrom through the aforesaid notch, said lug being co-operable with an end of said notch to limit the movement of the knife.

1,661,424. CHECK VALVE AND SCREEN. HERMAN E. HEINE, Milwaukee, Wis., assignor to Bradley Wash-Fountain Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 11, 1925. Serial No. 43,007. 3 Claims. (Cl. 251—121.)

1. A check valve and screen, comprising a casing having a valve chamber and a recessed screen chamber and openings thereto, a valve seat between the two chambers, a guide member extending downwardly into the valve chamber below the outlet opening and having a bore in line with the valve seat, a screen extending across the screen chamber and within the recessed portion thereof, and a valve of spherical shape engaging the valve seat and having a vertically extending stem portion which reciprocally extends into the bore of the guide.

1,661,425. MEANS FOR MAKING CASTS. EZRA HESS, Chicago, Ill. Filed Mar. 14, 1927. Serial No. 175,274. 7 Claims. (Cl. 18—34.)

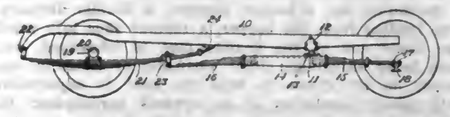
1. A flask for making molds of feet or the like comprising a box formed of suitable material and conforming generally to the form of the foot and having an opening



for inserting the foot, said box being formed in two parts which are hinged together and united on a substantially median plane and having frangible means for temporarily holding the free edges together when the cast is to be made.

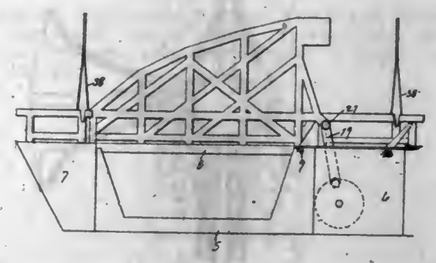
1,661,426. CORE DRILL. CARL J. HILLMAN, Houston, Tex. Filed Apr. 29, 1926. Serial No. 105,347. 6 Claims. (Cl. 255—72.)

1. A reciprocating core drill comprising a hollow drill body having longitudinally extending slots therein, a hollow cutter head mounted on the lower end of said body, a core receiving tube mounted in said body to reciprocate therein, a circular cutter on the lower end of said tube, a plug on the upper end of said tube, a pin on said plug extending into the slot in said body, a stud on the upper end of said plug, a washer movably mounted on said stud, a coiled spring on said stud between said plug and washer, and a shoulder on said body formed at the upper end of the central opening therein arranged to engage said washer.



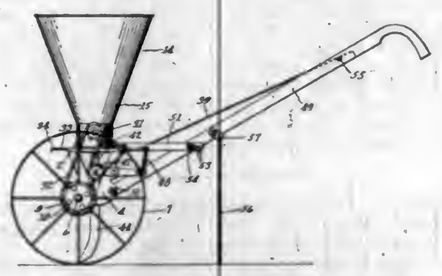
1,661,427. MACHINE AND PROCESS FOR KNITTING PLAITED FABRIC. WILBUR L. HOUSEMAN, Philadelphia, Pa., assignor to Standard-Trump Bros. Machine Company, Wilmington, Del., a Corporation of Delaware. Filed Feb. 19, 1927. Serial No. 169,460. 11 Claims. (Cl. 66—108.)

11. In a machine for knitting plural thread plaited fabric, the combination with the needles, of sinkers alternating therewith, and means to so feed two threads under



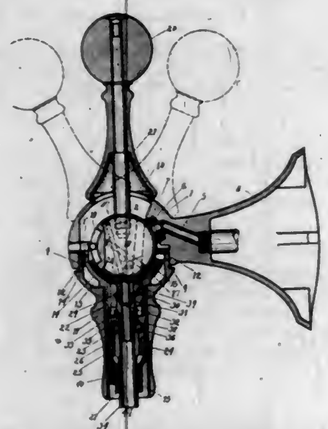
differential tension to the needles that they will cross one another before engaging the hooks of certain of the needles, all the sinkers extending radially and provided with similar thread engaging ends, cam mechanism adapted to impart similar radial movements to all the sinkers, one or more of the sinkers being tiltable to raise its thread engaging end and provided with a cam engaging member, and a cam movable radially into and out of position to cause it to engage said member and tilt the sinker, the tilted sinker being adapted to engage and deflect the threads from their normal direction of extension toward the needles and thereby cause the hooks of one or more other needles abnormally early to engage the threads before they cross.

1,661,428. SPRING SUSPENSION FOR VEHICLES. HENRY WEBB HYDE, North Cohasset, Mass., assignor to Hyde Engineering Company, Boston, Mass., a Corporation of Massachusetts. Filed Aug. 24, 1923. Serial No. 659,096. 6 Claims. (Cl. 280—104.)



1. In a vehicle having a body and axles, a spring suspension at each side of the body including a spring member having a rocking connection with the body at one side of the centre of gravity thereof, and connected at one end with an axle, said suspension also including a second spring member intermediately supported by the other axle and connected at both ends to the body, said first spring member being connected to said second spring member.

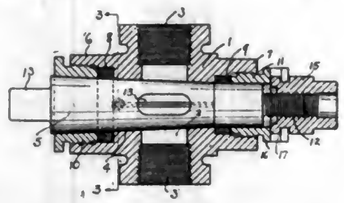
1,661,429. BASCULE TOY BRIDGE. HANS JADE, San Francisco, Calif. Filed Sept. 29, 1926. Serial No. 138,466. 1 Claim. (Cl. 46—37.)



In a toy of the character described a pair of portable spaced abutments connected one to the other, a bridge portion pivoted to one of said abutments and adapted to move into contact with the other of said abutments, a gear train positioned within one of said abutments, said gear train having a shaft, a plurality of discs carried on said shaft, one of said discs having notches in the periphery thereof, a latch adapted to engage said notches for the purpose of retaining said disc against rotation, the other of said discs having projections thereon, a shaft extending between said abutments, gates positioned on said abutments, means for actuating said gates from said last mentioned shaft, means for rocking said last mentioned shaft through a lever engaging said projections formed on said disc and link connections extending between said first mentioned disc and said bridge portion for the purpose of actuating said bridge portion.

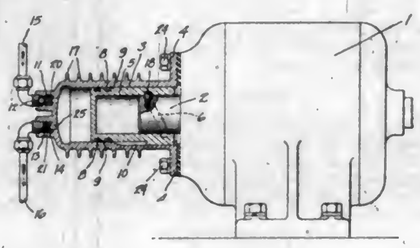
1,661,430. COMBINED FERTILIZER, DISTRIBUTOR, AND SIDE DRESSER. ARTHUR W. LEET, Madison, Ohio, assignor to The Iron King Implement Company, Madison, Ohio, a Corporation of Ohio. Filed Jan. 9, 1926. Serial No. 80,267. 1 Claim. (Cl. 111—69.)

In a distributor, the combination of a frame having a depending leg, a hopper thereon, a flexible discharge pipe leading from the hopper, a tubular shoe into which the lower end of the flexible pipe is telescoped, said shoe being adjustable either vertically or laterally, and means on the frame to hold the shoe at adjustment, said means consisting of an eye-bolt surrounding the shoe and extending into a slot in the leg.



1,661,431. MIXING VALVE. WILLIAM E. LEIBING, Oakland, Calif., assignor to Magnus Fruit Products Co., San Francisco, Calif., a Corporation of California. Filed Dec. 5, 1925. Serial No. 73,394. 11 Claims. (Cl. 225—26.)

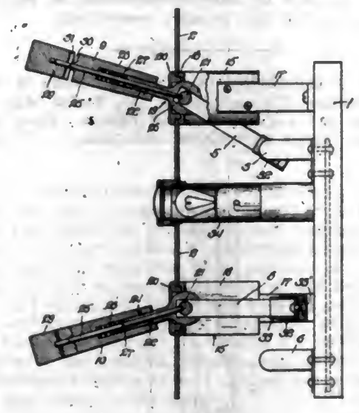
1. A mixing valve, comprising a pair of valve casing members formed for cooperation to provide a valve seat, a valve body mounted between said members and engaging the seat, and a spout removably and adjustably connected to one of said casing members and engaging the other casing member for maintaining the valve body seated, said valve body and casing members being formed with passages adapted for communication with the spout and controlled by the operation of the valve body.



11. A mixing valve, comprising a main valve casing member formed with a valve seat portion and a plurality of passages communicating therewith, a supplemental casing member formed with a cooperating valve seat portion, said supplemental casing member having a cylindrical projection formed with a discharge passage, a main foam control member mounted in said cylindrical projection and cooperating with a seat portion therein for controlling the admission of carbonated fluid to the passage therethrough, means for adjustably mounting said supplemental casing member in said main casing member and a valve body operably mounted in said seat portion of said members having ports permitting and controlling communication between the passages in said main casing member and said discharge passage.

1,661,432. COCK. ROBERT A. LINCOLN, Tonkawa, Okla. Filed Apr. 27, 1926. Serial No. 104,884. 3 Claims. (Cl. 251—97.)

1. In a device of the character described, a casing having a fluid passage therethrough, a tapered valve plug in said passage transversely thereof, packing glands at each end of said plug, a nut having threaded engagement with the smaller end of said plug, said nut being rotatably connected with the adjacent gland to prevent movement of said nut longitudinally relative to said gland for the purpose set forth.

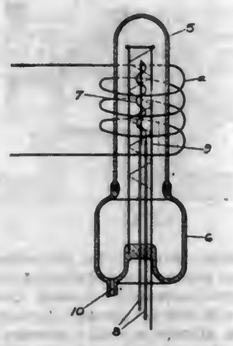


1,661,433. COMPRESSOR. THOMAS J. LITLE, Jr., Detroit, Mich., assignor to Copeland Products, Inc., Detroit, Mich., a Corporation of Michigan. Filed July 19, 1926. Serial No. 123,445. 3 Claims. (Cl. 230—58.)

1. In combination, an electric motor, a cylinder rigidly secured to one end thereof in axial alignment therewith and forming an end wall therefor, a piston slidably received within said cylinder rotatably receiving an end of the shaft of said motor within the interior thereof, a meandering endless groove in the interior walls of said piston, a projection on the periphery of said shaft engaging said groove, a longitudinally extending groove in the interior of said cylinder, and a longitudinally extending projection on the periphery of said piston received in said groove for preventing rotation of said piston whereby rotation of said shaft causes reciprocation of said piston.

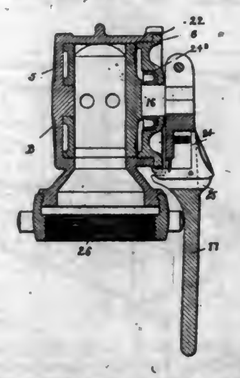
1,661,434. ELECTRIC SWITCH AND SYSTEM. ALBERT R. LOCKE, Chicago, Ill. Filed Aug. 14, 1922. Serial No. 581,610. 2 Claims. (Cl. 200—153.)

1. The combination with a fixed and a movable contact member supported by a mounting plate and switch blade respectively, said blade being pivotally secured by a shaft to a support mounted on said mounting plate,



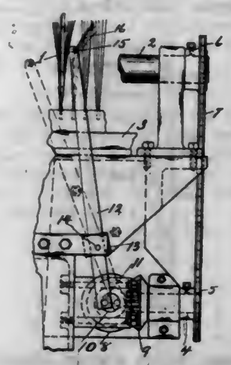
of a handle for the blade, and means mounted therein for connecting the handle to the shaft and disconnecting the same therefrom.

1,661,435. VEHICLE BRAKE CONSTRUCTION. LLOYD A. MARTINELLI and FREDERICK EDWARD CULVERWELL, San Francisco, Calif. Filed Feb. 25, 1926. Serial No. 90,472. 2 Claims. (Cl. 188—218.)



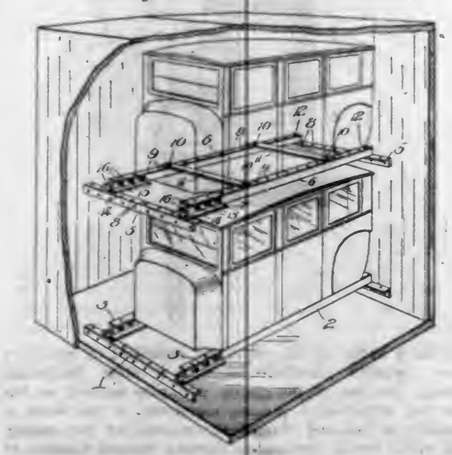
1. In combination with a driving shaft, a brake flange, brake linings disposed circumferentially of the inner and outer faces of the flange and detachably secured thereto to rotate therewith, and means for independently attaching the respective linings to the brake flange, the respective attaching means for one of said linings being accessible through an aperture in the opposite lining.

1,661,436. HELIUM SPACE DISCHARGE TUBE. FREDERICK S. MCCULLOUGH, Wilkinsburg, Pa. Filed Apr. 8, 1924. Serial No. 703,921. 2 Claims. (Cl. 250—27.5.)



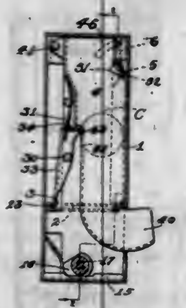
1. The method of making a space discharge tube having helium therein which consists in assembling a tube having an anode and a cathode on which latter there is a substance capable of liberating helium when heated, exhausting and de-gasifying the anode and the cathode by exhaustion and baking, sealing off the tube, and applying a current to the cathode to heat the same, whereby helium is evolved in the tube.

1,661,437. SHUT-OFF VALVE. THOMAS F. MCLAUGHLIN, San Francisco, Calif. Filed Sept. 24, 1923. Serial No. 664,403. 2 Claims. (Cl. 251—164.)



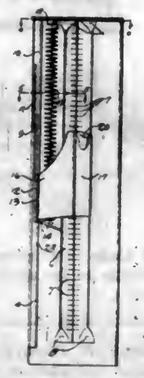
1. In a valve of the character described, a casing, a valve turnably mounted therein, a stem projecting through one end of the casing, a handle secured on the stem for imparting a turning movement to the valve, a plurality of notches formed in one end of the casing, said valve handle having an opening formed therein at a point intermediate the valve stem and the outer end of the handle and extending through the handle, an inwardly extending latch member pivotally mounted in the opening of the handle and engageable with the notches, and an extension on the latch member lying in the opening and assuming a position in substantial parallelism with the surface of the handle, said extension when depressed adapted to release the latch with relation to the notches and a spring interposed between the extension and the handle to normally retain the latch in engagement with the notches.

1,661,438. TUFT-DEFLECTING DEVICE FOR BRUSH MACHINES. AUGUST MERTES, Lakewood, Ohio. Filed Nov. 10, 1923. Serial No. 673,982. 1 Claim. (Cl. 300—2.)



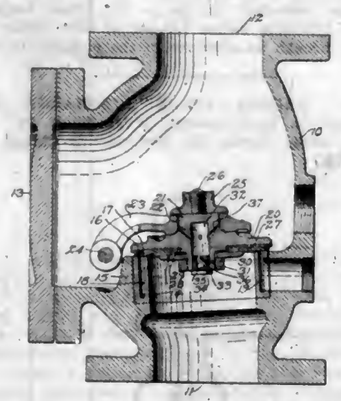
In a tuft deflecting device for a tuft setting brush machine, the combination of a pivotally mounted block, an arm longitudinally movable in said block, a crank timed with the tuft setting mechanism of said machine and operatively connected with one end of said arm, and a tuft deflecting member at the other end of said arm.

1,661,439. METHOD AND APPARATUS FOR LOADING AND SUPPORTING VEHICLE BODIES IN FREIGHT CARS AND THE LIKE. CHARLES L. MICHOD, Chicago, Ill., assignor, by direct and mesne assignments, to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey, and The Copony Auto Loading Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 22, 1926. Serial No. 82,913. 20 Claims. (Cl. 105—368.)



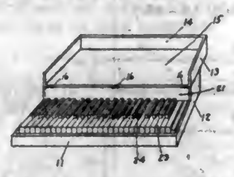
1. An apparatus for supporting vehicle bodies in a freight car or the like comprising bracket members arranged for aligned attachment to the opposite walls of the freight car body, supporting members extending crosswise of said freight car body and adjustably engaging said bracket members, means for removably securing said cross members and brackets together in adjusted position, and means for attaching and securing the vehicle body to said cross members.

1,661,440. SINGLE-PACKAGE-VENDING MACHINE. HARRY R. MITCHELL, Seattle, Wash., assignor to Mitchell Products Company, Seattle, Wash., a Corporation of Washington. Filed July 14, 1923. Serial No. 651,670. 1 Claim. (Cl. 194—1.)



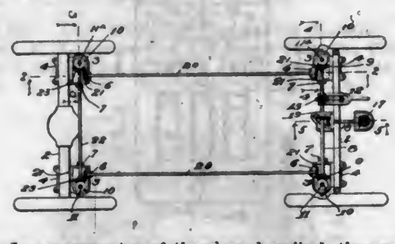
A single package vending machine comprising, in combination, a casing, including a package-receiving chamber, coin-controlled means, including a coin chute, for retaining the package in said chamber, a pivoted vane mounted adjacent the upper end of said chamber to move into or out of the same, said vane being directly engageable by a package within the chamber to be moved thereby out of the chamber, and movable thereinto by gravity as the package leaves the chamber, and a finger projecting from the free end of said vane into the coin chute and movable with said vane to obstruct the coin chute or to leave the same unobstructed, as the vane moves into or from said chamber, respectively.

1,661,441. DISPENSING CONTAINER. JOHN B. OHLSON, Chicago, Ill., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 2, 1924. Serial No. 735,227. 20 Claims. (Cl. 312—43.)



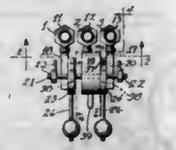
16. The combination with a container adapted to carry a nest of interfitting articles stationary therein and individually removable therefrom, of a spring actuated follower held in frictional engagement with the endmost article of the nest.

1,661,442. ALARM VALVE FOR AUTOMATIC SPRINKLING SYSTEMS. HARRY M. NACEY, Chicago, Ill. Filed Oct. 10, 1921. Serial No. 506,578. 5 Claims. (Cl. 169—28.)



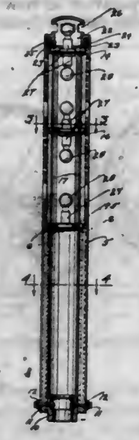
1. An alarm valve adaptable for use either in a vertical or horizontal position, comprising in combination a pivoted lever, a valve suspended loosely enough therein to form a water discharge passage through the lever, said valve having therein a water chamber and outlet passages therefor in open communication with said discharge passage, said chamber and passages establishing communication between the two sides of said first mentioned valve, and a check valve for controlling the supply of water to said chamber.

1,661,443. KEYBOARD MECHANISM. HERBERT G. NEELY, Anderson, Ind. Filed Nov. 2, 1925. Serial No. 66,309. 1 Claim. (Cl. 84—467.)



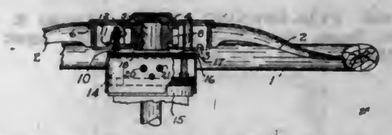
In a keyboard mechanism, the combination of a plurality of parallel arranged key members, an elongated stop rail positioned thereabove and intermediate the ends of said key member, a single tension support, bearings rotatably mounting said support, and yielding means secured at one end to each of said keys and at the other end to said support and normally under tension for maintaining the keys in engagement with the stop rail, and means rotatable for securing said yielding means support in the adjusted rotatable position for securing predetermined tension in said yielding means connecting each key member to the support.

1,661,444. AUTOMOBILE JACK. CLARENCE J. PARR, Hannibal, Mo. Filed Oct. 8, 1926. Serial No. 140,266. 2 Claims. (Cl. 254—86.)



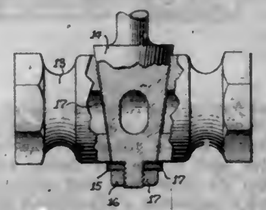
1. In an apparatus of the class described, the combination with a front and rear axle, a set of casings on each axle, vertically movable jacks mounted upon said casings, of a primary driving shaft connected at its ends to the jacks in the set of casings on the front axle, a driven shaft connected at its ends to the jacks in the set of casings on the rear axle, a pair of longitudinally-extending auxiliary driving shafts extending at their ends into the sets of casings on the front and rear axles, and means within said casings connecting all of said shafts and gears, whereby when said primary driven shaft is operated, said jacks will be operated upon said casings.

1,661,445. MEANS FOR FEEDING WATER INTO WASHING MACHINES. EBLE VINCENT PAYNE, Oakland, Calif. Filed Oct. 30, 1926. Serial No. 145,150. 4 Claims. (Cl. 137—68.)



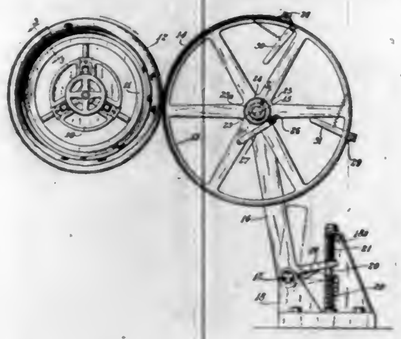
3. In combination, a soft water conduit, a hard water conduit and a steam conduit arranged in adjacent relation and joined to cause the hard and soft water to mix and the steam to be discharged into the mixed waters for heating the same and for accelerating the flow thereof, a tank receiving the heated mixed water, valves in the conduits, means for maintaining the valves open and means operated by the rising water level in the tank releasing said means for closing the valves when the water reaches a predetermined level.

1,661,446. TRAFFIC SIGNAL. JOHN RANK and HENRY W. RANK, Minneapolis, Minn. Filed Apr. 23, 1926. Serial No. 104,061. 7 Claims. (Cl. 40—145.)



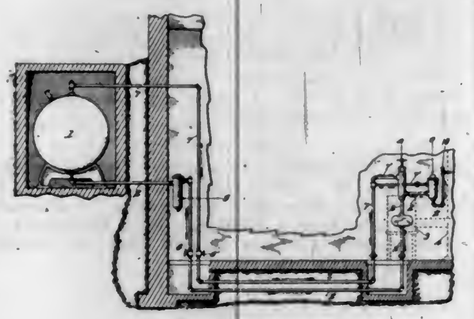
1. A self-arighting signal post having a tubular body of elastic non-separable material anchored at its lower end, a stiffening and reinforcing shell in the form of a metallic skeleton fitted within the upper portion of said tubular body and affording a support for lighting means, a portion of said tubular body between its anchored lower end and said metal skeleton being flexible and adapting the post to be bent to an approximately horizontal position, said tubular body at its stiffened upper end having light-emitting passages for signal purposes.

1,661,447. STEERING WHEEL AND IGNITION LOCK. WENDELIN P. SENG, Wilmette, Ill. Filed Oct. 24, 1921. Serial No. 509,950. 19 Claims. (Cl. 70—127.)



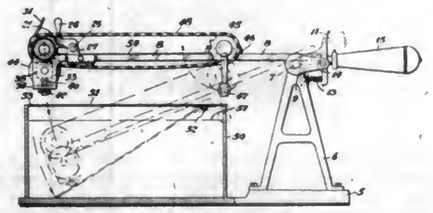
1. The combination with a steering shaft, of a relatively rotatable steering wheel therefor and an ignition circuit with a transversely movable contact, and a common means carried by the steering wheel for controlling the relative movement of the wheel and shaft and the movement of the contact of the said circuit.

1,661,448. NONSEIZING ARTICLE OF ALUMINUM AND METHOD OF PRODUCING THE SAME. CYRIL S. TAYLOR, New Kensington, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 24, 1923. Serial No. 634,228. 3 Claims. (Cl. 308—241.)



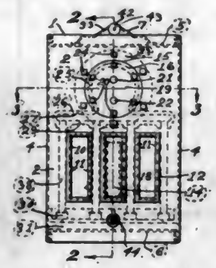
1. A rigid article of aluminum having a bearing surface comprising aluminum in an oxidized form, adapted to prevent seizure when the article is used with its bearing surface in contact with aluminum.

1,661,449. METHOD AND APPARATUS FOR BUILDING PNEUMATIC TIRES. JAMES D. TEW, Hudson, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed Apr. 9, 1923. Serial No. 630,743. 6 Claims. (Cl. 154—14.)



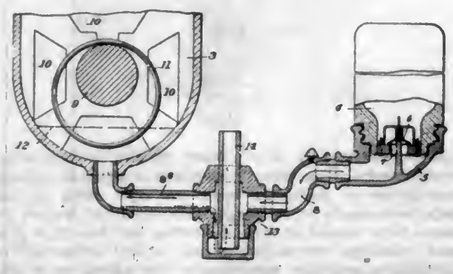
1. The method of building pneumatic tires which comprises feeding a strip of tire-building material onto a tire-core, the middle portion of the strip passing onto the crown of the core, while effecting a localized, progressive stretching of said middle zone by hold-back engagement with the outer face thereof substantially at the point of application, whereby said middle zone is more stretched than the side margins and the strip is thus caused progressively to assume a trough shape by lateral flexing, concurrently with its assuming a longitudinally arcuate form, in passing onto the core.

1,661,450. FUEL-BURNING SYSTEM. LEPORT R. VAN SANT, Peoria, Ill. Filed June 12, 1925. Serial No. 36,611. 7 Claims. (Cl. 158—42.1.)



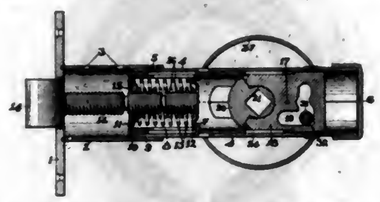
1. In a fuel feeding and regulating system for burners, a regulating valve including a casing having an inlet, outlet and a seepage port, a piston movable in said casing having a valve head at one end thereof adapted to engage and close the outlet port and provided at its opposite end with a depression, a compression spring engaged in said depression, and a valve seat carried by the casing and engaged by the opposite end of said piston to prevent seepage of the fuel around the piston when the same is raised and the outlet port is open.

1,661,451. METHOD OF AND APPARATUS FOR MAKING CELLULOID TUBES. JOHN N. WHITEHOUSE, New York, N. Y. Filed Dec. 4, 1925. Serial No. 73,139. 14 Claims. (Cl. 18—56.)



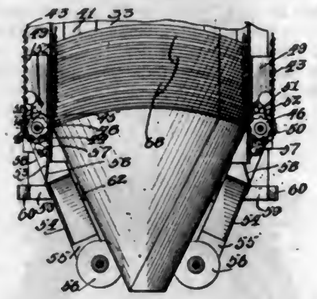
1. The method of forming tubing which comprises winding a sheet of material into a roll while immersed in a solvent bath.

1,661,452. REFRIGERATING APPARATUS. FRANK E. WILLIAMS, St. Louis, Mo., assignor to Polar Electric Refrigerator Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 6, 1925. Serial No. 48,511. 9 Claims. (Cl. 62—95.)



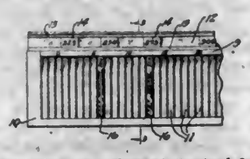
8. A refrigerating apparatus comprising a tank having a plurality of apertures extending horizontally thereof, a shelf portion arranged on the top of said tank and defining an auxiliary chamber in communication with said tank, a vaporizer header disposed within the upper portion of said tank, the upper portion of said header being cylindrical in form, developing at its lower portion into a wide and shallow hollow substantially rectangular distributing portion extending horizontally in opposite directions, and vertical tubes closed at lower ends having their upper ends connected to the base portion of said header.

1,661,453. METHOD OF AND APPARATUS FOR SEPARATING OIL FROM WATER. FREDERIC WILKES, Wilkinsburg, Pa. Filed Feb. 15, 1927. Serial No. 168,318. 1 Claim. (Cl. 210—51.)



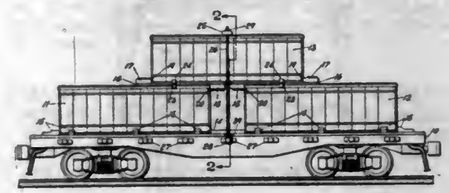
The combination with a bearing having an oil reservoir box and a source of oil supply therefor, of a conduit leading from said source into the lower portion of the reservoir, a water-collecting chamber disposed below the conduit and having communication therewith, and an overflow pipe extending upwardly from said chamber to a point above the conduit and not materially higher than the desired normal oil lever in said reservoir.

1,661,454. ADJUSTABLE LOCK. ELLIS L. WILSON, San Anselmo, Calif. Filed Aug. 26, 1926. Serial No. 131,597. 14 Claims. (Cl. 70—16.)



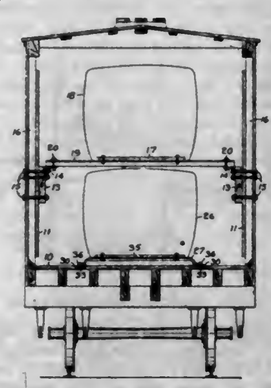
1. An adjustable lock comprising, a casing having a plurality of slots therein, a plunger movably extending through the casing and comprised of a number of sections adapted to be broken off to shorten the plunger, and a tubular member located inside the casing having a projection thereon adapted to engage with any one of the slots in the casing.

1,661,455. CUP DISPENSER. CESARE BARBIERI, New York, N. Y., assignor to The Vortex Mfg. Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 26, 1924. Serial No. 739,982. 16 Claims. (Cl. 312—43.)



1. A nested flat cup dispenser comprising a mounting plate, a container pivotally mounted thereon, a cover for the container pivotally mounted on the mounting plate, means connecting the mounting plate and the container for holding the container supported in place in open position, and a stop supported on the mounting plate and projection through a portion of the container to act as a stop for cups when the container is in open position.

1,661,456. RADIOLOG. HARRY D. BARTLETT, Delavan, Wis. Filed Aug. 5, 1926. Serial No. 127,344. 2 Claims. (Cl. 40—64.)

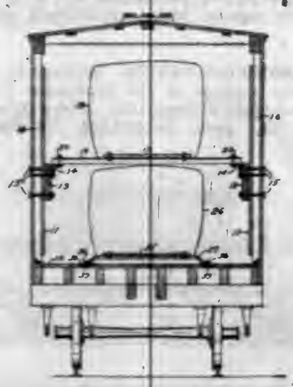


1. In combination, an elongated straight base member, an indicia strip holding member thereon, a wave length tab holding member thereon, a plurality of wave length tabs longitudinally removably mounted therein in proper spaced relation, and a plurality of station indicia strips engaged by said first mentioned holding member and movable at right angles to the direction of movement of the wave length tabs, said strip holding member being provided with dial setting graduations and said strips and tabs being in register with predetermined graduations.

1,661,457. SHIPPING DEVICE. RICHARD E. BAUS, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed Mar. 7, 1924. Serial No. 697,623. 15 Claims. (Cl. 280—179.)

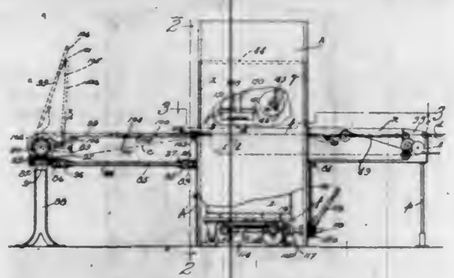
1. Means for securing a box against longitudinal movement relative to a second box positioned therebelow, said means comprising a plurality of members independent of each other interposed between said boxes, and stop members engaging the end faces of said boxes secured adjacent the ends of said first-named members.

1,661,458. METHOD OF LOADING AUTOMOBILE BODIES IN FREIGHT CARS. RICHARD E. BAUS, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed May 2, 1925. Serial No. 27,518. 9 Claims. (Cl. 105—368.)



1. The method of double-deck loading automobile bodies in freight cars for shipment, comprising securing brackets to the sides of said cars at a substantial height above the floor thereof, securing cross-members to said bodies, placing said bodies and their respective cross-members as a unit in said car with the cross-members of certain of said bodies supported on said brackets and the cross-members of other of said bodies supported on said floor.

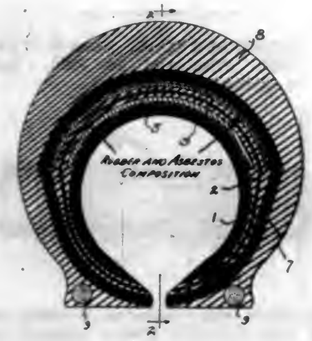
1,661,459. METHOD OF LOADING AUTOMOBILE BODIES IN FREIGHT CARS. RICHARD E. BAUS, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Original application filed May 2, 1925, Serial No. 27,518. Divided and this application filed Aug. 26, 1926. Serial No. 131,673. 11 Claims. (Cl. 105—368.)



1. The method of loading an automobile body in a freight car for shipment, comprising first securing to the

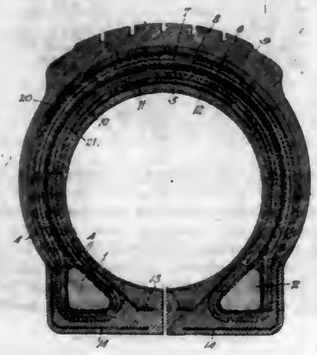
under side of said body a plurality of cross members having downwardly extending end portions, placing said

body and said cross members in said car as a unit, and thereafter removably securing the ends of said cross members to the floor of said car.



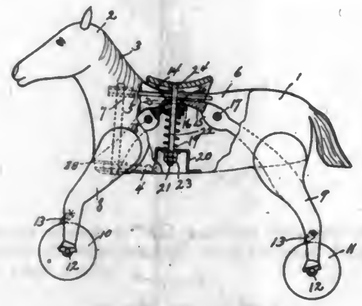
1,661,460. CONFECTION-COATING MACHINE. ALONZO LINTON BAUSMAN, Springfield, Mass., assignor to National Equipment Company, Springfield, Mass., a Corporation of Massachusetts. Filed Nov. 10, 1924. Serial No. 748,931. 16 Claims. (Cl. 91—3.)

1. In a confection coating machine, a casing, an endless belt for carrying confections therethrough, spaced devices over which said belt is trained in loop form and disposed one at each end of the confection carrying stretch thereof, and means for holding said devices against movement toward one another, said means permitting either device to be lifted therefrom and when so lifted to be moved toward the other device sufficiently to allow it to be slipped endwise out of the loop of said belt leaving the latter free for removal from the casing.



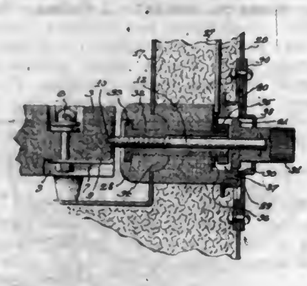
15. The combination with a confection coating machine, of a feed table therefor, comprising two hingedly-connected sections normally lying end to end in a common plane, a feed belt travelling over said table in its upper lap and returning in its lower lap beneath said table, a support spaced from said machine to which support one end of one of said sections is pivotally connected, a support adjacent said machine for the opposite end of the other section, said sections arranged to fold upwardly in jackknife fashion and to swing upwardly on said pivotal connection without removing said belt into an inoperative position, and means on one section to engage the other section and prevent jackknife movement of the sections in a downward direction.

1,661,461. CASING FOR PNEUMATIC TUBES. AMEL B. BROLUSKA, Detroit, Mich. Filed Apr. 6, 1923. Serial No. 630,231. 4 Claims. (Cl. 152—18.)



1. A casing for pneumatic tubes comprising a series of puncture resisting plates of vulcanizable material embedded in the casing, a series of reinforcing wires coated with a heat resisting substance and extending through the said plates, the wires being arranged in the plates in crossed layers at an angle to the center plane of the casing and in staggered relation to prevent the possibility of puncture, the casing being vulcanized to secure the plates in position.

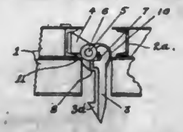
1,661,462. TIRE STRUCTURE. AMEL B. BROLUSKA, Detroit, Mich. Filed Oct. 11, 1924. Serial No. 743,119. 1 Claim. (Cl. 152—18.)



A tire structure comprising a pair of annular base members, a series of layers of cords wound around the base members and shaped to form a carcass, said cord layers being embedded in rubber, a tension band extending about the tire circumferentially of the casing on the tread side between the layers of cords, a similarly positioned band on the exterior of the carcass, and a third similar tension band on the interior of the carcass, one of the said bands having its opposite edges secured to the base members, the cords and bands being separately embedded in rubber, a tread portion on the exterior of the casing, and a cushion rubber lining for the interior of the casing, the entire structure being vulcanized to secure the parts in the said relation.

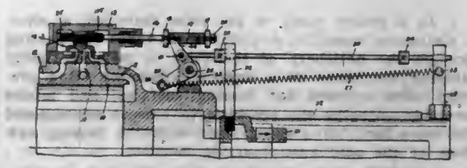
1,661,463. TOY HORSE. ALEXANDER CAMPBELL, Tyrrell, Ohio. Filed June 29, 1925. Serial No. 40,180. 7 Claims. (Cl. 208—42.)

1. A self-propelled toy comprising a body portion in the form of an animal, four legs pivoted to the body portion, a wheel carried by each leg, means for preventing the backward rotation of the wheel, means operating by the weight of the rider for spreading the front and rear legs apart, and spring means for drawing the legs together when the weight of the rider is removed from the operating means.



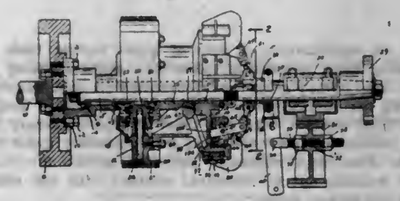
1,661,464. HEATING-ELEMENT SUPPORT. WILLIAM CAMPBELL, Detroit, Mich. Filed Aug. 13, 1923. Serial No. 656,994. 6 Claims. (Cl. 219—35.)

2. The combination with a double walled receptacle and an electrical heating unit in said receptacle, of insulators mounted upon the walls of the receptacle at opposite sides of the heating unit, terminals carried by said insulators to engage the heating unit and make electrical connection therewith, leading-in wires between the inside and outside walls of the double walled receptacle and connected to said terminals, said insulators being formed with chambers to receive the ends of the wires and within which chambers said wires are connected to said terminals, and means upon the outer end of one of said terminals and extending through the outer wall of the casing for operating said terminal from the exterior of the casing to move it into and out of engagement with the heating unit.



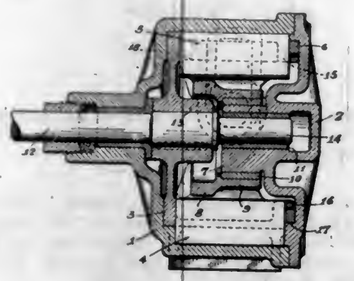
1,661,465. CAR COUPLER. EDGAR D. CHURCH, Saginaw, Mich., assignor to Jackson & Church Co., Saginaw, Mich., a Corporation of Michigan. Filed Apr. 11, 1927. Serial No. 182,737. 3 Claims. (Cl. 213—176.)

1. In combination, a car truck, a bracket secured thereto, a latch having on its lower edge a downwardly projecting shoulder and having a hooked end, said latch pivoted to said bracket for up-and-down movement in a vertical plane, a movable latch-supporting finger and



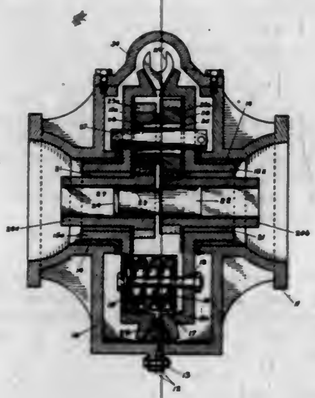
two oppositely directed projections on the latch near its pivot adapted, when the latch is pendent, to serve as a car bumper.

1,661,466. STEAM-CYLINDER VALVE-OPERATING MEANS. WILLIAM A. COOK, Marion, Ind., assignor to Marion Machine, Foundry & Supply Company, Marion, Ind., a Corporation. Filed Sept. 28, 1926. Serial No. 138,301. 4 Claims. (Cl. 121—164.)



1. The combination with a valve, cross head and cross head slide of a cylinder, of a bell crank lever with one arm in operative connection with the valve, a spring connected with the end of the other arm of the lever, a stationary post on the cross head slide with which the other end of the spring is connected so as to be under tension, a rod pivoted at one end to the arm of the bell crank lever which is operatively connected with the valve and at its other end is slidable in said post, a collar secured on said rod near each end thereof, and an arm extending up from said cross head and between said collars, said collars being positioned on said rod so that they will be respectively moved by the arm on the cross head near each limit of movement thereof and thereby rock the lever past its center to permit the spring to throw the lever to cause a sudden complete operation of the valve.

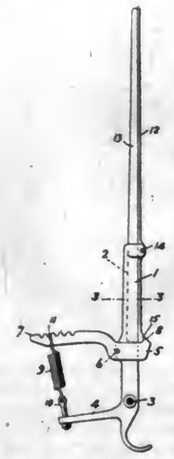
1,661,467. REVERSIBLE CLUTCH. WILLIAM A. COOK, Marion, Ind., assignor to Marion Machine, Foundry & Supply Co., Marion, Ind., a Corporation. Filed Feb. 7, 1927. Serial No. 166,433. 1 Claim. (Cl. 74—34.)



In a clutch construction, a shaft, a driving pinion support rotatably mounted thereon, a pair of opposed anti-friction thrust bearings interposed therebetween, a driving hub enclosing one end of the shaft, and another pair of opposed anti-friction thrust bearings interposed therebetween, adjacent bearings of both pairs of opposed anti-friction thrust bearings opposing each other.

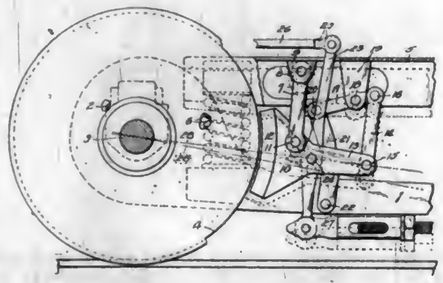
1,661,468. ROTARY PUMP. JAMES CORBETT, Toronto, Ontario, Canada, assignor of one-half to Benjamin Cohen, Toronto, Canada. Filed Jan. 27, 1927, Serial No. 164,107, and in Canada Jan. 28, 1926. 6 Claims. (Cl. 103—138.)

1. In a rotary pump of the class described, a rotor, a stationary eccentric, a plurality of vanes for passing through the periphery of the rotor, a member rigidly carrying the vanes as a unit, said member being provided with opposed flat bearing surfaces, and means revolubly engaging the eccentric to present non-opposed flat faces for sliding engagement with the bearing surfaces of the said vane carrying member.



1,661,469. AUXILIARY TRANSMISSION. FRANK P. FERRIS, Lincoln, Nebr. Filed July 23, 1925. Serial No. 45,633. 3 Claims. (Cl. 74—34.)

1. In combination, a pair of gears having their axes in alignment, a housing, planetary gears meshing with said first named gears and journalled in said housing, a spring for normally urging said housing toward and into frictional contact with the sides of said planetary gears for preventing the rotation of said planetary gears about their axes, and manually operable means for moving said housing out of frictional contact with the sides of said planetary gears.



1,661,470. PICKER-STICK MECHANISM. ELLIS L. FOX, Jr., Jeffersonville, Pa. Filed Apr. 4, 1927. Serial No. 180,685. 2 Claims. (Cl. 139—156.)

1. Picker stick mechanism comprising a grooved metal shank oscillatable about a fixed axis and provided with a bracket, a catch pivoted to the shank and having a beveled nose and a projecting lever, a spring interposed between the lever and bracket, and a tongued metal

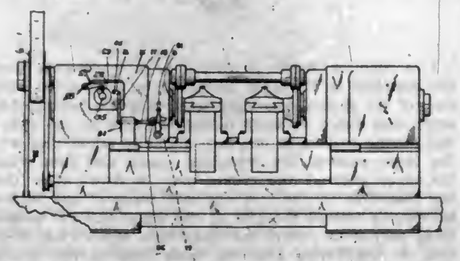
picker arm pivotally connected with the free end of the shank and having a beveled heel adapted to be caught by the catch and to release the catch.

1,661,471. BRAKE RIGGING FOR RAILWAY TRUCKS. HARVEY GEORGE, St. Louis, Mo. Filed Apr. 18, 1927, Serial No. 184,587. 5 Claims. (Cl. 188—190.)

1. In a brake rigging for railway trucks having a spring supported vertically movable upper frame member and a relatively stationary lower frame member, a brake head including a brake shoe, an arm extension for said brake head, hangers pivotally suspending from the upper frame member and means actuated by the up and down movement of the upper frame member for imparting movement to the brake head to always maintain concentric relation of the brake shoe with the wheel by maintaining the longitudinal axis of the brake head in a straight line with the center of the wheel.

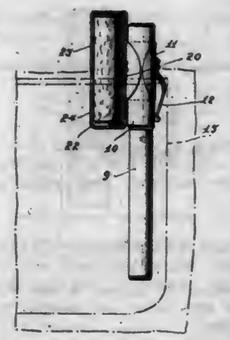
1,661,472. TOOTH-CLEANING IMPLEMENT. GEORGE N. GILBERT, Pana, Ill. Filed Apr. 6, 1927. Serial No. 181,547. 8 Claims. (Cl. 132—92.)

1. An implement of the character described comprising an open ended tubular glass storage compartment and handle providing body, and a closure cap for closing each open end of said body, a tooth crevice cleaning member carried by one cap, and a tooth surface clean-



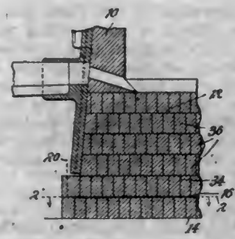
ing member carried by the remaining cap, said crevice and surface cleaning members being projected from said caps at acute angles.

1,661,473. ACCUMULATOR FOR RADIANT ENERGY. ROBERT H. GODDARD and NILS AUGUST RIFFOLT, Worcester, Mass. Filed June 10, 1924. Serial No. 719,201. 5 Claims. (Cl. 126—271.)



2. An accumulator for radiant energy comprising a longitudinally extended and substantially cylindrical receptacle having a convex outer surface and a concave energy absorbing inner surface, said surfaces being substantially uniformly spaced apart to receive a comparatively thin layer of energy absorbing liquid in said receptacle and said receptacle having a relatively narrow longitudinally extended heat-admitting opening along one side thereof.

1,661,474. SPINDLE STOP. WILLIAM F. GROENE, Cincinnati, Ohio, assignor to The R. K. Leblond Machine Tool Company, Cincinnati, Ohio, a Corporation of Delaware. Filed Mar. 23, 1923. Serial No. 627,175. 17 Claims. (Cl. 192—139.)

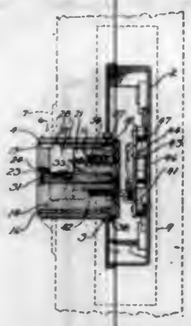


3. In a device of the class described the combination of a drive means, a shaft, a clutch controlling transmission of power from the drive means to the shaft, means for actuating the clutch whereby to render the drive means inoperative upon the shaft, a second shaft driven from the first shaft, a cam, complementary clutch members carried by the cam and second mentioned shaft, means associated with the cam for controlling the clutch actuating means, and means controlling the inter-engagement of the clutch elements associated with the cam and second mentioned shaft.

1,661,475. ROLLER BLOTTER. ALI HADI, Springwells, Mich. Filed Feb. 25, 1926. Serial No. 90,524. 2 Claims. (Cl. 120—26.)

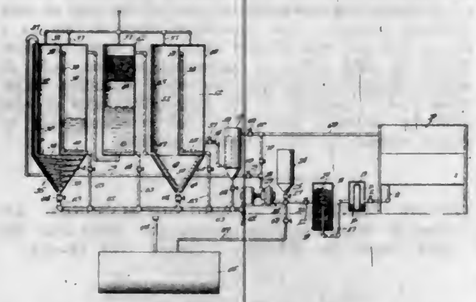
1. A device of the class described comprising a retaining member; a U-shaped supporting member pivotally mounted on said retaining member centrally of the bight of said U-shaped member; a tubular roller; a cup-shaped disc mounted on each of the legs of said U-shaped member; said cup-shaped discs serving as a closure for the ends of said roller; and a blotter positioned on said roller in embracing relation, said U-shaped member being operative while extending transversely of or parallel to the longitudinal axis of said retaining member; and means for retaining said U-shaped member in either operative position.

1,661,476. METHOD OF DRYING OUT MASONRY. ARTHUR B. HASWELL, Birmingham, Ala. Filed June 29, 1927. Serial No. 202,265. 5 Claims. (Cl. 34—24.)



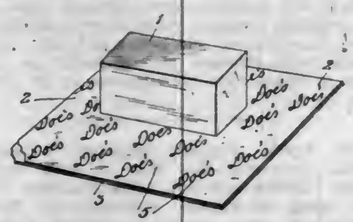
1. In the building of furnace hearths, the method which consists in first laying a lower course of brick for the hearth, secondly, placing a heater thereon, thirdly, laying a course of brick over said heater and then continuing the work under influence of said heater so that the moisture is driven from the structure as the work progresses.

1,661,477. LOCK. FRANK J. HELMUTH, Oakland, Calif. Original application filed Mar. 17, 1926, Serial No. 95,340. Divided and this application filed July 29, 1926. Serial No. 125,669. 4 Claims. (Cl. 70—46.)



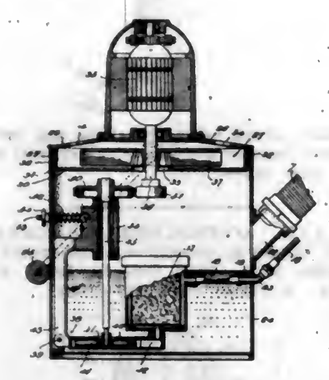
2. In a lock of the character described, a stationary element, a member revolvable relative thereto, means normally locking the member to the element yielding to the insertion of a key and a spring pressed plunger pro-

jecting eccentrically from an end face of the member adapted to ride on a ratchet for advancing the same



when the member is turned in one direction and for taking a new bite when the member is turned in the opposite direction.

1,661,478. APPARATUS FOR PURIFYING GASOLINE. JAMES P. JOHNSON, Greensboro, N. C., assignor to Johnson's Purifying Systems, Incorporated, Greensboro, N. C., a Corporation of North Carolina. Filed Dec. 11, 1926. Serial No. 154,251. 7 Claims. (Cl. 210—52.)



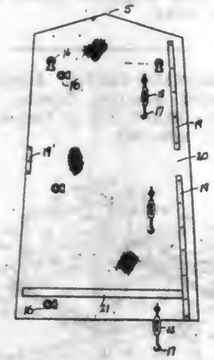
1. In an apparatus of the class described, a source of fluid to be cleaned, a pump acting upon the fluid, a trap, a filter, and a chemical tank interposed between the pump and source of fluid supply and cleaning means communicating with said pump, said means comprising a chamber for chemically treating the fluid, a filter communicating with said chamber, a washing chamber communicating with the filter, and an additional filter interposed between the last mentioned chamber and the point of use for the fluid.

1,661,479. WRAPPER FOR FOOD PRODUCTS. LOUIS JOSEPHSON, New York, N. Y., assignor to Breakstone Bros. Inc., New York, N. Y., a Corporation of New York. Filed Feb. 4, 1927. Serial No. 165,803. 4 Claims. (Cl. 229—87.)

1. An article of the class described comprising a wrapper having an outer covering and an inner covering, said inner covering being composed of transparent material having printed matter in reverse form on its outer face whereby said printed matter is properly readable when viewed from the inner face of said inner covering.

1,661,480. SURFACE-CLEANING MACHINE. WALTER L. KEEFER, Chambersburg, Pa. Filed Mar. 2, 1925. Serial No. 12,691. 6 Claims. (Cl. 15—2.)

1. In a surface washing device, a liquid applying nozzle and a suction nozzle, a single receptacle for a washing liquid, liquid outlet means leading from said receptacle to the liquid applying nozzle, a pump for effecting flow of liquid from said receptacle through said outlet means, a liquid return member leading from the suction nozzle and communicating with the part of said receptacle above the liquid level, and means for exhausting air from said part of said receptacle above the liquid level to create suction through said liquid return member.

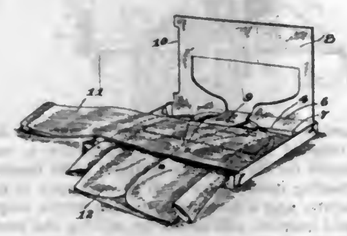


1,661,481. STEERING WHEEL. CHARLES H. KENRICK, Onaway, Mich., assignor to Lobdell-Emery Manufacturing Company, Alma, Mich., a Corporation of Michigan. Filed Dec. 23, 1925. Serial No. 77,348. 2 Claims. (Cl. 74—33.)

1. A steering wheel consisting in a continuous wood rim mortised in its inner periphery to receive the outer ends of the spokes, four rigid wooden spokes having their outer ends fitted securely in the mortises in the rim, a hub having sockets in one face normally registering with the inner ends of the assembled spokes and into which the inner ends of the spokes may be fitted after they are assembled in the rim, the side walls of the sockets converging toward the axis of the wheel and the sockets being shaped to receive the spoke ends in an axial direction, a ring fitting over the inner ends of the spokes, and means for clamping the ends of the spokes between the ring and hub, said inner ends of the spokes being broad in a circumferential direction and thinner axially of the wheel.

1,661,482. PORTABLE INSTRUMENT HOUSING. HEINZ E. KUHNE, Houston, Tex. Filed Sept. 24, 1926. Serial No. 137,479. 5 Claims. (Cl. 20—2.)

1. A portable housing having side walls, means to bring said walls into rigid connection with each other, a roof centrally hinged and shaped to engage said walls at its edges and adjustable means to draw said roof into locked

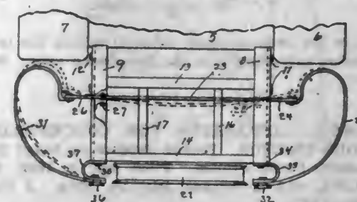


position on said walls, said walls and roof being formed of spaced plates enclosing an air space, for the purpose described.

1,661,483. METHOD OF SHEARING FUR PELTS. GEORGE J. LAEMMLE, New Rochelle, N. Y., assignor to Barnet Leather Company, Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 8, 1927. Serial No. 211,610. 6 Claims. (Cl. 149—28.)

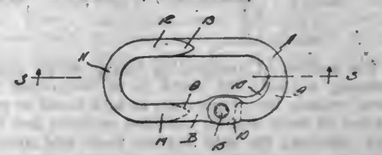
1. A method of shearing fur pelts having a pelage composed of hair falling in different directions comprising shearing the pelage against one fall of the hair, and repeating the shearing operation consecutively against all the falls of the hair.

1,661,484. GARMENT CARTON. BYRON HASSBERG LENGSFIELD, New Orleans, La., assignor to Lengsfield Brothers, New Orleans, La. Filed Mar. 2, 1927. Serial No. 172,159. 1 Claim. (Cl. 206—7.)



A carton for holding garment elements comprising a detachable cover portion, a main body portion having foldable sections, foldable side and end walls for one of the sections adapted to be suitably interlocked at their corners, thereby forming a container of a suitable depth for receiving the garment elements in folded relationship, a supporting section foldable along one edge of a side wall, a garment hanger flap portion formed from the supporting section, thereby providing means for securely locking the garment in the container and preventing wrinkling through rough handling, a notched portion along one edge of the supporting section for receiving a garment element, thereby providing a main body portion for bringing the garment elements into interlocked relationship when folded within the main body portion.

1,661,485. SPEAKING TUBE. JOSEPH LEVY, Tulsa, Okla. Filed Mar. 4, 1927. Serial No. 172,897. 4 Claims. (Cl. 181—22.)

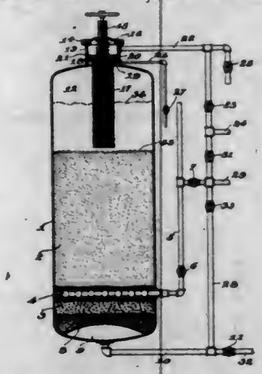


1. A speaking tube having doors at opposite ends, and connections independent of the tube from one door to the other for actuating them simultaneously.

1,661,486. LUGGAGE CARRIER AND BUMPER. WALTER R. MALM, San Francisco, Calif. Filed May 31, 1927. Serial No. 195,428. 3 Claims. (Cl. 293—55.)

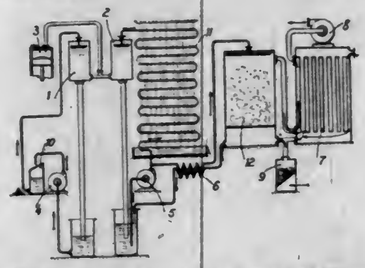
1. In combination with a luggage carrier having a pair of parallel frame members, a bar extending between said frame members and having its extremities projecting beyond said frame members, wing tips secured to the opposite ends of said bar and having their free ends secured to said frames at points remote from said bar.

1,661,487. COUPLING LINK. WILLIAM MARTIN MCCULLAR, Allenville, Ill. Filed Apr. 27, 1927. Serial No. 186,985. 1 Claim. (Cl. 24—232.)



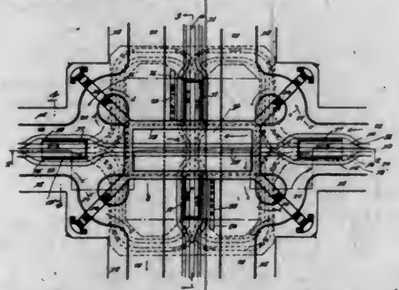
A coupling link of the class described comprising a pair of sections, one of said sections comprising a straight body portion having ends curved thereover toward each other, one of said ends, being reduced and terminating in a point, and the other end terminating in a pair of spaced ears one to each side of and in parallelism with the general plane of said one section, the other section comprising a substantially U-shaped formation having a bight, a short leg and a long leg, the extremity of the long leg being disposed between the ears and merging into a curved stop finger to engage one curved end of the first section which is provided with the spaced ears, and a pin extending through openings in the ears and an opening in the extremity of the long leg for pivoting the sections together so that they will swing in only a single plane.

1,661,488. BASE-EXCHANGE WATER SOFTENER AND FILTER AND FILL-NOZZLE SALT-POT ATTACHMENT. CHESTER T. MCGILL, Elgin, Ill., assignor to Reiter Company, Elgin, Ill., a Corporation of Illinois. Filed Apr. 9, 1926. Serial No. 101,002. 10 Claims. (Cl. 210—24.)



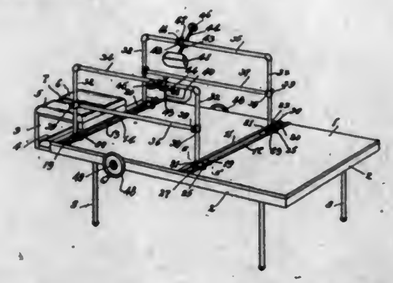
1. In a water softener, a tank, base exchange mineral within the tank, filtering material within the tank, means for introducing water into the tank, means for filtering

the water, means for supplying filtered unsoftened water, means for washing the filtering material and supplying softened water at the same time, there being a free board



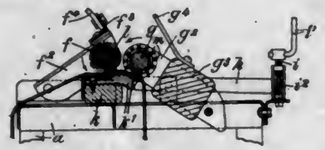
space above the base exchange mineral within the tank, a screen basket extending into the free board space from a fill nozzle.

1,661,489. APPARATUS FOR CONCENTRATING AQUEOUS LIQUIDS. PIERRE JEROME DE SAINT ANDRÉ MEYNARDIE, Paris, France. Filed Apr. 6, 1925, Serial No. 21,219, and in France Apr. 16, 1924. 2 Claims. (Cl. 62—153.)



1. The method of evaporating liquids which comprises introducing a stream of liquid to be evaporated into a vacuum, causing the evaporation of said liquid to produce a mixture of finely divided solidified material and liquids, rapidly removing the said mixture from said vacuum to prevent the accumulation of the solidified particles, and separating the solidified material from the liquid.

1,661,490. STREET CROSSING. EDWARD MIHALIAK, Brookfield, Ill. Filed Jan. 5, 1927. Serial No. 159,205. 15 Claims. (Cl. 104—28.)

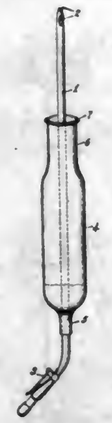


1. A street crossing comprising two street car trackways elevated one above the other and extending substantially at right angles with respect to each other, vehicle traffic lanes on opposite sides of the trackways, curved lanes at the corners of the street crossing and connecting adjacent traffic lanes to permit right and left turn of vehicles moving on the traffic lanes, and a bridge structure permitting pedestrian travel over the trackways and traffic lanes.

1,661,491. OPERATING TABLE. ALEXANDER THEODORE MINTY, Winnipeg, Manitoba, Canada. Filed Mar. 26, 1926, Serial No. 97,707, and in Canada Jan. 25, 1926. 5 Claims. (Cl. 128—70.)

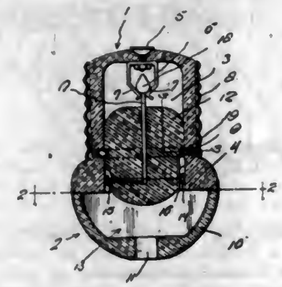
1. The combination with a table, of upstanding side frames carried by the table and extending legthwise thereof, ad bodily adjustable inwardly or outwardly of the table, means for locking the side frames in any adjusted position and pressure pads carried by the side frames and normally overhanging the table and mounted on the frames to permit of the shifting of the pads in a direction lengthwise of the table, the up and down swinging movement of the pads towards and away from the table and the in and out movement of the pads towards or away from the side frames.

1,661,492. TEASELING MACHINE. STANISLAS MOREL, Vevey, Switzerland. Filed Oct. 23, 1924, Serial No. 745,489, and in Switzerland Oct. 31, 1923. 3 Claims. (Cl. 26—32.)



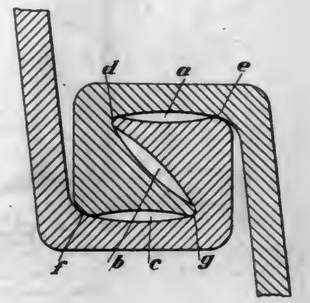
1. A machine for teaseling all kinds of material adapted to be teaseled comprising, in combination a non-rotatable support for carrying the material to be teaseled, a revoluble feeding member arranged to rest upon said support by gravity, and a revoluble brushing device cooperating with said support, and means for driving the brushing device and the feeding member.

1,661,493. PROCESS FOR TREATING CELLULOSIC MATERIAL. FREDERICK CARL NIEDERHAUSER and HAYDEN BENJAMIN KLINE, Cleveland, Ohio, assignors to The Industrial Rayon Corporation, Cleveland, Ohio. Filed Dec. 18, 1926. Serial No. 155,763. 11 Claims. (Cl. 260—100.)



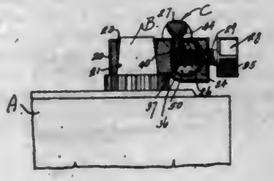
1. In a process for the manufacture of viscose rayon, the introduction in an alkaline medium into the process of viscose manufacture of an alkali metal zincate in solution, said zincate being incorporated into the alkaline viscose solution prior to the maturing of the viscose to the stage desired for precipitation, the solution being afterwards forced through openings into a precipitating bath for the formation of filaments, as herein set forth.

1,661,494. CATHETER. LOUIS A. NIELSEN, New York, N. Y. Filed Sept. 25, 1924. Serial No. 739,778. 2 Claims. (Cl. 128—349.)



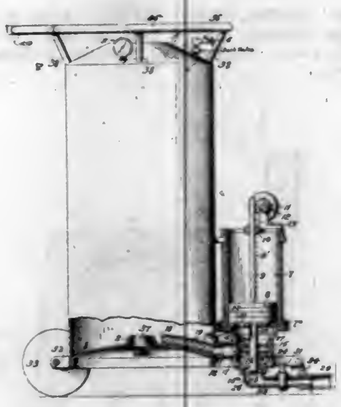
1. Means to enable at will drainage of the bladder irrespective of the condition of the sphincter muscle, comprising a drainage tube of a length to extend past the sphincter into the bladder, and means to hold the tube in place, comprising an envelope of a size to loosely receive the male organ, reduced at one end to provide a relatively short neck embracing the tube and secured thereto with a fluid tight joint, and reduced at the other end to provide a relatively long neck to embrace the organ thereby to support the envelope with the tube in place, said envelope being of resilient waterproof material, and the neck of a diameter to grasp the organ with sufficient firmness to hold the same in place without injurious pressure on the organ, and a clamp upon the lower projecting end of the tube.

1,661,495. SWIVEL CONNECTION. PHILLIP M. O'NEILL, Fort Ethan Allen, Vt. Filed Aug. 4, 1925. Serial No. 48,095. 1 Claim. (Cl. 173—359.)



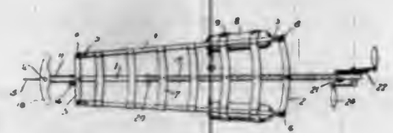
A swivel connector comprising a socketed plug provided at its open end with an outstanding flange of circular form, provided with a central contact at its closed end and surrounded by an external electricity conducting shell, a U-shaped clamp mounted in said socket and connected with said central contact, a body of semi-spherical configuration provided with a central extension fitting snugly in its bottom into the socket of said plug, said body being cored out to provide an elongated pocket, said body also having an opening in communication with said pocket for passage of electricity conducting cords, binding posts carried by said extension, and accessible through open end portions of said pocket, means associated with said binding posts whereby current is transmitted to said shell and returned to said central contact and clamp, said means including an electricity conducting stem embedded in said projection and having a head on its end detachably engaged with the arms of said clamp and also including means interposed between the wall of said socket and said extension.

1,661,496. METAL SHEET PILING. KARL PAHL, Heidelberg, Germany. Filed Dec. 31, 1925. Serial No. 78,611, and in Germany Dec. 7, 1925. 8 Claims. (Cl. 61—60.)



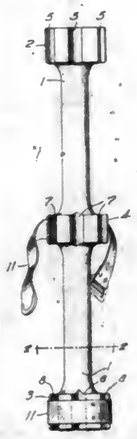
1. Metal sheet piling comprising individual pile members, interlocking jointing members on the inner edges of adjacent pile members having rigidly engaged portions for preventing a relative rotation of the pile members, the rigidly engaged portions having concaved surfaces facing each other in such a manner that the rigidly engaged portions of the jointing members interlocking each other have a linear contact throughout.

1,661,497. BATTERY TERMINAL. GEORGE DEWEY PATE, Akron, Ohio, assignor of thirty four-hundredths to Dora Neal, Kenmore, Ohio, and one-fourth to Simon Myers, Akron, Ohio. Filed Apr. 25, 1925. Serial No. 25,751. 2 Claims. (Cl. 173—259.)



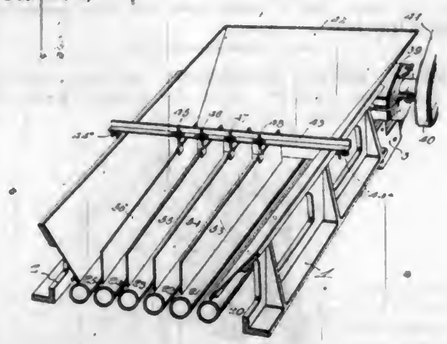
1. As an article of manufacture a battery connector comprising a post attaching portion formed of a hard metal body portion having a vertical pocket therein open only at the top thereof, said body portion having an acid resisting metal coating extending into and about the pocket thereof, a cable connecting member including a terminal formed of a body portion coated with an acid resisting metal, said terminal adapted to be extended into the pocket of the post attaching portion, and acid resisting clamping means adjustably carried by the post attaching portion adjustable into the pocket for the purpose of releasably clamping the terminal therein, said pocket being adapted to receive a plastic acid resisting substance for sealing the connection of the terminal in the pocket of the post attaching portion.

1,661,498. DISPENSING DEVICE. LAWRENCE W. PECK, Chicago, Ill. Filed Feb. 16, 1922. Serial No. 536,998. 13 Claims. (Cl. 221—102.)



1. In a grease dispensing device, the combination of a storage tank, means for supplying air under pressure to the tank, a measuring device comprising a cylinder and piston, a connection between the storage tank and cylinder, a discharge pipe connected with the cylinder, manually controlled operating means for the piston, and valve means controlled by the operation of the piston for alternately opening and closing the connections between the cylinder, and storage tank and discharge pipe, said valve means acting to maintain the connection between the storage tank and cylinder closed when the connection between the cylinder and discharge pipe is open.

1,661,499. AQUATIC DEVICE. ELIZABETH PROTEAU, Kamloops, British Columbia, Canada. Filed July 19, 1926. Serial No. 123,499. 3 Claims. (Cl. 9—18.)

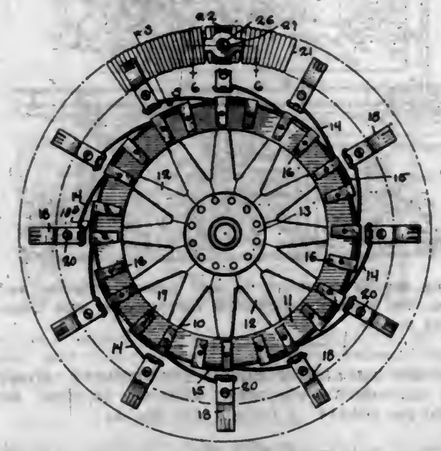


1. An aquatic device of the character described comprising a central keel member, a body supporting frame including transversely extending end members intermediately pivoted to the keel member and projecting laterally beyond the sides of said member, side members extending between corresponding extremities of said end members, fastening means connecting said side and end members together in such manner as to enable said members to be rigidly secured in rectangular formation or to be adjusted by turning movement of the end members to dispose all of said members above and in substantial parallelism with the keel member and flexible body, supporting means carried by the side members adapted to support a body thereon in the operative position of the side members.

1,661,500. GOLF-CLUB PRESS. WILLIAM F. REACH, Springfield, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Aug. 22, 1927. Serial No. 214,744. 5 Claims. (Cl. 273—82.)

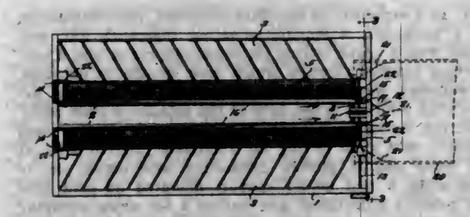
1. A holder for golf clubs comprising a post, spaced apart rigid enlargements at each end and at the middle thereof, one of said enlargements having a series of golf club receiving recesses, each recess being of an arc shape greater than a semi-circle.

1,661,501. SEPARATING OR CLASSIFYING MACHINE. WILLIAM A. RIDDELL, Frederick, Md. Filed Dec. 10, 1925. Serial No. 74,501. 6 Claims. (Cl. 209—107.)



1. In a separating or classifying machine, the combination of a hopper, a plurality of downwardly inclined rollers disposed longitudinally of said hopper, a pair of laterally extending members disposed between the sides of said hopper and a plurality of guide plates depending from said laterally extending members and positioned over said rollers, each of said guide plates being adjustable toward or away from the rollers aligned therewith in a vertical plane for guiding material to be separated longitudinally along said rollers.

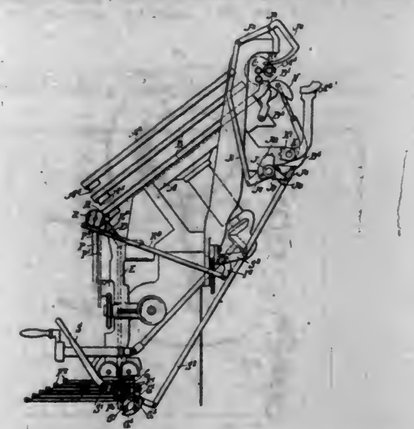
1,661,502. WHEEL AND TIRE THEREFOR. JOSÉ MA RIOJAS, Eagle Pass, Tex. Filed Nov. 9, 1926. Serial No. 147,223. 5 Claims. (Cl. 152—8.)



1. A resilient wheel comprising a solid rim, spring arms secured to the periphery of the rim and extending substantially tangentially with respect thereto, tire supporting brackets mounted upon said springs and each

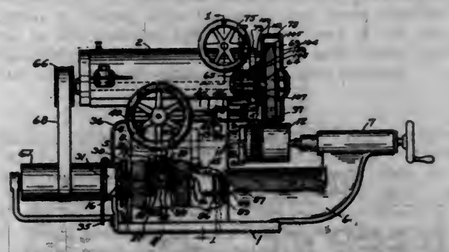
comprising a base member secured to the respective springs and arms extending from the base member and having longitudinally curved outer portions, a resilient

tire body disposed between and embraced at its sides by the said portions of the arms, and means for holding said arms in clamping engagement with said tire body.



1,661,503. FRUIT-SIZING MACHINE. JABIN V. ROGERS, Cashmere, Wash. Filed Dec. 23, 1926. Serial No. 156,668. 8 Claims. (Cl. 209—90.)

1. A fruit sizing machine including an endless conveying belt inclined laterally, and an endless ejecting belt having one flight extending diagonally along the first named belt from a point adjacent and above one end of the lower side thereof to a point adjacent and above the other end at the upper side thereof.

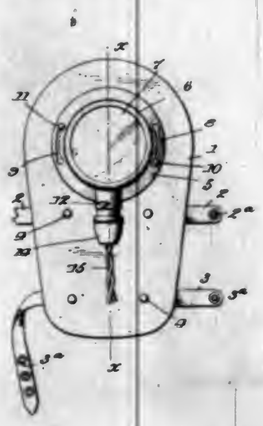


1,661,504. TYPOGRAPHICAL COMPOSING AND DISTRIBUTING MACHINE. JOHN R. ROGERS, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Apr. 15, 1926. Serial No. 102,107. 70 Claims. (Cl. 199—16.)

1. In a typographical composing and distributing machine adapted to be equipped with interchangeable magazines, one containing a set of matrices occupying certain channels according to character, and the other containing a set of matrices occupying differently located channels according to character, the combination of two distributor bars differing as to form to correspond to the respective magazines and movably mounted so as to be interchangeable in operative position with each other, and an assembler entrance arranged to receive matrices as they are discharged from the magazine in use, the said entrance being provided with two distinct throat sections provided with differently located fixed partition

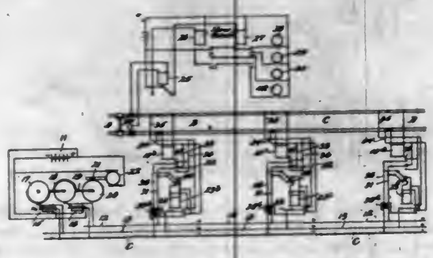
plates to correspond to the respective magazines and movably mounted so as to be interchangeable in operative position with each other.

1,661,505. GRINDING AND FINISHING MACHINE. CLARENCE T. ROTTLER, Seattle, Wash. Filed Dec. 28, 1925. Serial No. 78,037. 4 Claims. (Cl. 29—28.)



1. A machine of the class described having in combination a rotary work supporting means, a cylinder having a pivotal axis substantially parallel to that of the work, a rotary grinding tool and a roughening tool carried by said cylinder on opposite sides of its axis so that either tool may be alternatively brought into engagement with the work, means for axially moving said cylinder, and means for rotatably adjusting either tool to alternatively apply the same to the work.

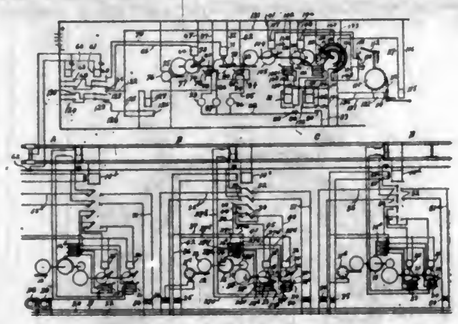
1,661,506. COMBINED SIGNAL AND TROUBLE LAMP FOR AUTOMOBILES. HENRY R. SANDERS, North Beach, Md. Filed June 2, 1922. Serial No. 565,311. 1 Claim. (Cl. 177—329.)



In a device of the class described, the combination of a flat signal plate of stiff light material of such proportions as to cover the back of the hand from the wrist to the finger tips, of proper shape and color to constitute a proper daylight danger signal, a plurality of straps attached thereto at points intermediate the ends, arranged to embrace the hand just back of the knuckles and at the wrist, leaving the fingers and thumb free for use, a separate lamp casing open on one side and closed on the other by a lens of colored glass to constitute a night danger signal, an integral flange formed around the edge of the open side of same, and shaped to fit closely and directly against the face of the signal plate, cooperating quick detachable fastening means on said casing and on

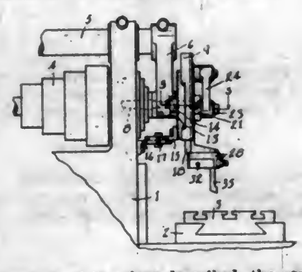
said plate respectively, whereby the lamp unit as a whole, including the lamp and its casing, may be mounted on

the plate for use at night, and may be detached therefrom in the daytime, or for special use at any time as a trouble lamp.



1,661,507. RAILWAY SIGNALING. EDWARD C. SASNETT, Washington, D. C. Filed Sept. 24, 1925. Serial No. 58,447. 8 Claims. (Cl. 246—59.)

3. In a continuous indication train control system, a brake actuating magnet controlled by current received from the track and normally energized, means for de-energizing said magnet if the train exceeds predetermined speeds under caution and danger conditions, a stick relay adapted when energized to hold said magnet energized independently of the speed, a pick-up circuit for said relay including a series a normally open manually operable switch and contacts closed only while the vehicle is standing still or travelling at a low speed, and a holding circuit for said relay opened upon the reception of caution signaling current.

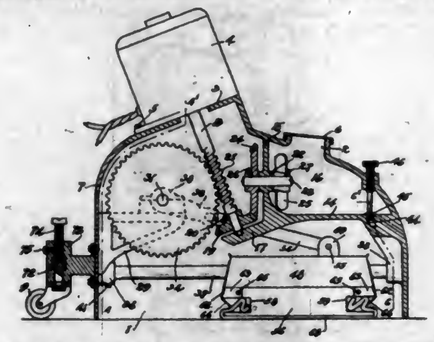


1,661,508. RAILWAY SIGNALING. EDWARD C. SASNETT, Washington, D. C. Filed Jan. 20, 1926. Serial No. 82,532. 14 Claims. (Cl. 246—37.)

1. In a railway signaling system for electrically operated roads, a track and a power conductor divided into blocks, track relays connected at the entrances of the blocks, means for connecting sources of electrical energy to the exit ends of the blocks and periodically reversing the polarity thereof, to cause the track relay contacts to vibrate, means controlled by said track relay contacts for connecting sources of electrical energy across the track and power conductor, a vehicle having trans-

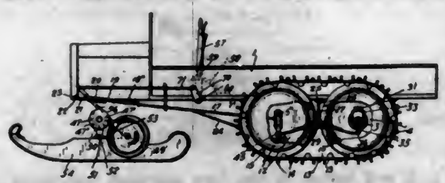
lating devices connected to said power conductor and track, and signaling mechanism controlled by said translating devices.

1,661,509. MILLING-MACHINE ATTACHMENT. HARRY A. SKINNER, Waterloo, Mich. Filed Apr. 23, 1926. Serial No. 104,114. 2 Claims. (Cl. 90—44.)



1. In a structure of the class described, the combination of a headstock, a spindle co-acting therewith and provided with a crank having an adjustable crank pin, a supporting bracket through which said spindle is disposed, a slideway mounted on said bracket for rotative adjustment relative to the axis of the spindle, a slide reciprocating in said slideway and slotted to receive said spindle, said slide having an annularly grooved stud at its lower end, a pitman connecting said crank pin to said slide, a tool holder support mounted on said stud for rotative adjustment and having a set screw engaging said groove for securing said support in its adjusted position, said support having a downwardly facing recess in the bottom thereof with a tool holder rest at the forward end of the recess, a tool holder pivotally mounted in said recess to normally engage said rest, and a spring acting to yieldingly hold said tool holder against said rest but permitting it to swing therefrom on the up-stroke of the tool.

1,661,510. FLOOR-TREATING MACHINE. EDMUND SPROSTON, Winnipeg, Manitoba, Canada. Filed Mar. 27, 1926. Serial No. 98,049. 10 Claims. (Cl. 91—39.)



4. A floor treating machine comprising a casing, adjustable wheels supporting the same, a driving motor mounted on the casing and presenting a driving shaft extending downwardly into the casing, a counter shaft rotatably mounted within the casing, cranks secured thereto, a worm on the motor shaft, a gear wheel secured to the counter shaft and meshing with the worm, a plurality of similar parallel guide members contained within and passing from the front to the back of the casing, similar carriages slidably mounted on the guide members, a link pivotally connecting each carriage with a crank on the crank shaft and floor working members detachably secured to the carriages.

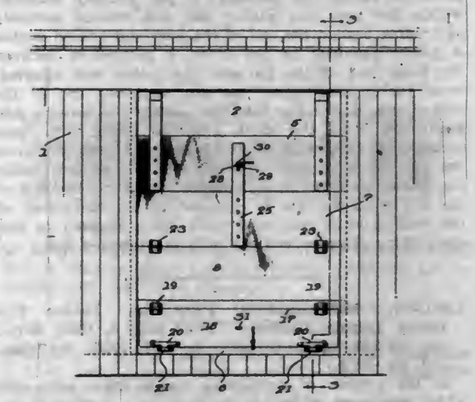
9. In a floor treating machine the combination of a liquid reservoir, a fountain reciprocating tool movable relative to said reservoir and equipped with a liquid receiving chamber and a hollow tube passing through said

tool and supporting the same for reciprocating movement, said tube having a liquid inlet communicating with the reservoir and a liquid outlet communicating with the liquid receiving chamber of the tool.

1,661,511. AUTOMOBILE SLEIGH. FRANK JOSEPH STEFFLER, Teeswater, Ontario, Canada. Filed Feb. 26, 1927. Serial No. 171,209. 1 Claim. (Cl. 180—5.)

In an automobile sleigh, the combination with the body, tractor wheels thereof, front axle and an inner hub plate at each end thereof, of outer hub plates spaced from each inner plate, bracket members inserted between the inner and outer hub plates, lugs depending therefrom, sleigh runners, a pivotal connection between the lower ends of the lugs and the runners, a lifting arm secured between the hub plates, a lifting wheel at the lower end of the arm, and manually operated means connected to the upper end of the lifting lever for turning the hub plates to simultaneously carry the lifting wheel into engagement with the roadway and the runners out of engagement.

1,661,512. OIL-WELL-CLEANING COMPOSITION. FRANCIS DALY SULLIVAN, Memphis, Tenn. Filed July 23, 1924. Serial No. 727,718. 5 Claims. (Cl. 87—5.)

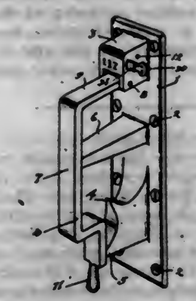


1. An oil well cleaning composition comprising caustic soda, aluminum powder, sodium bicarbonate, soap powder, saponin, and citric acid.

1,661,513. TEE-FORMING BLANK. ERMAN N. SWETT, South Sioux City, Nebr. Filed Sept. 30, 1927. Serial No. 222,995. 4 Claims. (Cl. 273—33.)

1. A blank from which to form a tee, said blank having curved inner and outer peripheral edges, ends adapted to be overlapped to form a frusto-conical tee, a disk integral with the inner edge of the blank and adapted to assume an inverted cone-shape when said ends are overlapped, and means for connecting said ends with each other when overlapped.

1,661,514. GRAIN-CAR DOOR. HERMAN C. TORDSEN, Lakefield, Minn., assignor of one-half to E. J. Stotereau and Fred K. Gage, Lakefield, Minn. Filed Apr. 17, 1926. Serial No. 102,804. 2 Claims. (Cl. 20—31.)



1. The combination with a structure having a door opening, and a trackway, of a door mounted to travel upon the trackway, said door comprising upper and lower sections and a pair of intermediate sections, the upper and lower sections being hinged to the respective intermediate sections on the inside and the intermediate sections being hinged to each other on the outside, and a lever fixed to the outer side of the upper intermediate door section and having a portion serving as a handle adapted to overlap upon the upper and lower door sections in the unfolded and folded positions of the door respectively, and means for securing said handle end of the lever to said upper and lower door sections.

1,661,515. PROCESS OF PRINTING IN GREASY INKS WITH GELATIN PRINTING SURFACES. OTTO TREICHEL, Berlin, Germany. Filed Nov. 30, 1926, Serial No. 151,826, and in Germany Dec. 18, 1925. 4 Claims. (Cl. 41—41.5.)

2. In the process of printing with greasy inks on gelatin printing surfaces, the step consisting in treating the gelatin with a substance having the property of reducing or delaying the swelling of the gelatin.

1,661,516. SAFETY HANGER. SAMUEL S. VINEBERG, Winnipeg, Manitoba, Canada. Filed June 23, 1923, Serial No. 647,368, and in Canada Feb. 12, 1923. 6 Claims. (Cl. 211—4.)

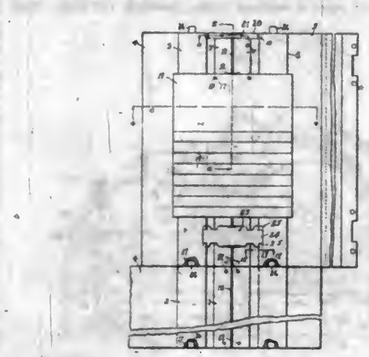
6. A safety hanger, comprising a permanently mounted body plate presenting a garment supporting post and a housing above the post, a substantially L-shaped lever having the upper end pivotally mounted and terminating within the housing and the lower end normally crossing

the free end of the post, a pivoted spring pressed catch contained within the housing and engageable with the upper end of the lever and adapted when engaged to lock the lever against movement, a rocker arm pivotally mounted within the housing, a pin slidably mounted within the post and having one end thereof normally protruding beyond the end of the post and housed within a pocket provided in the lever, a connection between the inner end of the pin and the rocker arm adapted, upon the in shifting of the pin, to lower end of the rocker arm, and a key insertible within the housing and engageable with the catch and the rocker arm, said rocker arm permitting of the insertion of the key upon the pin being pressed inwardly by the apparel under the influence of the lever and preventing the removal of the key when the pin is extended within the pocket of the locking lever, and said catch being adapted to lock the locking lever by contact with the inserted key.

1,661,517. METALLIZING PROCESS. JULIUS VON BOSSE, Leipzig, Germany. Filed May 6, 1926, Serial No. 107,258, and in Germany May 27, 1925. 2 Claims. (Cl. 91—68.1.)

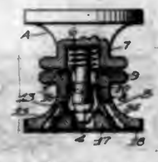
2. The process of metallizing textile fibres with gold which comprises subjecting the fibres in a vacuum to the action of a cooled radiating gold plated cathode.

1,661,518. GRID BAR FOR FIBER-TREATING MACHINES. MORRIS WEHLI, Basel, Switzerland. Filed Aug. 18, 1926, Serial No. 130,060, and in France Jan. 28, 1926. 2 Claims. (Cl. 19—105.)



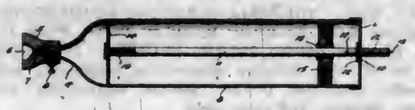
1. A grid for scutchers, beaters, carding machines and the like, embodying grid bars which, in order to allow the incoming streams of air to pass through the spaces between the bars without eddying and without the occurrence of dead spaces, have their inside portions, between the top and bottom edges thereof, constructed with a stream-line surface producing an increase in the cross-sectional area of said grid spaces, so that between the entry of the streams into the grid and their exit therefrom a reduction in velocity and a drop in pressure take place.

1,661,519. SHEET OR CARD HOLDER. GEORGE P. WIGGINTON, Kalamazoo, Mich., assignor to Office Equipment Patents Corporation, New York, N. Y., a Corporation of New York. Filed Nov. 27, 1926. Serial No. 151,093. 23 Claims. (Cl. 129—16.)



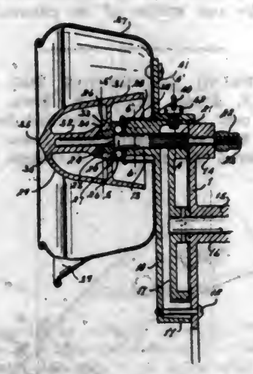
18. An apparatus of the class described comprising a plurality of supports provided with ways open at their ends, coacting aligning means on said supports whereby the ways may be brought into alinement, a plurality of sheet holders slidable in said ways whereby the holders may be slid from one support to another, and a holder-retaining member removably associated with said ways.

23. In an apparatus of the class described, the combination of a support provided with a way, a plurality of sheet holders slidably engaged in said way and provided with sheet-attaching means arranged in non-overlapping relation to adjacent holders, and a follower slidable in



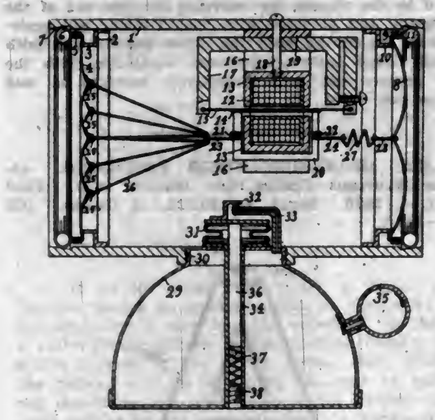
said way to coact with said holders, said follower being adapted to lie beneath the sheet mounted on the adjacent holder when in coacting relation thereto.

1,661,520. CUFF BUTTON. GERHARD WULLUM, Chicago, Ill. Filed Apr. 4, 1927. Serial No. 180,885. 3 Claims. (Cl. 24—110.)



1. A cuff button of the type described comprising a male member, a head portion for said male member, said male member having an arcuate-shaped groove adjacent said head portion, a female member having an arcuate-shaped groove extending downwardly therein, a sleeve carried by said female member, a retaining member integral with said sleeve and receivable in said groove, and retaining lugs receivable in the recess in said male member for locking said male member to said female member.

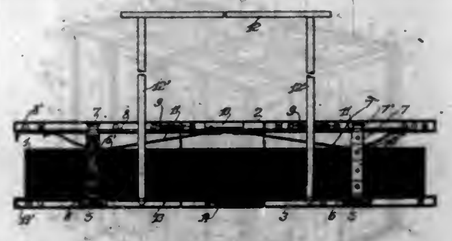
1,661,521. HIGH-PRESSURE GREASE GUN. HENRY A. ZIMMERMAN, Logansport, Ind., assignor of one-half to Merl M. Wall, Logansport, Ind. Filed May 2, 1927. Serial No. 188,275. 3 Claims. (Cl. 221—47.3.)



3. A grease gun comprising an elongated cylinder having a grease outlet at its front end and provided at its rear end with a cap having a central opening, a rod extending along the longitudinal central portion of said cylinder and passing through said opening, said rod being secured to said cap for removal bodily therewith, a piston slidable on said rod, the rear portion of the latter being formed with a longitudinal port for admitting fluid under pressure between the piston and cap, and an apertured plate secured to the front end of said rod and extending across the cylinder to limit the forward movement of the piston and to withdraw the latter from the cylinder when the rod is withdrawn, the front portion of said rod having a longitudinal port to conduct pressure from behind the piston into the part of the cylinder in front of said plate when said piston reaches the limit of its forward travel.

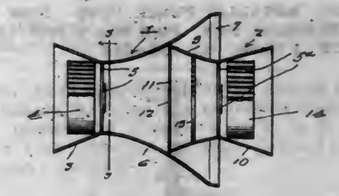
1,661,522. FRUIT-JUICE EXTRACTOR. MATTHEW BAILLIE, Winnipeg, Manitoba, Canada. Filed Jan. 5, 1926, Serial No. 79,395, and in Canada Nov. 10, 1925. 2 Claims. (Cl. 146—3.)

1. In a fruit juice extractor, a rotary reamer presenting a flaring skirt and a stationary juice collector surrounding the reamer and having the one side open and the other side closed and the closed side provided with a sleeve extending into the skirt and provided at the inner end with an out turned flange.



1,661,523. ACOUSTIC DIAPHRAGM AND LOUD-SPEAKER COMBINATION. NATHANIEL BALDWIN, East Mill Creek, Utah. Filed Apr. 2, 1926. Serial No. 99,294. 10 Claims. (Cl. 179—108.)

4. An acoustic diaphragm having unequal pneumatic pressure on opposite sides, pneumatic means to counterbalance the excess pressure, and an electrically operated armature operatively connected to said diaphragm.



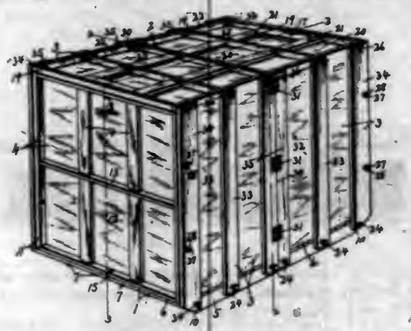
1,661,524. LOOSE-LEAF BINDER. PAUL BAUMER, Frauenfeld, Switzerland. Filed May 17, 1927, Serial No. 192,024, and in Switzerland May 22, 1926. 6 Claims. (Cl. 129—8.)

1. A loose-leaf binder, comprising in combination, a lower clamping member, an upper clamping member, extensible holding members fixed in the lower clamping member, means adapted to fix the upper clamping member to said holding members, a stirrup whose shanks pass through the upper clamping member, and means to fix said shanks in the lower clamping member, the leaves to

be inserted having unslotted perforations through which said holding members pass and slotted apertures for engaging with said guide members.

1,661,525. TONE MODIFIER. WILLIAM DEERFOOT, Iowa City, Iowa. Filed July 27, 1926. Serial No. 125,275. 6 Claims. (Cl. 181—27.)

3. As a new article of manufacture, a tone modifier for disposition in a horn, said modifier embodying telescopically connected parts, each of which includes oppositely flared portions, and means arranged in the flared portions of the respective parts for intercepting the sound waves to modify and subdue the same to render foreign noises less noticeable.



1,661,526. PROCESS OF REFINING LIGHT METALS SUCH AS MAGNESIUM OR ALUMINUM OR THEIR ALLOYS AND RECOVERING SUCH METALS FROM SCRAP. ADOLF BECK, Bitterfeld, Germany, assignor to the Firm I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany. Filed Apr. 4, 1927, Serial No. 180,991, and in Germany Jan. 15, 1926. 1 Claim. (Cl. 75—17.)

The process of refining light metals such as magnesium or aluminum or their alloys, which comprises melting the impure metal to be treated, adding calcium chloride and calcium fluoride in such proportions that the proximity of the eutectic point—82% of calcium chloride to 18% of calcium fluoride—is avoided, stirring the mixture and separating the molten metal from the foreign substances.

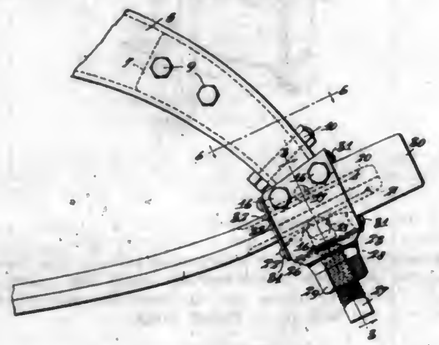
1,661,527. COLLAPSIBLE SHIPPING BOX. JOHN HENRY DE BOER, Syracuse, N. Y. Filed Nov. 20, 1924. Serial No. 751,074. 1 Claim. (Cl. 217—48.)

In a collapsible shipping box composed of separably connected sections, a bottom section having a floor and underlying shipping bars therefor, opposite upright side sections each comprising two substantially equal parts hingedly connected together and having their lower edges overlying upon the outer faces of the bottom section, opposite upright end sections rising from corresponding ends of the bottom section, a top section mounted upon the upper edges of the end sections and having opposed outer faces overlaid by the upper edges of the side sections said side sections, end sections and

the top section being provided with inner linings coextensive with the areas thereof, clamping devices for connecting and disconnecting the side and end sections

to the bottom section and additional clamping devices for connecting and disconnecting the top section to the side and end sections.

1,661,528. METALLIC FENCE POST. JOHN W. DUNLAP, Maquoketa, Iowa. Filed May 4, 1927. Serial No. 188,752. 1 Claim. (Cl. 256—58.)

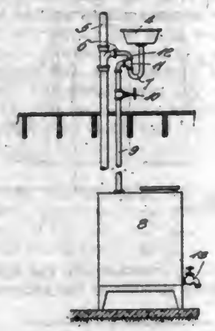


In a metallic fence post, a body portion having a forward flange and lateral flange, said forward flange having notches extending upwardly at oblique angles and downwardly at oblique angles, terminating in vertical downwardly extended portions, said forward flange having a lower lock notch extending inwardly from the outer edge thereof and terminating in an elongated upwardly extended portion, said notches adapted to receive wires of a wire mesh fence, the wires being stretched to points within the notches.

1,661,529. SCOW. ROBERT ELWOOD ELLIS, Seattle, Wash., assignor to Edgar Ames, Seattle, Wash. Filed Dec. 18, 1924. Serial No. 756,636. 7 Claims. (Cl. 114—79.)

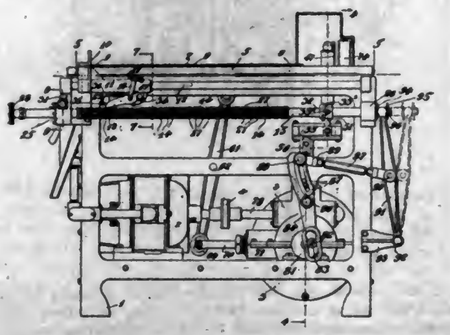
1. A steel scow, barge or like vessel embodying a hull, square in vertical cross section at all transverse planes, said hull being composed of channel shapes, the flanges of which are secured together, said shapes in the bottom being of sectional formation the sections having their ends in spaced relation longitudinally and terminating in given lines transverse to the ship; and a connecting plate disposed transversely of the hull in a plane parallel to the hull to which the end portions of said channel shapes are secured, whereby drainage of all liquids in said bottom is provided, and difficulties due to varying lengths and widths of the channel shapes are obviated.

1,661,530. SPRING SUSPENSION FOR VEHICLES. MARSHALL S. FIELD, Davenport, Iowa, assignor of twenty per cent to John C. Mohl and forty per cent to Charles H. Suiter, Davenport, Iowa. Filed Jan. 8, 1927. Serial No. 159,842. 4 Claims. (Cl. 267—54.)



1. A spring suspension for vehicles, comprising in combination, a vehicle chassis, a leaf spring having adjacent its free end a pair of grooves extending longitudinally along the upper face thereof and a single groove extending longitudinally along the under face thereof and disposed centrally of the upper grooves, a housing carried by the chassis for receiving the free end of the leaf spring and provided with spaced upper ball-receiving seats registering with the upper grooves and with a single lower ball-receiving seat registering with the lower groove, and balls respectively mounted in said grooves and seats.

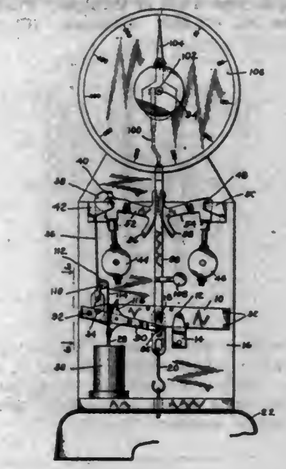
1,661,531. GLASS-SIGN-LETTER FASTENING. ALBERT HAMILTON FORDER, Los Angeles, Calif. Filed Mar. 4, 1926. Serial No. 92,322. 2 Claims. (Cl. 40—141.)



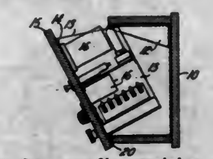
1. As a new article of manufacture, a sign letter composed of vitrified material, an integral lug projecting outwardly from the edge of the body of the sign letter, which lug is provided in its edge with an arcuate screw receiving notch, the entire face of which is beveled whereby the head of a screw that is seated in said notch will be forced away from the lug as a result of contact with said beveled face.

1,661,532. WATER AND SOAP SAVING DEVICE. JENNY BRAASCH FORTAIN, Redondo Beach, Calif. Filed Oct. 29, 1927. Serial No. 229,726. 3 Claims. (Cl. 182—1.)

1. In combination with a plumbing fixture, a stack, and a waste pipe from fixture to stack embodying a trap; a closed water-collecting tank below said trap, and piping leading from said trap to said tank, said piping communicating with the trap at a point between said fixture and the outlet end of said trap, whereby water from the fixture will descend through said piping until the tank and piping are full and will thereafter travel on through the waste pipe to the stack.



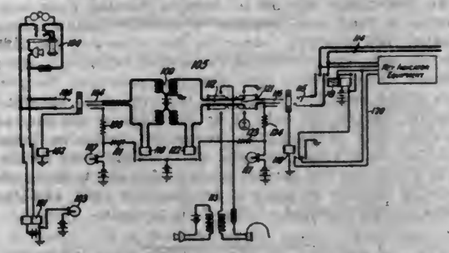
1,661,533. ICE-CREAM-BRICK CUTTER. AMOS F. GANTZ, Cedar Rapids, Iowa. Filed Dec. 15, 1924. Serial No. 756,063. 11 Claims. (Cl. 107—21.)



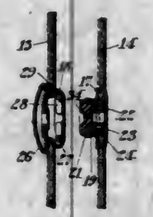
10. In an ice cream brick cutter, a frame; a table thereon; means for guiding a slab on the table; means for imparting a step by step movement to the slab; a cutter frame slidable in the machine frame; vertical guides carried by the cutter frame; rods slidable in the guides; a knife carried by the rods; a horizontal rod connecting the lower ends of the vertical rods; a block carried by the horizontal rods; a horizontal guide embracing the block; a vertical follower supporting the guide; a rocker arm connected at one end with the cutter frame; a horizontal follower connected with the other end of the rocker arm; a rotatable cam adapted to impart intermittent reciprocatory motion to the vertical and horizontal followers, and means for rotating the cam.

1,661,534. PENDULUM SCALE. WILLIAM N. GILBERT, Hudson Heights, N. J., assignor to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed Jan. 12, 1926. Serial No. 80,727. 5 Claims. (Cl. 265—62.)

1. In an automatic weighing scale, in combination, a main lever, a bifurcated auxiliary lever arranged with one fork on each side of said main lever, means for actuating said auxiliary lever by direct pivotal connection to said main lever, an indicator, and means for actuating said indicator from said auxiliary lever.

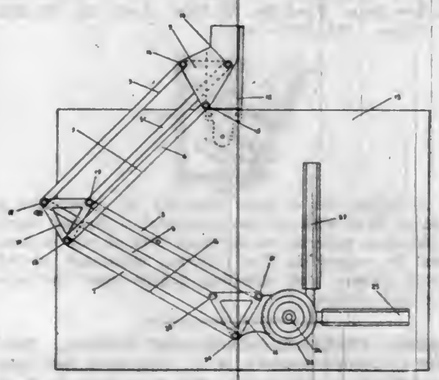


1,661,535. ELECTRIC SHIELDING. ARTHUR HADDOCK, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 22, 1924. Serial No. 745,323. 6 Claims. (Cl. 250—14.)



1. A cabinet for a radio receiving set comprising a container lined with shielding material, a closure therefor, shielding material on the inner face of said closure, means for supporting the receiving apparatus carried by said closure, and shielding flanges upon the container and closure.

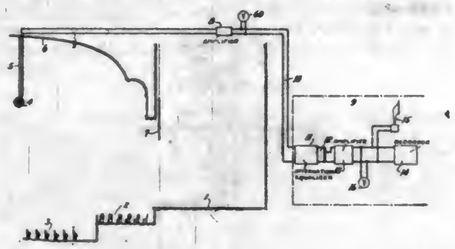
1,661,536. TELEPHONE-EXCHANGE SYSTEM. WILLIAM C. JORDAN, Madison, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Feb. 8, 1927. Serial No. 166,637. 8 Claims. (Cl. 179—27.)



1. In a telephone exchange system, a machine switching office, an operator's position thereat, a two-way line extending from a remote point and terminating at said operator's position, intercepting terminals individual to said line appearing in the banks of selector switches, means for extending a connection to said line comprising means for causing a selector switch to connect with said switch terminals, and means at said operator's position for connecting said terminals with said line.

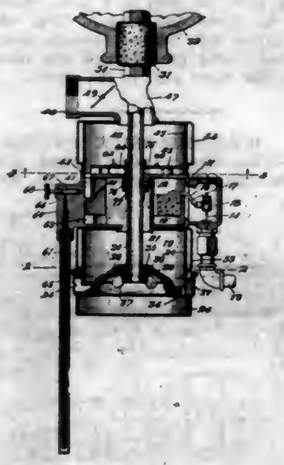
1,661,537. FASTENER. ARCHER L. KNAPP, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 30, 1923. Serial No. 635,469. 5 Claims. (Cl. 24—208.)

1. The combination with a fastener comprising a hollow male member and a female member adapted to co-operate therewith, of a resilient plug secured in the hollow male member and projecting axially and radially therefrom to cushion the female member.



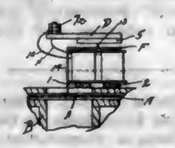
1,661,538. UNIVERSAL PARALLEL DRAFTING DEVICE. MANLIO MARZETTI, Milan, Italy. Filed Dec. 17, 1924, Serial No. 756,519, and in Italy Dec. 20, 1923. 1 Claim. (Cl. 33—79.)

An instrument for use in drawing parallel lines comprising a fixed base triangle, a second triangle, three parallel rods pivotally connecting the corners of the base triangle with the corners of the second triangle, a third triangle, three parallel rods pivotally connecting the corners of the second triangle with the corners of the third triangle, two of the rods of at least one of the sets of parallel rods between the respective triangles being mounted in the same plane and the third rod being mounted in a different but parallel plane to permit the said rods to swing through an angle of substantially 180°, and line ruling means mounted on the third triangle.



1,661,539. PHONOGRAPH SYSTEM. JOSEPH P. MAXFIELD, Maplewood, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Oct. 2, 1923. Serial No. 666,148. 3 Claims. (Cl. 179—100.1.)

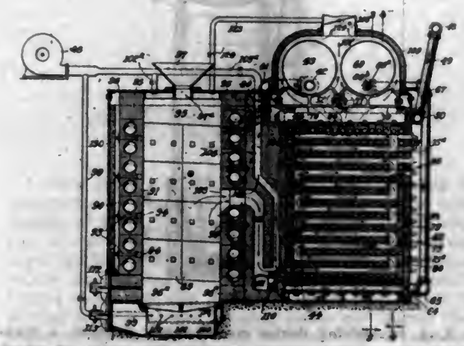
1. A reproducing or phonograph recording system, comprising an electric circuit including a reproducer or recorder and a pick-up device, the said pick-up device being located in such a position in the auditorium with respect to the sound source that the sound wave effect



at said device will be substantially the same as that received by the average member of the audience.

1,661,540. AIR WASHER AND CARBURETOR. HERBERT MCCORNACK, Glen Ridge, N. J. Filed Sept. 2, 1921. Serial No. 498,110. 2 Claims. (Cl. 261—79.)

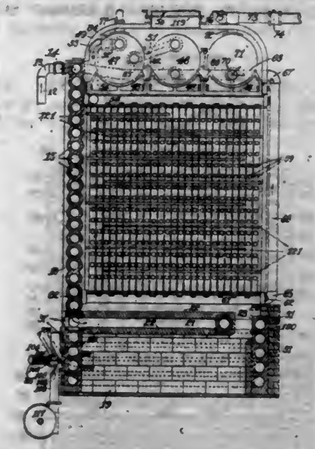
2. In a carburetor, the combination of a vessel within which the air is cleansed and moistened, an intermediate chamber connected with said vessel, a carbureting chamber connected with said intermediate chamber, a conduit connected with said carbureting chamber, a feed pipe for the cleansing and moistening liquid extending through said conduit, carbureting chamber, intermediate chamber and vessel, and means co-operating with said pipe for clamping said parts in cooperative relation.



1,661,541. LOUD SPEAKER. ULRUS H. MCNEIL and FRANCIS G. PEARCE, Woods Cross, Utah. Filed Jan. 15, 1927. Serial No. 161,816. 2 Claims. (Cl. 179—119.)

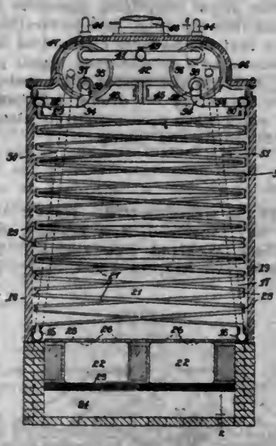
1. In a loud speaker the combination of a base, having a diaphragm mounted therein; pole pieces riveted to said base; a permanent magnet superimposed over said pole

pieces and held in contact therewith by bolts; bolts secured in said base and passed through said pole pieces and on which nuts are provided to hold the entire assembly together; a non-conductor plate over the ends of said magnet and holding said magnet to said pole pieces by the pressure exerted by the bolts and nuts thereon and therethrough; cores secured on said pole pieces and carrying electromagnets; an armature suspended from said non-conductor by spaced apart pins and said armature held directly over said electromagnets; and a pin connecting said armature with said diaphragm.



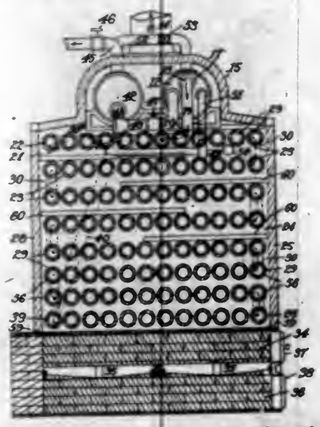
1,661,542. STEAM GENERATOR. HENRY A. NICHOLSON, Arkles Bay, Auckland, New Zealand, assignor to Ernest A. Craig, Auckland, New Zealand. Filed Mar. 24, 1919. Serial No. 284,657. 9 Claims. (Cl. 122—5.)

1. The combination of a pump, a system of continuous high pressure fluid piping through which the fluid is forced only once by the pump, and means to heat the piping sufficiently to heat the fluid above the boiling point, pressure maintaining means being provided at the delivery end of the system to restrain the heated fluid against undue speed of discharge; said heating means comprising a preheating furnace surrounded by a coil of said piping of relatively large diameter and into which the water is first pumped by said pump, and a secondary heating furnace to one side of the preheating furnace, with coils of piping of very much smaller diameter to sub-divide the stream of fluid into small streams communicating with said first mentioned coil of piping and extending back and forth in the secondary furnace from the coolest to the hottest portion of the furnace.



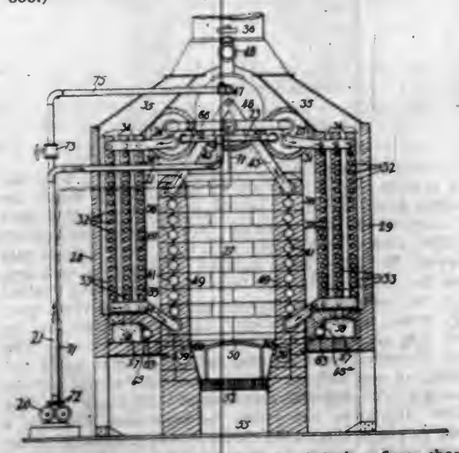
1,661,543. STEAM GENERATOR. HENRY A. NICHOLSON, Arkles Bay, Auckland, New Zealand, assignor to Ernest A. Craig, Auckland, New Zealand. Filed June 24, 1919. Serial No. 306,398. 6 Claims. (Cl. 122—356.)

1. A steam generating apparatus comprising a combustion chamber with a continuous coil of large diameter extending around the sides thereof, a bridge above the chamber with a large coil extending back and forth therethrough and connected at one end with the combustion chamber coil, coils of pipe of smaller diameter extending downwardly and terminating just above the bridge, a water drum between the large and small coils and a steam drum into which the smaller coils deliver, said coils being all connected at their entrance ends with the large combustion chamber and bridge coils, and means



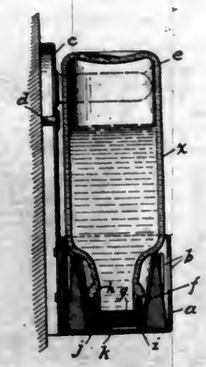
to force fluid only once first through the large coils, and thence through the small coils into the steam drum.

1,661,544. STEAM GENERATOR. HENRY A. NICHOLSON, Arkles Bay, Auckland, New Zealand, assignor to Ernest A. Craig, Auckland, New Zealand. Filed June 24, 1919. Serial No. 306,399. 3 Claims. (Cl. 122—350.)



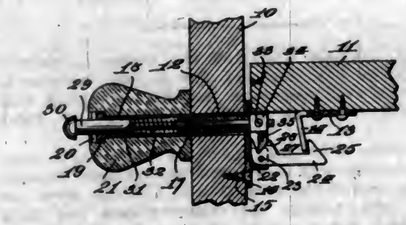
1. A boiler comprising a combustion chamber, distributing headers one at each side of said chamber, means for feeding water directly to one of said headers, a grid work of sections of tubes forming coils crossing each other in said chamber and connected at their lower ends to said headers, the tubes being inclined upwardly in each section, the upper end of each length of tubing being coupled with the lower end of the next length, leaving clear openings across the flame chamber, collecting headers one at each side near the top of said combustion chamber, and each connected to said coils, the coils beginning at the header on one side of the chamber and ending at the header on the opposite side thereof, and being the only water circulating connection between said headers, a drum on either side of the chamber connected to an upper header and to which the heated water is delivered from said header, and a return means from each drum to the header on the same side of the boiler as is the drum.

1,661,545. STEAM GENERATOR. HENRY A. NICHOLSON, Arkles Bay, Auckland, New Zealand, assignor to Ernest A. Craig, Auckland, New Zealand. Filed June 24, 1919. Serial No. 306,400. 8 Claims. (Cl. 122—258.)



1. In a steam generator, the combination of a system of tubing and a drum connected therewith, a pump for forcing fluid only once at high pressure through the system in a single direction, means for heating the fluid to high temperature as it advances, a low pressure service steam drum, and a converter connected to the delivery end of the system of tubing and having a portion extending within the steam drum, said converter having within said drum means for converting the high pressure fluid into low pressure steam comprising numerous small perforations opening into the drum, said perforations of such small dimension that the pressure of the fluid in the converter is maintained at a substantially higher point than the pressure of steam in the service drum, and upper and lower pipes for connecting the drums, said pipes having valves therein which when open permit circulation of the fluid through the drums and tubing.

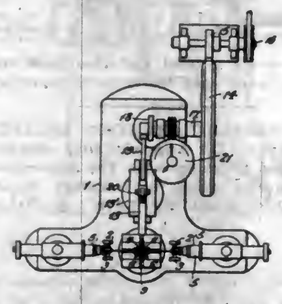
1,661,546. STEAM GENERATOR. HENRY A. NICHOLSON, Arkles Bay, Auckland, New Zealand, assignor to Ernest A. Craig, Auckland, New Zealand. Filed Aug. 13, 1919. Serial No. 317,135. 15 Claims. (Cl. 122—355.)



4. A steam-generator having an interior flame-chamber, the latter comprising front, rear and side walls, each side wall containing a coil of piping, said coils together with additional coils forming a pipe system, a pump to force fluid under high pressure only once in a single direction through said system, and a steam-drum at the delivery end of said pipe system, flame-passages being provided over the top and down alongside of said side walls, so that the latter are heated on both sides, and so that the flames and hot gases may have access to said additional coils; and provision being made at the terminal end of the piping system for converting any remaining water of the highly heated high-pressure pent-up advancing fluid into steam, the coils in said walls constituting the terminal portion of the piping system.

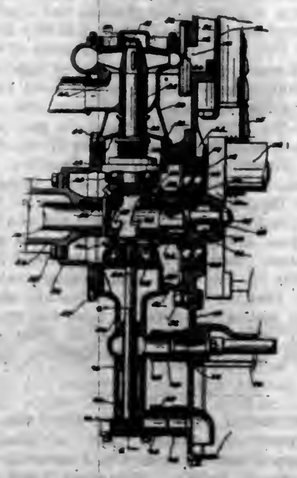
1,661,547. DEODORIZING DEVICE. EUGENE J. REEFER, Philadelphia, Pa., assignor to Reefer's No-Moth, Inc., Philadelphia, Pa., a Corporation of New York. Filed July 18, 1927. Serial No. 206,588. 2 Claims. (Cl. 299—23.)

2. A deodorizing device comprising a support, a truncated cone-shaped porous annulus the walls of which are of inverted, V-shaped cross-section carried by said support, said annulus having inner inclined walls arranged to receive the neck of a bottle, said annulus having an aperture in its bottom, an apertured strip of blotting paper fixed across said annulus bottom, an apertured felt member superimposed upon said strip of blotting paper, an inverted bottle having its neck disposed in said annulus which bottle neck is wedged within said truncated annulus for supporting purposes, and a cap closing the mouth of said neck, said blotting paper, pad, and bottle cap closure having minute apertures therethrough in vertical alignment with the annulus aperture whereby the tapering top of said annulus may quickly absorb material within said bottle.



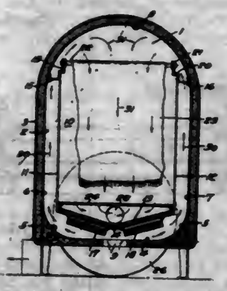
1,661,548. DOOR LATCH. THOMAS F. STUART and HENRY A. MOORE, Los Angeles, Calif. Filed Mar. 25, 1926. Serial No. 97,193. 2 Claims. (Cl. 292—127.)

1. The combination with a door in which is formed an aperture, of a tubular member passing through said aperture, a second tubular member screw-seated on the first-mentioned tubular member, a knob detachably



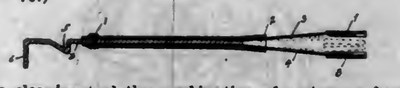
mounted on the second-mentioned tubular member, a plate carried by the first-mentioned tubular member and secured to the inner face of the door, a hook pivotally mounted on said plate and provided near its pivot point with a notch, a spring-held push rod arranged for sliding movement through the tubular members, a block adjustably mounted on the inner end of said push rod and a finger carried by said block and projecting into the notch in said hook.

1,661,549. PAPER-TESTING MACHINE. CASPER R. TAYLOR, Washington, D. C., assignor to Foreign Paper Mills, Inc., a Corporation of New York. Filed Sept. 20, 1927. Serial No. 220,708. 2 Claims. (Cl. 73—51.)



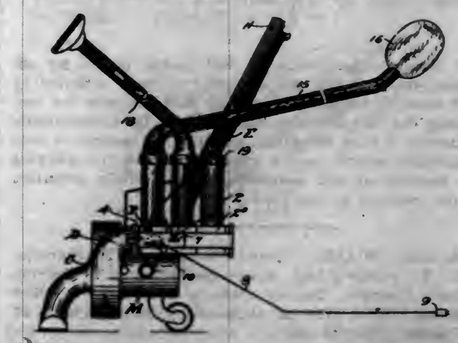
1. In a paper testing machine, means for gripping the extremities of a test strip of paper, said means being capable of movement toward and away from each other and of oscillation about a horizontal axis and having lower guiding surfaces of substantial width, resilient means for resisting movement of said gripping means toward each other, and horizontal rollers upon which the guiding surfaces of said gripping means rest during their reciprocatory movement, said rollers being of sufficient width to prevent oscillation of said gripping means.

1,661,550. INTERNAL-COMBUSTION ENGINE. JESSE G. VINCENT, Detroit, Mich., assignor to Packard Motor Car Company, Detroit, Mich., a Corporation of Michigan. Filed Feb. 2, 1924. Serial No. 690,328. 11 Claims. (Cl. 123—195.)



1. In an internal combustion engine, the combination with a crankcase having a bearing in one end, and a crankshaft mounted in said bearing and projecting therethrough beyond the crankcase, of a casing detachably secured to the crank case and surrounding the projecting end of said crankshaft, said casing having aligned openings above and below the crankshaft end, a bracket secured to the casing in each of said opening, and shafts in said brackets geared to said crankshaft.

1,661,551. APPARATUS FOR DRYING LAUNDRY. PHILIP F. APPEL, Seattle, Wash. Filed May 25, 1925. Serial No. 32,632. 4 Claims. (Cl. 34—19.)



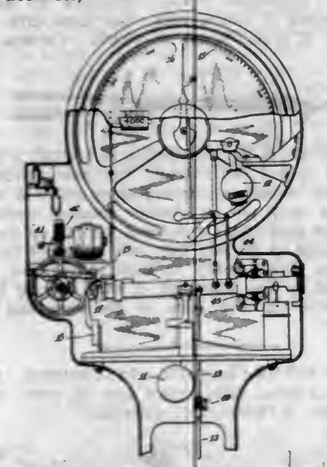
1. A laundry drying apparatus comprising a heat insulated chamber having an air inlet in the bottom thereof, a second chamber within said first chamber and in communication therewith at the upper portion thereof only, rails adjacent the upper portion of said first chamber, a carriage adapted to suspend articles to be dried mounted on said rails, and means for circulating air thru said chambers in series.

1,661,552. CLEANING TOOL. TILLMAN C. BABBITT and CLARENCE E. HOFFENBECK, Salt Lake City, Utah. Filed Mar. 6, 1926. Serial No. 92,971. 1 Claim. (Cl. 137—70.)

In a cleaning tool the combination of a stem; a handle portion bent in one end thereof; two rods attached to the other end thereof; a gripping scoop attached on the free ends of each rod; a slidable housing carried on said rods and said stem; a flatened portion on one end of said housing to fit said two rods and hold them in fixed relation diametrically to each other; and a reducer secured on the other end of said housing having the inner hole the same size as the stem and of a smooth bore.

1,661,553. VACUUM-CLEANER ATTACHMENT. LOUIS BAAR, Los Angeles, Calif. Filed Mar. 19, 1927. Serial No. 176,763. 2 Claims. (Cl. 219—42.)

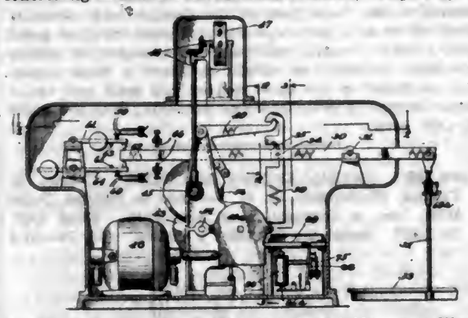
1. An attachment for vacuum cleaners whereby the output air may be regulated in volume and heated, and including a horizontal hollow body attachable to the



cleaner outlet, a series of independent, radial tubes adjustably mounted on said body to receive air therefrom and having electric heating coils, flexible discharge pipes attached to the tubes for various distribution of the heated air, and switch and rheostat means mounted on said body for control of current to said coils and to regulate speed of the cleaner motor.

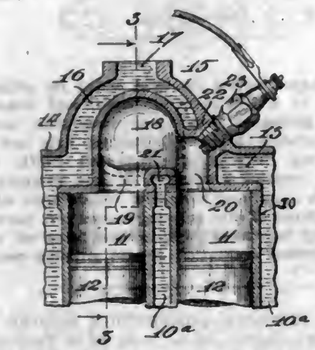
1,661,554. DOOR CLOSURE. GEORGE F. BANTA, Clearfield, Pa., assignor of one-half to Len A. Banta and one-half to Frederick B. Kerr, Clearfield, Pa. Filed May 11, 1927. Serial No. 190,621. 6 Claims. (Cl. 20—16.)

1. A closure of the character described including independent sections having the frames thereof entirely disconnected from each other, means for limiting the outward movement of each section relative to the other, and resilient means interposed between said sections normally tending to hold the sections in spaced apart relation.



1,661,555. SCALE. JAMES W. BRYCE, Binghamton, N. Y., assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed May 12, 1921. Serial No. 468,834. 26 Claims. (Cl. 265—48.)

1. In a weighing scale, a scale beam, means for offsetting the load thereon, electrical contacts actuated by said beam, a circuit governed by said contacts for controlling the load offsetting means, means for automatically initiating a load offsetting operation by means of said controlling circuit, and a retarding device for delaying the response of said controlling circuit to the actuation of the contacts by the beam.

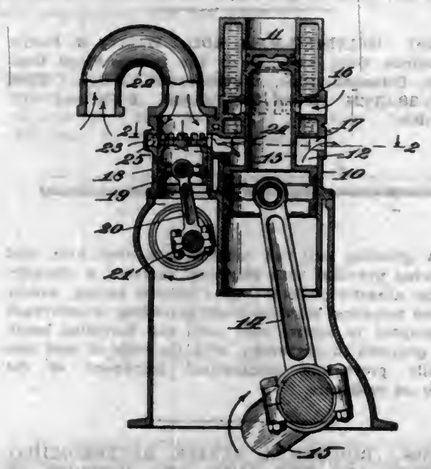


1,661,556. SCALE. JAMES W. BRYCE, Binghamton, N. Y., assignor, by mesne assignments, to Dayton Scale Company, Dayton, Ohio, a Corporation of New Jersey. Filed May 12, 1921. Serial No. 468,836. 35 Claims. (Cl. 265—48.)

1. A weighing scale comprising, in combination with a main scale beam having a connected load support, load offsetting weights, means for applying one or more of said weights to the beam to offset the applied load, and controlling means for the aforesaid means, comprising a

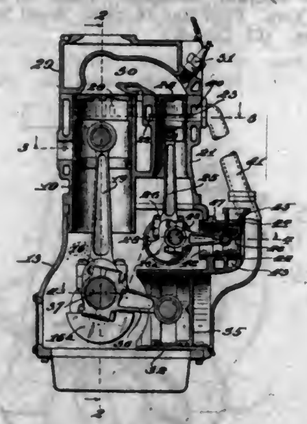
device which exerts a fixed and invariable controlling force upon the beam when the latter is overbalanced.

1,661,557. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Jan. 8, 1925. Serial No. 1,176. 2 Claims. (Cl. 123—53.)



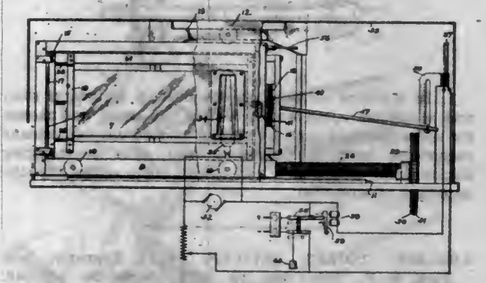
1. In an internal combustion engine, the combination with a pair of combustion cylinders, the axes of which are parallel, of a head closing the inner ends of the combustion chambers, a common compression and combustion clearance chamber formed in said head inwardly from the surface thereof that is applied to the head ends of the cylinders which common clearance chamber is spherical in form, short parallel ducts formed in said head and connecting the common clearance space with the combustion chambers, the axes of which ducts are parallel with the axes of the combustion chambers, one of which ducts communicates directly with the lower portion of the common clearance chamber, the other duct being offset with respect to the common clearance chamber so that its upper portion communicates directly with the end of said common clearance chamber the greatest width of said common clearance chamber being substantially greater than the widths of the ducts that connect said common clearance chamber with the combustion chambers and an ignition means seated in the head and projecting into the upper end of the duct that is offset relative to the common compression and combustion clearance space.

1,661,558. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Anegeles, Calif., a Voluntary Trust. Filed Apr. 2, 1925. Serial No. 20,118. 1 Claim. (Cl. 123—188.)



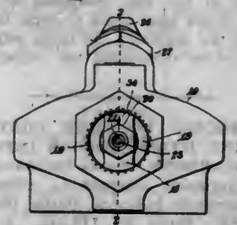
In an internal combustion engine, a piston valve cylinder, open at its upper end for the reception of gaseous

fuel, the wall of said cylinder being provided with an annular chamber having an outlet on one side, the bottom surface of which annular chamber declines toward said outlet, said annular chamber having communication



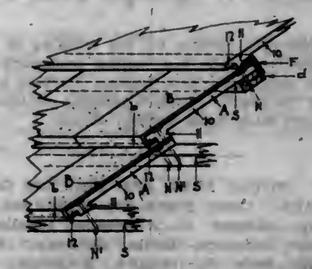
with the chamber within the piston valve cylinder by means of ports formed through the inner portion of the valve cylinder wall and a piston valve arranged for reciprocatory movement within said valve cylinder.

1,661,559. INTERNAL-COMBUSTION ENGINE. EVERETT R. BURTNETT, Los Angeles, Calif., assignor, by direct and mesne assignments, to The Automotive Valves Co., Los Angeles, Calif., a Voluntary Trust. Filed Nov. 5, 1925. Serial No. 66,964. 2 Claims. (Cl. 123—72.)



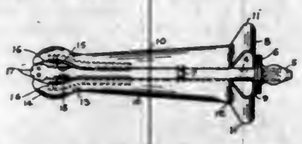
1. In a two stroke cycle internal combustion engine, a power unit comprising a combustion cylinder, a charge volume pump occupying a plane 90° from the plane occupied by the combustion cylinder, pistons arranged for operation within the combustion cylinder and the cylinder of said pump, a crank shaft to which said pistons are connected, a piston valve for controlling the admission of a fresh fuel charge to the pump, a separate piston valve for controlling the admission of a pumped charge volume to the chamber within the combustion cylinder and an auxiliary shaft adapted to operate at the same speed as said crank shaft for actuating said piston valves.

1,661,560. MACHINE FOR PHOTOGRAPHICALLY PRINTING ON CYLINDERS. FRED M. CARROLL, Endicott, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed Dec. 12, 1924. Serial No. 755,372. 14 Claims. (Cl. 95—73.)



1. In a photographic transfer device, a film carriage, means for supporting a light-sensitive member adjacent to said carriage, means for actuating said carriage and said supporting means in synchronism, and means for adjusting a film carried by said carriage relatively to the carriage while the latter is being actuated.

1,661,561. OILING MECHANISM FOR AIR-ACTUATED DEVICES. CHARLES A. CLAFLIN, Medford, Mass. Filed May 5, 1926. Serial No. 106,836. 19 Claims. (Cl. 184—55.)

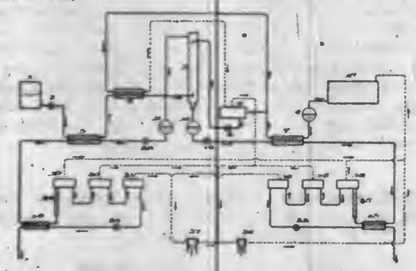


1. The combination of a casing open at opposite ends and provided with an air tube extending lengthwise thereof from a point near its inlet end to its delivery end and surrounded by an oil chamber; a short nozzle centrally disposed in the inlet end of said tube having a relatively small bore extending from end to end thereof through which air may be discharged into said tube; and radial passages in said nozzle for admitting oil from said chamber into the bore of said nozzle.

1,661,562. SHINGLE CONSTRUCTION. GEORGE E. CONWAY, Cresskill, N. J. Filed Nov. 30, 1925. Serial No. 72,124. 9 Claims. (Cl. 108—9.)

1. A strip or inner shingle comprising a body portion and means upstanding from one side of said portion inwardly from a butt edge thereof for spacing the portion adjacent said edge from a supporting structure to form an anchorage for outer superimposed shingles.

1,661,563. DOUCHE AND SYRINGE. FRANK DROSSELMEYER, Jersey City, N. J. Filed Mar. 1, 1926. Serial No. 91,338. 2 Claims. (Cl. 128—244.)



1. In a device of the class described, a segmental shell and a slidable spray nozzle within the same, and means for spreading said shell by sliding said nozzle, said means comprising radially projecting and slidably engaging fingers from said nozzle adapted to force outwardly the segments of said shell.

1,661,564. TOILET ARTICLE. AINA EBBESEN, New York, N. Y. Filed Apr. 19, 1927. Serial No. 185,043. 4 Claims. (Cl. 206—56.)

1. An improved toilet article consisting of a receptacle for cold cream or the like, composed of a continuous piece of paper folded upon itself to form two side walls, a depression in the center of the inner side of each side wall, and means for dispensing the contents of the receptacle.

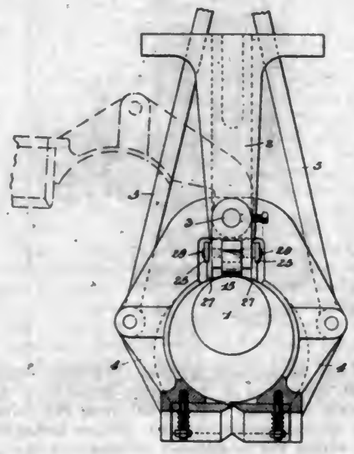
1,661,565. PROCESS FOR THE CONVERSION OF HIGH-BOILING HYDROCARBONS INTO LOW-BOILING HYDROCARBONS. LAZAR EDELEANU, Berlin-Charlottenburg, Germany, assignor to Allgemeine Gesellschaft fur Chemische Industrie, Berlin, Germany. Filed June 28, 1926. Serial No. 119,242. 3 Claims. (Cl. 196—50.)

1. An improved process for the cracking of high boiling hydrocarbons into low boiling hydrocarbons which consists in submitting to a pressure cracking process the portion of the distillates which remains undissolved after being treated with liquid sulphur dioxide.

1,661,566. MOTOR FUEL AND PROCESS OF REFINING OILS. LAZAR EDELEANU, Berlin-Charlottenburg, Germany, assignor to Allgemeine Gesellschaft für Chemische Industrie, Berlin, Germany. Filed Mar. 24, 1927. Serial No. 178,151. 5 Claims. (Cl. 44—9.)

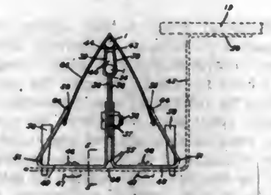
1. The process of producing motor fuel from hydrocarbon stock containing ingredients boiling between 130° C. and 220° C. by collecting the distillate from fractional distillation below 170° C. treating the residue with liquefied sulphur dioxide to dissolve unsaturated and aromatic hydrocarbon constituents, freeing the extract thus obtained from sulphur dioxide, and adding the freed extract to the distillate.

1,661,567. GRINDING-MILL ROD. WALTER B. FLOYD, Columbus, Ohio, assignor to The Bonney-Floyd Company, Columbus, Ohio, a Corporation of Ohio. Filed Dec. 18, 1924. Serial No. 756,855. 2 Claims. (Cl. 83—9.)



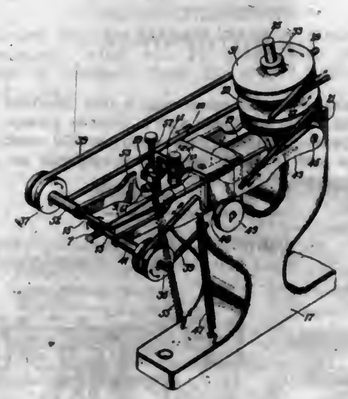
1. A grinding mill rod comprising a steel core, said core being provided with polygonal surfaces, a plurality of high abrasive resistant steel sleeves having axially disposed polygonal sided openings extending therethrough and adapted to receive said core, and fastening appliances provided in connection with the ends of said core normally preventing longitudinal movement of the sleeves on said core.

1,661,568. BIOLOGICAL STAINS, BACTERIOCIDAL AGENTS AND THE LIKE, AND METHODS OF PREPARING THE SAME. RALPH W. FRENCH and WALTER C. HOLMES, Washington, D. C., assignors to William F. Keohan, trustee, Washington, D. C. Filed Feb. 9, 1926. Serial No. 87,166. 16 Claims. (Cl. 260—67.)



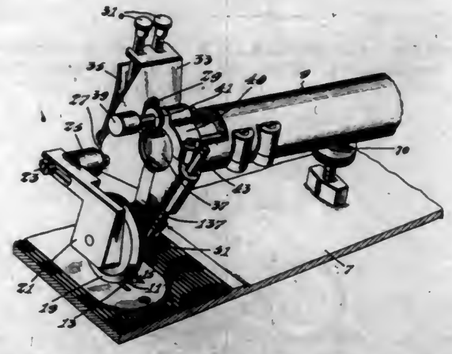
1. A product of the character described comprising the combination of a water-soluble reactive form of a basic dye and a cyclic compound containing acid groups.

1,661,569. BODY-FORMING MACHINE. PAUL H. LANGE, Bridgeport, Conn., assignor to The Max Ams Machine Company, Bridgeport, Conn., a Corporation of New York. Filed May 14, 1926. Serial No. 109,009. 3 Claims. (Cl. 113—8.)



1. Body-forming mechanism including a horn, body-forming members to fold a blank around the horn, a clamping member above the horn and intermediate the body-forming members to engage the blank on the horn before it is acted upon by said body-forming members, gages above the horn and slidingly mounted on the clamp, intermediate the body-forming members to receive the front edge of a blank fed substantially parallel to the axis of the horn, and timed actuating means to move the gages in a direction opposite to that of the feeding movement of the blank and to bring the clamp into engagement with the blank.

1,661,570. TICKET CARRIER. FRANKLIN P. LAWRENCE, Topeka, Kans., and SIDNEY M. HARDAWAY, Kansas City, Mo. Filed July 19, 1923. Serial No. 652,606. 14 Claims. (Cl. 198—129.)



1. In conveying apparatus of the character described, a plurality of sheaves, an endless conveying cable trained thereabout, a supporting member arranged intermediate said sheaves and engaging the under side of one run of said cable in such wise as to permit of placement thereon and movement therewith of a folded ticket with the parts of the latter on opposite sides of the crease depending on each side of said cable, means supported for engagement with the upper side of said ticket to urge the latter toward said cable into frictional tractive engagement therewith, while permitting of free movement of said ticket with said cable, and means for imparting operative movement to said cable.

1,661,571. ART OF FOLDING LEATHER. CLIFFORD K. MACDONALD, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Dec. 31, 1923. Serial No. 683,682. 28 Claims. (Cl. 12—55.)

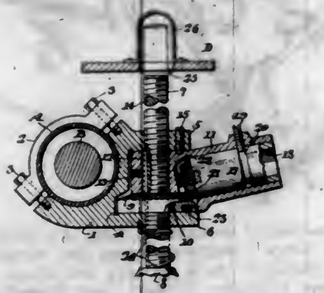
1. The method of folding a piece of sheet material which comprises skiving the margin, coating the margin with an adhesive substance which contracts upon application to it of heat, applying heat to the margin whereby the margin is caused to curl toward the coated side, and pressing the curled margin upon the material.

1,661,572. ART OF FOLDING. CLIFFORD K. MACDONALD, Brockton, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 27, 1924. Serial No. 716,170. Renewed Apr. 27, 1927. 13 Claims. (Cl. 12—55.)

1. A method of finishing the edge of a piece of sheet material which comprises coating the margin thereof with a cement which is normally not sticky, softening the cement to render it sticky, and thereafter folding the margin and pressing the fold.

1,661,573. METHOD OF DECORATION, ORNAMENTATION, OR PAINTING. HARRY CECIL MITCHELL, London, England. Filed Mar. 9, 1926, Serial No. 93,498, and in Great Britain Mar. 9, 1925. 4 Claims. (Cl. 41—26.)

1. A method of decoration, ornamentation or painting by impression, consisting in the application upon a surface on which colour is distributed of a printing stamp having an elastic printing surface formed with shallow cavities extending across parts of the said elastic printing surface, and with pockets, between the parts of the said elastic printing surface across which the shallow cavities extend and thereby applying colour on the said elastic printing surface and within the said shallow cavities and within the said pockets, applying the said printing stamp in impression upon the surface to be decorated, ornamented or painted without wiping the face of the said printing stamp before impression, and expelling the colour from the said shallow cavities and distributing the said colour in greater amount at those positions on the impressed surface that correspond with the said pockets, substantially as hereinbefore described.



4. A printing stamp for use in decoration, ornamentation or painting having an elastic printing surface, the said elastic printing surface having shallow cavities extending completely across parts of the printing surface and pockets in positions between the said parts, whereby the normal impression surface is not flat, substantially as hereinbefore described.

1,661,574. PROCESS FOR TREATING CELLULOSIC MATERIAL. FREDERICK CARL NIEDERHAUSER and HAYDEN BENJAMIN KLINE, Cleveland, Ohio, assignors to The Industrial Rayon Corporation, Cleveland, Ohio. Filed Sept. 20, 1927. Serial No. 220,834. 5 Claims. (Cl. 18—54.)

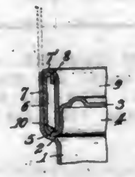
1. A process for increasing the leveliness and evenness in dyeing of cellulosic material obtained by the precipitation of viscose in an aqueous bath consisting of an in-

organic polybasic acid, an alkali metal salt of the same, and containing zinc dissolved therein, the amount of said zinc not exceeding 0.9% of the weight of the precipitating bath, said viscose after precipitation being treated in a known manner of washing, desulfurizing, bleaching and dyeing, as set forth herein.

1,661,575. AUTOMOBILE JACK. STEPHEN W. PHILLIPS, Prompton, Pa. Filed Sept. 20, 1926. Serial No. 136,530. 3 Claims. (Cl. 254—86.)

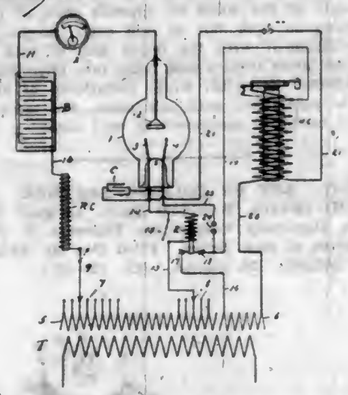
1. An automobile jack comprising a body portion adapted to be secured to the axle of the automobile, a cut out in said body portion forming upper and lower arms, a bevel gear located in said cut out, an operating member having one end positioned in said cut out overlying the bevel gear, a screw threaded rod passing through said arms, the bevel gear and the operating member, and a screw passing through said upper jaw and adapted to engage the operating member at various points to hold it in different angular relations to the body portion.

1,661,576. CLAMP. SAMUEL F. PURLLANT, Winchester, Ky. Filed Aug. 25, 1927. Serial No. 215,390. 4 Claims. (Cl. 24—85.)



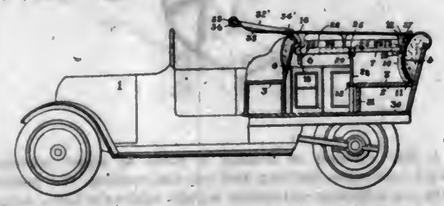
1. A clamp of the class described comprising an elongated flat strip of metal bent intermediate its ends to provide a pair of spaced arms, one arm being of greater length than the other arm, said clamp adapted to snugly fit over the upper edge of the flower pot, the longer arm being disposed on the outside of the flower pot, and a spur struck out from the intermediate portion of the longer arm of the clamp for securing a decorative covering in position on the outside of the flower pot.

1,661,577. COMPOSITION FOR TREE TREATMENT. HERBERT RENNER and JOHANNES RENNER, Chicago, Ill. Filed Mar. 18, 1927, Serial No. 176,586, and in Germany Apr. 22, 1925. 2 Claims. (Cl. 167—6.)



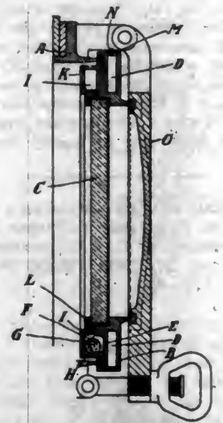
1. A composition for tree treatment consisting of a mixture of saw-dust and one or more non-hygroscopic chemicals soluble in water or natural sap of a tree and useful for preserving, dyeing and/or fireproofing wood.

1,661,578. SHEET-METAL DRUM. CHARLES H. ROLLASON, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Sept. 17, 1926. Serial No. 136,062. 5 Claims. (Cl. 220—67.)



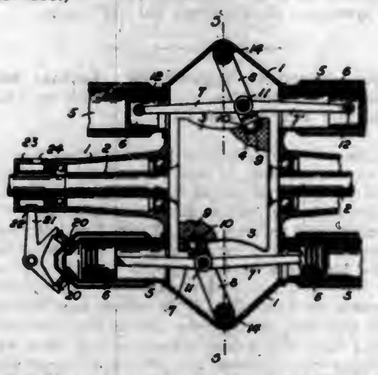
1. In a sheet metal drum, a body having an end portion thereof shaped to form an outwardly offset vertical chime and an intermediate upwardly facing internal shoulder, and a head having an integral rim provided with a seating portion for resting upon said shoulder, said seating portion being offset with respect to the plane of said head, said rim comprising a pair of separated resiliently related parallel members of which one is closely embraced by said chime, the terminal edge portion of said chime being turned inward into overlying securing relation to said rim.

1,661,579. BULB RECTIFIER. EARL H. ROLLINSON, Lyons Farms, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed July 28, 1922. Serial No. 578,131. 1 Claim. (Cl. 250—27.5.)



A thermionic rectifier comprising a tube provided with a re-entrant stem, an anode and a cathode element, the latter comprising spaced, substantially parallel conductors mounted on said stem and designed to establish an exciting arc from one to the other.

1,661,580. AUTOMOBILE BED. LOUIS A. SCHOLL, Crafton, Pa. Filed Mar. 25, 1926. Serial No. 97,217. 6 Claims. (Cl. 5—118.)

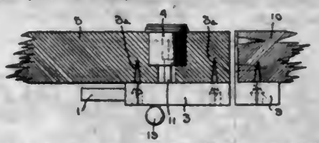


2. In a bed frame for an automobile, a side rail composed of telescopic members, an upright post supporting the rear end of the side rail, adapted to be supported at its lower end and curved to approximately the contour of the front surface of the rear seat, a support for the front end of the side rail comprising a horizontal member adapted to rest on the top of the front seat and a pendent member, means for attaching the front end of the side rail selectively at different points on the said pendent member, and means for attaching the rear end of the side rail selectively at different points on the said post.

1,661,581. SHIP'S SIDE SCUTTLE. LÜDER SCHRIEVER, Danzig-Langfuhr, Free State of Danzig, and ALFRED MICHAEL, Bremen, Germany. Filed Jan. 27, 1927, Serial No. 164,063, and in Germany May 19, 1926. 5 Claims. (Cl. 114—178.)

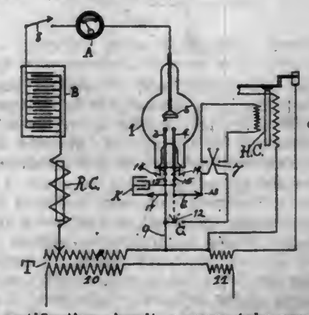
1. A ship's side scuttle, consisting in combination of a frame connected with the ship's hull, a pane of glass, metal members surrounding said pane of glass between said pane of glass and the frame on the ship's hull, said metal members being formed with air ducts therein, and with apertures on the inner side of the scuttle and in the upper part of the metallic members, and with apertures on the outside thereof, said outside apertures being connected by said air ducts with the apertures first mentioned, and closure elements in these metal members for closing the apertures under the influence of the pressure of the water outside the side scuttle.

1,661,582. PISTON ENGINE. JOSEF SZYDLOWSKI, Baden, Germany. Filed Apr. 24, 1926, Serial No. 104,395, and in Germany June 23, 1925. 5 Claims. (Cl. 121—119.)



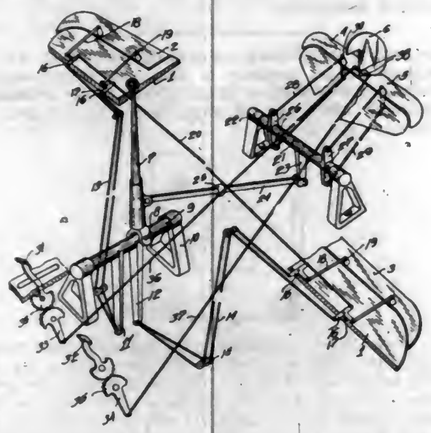
2. In a piston engine, an engine frame, cylinders arranged adjacent to said engine frame, pistons operating in said cylinders, a driven shaft, said cylinders arranged in any position relative to said driven shaft, a rocking lever, means for pivotally connecting said rocking lever to said engine frame, means for connecting said pistons to said rocking lever, a drum operatively connected to said driven shaft, a cam on said drum and means on said rocking lever cooperating with said cam for imparting motion to said shaft.

1,661,583. PIN TICKET. FRANK H. THOMPSON, Framingham, Mass., assignor to Dennison Manufacturing Company, Framingham, Mass., a Corporation of Massachusetts. Filed Apr. 12, 1927. Serial No. 183,203. 3 Claims. (Cl. 40—25.)



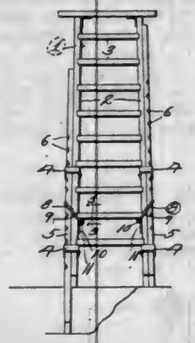
1. A pin ticket comprising a tag having a cloth recess in its under side intermediate its edges, and a pin inserted at one edge of the tag, extending through the cloth recess and lying within the thickness of the tag, the tag having a recess in its said under side at one edge for the head of the pin, the upper side of the tag overlapping said notch so that the head of the pin is concealed therebeneath.

1,661,584. BOLT FOR USE IN CONJUNCTION WITH EXISTING DOOR LOCKS. ALFRED JAMES TOZER, Wellington, New Zealand. Filed June 18, 1925, Serial No. 38,076, and in New Zealand June 18, 1924. 5 Claims. (Cl. 70—74.)



1. Means for the purpose specified, comprising, a casing to be secured to the inside of a door, a toothed bolt slidable in the casing, a toothed wheel in mesh with the toothed bolt, a bar to operate the wheel and a lock barrel in the outer side of the door connected to the bar for turning the bar and thereby operating the bolt, a seat in the toothed wheel to receive one end of the bar and upper and lower housings in the casing for the toothed wheel.

1,661,585. SYSTEM OF RECTIFICATION. FREDERICK TRANSOM, Washington, D. C., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Apr. 2, 1925. Serial No. 20,180. 3 Claims. (Cl. 175—363.)

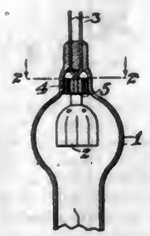


1. In a rectification circuit, a space tube provided with a load anode, a cathode, an exciting anode, and means for converting the exciting anode to a load cathode.

1,661,586. CONTROL MECHANISM. EBER HARLEY VAN VALKENBERG, McKeesport, Pa., assignor of one-half to Oscar Silverstein, Spokane, Wash. Filed Oct. 23, 1926. Serial No. 143,623. 3 Claims. (Cl. 244—29.)

1. In an aeroplane the combination with hinged ailerons and horizontal rudders, of a pair of angularly disposed rock shafts having crank arms thereon, a pivoted control stick for operating one shaft, and an operative connection between the said stick and the other rock shaft, of cables connecting the crank arms of the second shaft to the rudders, a pair of bell crank levers for each aileron, pivoted links connecting said levers and ailerons, and dual cables connecting said levers and crank arms to the first shaft.

1,661,587. STEPLADDER. NEWTON VARKER, JOHN T. KEMPS, and CHARLES H. BARTLETT, Cuba City, Wis. Filed July 9, 1924, Serial No. 725,047. Renewed Jan. 17, 1928. 1 Claim. (Cl. 228—63.)



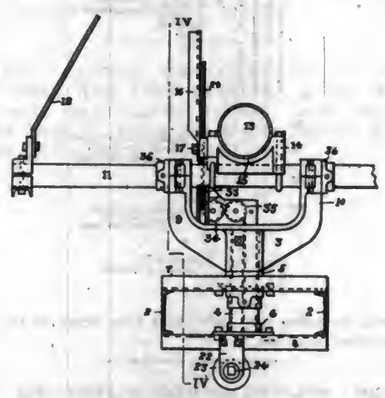
A ladder attachment, said attachment comprising a bracket, said bracket being adapted to be secured to the inner side of a rail of a ladder, an extension leg engaging the outer side of the rail and provided with a plurality of transverse grooves, a bolt extending through the bracket and extending beyond the edges of the rail of the ladder, a U-shaped bail, said U-shaped bail having its arms pivotally connected to the outer ends of the bolt, said bail having its transverse portion disposed in one of the grooves of the extension rail, coiled springs surrounding the bolt between opposite sides of the bracket and the arms of the bail, one of the ends of said coiled springs being connected to the arms of the bail, the other ends of said coiled springs being anchored to the inner side of the rail of the ladder.

1,661,588. THERAPEUTIC BOUGIE. KARL VON NEERGAARD, Basel, Switzerland, assignor to Chemical Works formerly Sandoz, Basel, Switzerland. Filed June 21, 1924, Serial No. 721,589, and in Switzerland June 30, 1923. 3 Claims. (Cl. 167—9.)

1. A process for the manufacture of bougies for the treatment of mucous membrane canals and fistulæ consisting in mixing tragacanth, kieselguhr and urea thoroughly together to form a plastic mass, constituting a mixture of a water soluble silver salt, water and glycerine, kneading said plastic mass with said mixture into a homogenous mass capable of swelling up until liquefaction within the organ to be treated, and finally forming bougies from this mass.

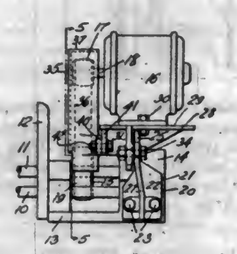
3. As a new product of manufacture the hereinbefore described bougies for the treatment of mucous membrane canals and fistulæ, composed on the one hand of tragacanth, kieselguhr, urea and on the other hand of a water soluble silver salt, water and glycerine, all mixed together in convenient relative proportions, so as to constitute a silver compound in highly dispersed state and in such a condition as to first swell up when coming in contact with the tissue fluids and to liquefy thereafter.

1,661,589. ANODE SPACER. WILFORD J. WINNINGHOFF, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Aug. 27, 1924. Serial No. 734,435. 4 Claims. (Cl. 176—50.)



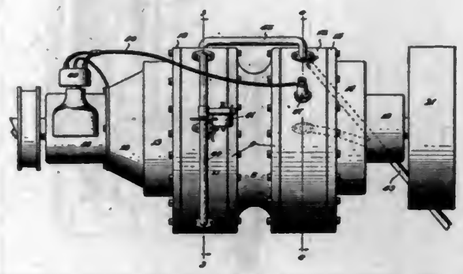
1. In combination in an electric device having an envelope and a conductor lead sealed into and extending in said envelope, means for supporting said lead against excessive bending within the envelope comprising a sleeve of refractory insulating material positioned about said lead and extending laterally into close proximity with the wall of said envelope, said electrode and the wall of said envelope serving to prevent any substantial longitudinal movement of said sleeve on said lead-in.

1,661,590. GARMENT SUPPORTER. LEONARD WOODS, St. Louis, Mo. Filed Jan. 11, 1927. Serial No. 160,492. 5 Claims. (Cl. 24—264.)



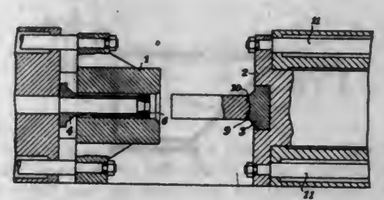
1. A garment supporter consisting of a stiff flat plate piece having a central aperture provided with multiple oppositely disposed parallel gripping slots, substantially as described..

1,661,591. MAST-ELEVATING MECHANISM FOR PORTABLE PULLING MACHINES. CLYDE S. WRIGHT, Toledo, Ohio, assignor to The National Supply Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1927. Serial No. 185,984. 5 Claims. (Cl. 189—11.)



1. In a portable hoisting mechanism, a stationary frame, a hollow vertical rotary swivel post, a mast and a gin pole supported by the same, and a hoist line for the mast and gin pole, means for directing the hoist line down through the hollow of the post, and a reel carried by the frame for operating the hoist line and connected to the line to draw it down through the said hollow.

1,661,592. MOTOR SUPPORT FOR BOTTLE-WASHING MACHINES. KIRK K. WRIGHT, Buffalo, N. Y. Filed Jan. 5, 1926. Serial No. 79,487. 2 Claims. (Cl. 308—11.)



1. In a bottle washing machine, the combination with a frame, a spindle rotatable in said frame and having a pulley thereon, a motor having a pulley on its shaft, a belt connecting said motor pulley to said spindle pulley for rotating said spindle, of a pair of fixed spaced arms on said frame, a motor platform extending between said arms and aadpted to support said motor, an adjustable connection between said platform and said arms adapted to permit said motor to be positioned at different distances from said frame, whereby the belt may be maintained under proper tension, and a belt hood adapted to extend about said belt and substantially encircle said motor pulley, said hood being rigidly connected to said motor platform, whereby said hood is movable with said platform in the adjustments thereof and is maintained in correct relation to said motor pulley and belt.

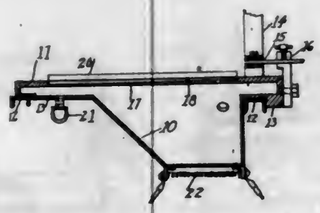
1,661,593. ROTARY INTERNAL-COMBUSTION ENGINE. ALBERT J. BODKER, Ponchatoula, La. Filed May 19, 1926. Serial No. 110,229. 2 Claims. (Cl. 123—16.)

1. In a rotary internal combustion engine, a casing, including eccentrically located end caps and a center plate dividing the casing into compression and firing chambers, fuel charge conducting means connecting said chambers, a power shaft journaled in said end caps eccentrically of said chambers, the center plate being formed with grooves, rotors fitting in said end caps and fixed to said shaft to extend across said chambers and rotatably fitting in said grooves, spring pressed packing members carried by the rotor to coact with the casing and provided with lugs engaging in said end caps and in said grooves for limiting the packing members against displacement from the rotors, and pistons carried by the rotors to coact with the casing.

1,661,594. EXTRUSION PRESS. ALFRED BORN, Magdeburg, Germany, assignor to the Firm Fried. Krupp Grusonwerk Aktiengesellschaft, Magdeburg-Buckau, Germany. Filed June 24, 1926, Serial No. 118,382, and in Germany July 17, 1925. 2 Claims. (Cl. 207—3.)

1. In an extrusion press of the type described, a die and a supporting member, recesses with undercut lateral faces being provided at the pressing face of said supporting member, whereby upon an ingot being forced through said die by means of said supporting member the end of the ingot will be pressed into said recesses, thereby clamping the ingot to the supporting member.

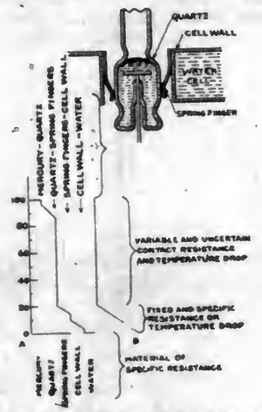
1,661,595. MEAT-SEASONING FORK. HOWARD E. BOWEN, Baltimore, Md. Filed Mar. 17, 1927. Serial No. 176,029. 1 Claim. (Cl. 99—2.)



In a meat seasoning fork of the class described, a shank, a handle on one end of the shank constructed to provide a seasoning material cylinder open at its outer end, a cap removably disposed over the open end of the cylinder, a pair of tines formed on the other end

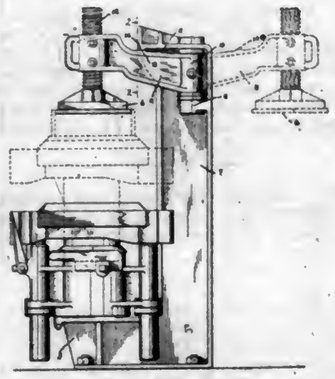
of the shank, each tine being provided with a longitudinal bore, the outer ends of the bores terminating inwardly of the pointed ends of the tines, the outer end of the bore of one tine being disposed for communication with the rear side of said tine, the outer end of the bore of the

other tine communicating with the opposite side, said shank being formed with a bore for affording communication between the cylinder and the inner ends of the bore in the tines, and a manually operable material ejecting piston arranged within the cylinder.



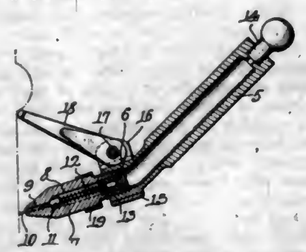
1,661,596. BOOK-CASING-IN MACHINE. JOHN J. BURKE, Cincinnati, Ohio. Filed Jan. 12, 1926. Serial No. 80,809. 6 Claims. (Cl. 219—19.)

6. An attachment for the purpose described comprising a hollow element having a casing supporting member, and adapted to be filled with water, means for applying heat exteriorly of the hollow element, and an exhaust pipe for steam extending from said hollow element, said means for applying heat comprising electrical heating elements, and separate circuits arranged for the heating elements to maintain the desired heat as applied to the water in the tank.



1,661,597. WATER-COOLED LAMP. LEROY J. BUTTOLPH, East Orange, N. J., assignor to Cooper Hewitt Electric Company, Hoboken, N. J., a Corporation of New Jersey. Filed Jan. 1, 1924. Serial No. 683,844. 5 Claims. (Cl. 174—177.)

1. In a water cooled lamp, in combination, a lamp holding tube, a water cell in thermal contact therewith, means for circulating water through said cell, said tube and cell having registering light conducting passageways, and a casing extending between the sides of said water



cell and enclosing said tube, said tube being in the form of a conical frustum.

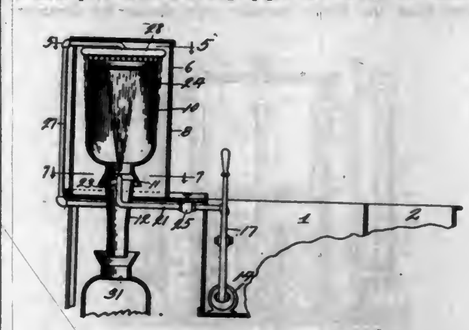
1,661,598. MOLDING-MACHINE PLATEN ARM. ERLE J. BYERLEIN, Wauwatosa, Wis. Filed Aug. 20, 1926. Serial No. 130,436. 4 Claims. (Cl. 22—43.)

1. In a molding machine, the combination with the frame, of a platen arm hingedly connected to the upper portion of the frame and movable from an inoperative position to an operative posision in bracing contact with the frame, the bracing contact being medially of the ends of the platen arm.

1,661,599. MECHANICAL STRIPER. ANDREW CYNOVA, Loup City, Nebr. Filed Dec. 18, 1926. Serial No. 155,700. 1 Claim. (Cl. 15—140.)

In a device of the character described, a hollow handle portion, a head removably supported at one end of the hollow handle portion, means within the head for controlling the passage of fluid therethrough, a brush including a curved body portion adapted to grip the head to removably secure the body portion to the head, the body portion of the brush having a reduced extremity extended laterally and arranged in spaced relation with the discharge end of the head, and bristles secured to the reduced extremity of the body portion of the brush, to spread material discharged by the head.

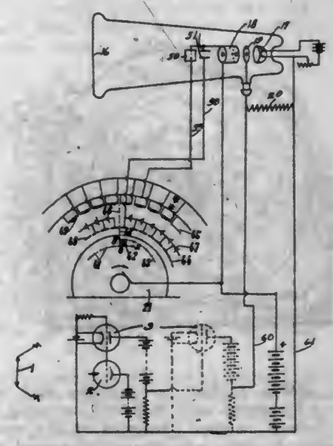
1,661,600. DRIVING MECHANISM OF THE FANS OF FORD AND LIKE ENGINES. ROBERT MILLER CRIBBES, Cockburnspath, Scotland. Filed Sept. 17, 1925, Serial No. 56,912, and in Great Britain Mar. 19, 1925. 2 Claims. (Cl. 64—17.)



2. A fan drive pulley comprising an annulus having a V-shaped groove in its periphery near its outer end, a hollow boss at the inner side thereof, an integral hollow hub, an end web connecting said boss and hub, aligned apertures in said boss and hub, a shaft on which said hub is mounted, and a pin adapted to be passed through said apertures and shaft in the rear of the grooved portion, said pin having bearing in the boss and hub on each side of the shaft, and said pin thus providing a pair of cross members between the boss and hub adapted to be engaged to rotate the pulley.

1,661,601. PROCESS FOR THE MANUFACTURE OF SOFT CHEESE. ARTHUR C. DAHLBERG, Geneva, N. Y., assignor, by mesne assignments, to The People of the United States of America. Filed Aug. 3, 1927. Serial No. 210,448. 1 Claim. (Cl. 99—11.) (Granted under the provisions of the act of Mar. 3, 1883, 22 Stat. L., 625.)

A process for the manufacture of soft cream cheese comprising the mixing of sweet cream, approximately 5 per cent soluble dry skim milk, and approximately one-half of one per cent of powdered agar, Pasteurizing the cream mixture, cooling, adding salt and a commercial starter, straining, homogenizing, and finally reducing the temperature of the cheese to approximately 70° F. and keeping the cheese at this temperature until it has developed a mild acid flavor.

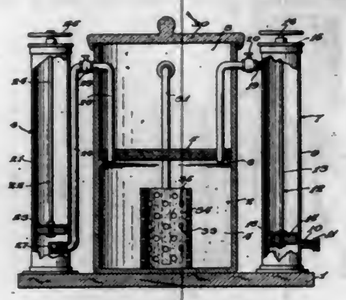


1,661,602. MILK-CAN-WASHING MACHINE. SAMUEL DARY, Guthrie, Okla. Filed Mar. 5, 1926. Serial No. 92,505. 1 Claim. (Cl. 141—7.)

The combination with means for supporting a can in inverted position, of a horizontally disposed annular spraying device above said can, said annular spraying device having its under side provided with apertures positioned whereby liquid will be discharged downwardly and inwardly towards the outer side of the can and crossed perforated discharge pipes carried by the annular

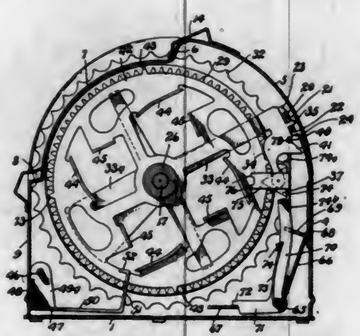
spraying device and positioned whereby liquid will be discharged onto the adjacent end of the can.

1,661,603. TELEVISION PROCESS AND MEANS OF REALIZATION. ALEXANDRE DAUVILLIER, Paris, France. Filed Aug. 22, 1924, Serial No. 733,651, and in France Nov. 29, 1923. 5 Claims. (Cl. 178—6.)



1. In a television system, a disc rotating in front of the real image to be transmitted, holes distributed both on a spiral and on concentric and equidistant circumferences drawn on the rotary disc so as to select, at every instant, a beam, of invariable size, completely exploring the plane of the image for a single revolution of the disc, and means allowing the rotary disc to simultaneously produce currents the intensities of which are proportional to the variations of coordinates of the beam relatively to the image to be transmitted.

1,661,604. APPARATUS FOR GENERATING RADIUM WATER. ADOLPH DE CLAIRMONT, Los Angeles, Calif. Filed Nov. 17, 1925. Serial No. 69,719. 3 Claims. (Cl. 167—7.)

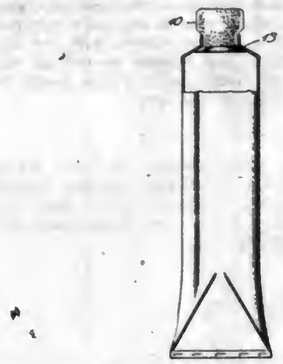


1. In apparatus for generating radium water, a generator comprising a hollow body, a filtering medium dividing the body interiorly into upper and lower chambers, the upper chamber constituting a reservoir for water to be impregnated with radium emanations, a radium emanation-bearing medium in the lower chamber, means for creating a partial vacuum in the lower chamber whereby to effect rapid filtering of the water from the

upper to the lower chamber for intimate contact with the said radium emanation-bearing medium, a valved outlet from the lower chamber, and means for destroy-

ing said partial vacuum within the lower chamber whereby to provide for discharge of the impregnated water from the said chamber.

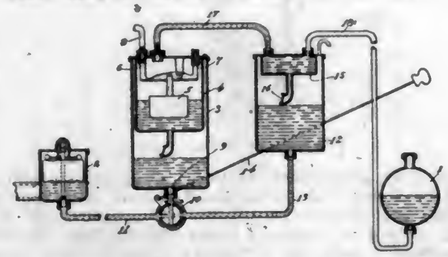
1,661,605. ADDING MACHINE. ANDREW EKMAN, Grand Rapids, Mich. Filed Mar. 18, 1926. Serial No. 95,668. 11 Claims. (Cl. 235—80.)



1. In an adding machine, a computing unit mounted to turn on a horizontal axis, said unit including a gear, a member loosely mounted alongside of the computing unit, a combined pinion and triangular shaped member mounted on said first member, the pinion meshing with the gear, a bar pivotally mounted at one end, a plate attached to the free end of the bar against which the triangular shaped member bears, and spring means acting on the bar to move the plate connected with it into spring pressed engagement with said triangular shaped member.

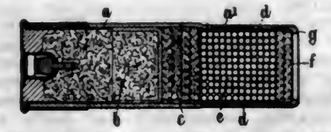
1,661,606. DYEING PROCESS. AUGUSTE ESCAICH and JEAN PAUL WORMS, Paris, France. Filed Nov. 20, 1923, Serial No. 675,956, and in Germany Nov. 25, 1922. 2 Claims. (Cl. 8—5.)

1. Method of dyeing any fibres with the aid of a double cyanide of iron and of an alkali metal, consisting in causing to act on the fibres a slightly acid bath containing a double cyanide of iron and of an alkali metal, an organic reducing agent and traces of a mercury compound.



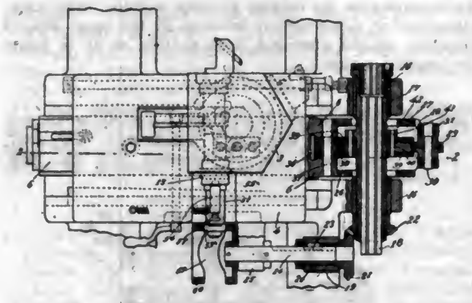
1,661,607. COLLAPSIBLE-TUBE BRUSH. RUSSELL GEO. EVANS, Detroit, Mich. Filed Feb. 9, 1925. Serial No. 8,067. 3 Claims. (Cl. 15—135.)

1. A collapsible tube having an opening in one end, a rubber base closing the open end of said tube, there being a perforation through said base, an elastic nipple integral with said base and surrounding the perforation therein,



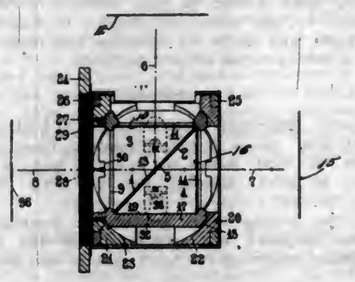
and a sponge rubber distributor surrounding said nipple and secured to the nipple and to the base.

1,661,608. FUEL-RESERVE DEVICE. EDWIN L. GRAUEL, Cincinnati, Ohio, assignor to The Graulock Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Apr. 23, 1925. Serial No. 25,441. 1 Claim. (Cl. 158—46.5.)



In combination with a vacuum supply tank having a fuel line to a supply, a suction air line, and an air inlet, a float element to close the suction line and open the air inlet when the vacuum tank is full, a reserve trap in the fuel line, a reserve tank open to the atmosphere and communicating through a valved connection to the reserve trap, and a valve for directing fuel from the vacuum tank and the reserve tank, selectively to an engine using such fuel.

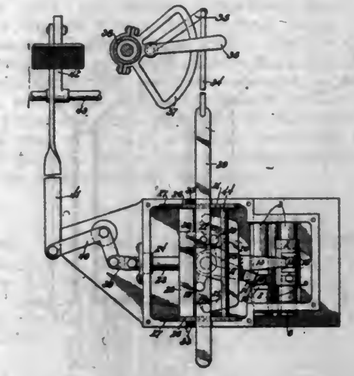
1,661,609. SHOT CARTRIDGE. HARRY GREENER, Birmingham, England. Filed Apr. 11, 1927, Serial No. 182,848, and in Great Britain Apr. 1, 1926. 1 Claim. (Cl. 102—15.)



A shot gun cartridge comprising a shell having a cylindrical body portion of a diameter corresponding to that of a gun chamber, said shell also having a diametrically reduced neck provided with longitudinal crimpings and a shoulder connecting said neck and said body, a powder charge in said body, a shot charge in said neck and wads between said charges, the foremost of which bears against said shoulder, the said cartridge when loaded in a gun chamber by reason of said reduced neck providing an annular space surrounding said neck and between the neck and the said chamber, the said longitudinally extending crimps enabling the said neck to diametrically expand when the cartridge is fired.

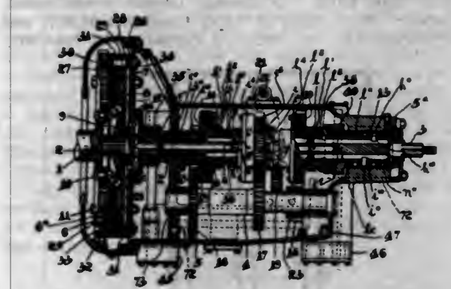
1,661,610. MACHINE TOOL. WILLIAM F. GROENE and ROSS M. BACON, Cincinnati, Ohio, assignors to The R. K Le Blond Machine Tool Company, Cincinnati, Ohio, a Corporation of Delaware. Filed Jan. 15, 1925. Serial No. 2,660. 5 Claims. (Cl. 29—44.)

1. In a machine tool, means for imparting automatic motion from a master to a moving part comprising a member coupled to the part to be moved, a master cam device formed of a smaller inner cam and two larger outer cams held together in fixed relation, a wide roller to engage the outer cams, a narrow roller to engage the inner cam between the outer cams, said rollers being mounted on the said member and spaced substantially 180 degrees apart, and a hanger pivotally secured to the member for mounting one of the rollers, and means for adjusting the relation of the hanger to the member, to control the spacing of the rollers whereby the thrust on the moving part applies in both directions and always in the same line.



1,661,611. CAMERA FOR COLOR PHOTOGRAPHY. ARON HAMBURGER and HERBERT ERNEST COSTON, London, England. Filed Jan. 13, 1925, Serial No. 2,180, and in Great Britain Mar. 22, 1924. 7 Claims. (Cl. 88—1.)

1. In a camera for color photography two right angled prisms cemented together by their hypotenuse faces to form a block arranged between the camera lens and a plurality of sensitized surfaces, a thin layer of material interposed between said cemented faces of such a nature that it is partially reflecting and partially transparent to light, and a color filter worked integrally into the hypotenuse prism face immediately following said thin layer.

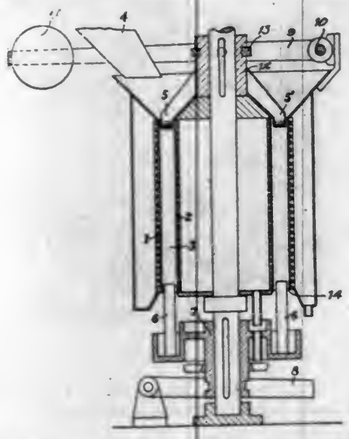


1,661,612. GEAR-SHIFTING MECHANISM. SETH HULMES, Beaver Falls, Pa. Filed May 28, 1926. Serial No. 112,328. 10 Claims. (Cl. 74—58.)

1. In a gear shifting mechanism, the combination of two shifting yokes mounted side by side and longitudinally slidable, a pair of pivoted levers, each being directly connected to one of the yokes and rockable to shift the same in either direction, a selector bar longitudinally adjustable to select the desired shift, means for moving the selector bar laterally, and means cooperable with the selector bar when moved laterally to selectively rock

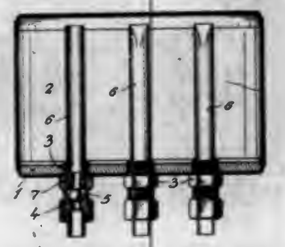
either one of the levers in either direction according to the longitudinal adjustment of the selector bar.

1,661,613. CHANGE-SPEED GEARING. MAUNSELL B. JACKSON, Toronto, Ontario, Canada, assignor of one-third to Edward McMahon and one-third to Thomas Cameron Bate, Ottawa, Canada. Filed Nov. 10, 1924. Serial No. 748,992. 16 Claims. (Cl. 74—59.)



1. The combination of a driving element; a driven element; a clutch shaft; a main clutch for connecting the driving element with the clutch shaft; a countershaft having a driving connection with said clutch shaft; change speed gearing including a plurality of gears journalled on said driven element; a plurality of clutches, one being adapted to connect the said clutch shaft with the driven element and the others adapted for connecting the said gears with the driven element; and means for actuating any one of the driven element clutches, each of the said driven element clutches being adapted to control the operation of the said main clutch whereby the latter will not be actuated before a driven element clutch is actuated.

1,661,614. LIQUID-EXPRESSING APPARATUS. PAUL KUTSCHBACH, Harburg, Germany, assignor to Fried. Krupp Grusonwerk Aktiengesellschaft, Madgeburg-Buckau, Germany, a Firm. Filed Feb. 25, 1926, Serial No. 90,712, and in Germany Feb. 25, 1925. 3 Claims. (Cl. 100—50.)

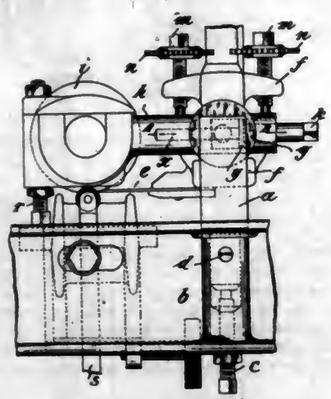


1. A straining press for expressing liquid constituents from materials of various kinds comprising the combination with a substantially vertically disposed press chamber having an annular cross section and being open at the top and bottom, of means adapted to supply the material in a continuous stream under its own gravitation to the upper end of said press chamber, a feeding element adapted to force the material continuously into

said press chamber, to compress it therein and to cause it to travel therethrough, said feeding element being arranged substantially outside the press chamber proper

and working only at the actual intake port of the same, and means for continuously discharging the exhausted material at the bottom end of said press chamber.

1,661,615. LUBRICATING DEVICE FOR MOTORS AND THE LIKE. WALDEMAR LARSEN, Fredriksstad, Norway. Filed Mar. 11, 1926, Serial No. 94,077, and in Norway Mar. 25, 1925. 5 Claims. (Cl. 184—81.)

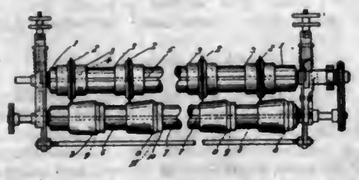


1. In a lubricating device for motors or the like, the combination of an oil container, an outlet from the same, an oil supply pipe, a non-return valve closing upon an upwardly directed stroke of its movable valve member, said valve being located between said outlet pipe at the lower end of the latter, an abutment for the movable valve member, the supply pipe being adjustable in the container relatively to the said member and carrying at its lower end the said abutment.

1,661,616. PRESS-BUTTON FASTENER. EDUARD MERZINGER, Dresden, Germany. Filed Mar. 25, 1926, Serial No. 97,382, and in Czechoslovakia Feb. 3, 1926. 1 Claim. (Cl. 24—219.)

In a press-button fastener, the combination of a dome-shaped stud, and a fastening member for securing it to its supporting material; said member embodying a solid, needle-like shank adapted to be passed through the material and terminating in a transversely flattened, lanceolate portion which tapers to a point at its apex and also tapers at its base and which is adapted to curl up in the dome when its pointed apex strikes against the curved inner surface of the dome and to be positively guided in its curling by such surface, said lanceolate portion being curved laterally in the same general direction, as the aforesaid dome surface so as to assist the curling action.

1,661,617. SHEARING MACHINE. JOSEPH MONFORTS, Munich-Gladbach, Germany. Filed Apr. 19, 1927, Serial No. 185,030, and in Germany Feb. 23, 1926. 3 Claims. (Cl. 26—15.)

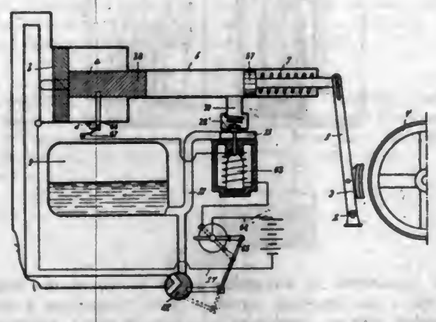


1. In a machine of the class described, a machine frame and a shearing mechanism rockably mounted thereon, said shearing mechanism comprising a stationary blade, bearings secured to the ends of said blade, journals in said bearings having diametrical bores, supporting arms resting in said bores, a rotary cutter mounted on said arms and adapted to cooperate with said blade, and means for adjusting and fixing the position of said journals in said bearings.

1,661,618. PROCESS FOR MAKING ALUMINUM COMPOUNDS. GEORG MUTH, Nuremberg, Germany. Filed Mar. 29, 1921, Serial No. 456,751, and in Germany May 13, 1919. Renewed Mar. 24, 1923. 23 Claims. (Cl. 23—123.)

20. The process which consists in treating an aluminum compound with sulphuric acid and a fluorine salt while subjecting the batch to heat and pressure.

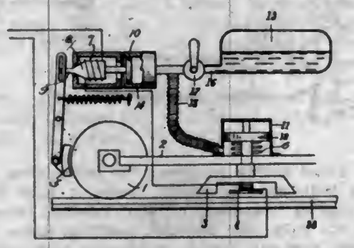
1,661,619. CUTTING DEVICE. TRUMAN G. PADDACK, Wyoming, Ohio, assignor to The Stearns & Foster Company, Lockland, Ohio, a Corporation of Ohio. Filed Apr. 23, 1925. Serial No. 25,445. 5 Claims. (Cl. 164—60.)



5. A cutting device composed of two shafts with cutting members with fixed peripheries on one shaft, said peripheries being subject to variation each with relation to the others, and tapered bearing members mounted

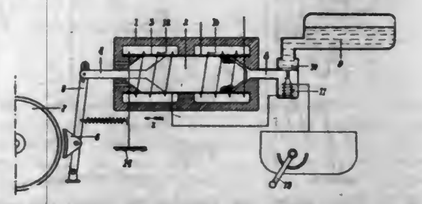
on another shaft aligned with the first mentioned shaft and means for permitting adjustment of said bearing members with relation to the cutting members having peripheries which are subject to variation.

1,661,620. PROCESS FOR THE PRODUCTION OF WASHING AGENTS. GRIGORI PETROFF, Moscow, Russia, and PETER SHESTAKOFF, Paris, France. Filed Dec. 30, 1925, Serial No. 78,488, and in Germany Feb. 20, 1925. 4 Claims. (Cl. 260—108.)



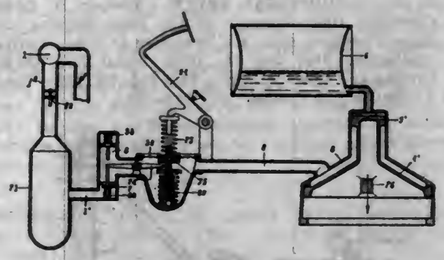
1. The process of preparing a washing compound which comprises sulfonating a mixture of aromatic hydrocarbons and highly unsaturated drying oils, and thereafter purifying the sulfonation product.

1,661,621. BRAKE MECHANISM. HENRI PIEPER, Brussels, Belgium, assignor to Compagnie Internationale des Freins Automatiques, Societe Anonyme, Liege, Belgium. Filed Apr. 15, 1926, Serial No. 102,180, and in Belgium Sept. 10, 1925. 7 Claims. (Cl. 303—49.)



2. A brake mechanism comprising a cylinder filled with liquid, a piston moving in said cylinder and connected to the brakes, a brakes control device acting upon said liquid, a chamber containing liquid surmounted by a gas under pressure, a valve controlled communication between said chamber and said cylinder, and means for opening such communication by the first movement of the brakes control device, when displaced in the direction corresponding to braking, and for closing said communication after the completion of a predetermined stroke of the said control device in braking direction.

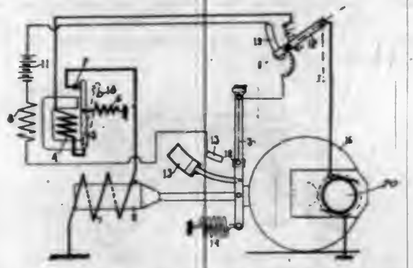
1,661,622. BRAKE SYSTEM FOR VEHICLES RUNNING ON RAILS. HENRI PIEPER, Brussels, Belgium, assignor to Compagnie Internationale des Freins Automatiques, Societe Anonyme, Liege, Belgium. Filed Apr. 15, 1926, Serial No. 102,181, and in Belgium Sept. 14, 1925. 10 Claims. (Cl. 188—164.)



3. In a brake system for a vehicle running on rails, an electromagnet suspended above the rails and through which the magnet circuit is closed, the electromagnet being carried through the medium of a piston moving in a cylinder containing a liquid under pressure, a piston connected with the brake mechanism and movable in a second cylinder, a duct connecting said second cylinder with the cylinder containing liquid under pressure in such a way that the said liquid displaces the brake mechanism towards braking position when the electromagnet is attracted towards the rails, a vessel containing liquid and gas under pressure, a duct connecting said vessel with the aforesaid second cylinder that contains the piston connected to the brake mechanism in order to displace said brake mechanism towards braking position, and a closing member interposed between the second cylinder and vessel.

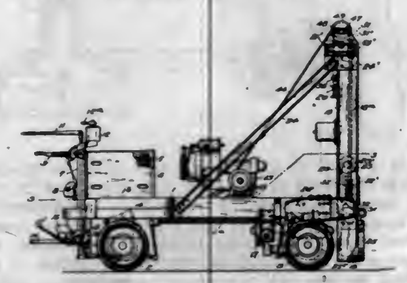
1,661,623. BRAKING DEVICE FOR VEHICLES. HENRI PIEPER, Brussels, Belgium, assignor to Compagnie Internationale des Freins Automatiques, Societe Anonyme, Liege, Belgium. Filed Apr. 15, 1926, Serial No. 102,182, and in Belgium Oct. 5, 1925. 7 Claims. (Cl. 303—20.)

4. Brake-operating apparatus for vehicles, embodying an electromagnetic device comprising a magnetic field traversed by a magnetic flux created by a solenoid which is excited by current from the vehicle and which shifts in braking direction a core disposed in said field; a second magnetic field traversed by a magnetic flux created by a second solenoid also excited by current from the vehicle and shifting in brake-releasing direction a core disposed in the second field, said core being shifted in braking direction by a fluid under pressure coming from a reservoir through a duct; an automatic valve for controlling said duct opening toward said reservoir; and an electromagnet for operating said valve interposed in the excitation circuit of the first solenoid.



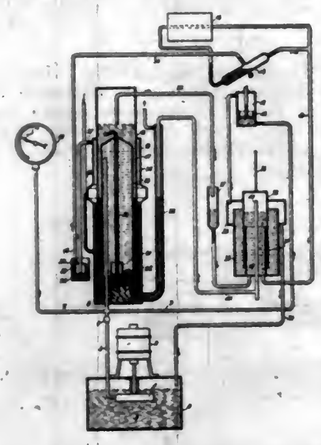
1,661,624. SERVO-BRAKE. HENRI PIEPER, Brussels, Belgium, assignor to Compagnie Internationale des Freins Automatiques, Societe Anonyme, Liege, Belgium. Filed Apr. 15, 1926, Serial No. 102,183, and in Belgium Dec. 24, 1925. 18 Claims. (Cl. 303—68.)

5. In a servo brake provided with brake mechanism, a piston connected to the brake mechanism and moving in a releasing cylinder, a controllable communication duct between said cylinder and a partial vacuum source, a vessel in which a partial vacuum is maintained, and a distributor controlling the entry into action of the releasing devices, said distributor comprising a sliding member movable in one direction to actuate a closing member controlling communication with the atmosphere, and in the other direction to actuate a closing member



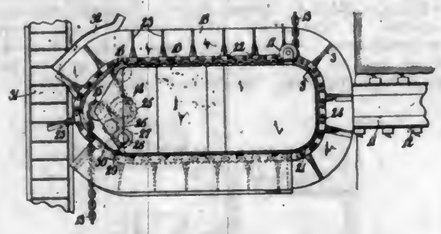
controlling communication with the duct connected to the partial vacuum source, said sliding member being connected to a diaphragm subjected upon one side to atmospheric pressure and upon the other side to the partial vacuum existing in the releasing cylinder, the displacements of the said sliding member being controlled by the brake controlling pedal or lever, the said sliding member being further subjected to the action of a spring exerting an action which opposes the action of atmospheric pressure.

1,661,625. BRAKE DEVICE. HENRI PIEPER, Brussels, Belgium, assignor to Compagnie Internationale des Freins Automatiques, Societe Anonyme, Liege, Belgium. Filed June 5, 1926, Serial No. 113,944, and in Germany Nov. 7, 1925. 6 Claims. (Cl. 188—158.)



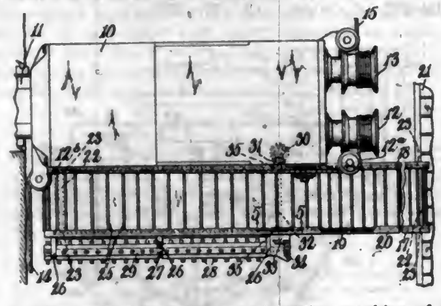
5. A brake device for vehicles, in which the current from a dynamo actuated by the axles, or the current from the motors of the vehicle acting as generators, is employed for the braking of the vehicle, comprising an electrical relay embodying a winding traversed by the current producing the braking in such a way that said relay cuts off this current when it falls below a predetermined value, a member for reestablishing the braking current, and a second winding comprised in said relay supplied by a source of current and acting upon said member, the second winding being included in a circuit comprising two switches, one of which is closed by the movement of the controller lever into braking position and the other being closed by a member of the brake mechanism after a certain interval during which said mechanism effects a certain releasing stroke, said brake-mechanism member being connected to the electro-magnet of an electro-magnetic brake brought into operation by said current and closing the circuit of the second winding under the action of a return spring.

1,661,626. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Original application filed May 4, 1923, Serial No. 636,638. Divided and this application filed Feb. 23, 1926. Serial No. 89,968. 16 Claims. (Cl. 214—65.)



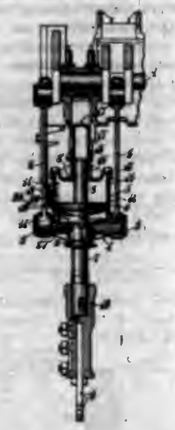
1. In apparatus of the class described, the combination of a truck frame having supporting wheels, a guide frame on said truck frame, an elevating member comprising a main portion mounted to slide on said guide frame and a lift device movably mounted on said main portion and provided with load engaging walls arranged to be adjusted transversely of said truck frame when said device is moved relative to said main portion, and means for raising and lowering said elevating member.

1,661,627. GAS-ANALYZING APPARATUS. OLOF RODHE, New York, N. Y., assignor to Svenska Aktiebolaget Mono, Stockholm, Sweden. Filed Aug. 19, 1926, Serial No. 130,290, and in Germany Aug. 28, 1925. 2 Claims. (Cl. 23—254.)



1. Apparatus for analyzing gas mixtures of the type in which an absorbing liquid is used, comprising a gas pumping device containing a non-absorbing pumping medium, means for pumping the absorbing liquid against said non-absorbing medium to oscillate the latter, an absorbing and measuring receptacle, and means for conducting absorbing liquid which has been used to oscillate said non-absorbing medium into said absorbing and measuring receptacle.

1,661,628. COAL CUTTER AND LOADER. CHARLES BRAND OFFICER, Chicago, Ill., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 4, 1925. Serial No. 73,179. 20 Claims. (Cl. 262—30.)

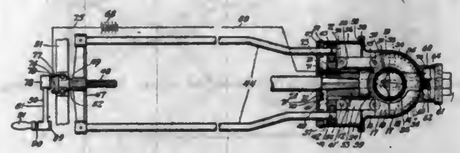


1. In a coal mining apparatus, the combination with a machine body movable laterally over a mine bottom, of kerf cutting means and material handling means carried by the body, said material handling means having a material engaging portion coextensive with said body at the advancing side of the latter, and each of said means initially engaging material along parallel laterally adjacent paths and each operative to clear its path as the machine body advances.

1,661,629. MINING APPARATUS. CHARLES F. OSGOOD, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed Dec. 4, 1925. Serial No. 73,178. 19 Claims. (Cl. 262—9.)

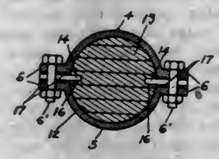
1. The combination with a coal cutting machine of the type having an elongated body slidable on the mine bottom and a cutter bar extending from one end of the body, of gathering and loading mechanism connected to the body and comprising mechanism for moving loose material first transversely and then longitudinally of said body and out of the path of the latter.

1,661,630. CHANNELER. HENRY H. MERCER, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed July 12, 1922. Serial No. 574,406. 10 Claims. (Cl. 125—33.)



1. In a stone working machine, in combination, a cutting tool, actuating means therefor including a reciprocable cylinder having a piston movable therein, said cylinder having fluid inlet means including a port, fluid outlet means, and passage means for conducting fluid to the opposite ends of said cylinder, an automatic valve for controlling fluid flow to said inlet port, and means for regulating fluid flow to said automatic valve.

1,661,631. HUB FOR PROPELLER BLADES. MOSES C. NIXON, Chicago, Ill. Filed May 3, 1926. Serial No. 106,430. 41 Claims. (Cl. 170—173.)

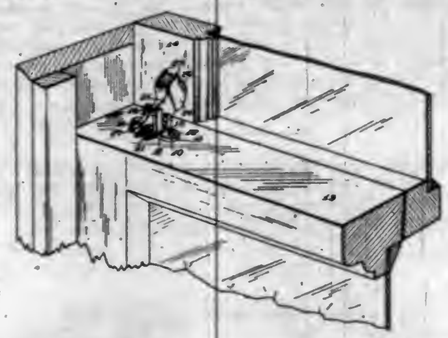


1. In combination a hub comprising cooperating elements secured together and adapted to be secured on a driving shaft and having a radially extending socket member substantially circular in cross section, a propeller member, and means for securing the propeller member in said socket member, one of said members having a projecting member and the other of said members having a groove extending longitudinally therewith adapted to receive said projecting part thereby preventing turning but permitting longitudinal movement of the propeller member in the socket member.

1,661,632. PROPELLER APPARATUS SUITABLE FOR USE IN CONNECTION WITH VARIOUS VEHICLES. MOSES C. NIXON, Chicago, Ill. Filed May 3, 1926. Serial No. 106,481. 35 Claims. (Cl. 170—163.)

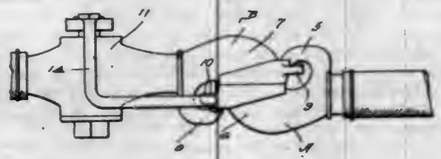
1. In a propeller apparatus, the combination with a revoluble shaft, propeller blades having segments extending radially from the hubs thereof, means for mounting the blades on said shaft and permitting rotatable adjustment of the blades about an axis at right angles to the axis of said shaft, operating means in connection with said segments whereby the blades may be moved to different positions, and means for engaging the rims of said segments for locking the blades in adjusted position.

1,661,633. HUB FOR PROPELLER BLADES. MOSES C. NIXON, Chicago, Ill. Filed Oct. 4, 1927. Serial No. 224,007. 7 Claims. (Cl. 170—173.)



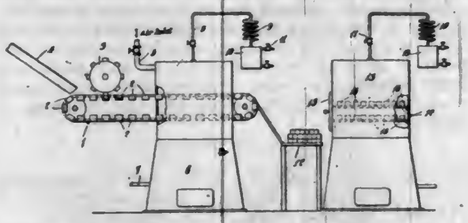
1. In combination a split hub comprising cooperating flanged members adapted to be secured together and on a driving shaft, said members being formed so as to provide a radially extending tapered socket split longitudinally and so disposed that its larger end is adjacent the axis of rotation, a propeller blade in said socket and having a groove adjacent the flanges at one side of said socket, a shim key disposed partly in said groove and partly between the flanges adjacent thereto, and means extending through said flanges for fastening said members together.

1,661,634. SASH LATCH. FRANK PEKAR, Bridgeport, Conn. Filed June 18, 1927. Serial No. 199,745. 5 Claims. (Cl. 292—228.)



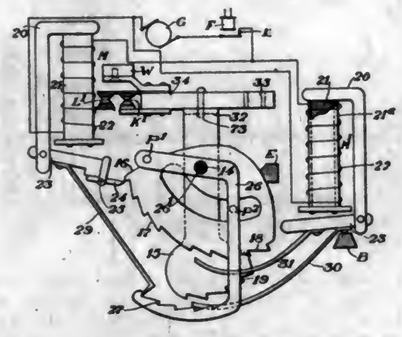
1. In a window latch, a base adapted to be secured to a window sash, spaced pairs of fingers projecting upwardly from the base, the fingers of each pair being also spaced to provide a slot therebetween, a pin mounted between the pairs of fingers, a coil spring surrounding said pin and having one end fixed relative to the base, a pawl having a body received in said slot and having a notch in its lower edge fitting over the pin and body of the spring, the remaining end of the spring being engaged over the pawl to hold the pawl and base together and

urge the pawl to tilt to latching position, and means on the end of the pawl to engage a part of the window



past which said sash is movable upon the pawl being moved to latching position.

1,661,635. AIR-HOSE-COUPLING SAFETY DEVICE. JOHN L. SHULTZ, Bellefonte, Pa., assignor of one-third to Henry Kline, Bellefonte, Pa. Filed Nov. 23, 1926. Serial No. 150,279. 2 Claims. (Cl. 284—9.)

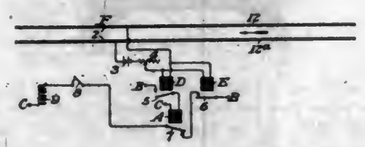


1. In a coupling structure; wherein a coupling head includes a body having an interlocking finger extending therefrom terminating in spaced relation thereto for the purpose of receiving a cam lug of a co-mating coupling head, and a valve structure adjacent the first mentioned head; an operating crank having an end operatively engaged with the valve and extending upwardly from the coupling structure, said operating crank terminating in an angularly disposed extension merging into an arcute extension and being mounted to swing downwardly between the finger and the body to close the valve only when the cam lug of the co-mating coupling head is entirely outside the space between the body and the finger.

1,661,636. PROCESS FOR TREATING FLUE DUST. KENNETH M. SIMPSON, New York, N. Y. Filed Apr. 7, 1926. Serial No. 100,454. 2 Claims. (Cl. 75—73.)

1. The herein described process which comprises mixing with flue dust pulverized carbonaceous fuel matter, in adding to such mass a hydrocarbon, in briquetting the resulting mixture, in subjecting the mixed materials to a carbonizing treatment in which the volatiles of the hydrocarbon are largely removed and the solid materials bonded by the carbon residue thereof by preliminarily heating the material in a zone where oxygen is present, and in thereafter raising the temperature of the material in a zone where oxygen is excluded.

1,661,637. DECODING APPARATUS. ANDREW J. SORENSEN, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Nov. 18, 1926. Serial No. 149,257. 7 Claims. (Cl. 177—353.)



1. In combination, a relay at times supplied with different code impulse combinations, a selector associated with said relay comprising a first movable member biased to a normal position, a second and a third movable members, means for advancing the first member from its normal position for each impulse supplied to the relay, means for holding the first member in its advanced position between successive impulses in a combination but releasing it between combinations, means whereby the second member always follows the advance movements of the first member and also follows its return movements unless restrained, means for restraining the second member in its advanced position between impulse combinations but releasing it during the impulses of a combination, means whereby the third member always follows the advance movements of the second member and also follows its return movements unless restrained, means for restraining the third member in its advanced position during the same periods as the first member, a plurality of contacts variably controlled by the different positions of the third member, and governing means controlled by said contacts.

1,661,638. FISHING TOOL. FERDINAND J. SPANG, Butler, Pa. Filed Sept. 6, 1924. Serial No. 736,273. 2 Claims. (Cl. 294—102.)

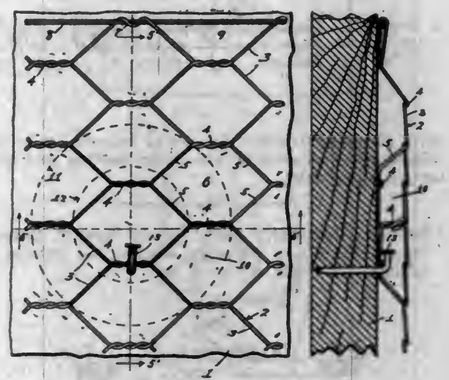
1. A fishing tool having in combination a socket member, a reciprocable member mounted therein and provided with gripping jaws extending longitudinally of said socket, means on said socket for contracting said jaws upon relative downward movement of said reciprocable member so as to cause them to grip an external object, means for locking said reciprocable member against movement so as to prevent the operation of said jaws, a relatively short spring associated with said reciprocable member so as to support said socket thereon and normally prevent operation of said locking means and a relatively long spring for moving said jaws downwardly to gripping position when said socket member is raised.

1,661,639. APPROACH-INDICATION APPARATUS. LESTER E. SPRAY, Wilkinsburg, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Oct. 24, 1923. Serial No. 670,464. 7 Claims. (Cl. 246—41.)

1. In combination, a section of railway track, a track circuit for said section including a source of current and a track relay, a second relay interposed between said source and one rail and so adjusted that it is open when the section is unoccupied and closed when the section is occupied by a train, a third relay interposed between said source and a track rail and so adjusted that it is closed at all times provided said track circuit is intact, and an indicator controlled jointly by said second and third relays.

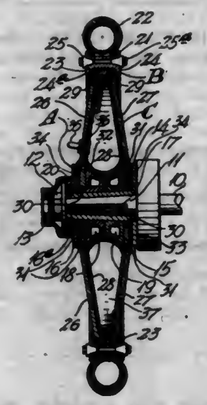
1,661,640. POWDER ADAPTED TO LIBERATE IODINE. KENNETH VAN ALLEN, New York, N. Y. Filed Apr. 24, 1926. Serial No. 104,473. 8 Claims. (Cl. 167—9.)

1. A pulverulent substance consisting of iodic acid, a reducing agent, and a filler.



1,661,641. EMERGENCY DEVICE FOR AUTOMOBILES. EMILIO E. VECCHI, Des Moines, Iowa. Filed Oct. 25, 1926. Serial No. 143,981. 5 Claims. (Cl. 254—86.)

1. An emergency device for automobiles comprising caster wheels adapted to be secured to the axles of automobiles and adjacent the wheels thereof, each caster wheel being capable of moving to position for raising its corresponding automobile wheel clear of the ground and means for moving the caster wheels to such position, said means comprising rock arms operatively connected to said caster wheels, an oscillatably mounted rod, a hand lever slidably mounted thereon and a socket in said lever adapted to selectively engage said rock arms upon sliding movement thereof relative to the oscillatably mounted rod whereby the rock arm, so engaged, will be swung upon actuation of said hand lever.



1,661,642. METAL LATH. GEORGE F. VOIGHT, Oakland, Calif., assignor to Economy Products Corporation, a Corporation of California. Filed Mar. 2, 1925. Serial No. 12,686. 1 Claim. (Cl. 72—118.)

Metal lath comprising a fabric formed with relatively large meshes, the wires surrounding certain of said meshes bent into a plane offset from and parallel to the remaining meshes thereof, the wires connecting said offset meshes extending diagonally between said planes

whereby said offset mesh-surrounding wires bear in toto against the supporting surface and any one of said offset wires may be secured to the supporting surface at will.

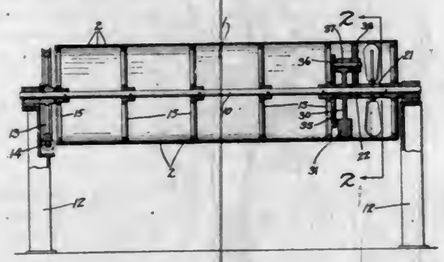
1,661,643. RESILIENT WHEEL. OTTO WADDELL, Radersburg, Mont. Filed Feb. 11, 1927. Serial No. 167,403. 3 Claims. (Cl. 152—46.)

2. A vehicle wheel comprising a conical sleeve, flanges mounted on said sleeve, complementary concave conoidal spools mounted on said sleeve intermediate said flanges, resilient side plates mounted on said sleeve intermediate said spools and said flanges, a rim disposed about said sleeve adapted to engage said side plates, and an inflatable resilient annular air container positioned intermediate said side plates.

1,661,644. GARMENT BAG. DAVID WARREN, Roxbury, Mass. Filed Apr. 27, 1927. Serial No. 187,053. 5 Claims. (Cl. 206—7.)

1. In a garment bag, a pair of closure members, each comprising an elongated outer plate engaged with the outer side of the bag for a portion of the length of its

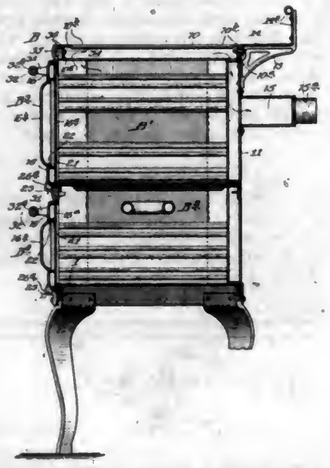
mouth and means for securing opposite portions of the bag material to the corresponding plates, top and end flanges projecting right angularly inwardly from each



outer plate and arranged to overlap respectively in close engagement and movable means for holding said members in engagement.

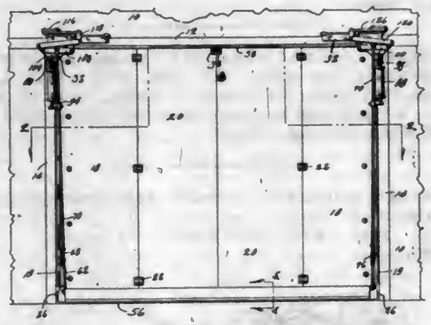
1,661,645. GARMENT BAG. DAVID WARREN, Roxbury, Mass. Filed Apr. 27, 1927. Serial No. 187,054. 4 Claims. (Cl. 206—7.)

2. In a garment bag, a pair of closure members, each comprising an elongated metal plate, means for securing opposite portions of the bag at its mouth to said plates, one of said plates having its top portion extended laterally and reversely to form a groove which extends for the length thereof and having means to close the ends of said groove, and the other plate having a laterally extending top portion adapted to be fitted in said groove.



1,661,646. LAUNDRY MACHINE. FRED CARL WILHELM, Minneapolis, Minn. Filed July 14, 1927. Serial No. 205,742. 6 Claims. (Cl. 68—9.)

1. In combination with a laundry machine including a cylinder and shaft for rotating the cylinder, a fan rotatable upon the shaft, a frame supported upon the shaft and weighted to prevent rotation with the shaft, transmission gearing carried by the frame, and connected for rotating the fan, and means for driving the transmission gearing as the result of rotation of the cylinder.

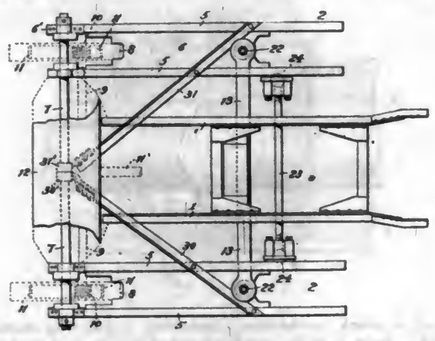


1,661,647. RANGE. LAWRENCE A. ALTHOFF, La Porte, Ind. Filed Mar. 23, 1925. Serial No. 17,053. 4 Claims. (Cl. 126—39.)

1. A range comprising a base, an oven-unit mounted thereon, a cooking-top mounted at one side of the oven-unit and disposed a short distance below the oven-top, a shelf projecting rearwardly from the body of the range in a plane substantially flush with the oven-top and extending transversely throughout the width of the range, a standard plate rising from the rear edge of said shelf, and a transverse flue disposed beneath

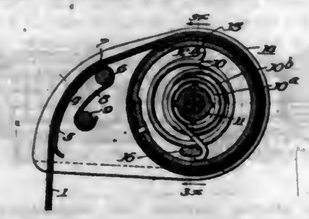
said shelf and communicating with the burner-box and flues of the range.

1,661,648. DOOR OPENING AND CLOSING DEVICE. CLARENCE B. BATES, Marshalltown, Iowa. Filed Apr. 4, 1927. Serial No. 180,815. 8 Claims. (Cl. 268—35.)



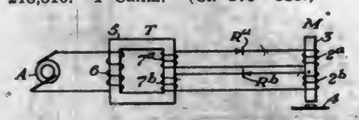
1. In combination with a wall having a door frame therein, a shaft rotatably mounted in said frame, a door secured to said shaft, an arm on said shaft, a bar slidably mounted adjacent said arm, a second arm pivotally mounted adjacent said bar, link connections between said arms and said bar, a platform having one end pivoted, an operative connection between said second arm and the free end of said platform and spring means for maintaining said free end in raised position.

1,661,648 TRACTION ENGINE. CLARENCE LEO BEST, Elmhurst, Calif., assignor, by mesne assignments, to Caterpillar Tractor Co., San Leandro, Calif., a Corporation of California. Filed Sept. 15, 1920. Serial No. 410,419. 11 Claims. (Cl. 305—9.)



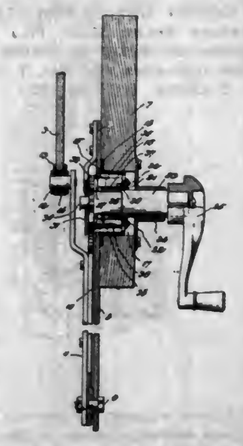
6. In a tractor, the combination of a main frame, a pair of tractor trucks to support the main frame arranged at opposite sides thereof, each tractor truck including a truck frame and an endless track thereon, the truck frames being pivotally connected at their rear portions with the rear portions of the main frame for vertical oscillation, an equalizer member pivotally connected centrally of its ends with the main frame at the forward part thereof and flexibly connected at its ends

with the truck frames, a strut free of the main frame and flexibly connected at its ends with the truck frames at the front portions thereof, and inclined brace members pivotally connected at their inner ends to the rear



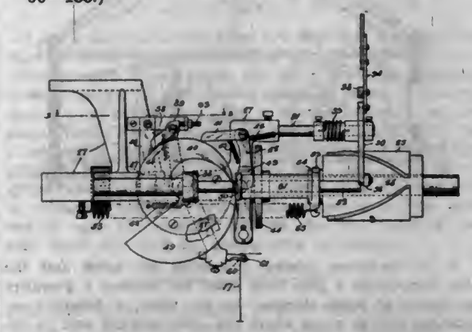
portion of the main frame centrally of the sides thereof, and extending forwardly therefrom and being rigidly connected with the truck frames at the front end portions thereof.

1,661,650. VEHICLE-SPRING REGULATOR. JOHN W. BLACKLEDGE, Chicago, Ill. Filed June 24, 1925. Serial No. 39,208. 10 Claims. (Cl. 267—10.)



1. A vehicle spring regulator, comprising a flexible connector adapted to be attached to one of two spring connected vehicle members, a resilient take-up device for said connector adapted to be mounted on the other of said vehicle members, and a deflector adapted to be mounted on the same vehicle member that carries the take-up device, and presenting a frictional surface over which the connector travels during relative movement of the vehicle members; said deflectors deflecting the connector into a circuitous path and being resilient in the direction of such deflection.

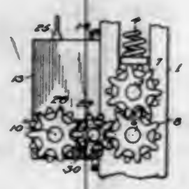
1,661,651. ELECTROMAGNETIC APPARATUS. PAUL N. BOSSART, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Sept. 10, 1927. Serial No. 218,810. 1 Claim. (Cl. 175—335.)



In combination, an electromagnet having two windings, a transformer having a primary and two secondaries, a source of alternating current for the primary of said transformer, a circuit for one of said magnet windings including one of said transformer secondaries, a circuit for the other magnet winding including the other of said transformer secondaries, two asymmetric units one included in the circuit for each magnet winding and so connected that current is supplied to one winding during one half of each wave of the alternating current in said primary and to the other winding during the other half of each wave of the alternating current in said primary, and said magnet windings being so connected that the magnetomotive forces created by the currents therein in the magnet core are in the same direction.

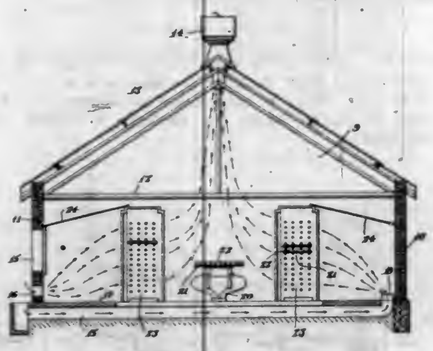
1,661,652. LEVER SASH REGULATOR. GUSTAVE A. CARLSON, Detroit, Mich. Filed Oct. 27, 1924. Serial No. 746,030. 1 Claim. (Cl. 192—8.)

In a clutch, a cup-shaped casing, a bushing non-rotatably secured against the outer wall of said casing and extending therein, an arbor in said bushing, a spindle extending into said arbor, and means in said casing frictionally engaging said bushing adapted for holding said arbor and spindle against accidental rotation, said means including an abutment member, rotatable with said arbor and having abutment extending parallel to said bushing, a follower rotatable with said spindle and having a lug overlying said abutment member and extending parallel to the abutments of said member, and a spring frictionally encircling said bushing and having its ends extending between the abutments of said abutment member and the lug of said follower and adapted to be distended to permit rotation of said arbor and spindle.



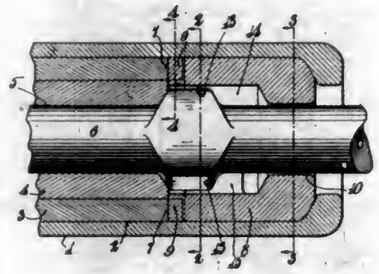
1,661,653. KNITTING MACHINE. HUMPHREY EVANS, Milwaukee, Wis., assignor to Holeproof Hosiery Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Oct. 23, 1922. Serial No. 596,266. 3 Claims. (Cl. 66—133.)

1. In a knitting machine the combination with a rotary needle cylinder provided with needles and a yarn guide movable into and out of operative position to



direct yarn to the needles, of a rotary and axially movable cam for shifting the yarn guide out of operative position, means for rotating the cam synchronously with the needle cylinder, a cam for shifting the first cam axially, a ratchet wheel connected and rotatable with the second cam, a rocker arm provided with a pawl for rotating the ratchet wheel and second cam, and a third cam for actuating the rocker arm and pawl.

1,661,654. SAFETY DEVICE FOR CLOTHES WRINGERS. ARTHUR FOLKE, Kane, Pa. Refile for abandoned application Serial No. 59,046, filed Sept. 28, 1925. This application filed Jan. 7, 1928. Serial No. 245,234. 2 Claims. (Cl. 68—32.)

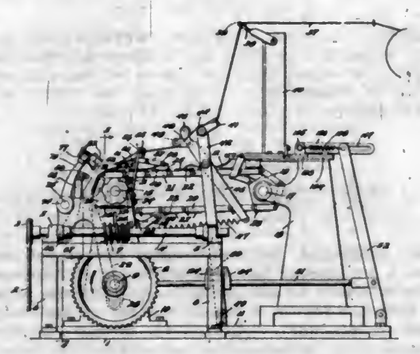


1. In a clothes wringer, a pair of pressure rollers, a pair of guard rollers adjacent to the pressure rollers, an idle gear wheel, a gear wheel rotatable with one of the rollers of each pair and meshing with the idle gear wheel, a slidable element on which the idle gear wheel is mounted, and means having an open end for the insertion of the slidable element for guiding the latter and alining the axis of the idle gear wheel with the axes of the other gear wheels.

1,661,655. DRIER. CLAUD E. FULLER, New York, N. Y., assignor to New York Brick Handling Corporation, New York, N. Y., a Corporation of New York. Filed Aug. 9, 1926. Serial No. 128,041. 3 Claims. (Cl. 34—19.)

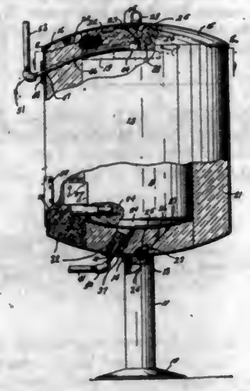
1. An improved drying apparatus for brick and the like comprising a pipe rack drier for holding a plurality of layers of brick thereon, an air inlet, a deflector extending from a point above the inlet upward and to the top of the pipe rack drier whereby the air is prevented from rising above such deflector, said deflector guiding the air from the inlet through the pipe rack drier and around the brick therein.

1,661,656. CHUCK MECHANISM. ELMER G. GARTIN, Claremont, N. H., assignor to Sullivan Machinery Company, a Corporation of Massachusetts. Filed June 7, 1920. Serial No. 387,240. 6 Claims. (Cl. 121—32.)



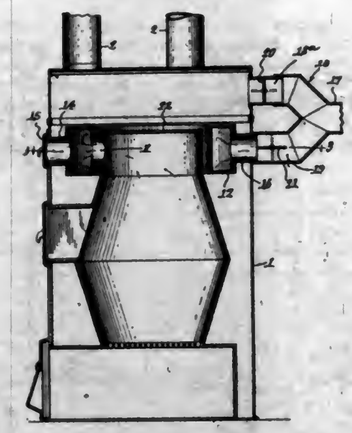
1. A chuck mechanism comprising a rotating member and a chuck member loosely clutched thereto and provided with means for the reception and locking therein of a lugged drill steel, said member having also lug engaging portions adapted to support the lugs during rotation.

1,661,657. GRADING MACHINE. JOHN D. GRABILL, Woodstock, Va. Filed Sept. 10, 1927. Serial No. 218,802. 11 Claims. (Cl. 209—84.)



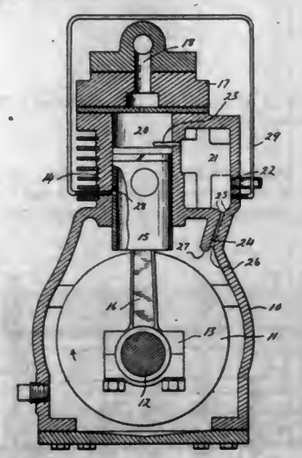
1. In a grading machine, the combination with an endless traveling sizing chain and supporting and driving means therefor, of an endless flexible cover member for the sizing chain adapted to be arranged thereon to travel therewith and to close the sizing openings of the chain, and means for securing the cover member to the sizing chain.

1,661,658. MACHINE FOR MAKING DISPLAY CARDS. GEORGE GRAY, Jr., Philadelphia, Pa., assignor to Largman, Gray Company, Croydon, Pa. Filed Mar. 6, 1926. Serial No. 92,983. 19 Claims. (Cl. 93—1.)



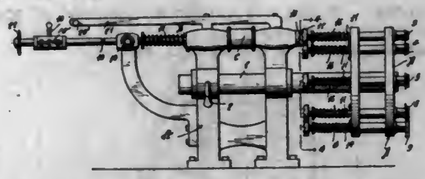
1. In a machine of the class described, means for feeding cards therethrough, and means for threading display tape through and across the face of said cards to lay flat upon the latter.

1,661,659. WATER STORAGE TANK. PERCY GRAY, Jefferson, Iowa. Filed Feb. 1, 1926. Serial No. 85,229. 8 Claims. (Cl. 220—15.)



1. In a device of the class described, an outer container, an inner container received therein and spaced from the walls thereof, a member secured to the bottom of the inner container on the inner side thereof provided with a plurality of sockets, heat insulating arms received in said sockets and inclined upwardly in diverging relation, sockets on the underside of the inner container receiving said arms, spaced sockets on the top of the inner container, heat insulating arms received therein and converging upwardly, a removable cover for the outer container, and a detachable member secured on the under side thereof having sockets receiving the ends of said last-described arms, and a member accessible from outside the cover for securing said last-described member in position.

1,661,660. COLD-AIR CONNECTION. ELMER E. GULLION, Kokomo, Ind. Filed June 14, 1926. Serial No. 115,958. 1 Claim. (Cl. 126—99.)

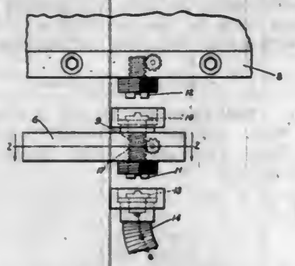


In a device of the class described, a hot air heater comprising a casing, a furnace in the casing and provided at its upper end with a drum, a radiator ring disposed about the drum in spaced relation thereto, a connection establishing communication between the drum and the radiator ring, the casing being provided with an internal space located above the radiator ring and above the drum, a hot air delivery flue connected to the casing and communicating with the aforesaid space, an outlet pipe for the products of combustion, the outlet pipe having short branches, one branch being slightly longer than the other, the longer branch communicating with the radiator ring through the casing, the other branch being joined to the casing and being in communication with the aforesaid space, and dampers controlling the branches of the outlet pipe.

1,661,661. COMPRESSOR. HAROLD A. GREENWALD, Detroit, Mich., assignor to Thomas C. Whitehead, Detroit, Mich. Filed May 9, 1927. Serial No. 189,999. 8 Claims. (Cl. 230—206.)

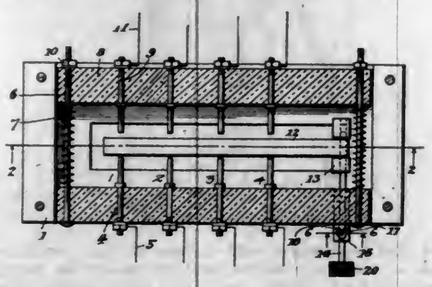
1. The combination with a pump having a crank case, and a lubricant arresting chamber positioned near the pump cylinder having intake and outlet ports therein, of means permitting a return of the gas entrapped in the crank case to the chamber when the pressure in the former is greatest including a passage extending from the cylinder and communicating with the chamber.

1,661,662. SHOE MACHINE. ALI HADI, Detroit, Mich. Filed Feb. 6, 1926. Serial No. 86,495. 2 Claims. (Cl. 12—89.)



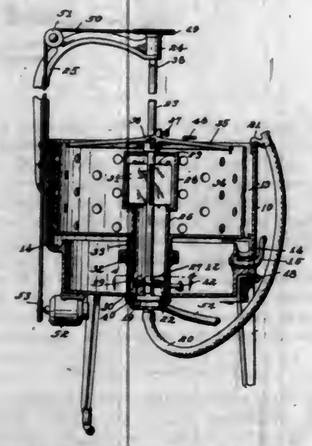
1. In a machine of the character specified, a supporting frame, a drive shaft mounted therein, a second shaft journaled in said frame below the drive shaft, a rotatable carriage keyed to said second shaft, a series of sleeves mounted on said carriage in a circle concentric to the second shaft, a series of cutter shafts each reciprocable in a respective sleeve for protraction and retraction and adapted for selective alinement with the first shaft, spring surrounding said cutter shafts and urging them to retracted position, and clutch elements on the rear end of each cutter shaft and on the front end of the first shaft arranged for cooperative engagement.

1,661,663. CHASSIS-LUBRICATION-CONTROL DEVICE. GUS A. JAMERSON, Cincinnati, Ohio. Filed Feb. 26, 1925. Serial No. 11,857. 9 Claims. (Cl. 184—7.)



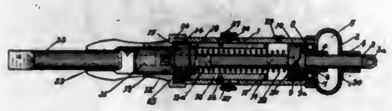
1. In a motor vehicle having a chassis lubricating system, and an accessory with actuating mechanism therefor; the combination of a control device for said lubri-

cating system, and means to connect said device to a moving part of the vehicle to be driven thereby and to



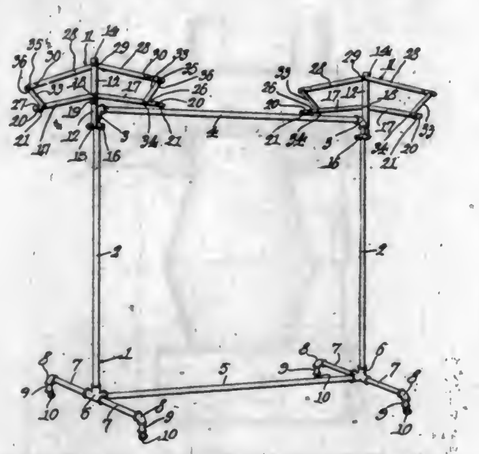
the actuating mechanism of the accessory, thereby to actuate said accessory.

1,661,664. IGNITION-SPARK TESTER. ROBERT M. JOHNSON, Westmoreland, Calif. Filed May 31, 1927. Serial No. 195,297. 4 Claims. (Cl. 175—183.)



2. A device of the character described comprising a casing, bolts mounted at one side of the casing, springs coiled about the bolts, a block slidably mounted upon the bolts and bearing against the springs, means mounted upon the bolts for holding the block at an adjusted position, aligned terminals carried by the block and an opposite side of the casing and a tongue adapted to be interposed between the terminals.

1,661,665. WASHING MACHINE. ROBERT S. KIRKPATRICK, Des Moines, Iowa. Filed Sept. 30, 1925. Serial No. 59,490. 8 Claims. (Cl. 68—18.)

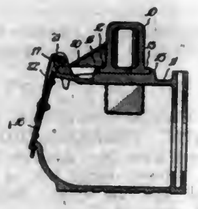


1. A washing machine having a tub provided with upper and lower compartments, the upper compartment being larger than the lower compartment and provided with a trough at its lower end, means for delivering water from said trough to either the interior of the lower compartment or the exterior of said tub, a perforated container rotatively mounted concentrically within said upper compartment, means for delivering water from said lower compartment to the inner surface of said container, and means for rotating said container.

1,661,666. STRIKING AND BORING MECHANISM. GEORGE MAEHREN, New Monterey, Calif., assignor of one-half to Rocco Ello, Monterey, Calif. Filed July 11, 1927. Serial No. 204,915. 1 Claim. (Cl. 255—36.)

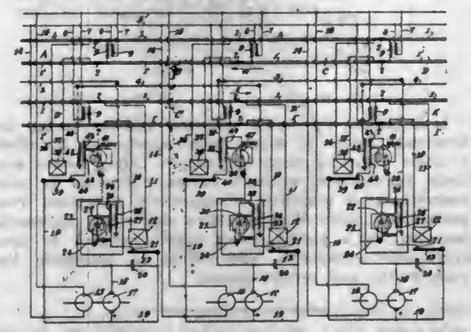
In a tool of the class specified, a casing, a driving cam within the casing, an internal shaft concentrically disposed within the casing, said shaft carrying a complementary cam at the upper end thereof and a hammer bit-stock at the lower end, means to yieldingly keep the cams in contact, a revoluble clutch member journaled in the casing with an axial perforation therethru and being adapted to center the lower portion of said shaft, said shaft being unturnable in the perforation, but free for axial displacement, clutch means on said clutch member a nonrevoluble axially-displaceable change-motion member within the casing adapted to contact either with the complementary cam or the clutch member, complemental clutch means carried by said change member and adapted to arrest the revoluble movement of said clutch member when engaged therewith, and an anti-friction means adapted to reduce the co-efficient of friction between said change member and the complementary cam aforesaid.

1,661,667. RACK COVER. LILLIAN MALLACH, Los Angeles, Calif. Filed June 18, 1927. Serial No. 199,721. 4 Claims. (Cl. 135—5.)



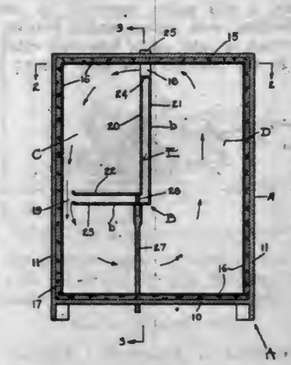
3. In a device of the class described, a frame including a standard and upper and lower members, the outer ends of the upper and lower members being joined together, and the inner ends of the upper and lower members being connected to the standard at vertically spaced points, and means on the lower end of the standard whereby the standard may be connected to a supporting post.

1,661,668. AUTOMOBILE PIT. CHARLES NEWTIN, New York, N. Y. Filed Jan. 10, 1927. Serial No. 162,009. 8 Claims. (Cl. 189—1.)



2. A multiple automobile pit comprising a single common chamber, and a plurality of spaced trackways overlying a plurality of individual servicing positions in said chamber.

1,661,669. JOURNAL-BOX-SECURING MEANS. PAUL J. MCCULLOUGH, St. Louis, Mo., assignor to Scullin Steel Co., St. Louis, Mo., a Corporation of Delaware. Filed Jan. 17, 1927. Serial No. 161,576. 6 Claims. (Cl. 105—220.)



1. In combination, a side frame, a separable journal box cooperatively associated therewith, said side frame having a pair of jaws, said journal box having a pair of gibs for receiving said jaws and for preventing rotative movement between said side frame and said journal box, a swinging closure for said journal box, and a hinge pin for said closure member, said pin having engagement with said side frame and said journal box for preventing relative vertical movement between said side frame and said journal box.

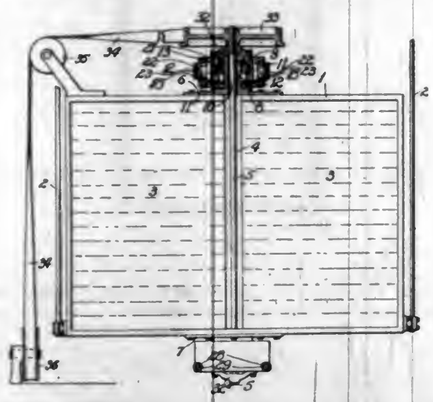
1,661,670. CAB-SIGNALING AND TRAIN-CONTROL SYSTEM FOR RAILWAYS. JOHN A. MILLER and GILBERT W. CATTELL, Waukegan, Ill., assignors, by mesne assignments, to Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Feb. 24, 1920, Serial No. 360,751. Renewed Dec. 21, 1927. 13 Claims. (Cl. 246—30.)

1. In a train control system of the class described, a track divided into blocks, a wave wire for each block, means for impressing radio frequent oscillatory current of one frequency upon the wave wires of alternate blocks, means for impressing radio frequent oscillatory current of a different frequency upon the wave wires of the other blocks, and means associated with adjacent blocks responsive to the beat frequency of said currents.

1,661,671. REFRIGERATOR. CHARLES A. MOORE, Edina, Minn. Filed Apr. 22, 1926. Serial No. 103,779. 7 Claims. (Cl. 62—51.)

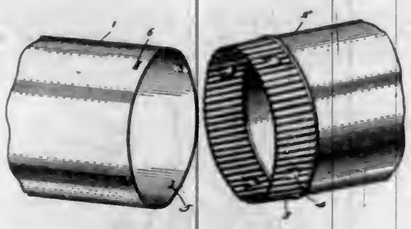
1. In a refrigerator, a cabinet enclosing a provision chamber, a partition, L-shaped in vertical cross-section, providing a refrigerant compartment in an upper corner of said chamber, the upright branch of said partition falling short, at its extremity of the ceiling of the chamber and the horizontal branch falling short, at its extremity, of an end wall of said chamber, said partition comprising double walls spaced apart to form an air passageway therebetween, also a cap-piece closing the space between the upper edges of the walls of the upright branch, an upright air ingress duct extending through the top of the cabinet and opening at its upper end into the outer air, the lower end of said duct opening through said cap into said air passageway between said walls, and an upright air egress duct disposed between said walls, said egress duct communicating at its upper end with the provision chamber near the ceiling thereof and opening at its lower end into the outer air.

1,661,672. APPARATUS FOR HYDRAULIC DRILLING. EDGAR H. MORRISON, Virginia Beach, Va. Filed Sept. 3, 1927. Serial No. 217,419. 3 Claims. (Cl. 61—80.)



1. A hydraulic excavating tool for structural piles, comprising a head having a main nozzle and a plurality of auxiliary nozzles equally spaced circumferentially on the main nozzle, said nozzles being provided with longitudinal slits, positioned in radial planes of the respective nozzles.

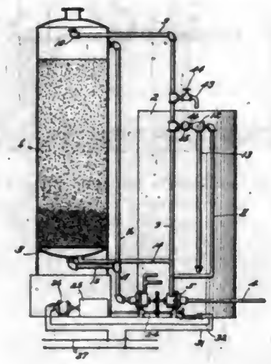
1,661,673. DRIVING MECHANISM FOR PRODUCING GYRATORY MOTION OF A SUSPENDED BODY. BURTON NEAL, St. Louis, and GEORGE H. HEBERBRAND, Kinloch, Mo. Filed Sept. 7, 1923. Serial No. 661,355. 6 Claims. (Cl. 74—14.)



1. In driving mechanism for producing gyratory movement of a suspended body, in combination with a member rotatably mounted on the body, a rolling weight mounted on said member to one side of its axis of rotation and having a reduced portion presenting a spiral surface, a

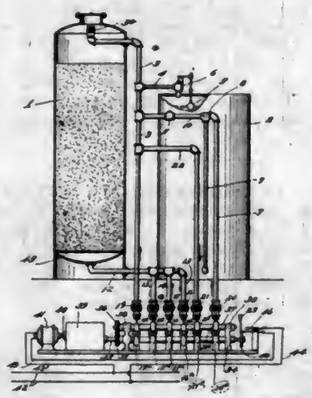
cable secured at one end centrally of said reduced portion and wound about the spiral surface thereof and having its outer end passed from the underside of said reduced portion, a coil spring mounted on said member, means for holding said spring under tension connected to the outer end of said cable, a second cable connected at one end to the periphery of said weight and passed

from the underside thereof in a direction opposite to that of the first named cable and fixedly secured at its outer end to said member, and means for rotating said member, whereby said weight will roll outward against constantly increasing resistance afforded by said spring, and thereby gradually produce the desired gyratory movement of the body.



1,661,674. STOVEPIPE ATTACHMENT. MILTON OSBORN, Wayne City, Ill. Filed July 10, 1925. Serial No. 42,810. 1 Claim. (Cl. 285—185.)

A pipe joint for substantially rigidly securing the ends of pipes together in telescopic formation, tongues and projections produced on said pipes by making U-shaped cuts adjacent the end of each pipe with the tongues at one end and the projections in the opposite end, said tongues and projections being bent in a maner whereby they extend away from the end of the pipe in which they are formed, said tongues being on the inner pipe and bent outwardly while the projections are on the outer pipe and bent inwardly, and said pipes being mounted to position the tongues with their free ends in end to end abutment with the free ends of the projections.



1,661,675. WATER SOFTENER. VICTOR C. NORQUIST, Kansas City, Mo. Filed May 3, 1926. Serial No. 106,189. 11 Claims. (Cl. 210—24.)

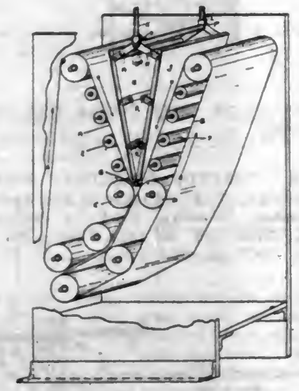
1. A regenerating apparatus for water softeners, in combination with a water softening mineral receptacle, having inlet and drain connections, of a brine tank communicating with the receptacle through the water inlet, separate rotary valves in the inlet and drain connections, unitary driving means for manipulating said valves, timing mechanism controlling the driving means for regulating the period of regeneration, said valves

automatically functioning to divide the regenerating period into back washing, salting and flushing stages.

1,661,676. WATER-SOFTENING SYSTEM WITH SEMIAUTOMATIC REGENERATION. VICTOR C. NORQUIST, Kansas City, Mo., assignor to Butler Manufacturing Co., Kansas City, Mo., a Corporation of Missouri. Filed Apr. 26, 1926. Serial No. 104,636 9 Claims. (Cl. 210—24.)

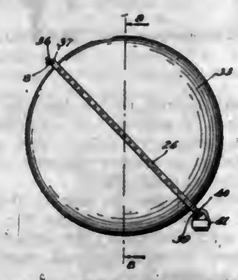
1. A control for water softening systems having intermittent stages of supply and regeneration including a single softening container, supply, brine, service and drain connections, separate valves interposed in said connections, a plurality of oppositely positioned cam mechanisms mounted on coacting shafts and optionally operated by a single power source adapted to synchronously manipulate said valves to determine the regenerative and service stages.

1,661,677. DISTANCE RESPONSIVE CONTROLLER. THOMAS H. PHILLIPS, Jr., Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 12, 1918. Serial No. 216,809. 7 Claims. (Cl. 235—182.)



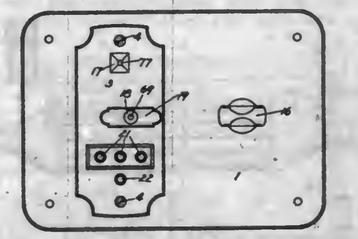
1. An air-distance measuring instrument for aircraft comprising an elongated casing, means for securing the same in an exposed position on the aircraft, a forwardly

positioned revoluble nose on said casing, blades secured to said nose, a train of gearing in said casing operated



by said nose, and distance indicating means actuated by said gearing.

1,661,678. APPARATUS FOR PULP-BOARD MAKING. HERBERT THEODORE PRICE, Burwood, Sydney, New South Wales, Australia. Filed June 8, 1927, Serial No. 196,334, and in Australia July 16, 1926. 4 Claims. (Cl. 92—39.)

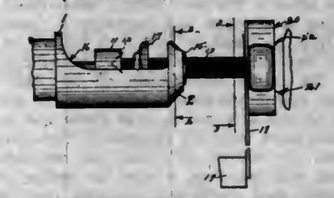


1. In apparatus for pulp board making, two moving and converging endless woven wire belts and two converging and reciprocating woven wire screens substantially as described.

1,661,679. METAL TIRE COVER. HOLLIS F. PRIVETT, Long Beach, Calif. Filed Oct. 5, 1926. Serial No. 139,595. 2 Claims. (Cl. 224—29.)

1. A tire cover comprising in combination a lower trough like structure having a flange at its upper edge, said structure being curved on the bottom to conform to a vehicle tire, an upper trough like structure complementary to the lower structure and having a flange with a downturned edge, the flanges of both structures engaging and the downturned edge fitting over the lower flange, both flanges having apertures therethrough for securing a padlock, and one of the flanges having a tongue and the other a slot to receive the tongue.

1,661,680. COMBINATION LOCK. DARIO ROBERTI, Springfield, Mass. Filed Apr. 12, 1927. Serial No. 183,066. 16 Claims. (Cl. 70—127.)

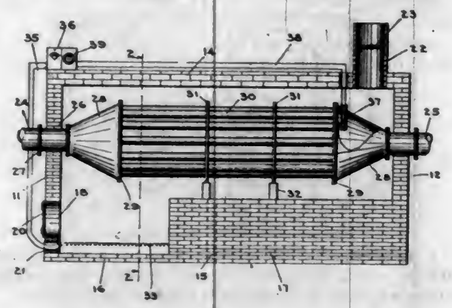


1. In a combination lock, a plate having an opening therein, a case receivable in said opening, and yielding means normally to retain said case in place therein.

1,661,681. MIXER. FLETCHER C. ROOD, Walla Walla, Wash. Filed Feb. 27, 1923. Serial No. 621,554. 2 Claims. (Cl. 251—81.)

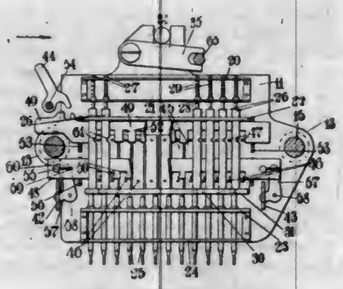
1. A mixer of the character shown and described for mixing alloy fillings with mercury to make amalgam fillings for teeth, including in combination a drive shaft adapted to be connected with and driven from the hand piece of a dental engine, a gear on said shaft, means for holding said gear stationary, a pair of plates mounted to revolve with said shaft, an idler gear and a driving gear between said plates and in mesh with each other said idler gear being in mesh with said stationary gear, a container having an open top mounted to turn about a vertical axis with said driving gear above said plates, and means for preventing the material therein from being thrown therefrom as said container is revolved and rotated through said connections, substantially as shown.

1,661,682. WRENCH MECHANISM. JOHN SCHERNER, Milwaukee, Wis., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Mar. 8, 1922. Serial No. 542,161. 5 Claims. (Cl. 81—55.)



1. In a machine for rotating a nut on a valve stem provided with a spreader and carrying a second nut, means for receiving said stem, means to hold said spreader against rotation, means for rotating one of said nuts, said last means being formed with a cut-away portion to leave the other nut free.

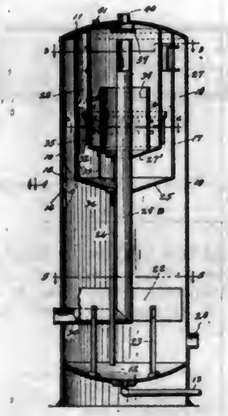
1,661,683. ELECTRIC HEATING SYSTEM FOR OIL PIPE LINES. CHARLES SETZEFANT, Modesto, Calif. Filed Aug. 10, 1927. Serial No. 211,928. 8 Claims. (Cl. 219—38.)



1. In the art described, the combination of a furnace structure having an oil pipe line connected through the ends of the furnace, a series of smaller pipes con-

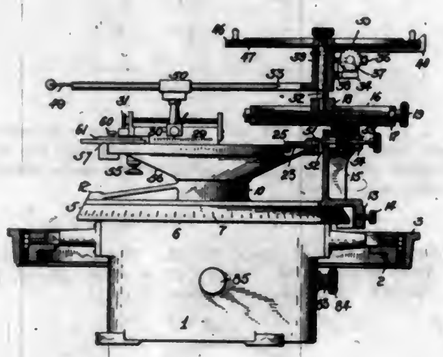
necting the pipe lines in the furnace, electric heating units in the furnace, a stack, and means to control

the flow of air through the furnace over the heating units and around said smaller pipes.



1,661,684. STATISTICAL, CALCULATING, AND LIKE MACHINE CONTROLLED BY MECHANICAL RECORDS. ARTHUR THOMAS, Thornton Heath, England, assignor to The Accounting & Tabulating Corporation of Gt. Britain, Limited, London, England. Filed July 11, 1927, Serial No. 204,850, and in Great Britain Feb. 8, 1926. 6 Claims. (Cl. 235—58.)

1. In a tabulating machine of the character described, the combination with feeding mechanism and mechanism for sensing the data on a record when the record is stationary, of a second designation sensing mechanism constructed as a unit and attachable to the machine and positioned between the said feeding mechanism and the first sensing mechanism and including a frame, means for mounting the frame so that it is capable of vertical movement and including means for permitting adjustment of the frame transversely of the line of feed, designation registering members arranged in said frame, sensing pins also arranged in said frame and positioned in collateral rows with the designation registering members, means for setting said pins and members, means for locking said members, means for testing said pins and members, and mechanism operable from the main shaft of the machine and operably connected with the frame, the setting means and the testing means.

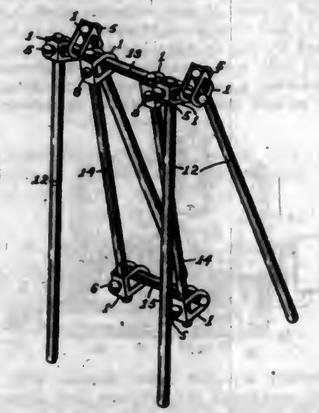


1,661,685. OIL AND GAS SEPARATOR. JAY P. WALKER, Tulsa, Okla., assignor of forty per cent to Guy O. Marchant and six per cent to C. G. Wells, Tulsa, Okla. Filed Mar. 15, 1927. Serial No. 175,445. 20 Claims. (Cl. 183—2.7.)

1. In an oil and gas separator, an upright tank, fluid inlets in the sides of the tank, a shell within the tank spaced from the tank walls, fluid inlets at the upper end of the shell above the tank inlets, a separating cylinder in the shell having its upper portion closed and provided with a fluid inlet communicating with the shell, a gas escape pipe leading from the upper portion of the

cylinder, and an oil outlet leading from the lower end of the tank.

1,661,686. TORPEDO DIRECTOR. MORTIMER F. BATES, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed Feb. 26, 1923. Serial No. 621,483. 10 Claims. (Cl. 33—67.)

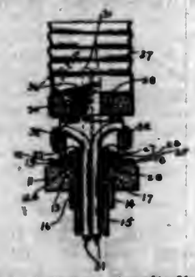


3. In a torpedo director or the like, the combination of a compass card, a pointer bar, sighting means connected therewith, means for locking said card and bar together comprising an electro-magnetic clutch and a switch for controlling said clutch.

4. In a torpedo director, the combination of a sight bar, means for adjusting said sight bar, a telescope carried by said sight bar, means for adjusting said telescope with respect to said bar and means for fixing said bar at will in azimuth.

1,661,687. TOY BUILDING ELEMENT. WALTER R. BENJAMIN, Granite City, Ill. Filed Feb. 10, 1927. Serial No. 167,207. 2 Claims. (Cl. 46—35.)

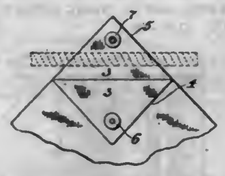
1. An assortment of elements for building a variety of structures, including a U-shaped clamp having an opening in its base and respective aligned openings in its arms, a wood screw adapted to extend through the base opening, and a pair of elements adapted to engage with said clamp, one of said elements being of wood



whereby it may be pierced by the wood screw in order to bind it to the base of said clamp.

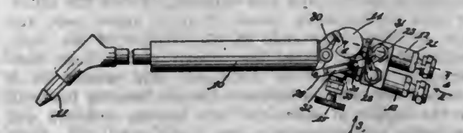
1,661,688. TROLLING SPOON. EDWARD C. BILLS, Redondo Beach, Calif. Filed Feb. 14, 1927. Serial No. 168,034. 3 Claims. (Cl. 43—45.)

1. A trolling spoon comprising in combination a spoon structure formed of a metal trough, having a concave inner side and a convex outer side considered transversely, the edges being sharpened and being in substantially a horizontal plane, the trough having upturned ends, the edges at the end being at a slightly higher elevation than the edges at the center part, and the side edges at the center part being spaced closer together than the side edges towards the ends of the spoon structure, a hook having a stem fitted in the trough part of the spoon and rigidly connected thereto on the concave side, said stem extending through a slot adjacent the rear end of the spoon, an aperture adjacent the rear of the spoon to attach a lure, and means at the forward end of the spoon to attach same to a line.



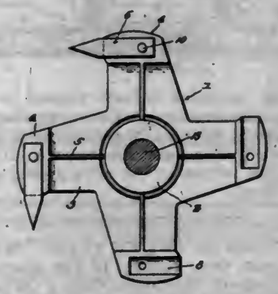
1,661,689. ELECTRIC CANDLE SOCKET. TONJES A. BOTH, Stratford, Conn., assignor to The Connecticut Electric Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed July 26, 1921. Serial No. 487,649. 7 Claims. (Cl. 173—358.)

7. In an electrical fixture, longitudinally spaced insulating blocks, binding post brackets between the blocks and provided with flanges at one end, a tubular nipple



extending through one of the blocks and having an inner end adapted to be spun over said flanges to secure the binding posts to said block, means for securing the tube to a conduit, and lamp terminals carried by the other block and having electrical connection with said binding post brackets.

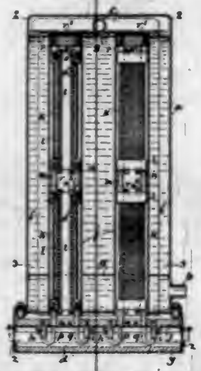
1,661,690. PILLOW OR CUSHION. ISIDORE BUCHMAN, Brooklyn, N. Y., assignor to The L. Buchman Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Mar. 5, 1925. Serial No. 13,404. 2 Claims. (Cl. 5—337.)



2. A pillow or cushion bifurcated at one corner and lined to form flaps, the interiors of which are open to the interior of the pillow or cushion, said flaps being arranged to receive a clothesline between them, and means for detachably securing said flaps together around the clothesline to suspend the pillow or cushion therefrom.

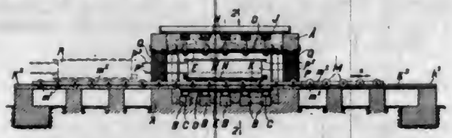
1,661,691. BLOWPIPE GAS-FLOW CONTROL. ANDREW J. EASON, San Bernardino, Calif., assignor of one-half to Ulah J. W. West, San Bernardino, Calif. Filed May 22, 1926. Serial No. 110,849. 2 Claims. (Cl. 158—27.4.)

1. A blow pipe having two gas conduits, valves mounted in the conduits, each of the valves having a rotatable stem on which there is a slotted arm, a lever pivoted upon the blow pipe, and a link pivoted to the lever and having a pin extending through the slots in both of said arms, whereby upon moving the lever both of said valves may be simultaneously opened or closed.



1,661,692. ROTARY CUTTER. HUBERT EVERIST, Sioux City, Iowa. Filed May 18, 1927. Serial No. 192,894. 4 Claims. (Cl. 97—212.)

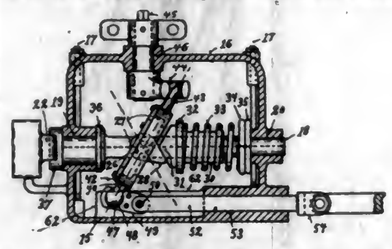
1. A cutter of the class described comprising a head provided at opposite sides with transverse recesses extending inwardly from one side edge of the head and terminating short of the opposite side, forming integral



approximately U-shaped frames located at opposite sides of the head and disposed substantially at right angles to a diameter of the cutter within the outer periphery thereof, a straight tooth having a projecting cutting portion and provided with an inner bifurcated attaching portion straddling the recessed portion of the head and having sides fitting the recesses of the head and supported and braced by the walls thereof, and means for retaining the tooth in the recesses of the head.

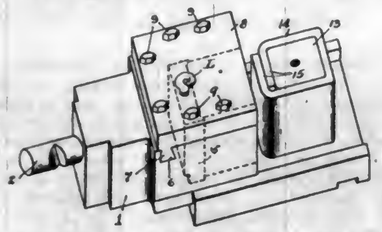
1,661,693. ELECTRIC WATER HEATER. JOHN HENRY EWART, London, England. Filed July 7, 1926, Serial No. 121,026, and in Great Britain Jan. 12, 1926. 4 Claims. (Cl. 219—39.)

1. An electrically heated water-heater comprising a tank, a plurality of upright tubular guides secured to the bottom of the tank and extending within the latter, the said guides being closed at their upper ends and open at their lower ends to the exterior of the tank, heating elements within the tubular guides, each comprising a conductor of resistance wire wound on a former, fixed inverted socket terminals beneath the tank for the supply of current to the heating elements and detachable plug terminals at the lower ends of the heating elements for insertion in the said sockets as the said elements are raised to place them in position in the tubular guides.



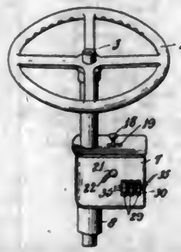
1,661,694. ELECTRIC RESISTANCE FURNACE ADAPTED FOR HEATING BY NITROGENIZATION. ADOLF FRY, Essen-on-the-Ruhr, Germany, assignor to Fried. Krupp Aktiengesellschaft, Essen-on-the-Ruhr, Germany. Filed Aug. 2, 1926, Serial No. 126,650, and in Germany Sept. 4, 1925. 1 Claim. (Cl. 266—1.5.)

In an electric resistance furnace adapted for hardening metals by nitrogenization, a roller system, a nitrogenizing receptacle mounted thereon, and a removable electrically heated casing surrounding said nitrogenizing receptacle and the portion of the roller system which lies within the furnace.



1,661,695. AUTOMATIC SWITCH STAND. WALLACE M. GRAY, Cincinnati, Ohio, assignor to The American Valve and Meter Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 1, 1927. Serial No. 171,899. 7 Claims. (Cl. 246—318.)

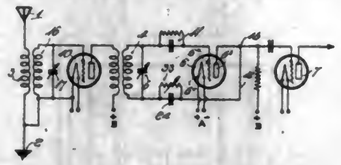
1. An automatic switch stand comprising a switch stand casing, an actuating shaft journaled in said casing and provided with a manually operable lever exteriorly of said casing, a rocker member carried by and pivotally mounted upon said actuating shaft and having a limited movement relative to said actuating shaft, a cam member carried by and movable endwise relative to said actuating shaft and having an engaging face held in resilient engagement with a face carried by said pivotally mounted rocker member, a switch actuating connecting rod movable relative to said casing, and means operatively connecting



said pivotally mounted rocker member with said switch actuating connecting rod, whereby said connecting rod is adapted to be actuated by said pivotally mounted rocker through rotation of said actuating shaft, and said pivotally actuated rocker is adapted to be rocked from one position to another relative to said actuating shaft through actuation of said switch actuating connecting rod by an automatically actuated switch.

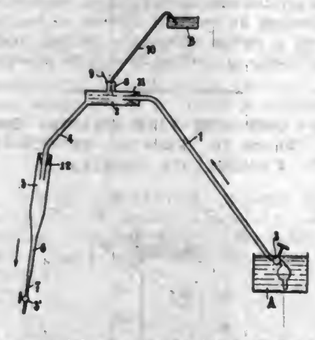
1,661,696. MACHINE FOR MAKING SPRING BANDS AND LIKE ARTICLES. PHILIP T. LAVINDER, Salem, Va. Filed Apr. 3, 1925. Serial No. 20,391. 5 Claims. (Cl. 78—82.)

1. In mechanism for making spring-bands, the combination of a support, a die-post fixed thereto, a header-slide reciprocable relative to said post, forwardly projecting side walls on said slide to embrace said post at both sides, and a crown-block held within said side walls at the rear by undercuts.



1,661,697. STEERING-COLUMN LOCKING DEVICE FOR MOTOR VEHICLES. WILLIAM JOSEPH LILLICRAPP, North Melbourne, Victoria, and DANIEL LESLIE O'SHEA and AUGUSTINE HOGAN, East Brunswick, Victoria, Australia. Filed Feb. 25, 1927, Serial No. 171,024, and in Australia Oct. 15, 1926. 4 Claims. (Cl. 70—90.)

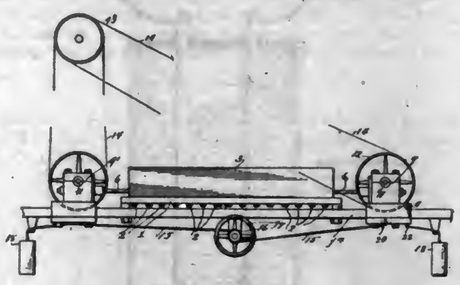
1. A locking means for vehicle steering columns, comprising a casing having a movable wall, a rod controlling



the movement of said wall, permutation locking means for governing the movement of the rod, a latch carried by the casing and terminally formed to interlock with the steering column, means whereby said latch is normally influenced toward an unlocking position, and means carried by the movable wall to hold the latch in locked position when the wall is in a predetermined position.

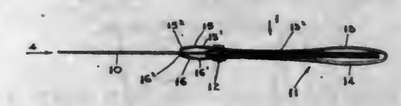
1,661,698. ELECTRON-TUBE CIRCUITS. JOHN L. LUDLOW, Maplewood, N. J. Filed Aug. 31, 1926. Serial No. 132,743. 2 Claims. (Cl. 250—27.)

1. In an electron tube system the combination of an evacuated vessel, grid, filament and plate electrodes in said vessel, input and output circuits interconnecting said electrodes in non-regenerative relation, a source of potential for heating said filament electrode, a source of potential disposed in circuit with said plate electrode for imparting a positive polarity to said plate electrode, said input circuit being substantially independent of said filament electrode with respect to oscillatory currents in said input circuit and having a connection through a resistance with said output circuit to a point adjacent said plate electrode.



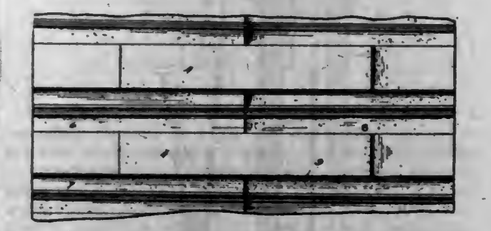
1,661,699. SIPHON. PIERRE MAGNIN, Paris, France. Filed Dec. 11, 1923, Serial No. 680,000, and in France Dec. 21, 1922. 1 Claim. (Cl. 137—20.)

A siphon comprising an intake leg having a stop cock at its lower end, a container into which said intake leg discharges, a discharge leg leading from said container and including at a point intermediate it ends a portion of much greater diameter having an inverted conical lower end and also including an extreme lower end portion of less diameter than said discharge leg and provided with a stop cock, said intake leg extending into said container and having a cone surrounding said extending end, said discharge leg having a portion extending into the upper end of said diametrically enlarged portion and provided at said extending portion with a cone arranged in the upper end of said diametrically enlarged portion.



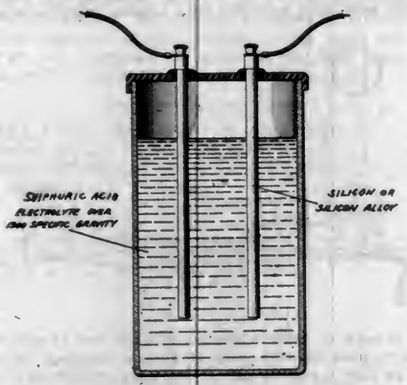
1,661,700. DEVICE FOR DRILLING BRUSH BACKS LONGITUDINALLY. AUGUST MERTES, Lakewood, Ohio. Filed Mar. 5, 1924. Serial No. 697,164. 3 Claims. (Cl. 144—94.)

1. In a device for drilling in a longitudinal direction a brush back, having longitudinal rows of spaced vertical openings therein, a base plate, on which said brush back rests in inverted position, rows of longitudinally and transversely spaced vertical guide pins, projecting from the upper face of the base plate, the pins in each longitudinal row being provided with aligned transverse open-



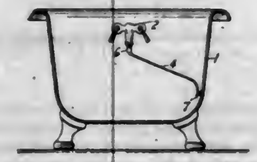
ings, a gang of drills operating at each end of said base plate to pass through said transverse openings in said rows of pins, a head in which each gang of drills is revolvable, means for revolving each gang of drills, and a common source of power for said revolving means.

1,661,701. THICKNESS GAUGE. ROBERT W. MICHLER, Perris, Calif. Filed Aug. 17, 1927. Serial No. 213,539. 5 Claims. (Cl. 33—168.)



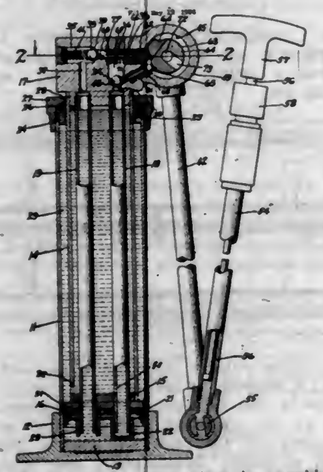
1. A thickness gauge comprising a plurality of gauge blades, a handle therefor consisting of a single flat strip of spring metal bent upon itself forming two sections connected at one end, a bolt spaced from the free ends of said sections, passing through said handle and said blades, the free ends of said sections beyond said bolt being bent outwardly, with their extreme outer ends converging to form a pair of spring clamp members for holding any of said blades in operative position, the outer edges of said clamp members being convex in outline and tending to contact with each other at their middle points only, said sections being provided with oppositely arranged cut out portions and being bent inwardly to yieldingly clamp the blades between said sections.

1,661,702. TRACK-BED CONSTRUCTION AND ARRANGEMENT. GEORGE W. MULLER, Washington, D. C. Filed Dec. 1, 1926. Serial No. 151,902. 46 Claims. (Cl. 238—30.)



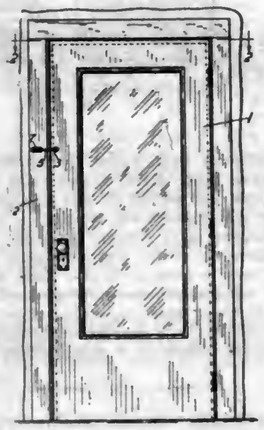
3. In a railway track construction, a track support comprising a plurality of members constructed to be arranged side by side, each member being narrower at one end than at the other end whereby either straight or curved portions of the track bed may be formed, and under-rails extending longitudinally and spaced apart beneath the said members.

1,661,703. ELECTROLYTIC RECTIFIER. CLARENCE E. OGDEN, Cincinnati, Ohio, assignor to The Kodel Radio Corporation, a Corporation of Ohio. Filed Aug. 6, 1926. Serial No. 127,707. 1 Claim. (Cl. 175—318.)



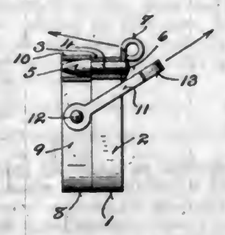
In an electrolytic rectifier, in combination with an electrode containing silicon, an acid electrolyte comprising sulphuric acid of from 1300 to substantially 1700 specific gravity.

1,661,704. WATER SILENCER. JESSE A. OSBORNE, Akron, Ohio. Filed May 25, 1927. Serial No. 194,025. 5 Claims. (Cl. 137—111.)



5. In a device for silencing water flowing into tubs or the like having an elevated faucet, a rubber tube having a restricted end to be forced over the faucet and a discharge opening at its lower end, and a rubber suction cup secured to the exterior of the tube and adapted to hold the discharge end thereof adjacent a surface of the tub.

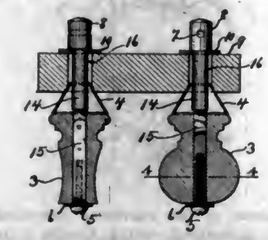
1,661,705. LIFTING JACK. TIMOTHY C. POMEROY, Minneapolis, Minn. Filed May 19, 1926. Serial No. 110,177. 5 Claims. (Cl. 158—9.)



1. A hydraulic jack comprising in combination, a cylinder, a hollow plunger movable therein, a lifting head on the plunger, a plug valve in said lifting head having a pump means connected therewith, fluid passages in the head, one communicating with the cylinder and the other with the plunger, check valves in said passages, and means operable by said plug valve to open and retain said check valves in open position to permit the return of the fluid to the plunger without passing through said plug valve.

1,661,706. DOORCHECK. EARL C. SCHOBERT and FRANK G. MORRISON, Akron, Ohio. Filed Aug. 24, 1926. Serial No. 131,202. 2 Claims. (Cl. 292—272.)

1. In a door check, a slotted keeper having a channel therein, a pivoted arm having a head receivable into the channel through an enlarged opening at one end of the keeper, and a spring within the channel having an S-shaped extremity projecting through the enlarged opening.

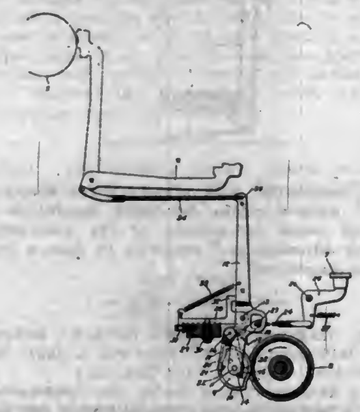


1,661,707. CLIP FOR TIRE CHAINS. BERTRAM A. SMALL, Chicago, Ill. Filed Nov. 13, 1926. Serial No. 148,297. 2 Claims. (Cl. 152—14.)

1. A pair of tire chain clips adapted to be positioned with the ends of the chains crossing, said clips each comprising arched arms adapted to grip the tire and terminating in eyelets, connecting pins having shanks securely held within the eyelets of one clip, and having rounded tapered heads positioned within the eyelets of the other clip.

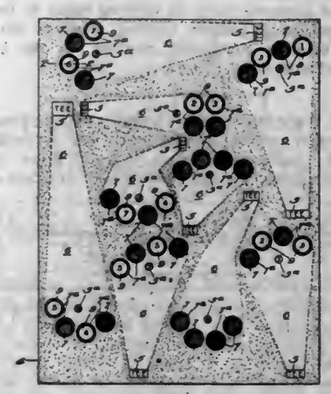
1,661,708. TUNING KEY FOR STRING INSTRUMENTS. THEODORE H. STARK, New York, N. Y., assignor to C. Bruno & Son, Inc., New York, N. Y., a Corporation of New York. Filed May 18, 1926. Serial No. 109,831. 1 Claim. (Cl. 84—305.)

In combination with a musical string instrument having a head piece provided with a bore adapted to receive a key, a key located in said bore and having a first end portion projecting beyond the upper face of the head piece of the said instrument, the second end portion of the said key projecting beyond the lower face of said head piece and having an internally threaded recess in the bottom thereof, a finger-piece for said key having a bore and slidably mounted upon said second end portion of the said key, the top of the said finger-piece being located below the bottom of said head piece, a hollow and bendable friction cone slidably mounted upon the



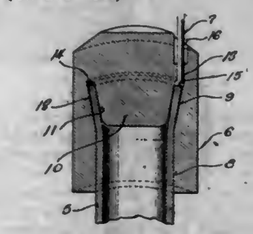
said key, the bottom of the said friction cone abutting the top of the said finger-piece, the top of the said friction cone projecting into the bore of the head piece and being located below the top of the said bore, the said cone having a portion thereof abutting the inner wall of said bore, and a tightening screw having a head located at the underside of the said finger piece, the shank of the said screw being located in said internally threaded recess.

1,661,709. VENTILATING SUNSHADE. WILLIAM J. TATE, Flint, Mich. Filed Apr. 30, 1927. Serial No. 187,813. 1 Claim. (Cl. 156—17.)



In a ventilating sun shade of the class described a plurality of lazy tongs; a plate mounted on alternate similarly directed links of said tongs, the central portion of said plate being twisted to extend perpendicularly to the link; and a sun shade mounted on said perpendicularly extended portion.

1,661,710. POWER MECHANISM. RUSSELL G. THOMPSON, Rochester, N. Y., assignor, by mesne assignments, to North East Appliances Inc., a Corporation of New York. Filed Jan. 5, 1925. Serial No. 727. 3 Claims. (Cl. 197—17.)



1. Power mechanism, for a typewriter or the like, comprising: a constantly rotary power roller; a power lever; a cam carried by the power lever and cooperable with the power roller; a bearing-member, on which the power lever is pivoted, provided with a stop cooperating with the power lever to determine its normal inactive position; a spring, connecting the power lever and the bearing-member, tending to swing the power lever in the direction of said stop; connections, between the power lever and the part of the machine which is to be actuated, having provision for lost motion; and means for turning the cam into engagement with the power roller.

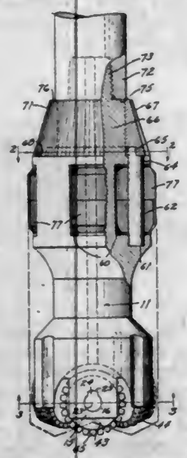
1,661,711. GAME. HOWARD A. VAUGHAN, Chicago, Ill. Filed Aug. 5, 1927. Serial No. 210,735. 6 Claims. (Cl. 273—87.)

1. In a game device, the combination of a board having a series of places thereon, each for a plurality of tokens, and a sufficient number of differently numbered tokens indicating strokes, for consecutive placement in the entire series of places so the number of strokes for a series of plays by each player can be aggregated from the tokens on the board.

1,661,712. ELECTRICAL APPLIANCE. PAUL VAN WAGNER, New York, N. Y., assignor to Line Material Co., South Milwaukee, Wis., a Corporation of Wisconsin. Filed July 31, 1924. Serial No. 729,318. 5 Claims. (Cl. 173—31.)

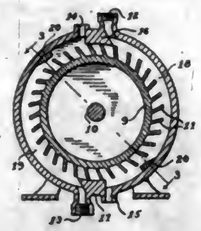
2. A device of the character described, comprising a cap member having its under face bored, the inner end of the bore being taperingly enlarged, and said cap having an opening in its upper portion communicating with the upper end of said bore; a ground rod of a normal diameter substantially equal to the minimum diameter of said bore, a conductor adapted to have one end passed into the taperingly enlarged end of said bore through the opening in the cap member, said cap member being adapted to be forced on the upper end of the rod, and means within said bore for swelling the upper end of the ground rod as the cap member is pressed thereover to rigidly secure the cap member thereon and press the end of the conductor in the tapered bore into electrical connection therewith.

1,661,713. DENTAL DEVICE. HORACE E. BARKER, Brooklyn, N. Y. Filed Jan. 15, 1927. Serial No. 161,257. 6 Claims. (Cl. 15—188.)



1. A dental device comprising a tubular body of soft resilient material divided longitudinally through one side thereof and serrated along its meeting edges to form two opposing series of arcuate rubbing members which are normally held in contracted position by the inherent elasticity of said body.

1,661,714. METHOD OF AND APPARATUS FOR MANUFACTURING SCREEN-FRAME STOCK. ARTHUR T. BRENNAN, Detroit, Mich. Filed Nov. 4, 1926. Serial No. 146,101. 14 Claims. (Cl. 144—2.)

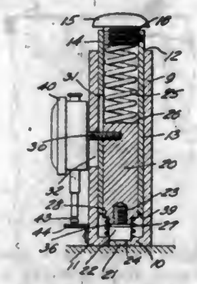


1. In a machine for manufacturing screen-frame stock; angularly arranged saws adapted to separate a longitudinal strip, substantially rectangular in cross section, out of one corner of a piece of frame stock; means adapted to spread said strip, as it leaves the saws, away from the body of the piece of frame stock; a saw arranged to travel in the opening produced by such spreading of the strip to cut a kerf in the bottom of the shoulder formed by the removal of the strip, which kerf is spaced from the side wall of said shoulder; and means engaging the strip beyond said saw to move the same into position upon said shoulder over said kerf.

1,661,715. ROTARY BIT. ANTHONY E. CARLSON, Los Angeles, Calif. Filed May 18, 1927. Serial No. 192,225. 11 Claims. (Cl. 255—71.)

9. A bit for drilling wells, comprising: a body; a primary shaft carried by said body; a secondary shaft carried by said body; a key carried by one of said shafts adapted to engage in a notch of the other of said shafts for locking said secondary shaft to said body; cutters carried by said shafts; and means for locking said primary shaft to said body.

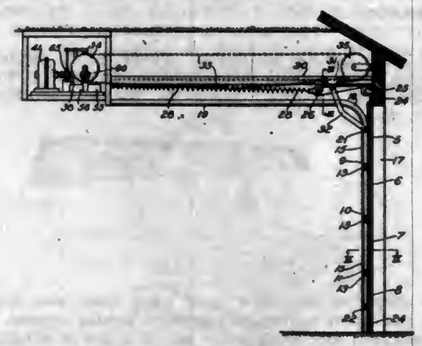
1,661,716. FLUID TURBINE. JOHN ALBERT CHOQUETTE, Ottawa, Ontario, Canada. Filed Nov. 7, 1924. Serial No. 748,404. 4 Claims. (Cl. 253—140.)



1. In a turbine of the character described, the combination of a cylindrical casing having a pair of diametrically opposed fluid discharge ports, a pair of diametrically opposed fluid inlet ports provided closely adjacent said discharge ports, inwardly extending projections between each adjacent pair of inlet and discharge ports; and a rotor housed within said casing, said inwardly extending projections being in substantially fluid tight contact with or proximity to said rotor, and circumferentially adjustable means for restricting the space between the vanes of the rotor and the casing at a point between said projections.

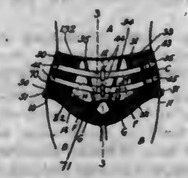
1,661,717. RAILWAY CAR. ANDREW CHRISTIANSON, Butler, Pa., assignor to Standard Steel Car Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 20, 1926. Serial No. 142,920. 9 Claims. (Cl. 189—75.)

1. The combination with a railway car having side posts, of window guides detachably secured to said posts, and means independent of the guide-securing means, for adjusting said guides to fit window frames of various dimensions.



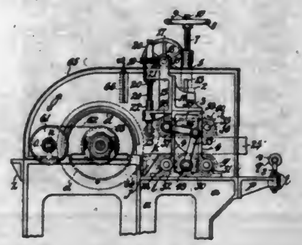
1,661,718. HARDNESS-TESTING DEVICE. DONALD C. DAVIS, Williamsville, N. Y. Filed Feb. 2, 1927. Serial No. 165,408. 8 Claims. (Cl. 265—12.)

1. In a hardness testing device, the combination of a casing, a plunger slidably arranged therein and having a test member adapted to be pressed against a sample, an operating member extending into said casing and slidable relatively thereto and to said plunger, a yielding measuring element of known capacity in said casing and disposed between said operating member and said plunger and which is compressible by movement of said operating member in one direction to move said plunger



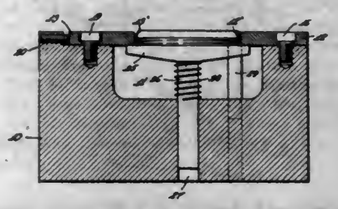
and press said test member into said sample, and positive stop means for arresting the travel of said operating member when the same has been moved a predetermined distance so as to apply a definite compression to said measuring element.

1,661,719. DOOR MECHANISM. ROY M. EDWARDS and JULIUS P. POSCHEN, Pittsburgh, Pa. Filed Aug. 13, 1927. Serial No. 212,622. 6 Claims. (Cl. 268—59.)



1. The combination comprising a closure member having hinged panels, guide rollers attached to the ends of the panels, a track for said guide rollers, said track having a central curved portion and two substantially straight ends corresponding to the open and closed positions of said closure member, respectively, a substantially straight runway disposed substantially parallel to but offset from the straight end of the track in which said closure member is in its open position, a carriage movably mounted on said runway, and inclined link connecting said carriage to one of the panels of said closure member, and independent means for moving said carriage along its runway.

1,661,720. ABDOMINAL BAND. MARIE ALIDA FONTAINE, Manchester, N. H. Filed Nov. 23, 1925. Serial No. 70,784. 2 Claims. (Cl. 2—41.)

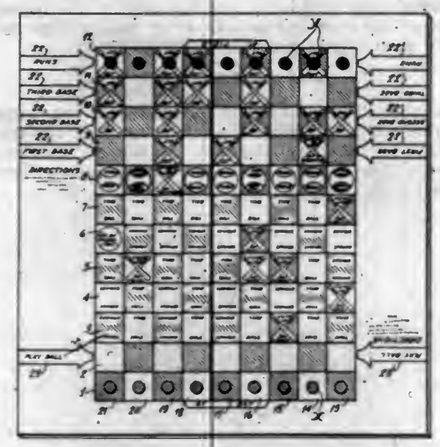


1. In an abdominal supporter, the combination of a knitted band adapted to go around the body and to be tightened and fastened and having a non-elastic flexible front portion reinforced with vertical strips of featherbone adapted to fit the front of the abdomen; with leg straps of knitted material attached to the bottom of the band; and triangular supporting pieces of soft material each fastened at its top edge to the bottom edge of the front portion and at its bottom edge fastened partly across the adjoining leg strap.

1,661,721. APPARATUS FOR GRINDING OR COMMINUTING RUBBER AND OTHER MATERIALS. CHARLES EDWARD GARDNER, Gloucester, England. Filed May 7, 1927, Serial No. 189,654, and in Great Britain Feb. 19, 1926. 11 Claims. (Cl. 83—6.)

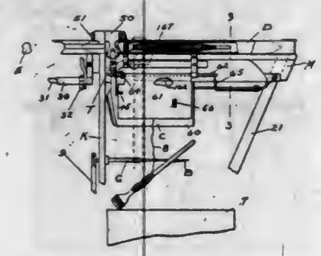
1. Apparatus for grinding india rubber and other materials comprising a framework, a rotary abrading drum, a feed table, a plurality of feed rollers associated with said feed table, a plurality of elastically mounted feed rollers disposed in a plane substantially parallel with and above said feed table, means for vertically adjusting the last mentioned feed rollers, and means for positively driving all of said feed rollers.

1,661,722. GAUGE. BENGT M. W. HANSON, Hartford, Conn.; Einar A. Hanson and Clarence E. Whitney, executors of said Bengt M. W. Hanson, deceased. Filed June 17, 1925. Serial No. 37,852. 6 Claims. (Cl. 33—199.)



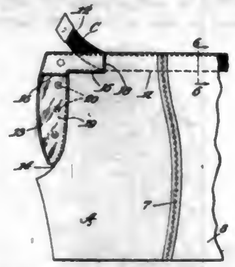
1. A gauge comprising opposed gauging members one at least of which has a plurality of spaced apart gauging teeth, a support for holding the pieces while moving the same into engagement with and between said gauging members, said support being mounted for movement in the direction in which said teeth are spaced apart, and means for urging said support towards said gauging members.

1,661,723. GAME. SAMUEL A. HELFGOTT, Brooklyn, N. Y. Filed Aug. 6, 1927. Serial No. 211,057. 9 Claims. (Cl. 273—131.)



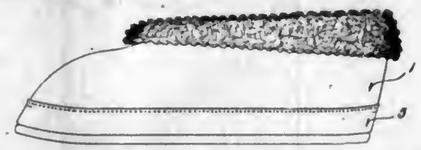
1. A baseball game board, a portion of the face of which is divided into squares of alternately different colors there being nine rows of squares extending longitudinally of the board and upwardly of nine rows of squares extending transversely of the board, the transverse row of squares at one end of the board being suitably marked to designate men at bat and the transverse row at the opposite end of the board being suitably marked to designate men at field, legends for suit-

ably marking transverse rows near the at field end of the board with designations appropriate to first, second and third base, award legends on certain squares and



penalty legends on certain other squares, in combination with checks adapted to be placed on and moved over the squares of the board.

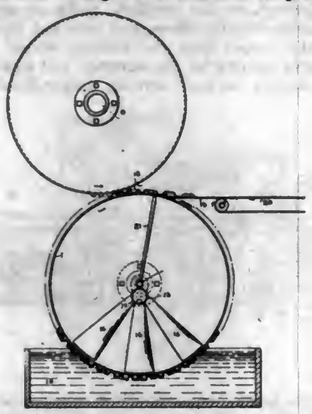
1,661,724. BOBBIN-STRIPPER TRAP. JOHN J. HENDERSON, Dracut, and HOWARD C. DEERING, Malden, Mass.; Anna I. Henderson, administratrix of said John J. Henderson, deceased, assignors to Automatic Bobbin Cleaner Co., Boston, Mass., a Corporation of Massachusetts. Filed Apr. 30, 1925. Serial No. 26,900. 9 Claims. (Cl. 139—262.)



1. The combination with a weft replenishing loom having a frame, a change shaft sleeve, bobbin changing mechanism, a lay beam with a bobbin passage, and a picker stick which enters said passage; of a trap positioned under said bobbin passage comprising a fixed sheet metal jaw extending down from a point on one side of said passage in front of the forward position of the picker stick in said passage; and a movable sheet metal jaw having a padded lower edge cooperating therewith pivoted to the lay beam at the other side of said passage; a spring arm adjustably fixed to the movable jaw; a trap spring adjustably connecting the spring arm with the lay beam frame whereby the padded lower edge of the movable jaw is normally kept in engagement with the fixed jaw; an opening arm extending towards the breast beam, fixed to the movable jaw and pivotal therewith; a bobbin changing lever carried by the change shaft sleeve; a short shaft revolvible in bearings carried by the loom frame; a short arm carried thereby and pivoted to the bobbin changing lever; an arm guide carried by the other end of the short shaft; and a yarn winding member positioned proximate the path of the discharged bobbin.

1,661,725. BATHING GARMENT. NATHAN JENKINS, Chicago, Ill. Filed June 10, 1927. Serial No. 197,803. 5 Claims. (Cl. 2—238.)

2. A garment which consists of a plurality of united fabric sections forming trunks having a vertical opening, a belt adjacent the waist line of the trunks having a continuous connection therewith except in the region immediately adjacent said opening, the sections forming the garment being cut to provide a tab adjacent the waist line which is folded in coincidence therewith to provide a double thickness of the material, a line of stitching extending transversely across the belt for securing the same to the waist line at the point where the belt free ends commence, said stitching passing also through the turned over tabs to secure the same in place, substantially as described.

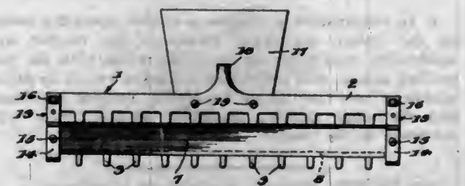


1,661,726. HOUSE SLIPPER. PETER S. B. JENSEN, Berlin, Wis., assignor to Berlin Glove Co., Berlin, Wis. Filed Aug. 25, 1926. Serial No. 131,386. 1 Claim. (Cl. 36—9.)

A slipper comprising a fleece lined upper and inner sole, said upper having an outturned portion secured to the marginal edge of the inner sole by a line of stitching and forming an outturned seam, an outer sole having an inturned portion, a vamp strip having an inturned portion positioned above the inturned portion of the outer sole, a line of stitching joining the inturned portions of the vamp strip and outer sole and forming an inturned seam spaced upwardly from the outer sole, the inner sole and the lower portion of the upper being surrounded by the outer sole and vamp strip with the outwardly projecting seam fitted beneath the inwardly projecting seam, and a line of stitching joining the vamp strip to the upper.

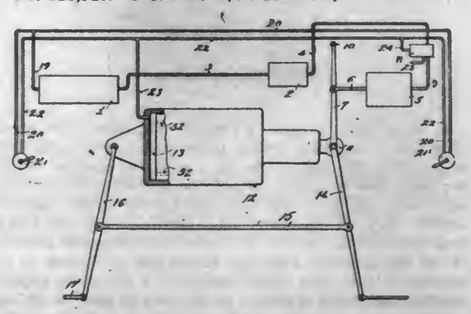
1,661,727. METHOD AND APPARATUS FOR MAKING PACKING FOR FRAGILE ARTICLES. MORRIS KOPPELMAN and SIMON COOPER, Brooklyn, N. Y., assignors, by direct and mesne assignments, to Moulded Pulp Devices, Incorporated, a Corporation of Maryland. Filed Apr. 15, 1922. Serial No. 553,139. 9 Claims. (Cl. 92—42.)

1. The method or process of making packing units for globular fragile articles, comprising flat portions with hollow members projecting therefrom in truncated conical form, with depressed middle portions adapted to receive the globular article at its inner upper edges, which consists in taking a form of foraminous material, producing suction on one side thereof, immersing the form in a liquid having fibrous material floating therein, thereby causing the liquid to be drawn through the foraminous form and to deposit the fibrous material thereon, then removing the form from the liquid with the coating of fibrous material thereon, pressing a die corresponding in contour to the form against the exterior of the said coating, then removing the die and then progressively



applying jets of air or the like under pressure to the side of the form to which the suction is applied and thereby removing the formed coating therefrom.

1,661,728. BOX OR RECEPTACLE FOR HOLDING SMALL ARTICLES. WILLIAM D. LA RUE, Philadelphia, Pa., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed July 11, 1921. Serial No. 483,723. 3 Claims. (Cl. 220—20.)

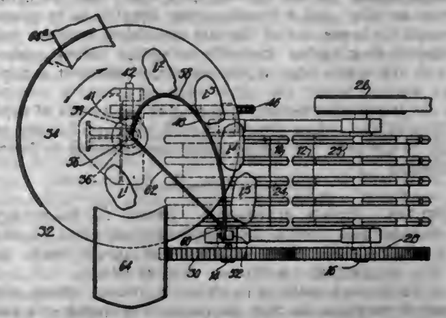


1. A container for small articles comprising a box, a removable tray retained within said box by the friction between the ends thereof and the walls of said box, means to definitely position said tray within said box and to assist in holding it from sliding within said box, a wall of said tray dividing the opening into said box into two equal parts, and a swinging member hinged to the top edge of said wall of said tray and adapted to be swung to cover either part of said opening.

1,661,729. GARDENING IMPLEMENT. ELEFTERIOS S. LEONARDOS, Shreveport, La. Filed May 31, 1927. Serial No. 195,498. 4 Claims. (Cl. 55—10.)

1. An implement including in combination with a rake, spaced brackets on portions of the rake head having the free portions thereof angularly disposed with relation to the rake tines and bent into substantially V-shaped formation, the body portions of said brackets being shaped to correspond to the shaping of said rake tines and disposed coincidentally therewith, and a cutting blade secured to said free portions transversely of said tines and so positioned as to shearingly cut matter engaged thereby with drawing of the rake over a surface.

1,661,730. AIR-BRAKE RELEASE. JOHN S. MCWHIRTER, New York, N. Y. Filed Aug. 4, 1926. Serial No. 126,949. 8 Claims. (Cl. 303—71.)



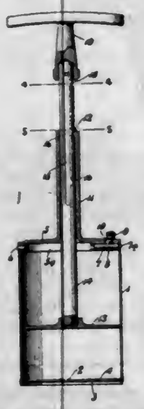
1. In a brake release mechanism the combination with pneumatic air brake applying means including a piston of means interconnected with said brake applying means for releasing the brakes when the brake applying means is deenergized, said interconnected means being mechanically fastened to the piston of said pneumatic means.

1,661,731. PROCESS FOR RECLAIMING USED LUBRICATING AND INSULATING OILS. ARCHIBALD F. MESTON, Poughkeepsie, N. Y., assignor to The De Laval Separator Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 23, 1925. Serial No. 17,801. 5 Claims. (Cl. 196—16.)

4. The process of reclaiming used oil, which comprises heating the oil to a temperature of from 150° F. to 200° F. and mixing with a solution of trisodium phosphate, subjecting the oil to a plurality of operations each of which comprises centrifuging to separate oil from the trisodium phosphate solution and agglomerated impurities, and after one and before another of said separating operations cooling the oil to a temperature of from 120° F. to 140° F., and then mixing the oil with more than one and less than four per cent activated earth and centrifuging the oil to remove suspended earth and impurities that have not been removed in the preceding operations.

1,661,732. FEEDER FOR BREAKERS. FRANK PARDEE, Hazleton, Pa. Original application filed Mar. 21, 1924, Serial No. 700,749. Divided and this application filed Jan. 6, 1925. Serial No. 824. 6 Claims. (Cl. 83—52.)

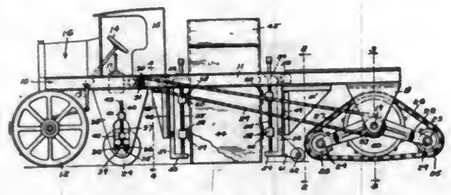
1. In combination with a breaker a moving carrier above the breaker for feeding lumps thereto and a sta-



tionary blade in juxtaposition to said carrier for orienting the lumps fed thereby so that each lump falls from said carrier with its greatest length extending in a determined direction.

1,661,733. SWITCH-POINT PROTECTOR. JAMES CLARENCE PATTERSON, East Orange, and JAMES HENRY LYNCH, Jr., Jersey City, N. J. Filed May 23, 1925. Serial No. 32,238. 4 Claims. (Cl. 246—435.)

1. A railway switch structure including the main rails and a movable switch point operatively associated with one of the main rails, of a protector member therefor positioned at the inner side of the other or opposite rail, said protector member having its upper portion formed with an upwardly and longitudinally extending deflecting flange having its outwardly directed surface at its end portions inwardly flared and positioned to be engaged by the inner flange surface of a wheel for deflecting the associated wheel to clear the end portion of the switch point and having its lower portion correspondingly formed to be reversible and means for securing the protector member in position.

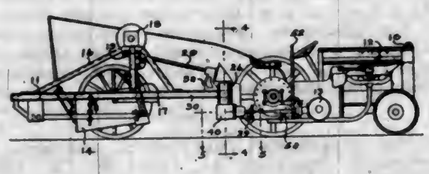


1,661,734. ICE-CREAM DISPENSER. PETER D. PEARCE, Grand Rapids, Mich. Filed Jan. 16, 1926. Serial No. 81,613. 3 Claims. (Cl. 107—48.)

3. A device of the class described comprising, a cylindrical member adapted to be forced into a body of ice cream, means for forcing the ice cream from the cylindrical member, and a coupling ring adapted to be placed around the lower end of the said cylindrical member, said coupling ring having inwardly extending ledges against which the lower edge of the cylindrical member engages and against which the upper edge of a carton engages at the lower side thereof, said ring at the points of separation of the ledges providing vent passages for the escape of air from the carton when the ice cream is forced thereinto.

1,661,735. ROAD MACHINE. CYRUS C. PERSONETT, Muncie, Ind.; Nelle Personett administratrix of said Cyrus C. Personett, deceased. Filed Apr. 7, 1927. Serial No. 181,742. 4 Claims. (Cl. 94—46.)

1. In a road building machine, a frame, wheels supporting the frame so that the frame is arranged at a substantial elevation above the roadway, a hopper having its top and bottom open and positioned within the frame and extending transversely throughout the major portion of the width of the frame, said hopper extending below the frame for a substantial distance so that its outlet end is adjacent to the roadbed, pairs of uprights detachably secured to the frame and arranged upon opposite sides of the hopper near the corners thereof, adjusting screws bodily carried by the uprights and rotatable with relation thereto without moving longitudinally of the

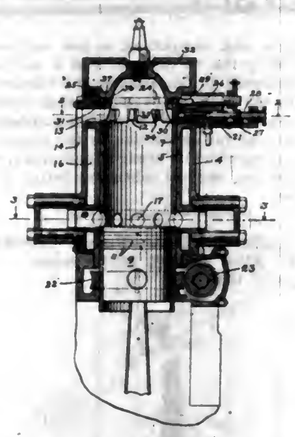


same, blocks having screw-threaded engagement with the adjusting screws, and means connecting the blocks with the hopper near the corners thereof, the adjusting screws being independently rotatable whereby the hopper may be raised or lowered and also angularly adjusted, the uprights, adjusting screws and hopper when assembled as a unit being adapted as such to be removed from within the frame.

1,661,736. PROCESS FOR REDUCING THE VISCOSITY OF NITROCELLULOSIC MATERIALS. CHAUNCEY U. PRACHEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 27, 1925. Serial No. 12,181. 14 Claims. (Cl. 260—148.)

1. The process of treating solid colloidized nitrocellulosic materials, which comprises acting at atmospheric pressure on them with an aqueous mixed mineral acid solution containing nitric acid until the viscosity characteristics of the nitrocellulose are lowered, said solution being of insufficient strength to increase the nitration of the nitrocellulose.

1,661,737. TRACTOR TRAILER CONNECTION. PHILIP RAIMER, Maple Heights, Ohio. Filed Aug. 17, 1925. Serial No. 50,650. 3 Claims. (Cl. 180—53.)

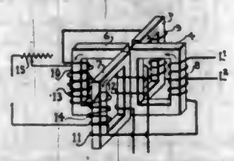


1. In combination, a tractor, a trailer, operating means on the trailer, controlling means on the tractor, and mechanism connecting the operating means with the controlling means, said mechanism including two inter-fitting members, one functioning to permit vertical movement and the other twisting movement of the trailer with reference to the tractor.

1,661,738. INTERNAL-COMBUSTION ENGINE. JOHN A. RYMER, Alameda, Calif. Filed Jan. 29, 1924. Serial No. 689,358. 5 Claims. (Cl. 123—65.)

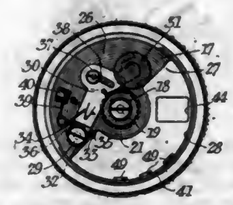
1. In an internal combustion engine, a cylinder mounted for rotation about its axis and having a bore, a piston

mounted for reciprocation in said bore, an air intake passage adjacent the head end of the cylinder, an exhaust passage adjacent the other end of said cylinder, ports in said cylinder adjacent the head and opposite ends thereof respectively arranged to intermittently and continuously



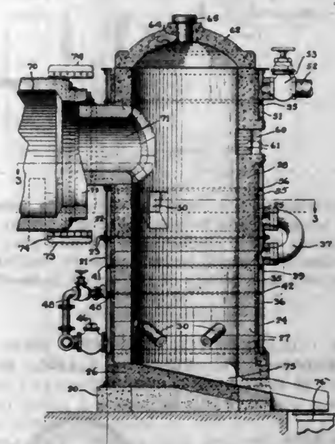
register with said passages during the rotation of said cylinder, means operative to inject fuel into said bore when said head-end ports are not registering with said air inlet passage, and fuel igniting means associated with said cylinder.

1,661,739. BUILDING BLOCK. JOHANNES T. SENTROP, Grand Rapids, Mich. Filed June 10, 1926. Serial No. 115,025. 2 Claims. (Cl. 72—41.)



1. An approximately rectangular building block having at its side a longitudinally-extending shoulder spaced below its upper surface and a longitudinally-extending groove spaced inwardly from said shoulder and adapted to receive a reinforcing rod, the block also having at its bottom a longitudinally-extending side flange adapted to seat on such a shoulder of a block beneath.

1,661,740. APPARATUS FOR EFFECTING ENERGIZATION CONTROL OF AN ELECTRIC CIRCUIT. ERWIN R. STOEKLE, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Aug. 13, 1921. Serial No. 492,198. 5 Claims. (Cl. 171—119.)

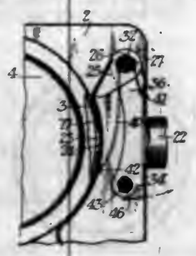


1. A transformer comprising a magnetic structure having primary and secondary coils so associated therewith that the joint inductive effect of the former with reference to the latter is normally substantially zero, and separately excited means inductively related to said coils for imparting a material value to said effect.

1,661,741. SPEED CONTROL FOR MOTION-PICTURE APPARATUS. PHILIP W. TIERNEY, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Jan. 3, 1925. Serial No. 425. 12 Claims. (Cl. 88—19.4.)

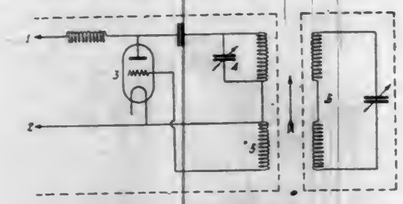
1. In motion picture apparatus, motor driven mechanism including a rotatable shutter, and a speed operated governor carried by said shutter and operative on said mechanism to control the speed of said mechanism.

1,661,742. REDUCING AND SMELTING FURNACE. ADOLPH W. WAERN, Ontonagon, Mich., assignor to Pine-Waste Products, Inc., New York, N. Y., a Corporation of Delaware. Filed Dec. 19, 1923. Serial No. 681,592. 4 Claims. (Cl. 263—46.)



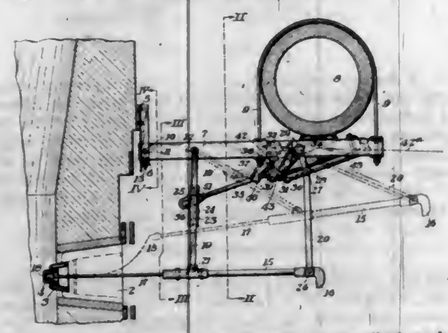
1. A furnace comprising a shell having inner and outer walls, the walls being spaced from each other, air directing baffles between said spaced walls, a lining within the shell and spaced from the inner wall thereof, compressible material between said lining and said inner wall, an air nozzle extending into the furnace and means for forcing air through the space between the walls of the shell, around said baffles and through said air nozzles.

1,661,743. MOTION-PICTURE PROJECTOR. OTTO WITTEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Feb. 20, 1925. Serial No. 10,508. 12 Claims. (Cl. 88—17.)



1. In motion picture apparatus, a frame, an exposure gate comprising a guide and a presser member between which film may be drawn, an objective support, a common support upon which both said presser member and objective support are separately pivotally supported and means for adjusting said pivotal support longitudinally of the gate.

3. In motion picture apparatus, an exposure gate comprising correspondingly longitudinally bowed guide and presser members, the presser member being resiliently

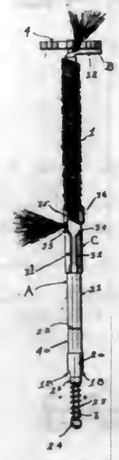


pressed toward said guide member, means for adjusting said presser member longitudinally of said guide and permitting it to follow the curvature thereof when so adjusted.

1,661,744. METHOD AND ARRANGEMENT FOR TRANSFERRING SIGNALS BETWEEN MOVING VEHICLES AND ROADBEDS. WALTER WURST, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H., Berlin, Germany, a Corporation of Germany. Filed Aug. 9, 1924, Serial No. 731,036, and in Germany Sept. 8, 1923. 5 Claims. (Cl. 246—63.)

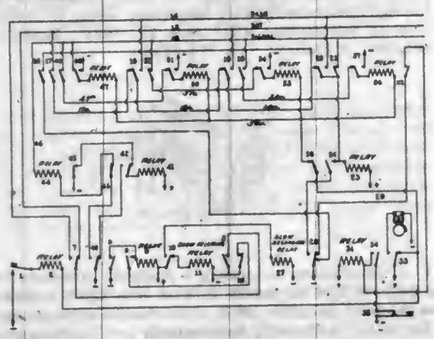
1. In combination, a regenerative vacuum tube circuit having a loose coupling between input and output circuits, and means for closely coupling said circuits when brought into effective relationship thereto, whereby oscillations are developed and the stability of the circuit is modified.

1,661,745. CINDER-NOTCH STOPPER. EDGAR E. BROSIUS, Pittsburgh, Pa. Filed Dec. 9, 1925. Serial No. 74,385. 22 Claims. (Cl. 266—42.)



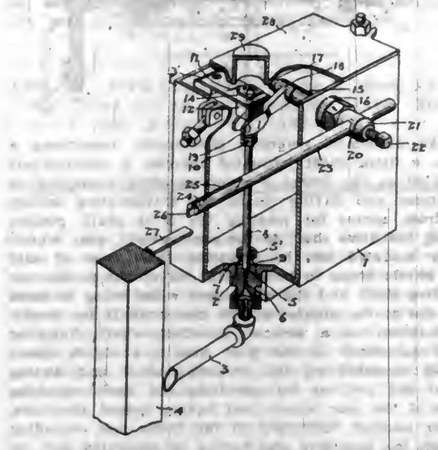
1. In an apparatus of the character described, a botting arm, supporting means for the front end of said arm, a compound link support for the rear end of said arm, and means for changing the relative relationship of the parts of said compound link support about pivotal axes only during backward movement of said arm for changing the path of travel of the rear end of said arm to effect movement of the front end in a substantially horizontal plane.

1,661,746. WRITING PEN. EDWIN CALDWELL, New York, N. Y. Filed Jan. 29, 1923. Serial No. 615,489. 7 Claims. (Cl. 120—48.)



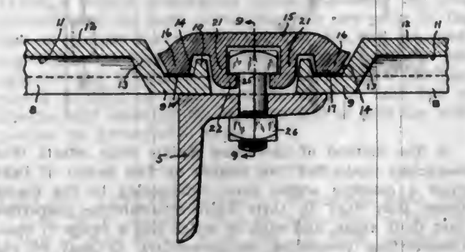
1. A fountain pen comprising a pen support having means for feeding ink to the pen, and a tubular handle detachably connected to the support and adapted to communicate with the said means for feeding contained ink to the pen when it is attached to the support, said handle, at the end adapted for connection to the support, having a self-closing valve which is engaged and operated to open position by the pen support when the latter is attached to the handle.

1,661,747. HAIR CURLER. FRANK CAPDEVILA, New York, N. Y. Filed Feb. 28, 1927. Serial No. 171,495. 5 Claims. (Cl. 132—33.)



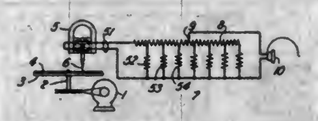
1. A hair curler comprising three concentric shafts, the outer two of which are tubular; a two-part gripper fixed to the distal ends of two of said shafts and operable independently of the other of said shafts; the outermost shaft being positioned between the other shafts and the hair; and a winder clip riding upon the said outermost tubular shaft and being frictionally gripped thereto.

1,661,748. CALL SELECTOR. LOUIS L. CHAUVEAU, Paris, France. Filed Jan. 8, 1923, Serial No. 611,537, and in France Jan. 17, 1922. 12 Claims. (Cl. 177—353.)



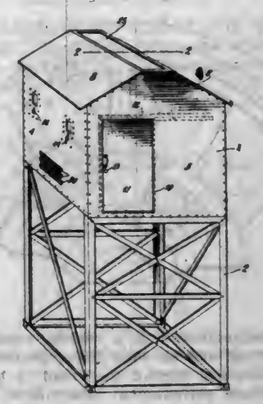
11. In a call selector for indicating the reception of certain desired predetermined signal impulses, in combination, means responsive to received signal impulses, a series of relays associated with the signal responsive means equal in number to the total number of desired signal impulses, means for consecutively energizing each of said relays upon the reception of desired signal impulses in sequence, a call circuit, and means actuated by the last relay for closing the call circuit.

1,661,749. LUBRICATING DEVICE. FRANCIS C. DAVIS, Toronto, Ontario, Canada. Filed Jan. 7, 1926. Serial No. 79,805. 3 Claims. (Cl. 184—21.)



1. A lubricating device, comprising a receptacle having a discharge opening at the bottom and a valve seat in said opening, a valve rod closing against said valve seat and slidably supported in rigid guides and adapted to close said seat against the passage of oil, a pivotal arm within the receptacle operatively connected with said valve, a rod outside of the receptacle connected with said pivotal arm and adapted through the action of gravity thereon to normally effect the closing of said valve, and means adapted to periodically engage said outside rod to tilt the same to actuate said pivotal arm and open the valve connected therewith.

1,661,750. ASH HOPPER. FRANK H. DUNBAR, Cleveland, Ohio. Filed Dec. 8, 1924. Serial No. 754,564. 10 Claims. (Cl. 72—19.)

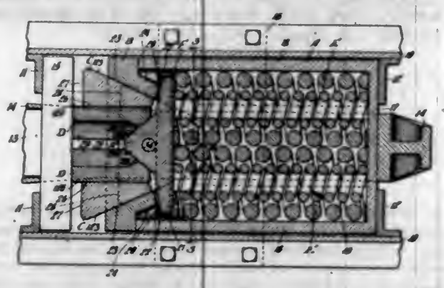


1. The combination of wall plates having recessed side edges, upright supporting bars, clamping bars having projections fitting into the recesses of adjacent wall plates to form liquid tight closures, said clamping bars having imperforated inner surfaces and having on their outer surfaces projections to receive means to secure them adjustably to said supporting bars and having their ends rabbeted so that adjacent clamping bars will cooperate with each other to form substantially liquid-tight joints.

1,661,751. ACOUSTICAL APPARATUS. HARVEY FLETCHER, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Nov. 26, 1924. Serial No 752,323. 15 Claims. (Cl. 179—100.1.)

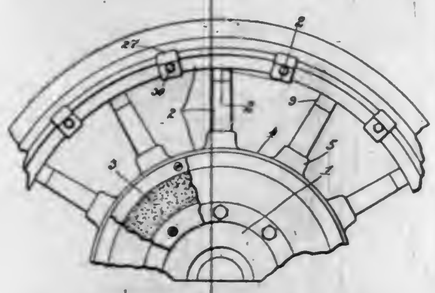
1. The combination of a phonographic record having recorded thereon a series of separate sounds of substantially uniform intensity, means for translating said sound record into electric currents, means for regulating each current to a definite value which differs from the preceding current by an accurately predetermined amount, and means for translating said regulated currents into sounds of corresponding intensities.

1,661,752. BURGLAR PROTECTION. HARRY FRANK, Brooklyn, N. Y. Filed Nov. 10, 1926. Serial No 147,451. 3 Claims. (Cl. 89—36.)



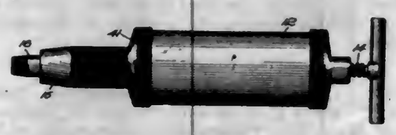
1. An assembly of the character described embodying an enclosure having bullet proof walls provided with openings through which a weapon may be projected, a slide mounted for sliding movement on the interior of the enclosure adjacent each opening and provided with an opening adapted to be moved into registration with the opening of the enclosure, automatic means for normally moving the slide into a position wherein the openings of the enclosure and slide are out of registration, and a transparent bullet proof window positioned above each opening of the enclosure whereby the persons to be fired upon may be observed without exposing the occupant of the enclosure to attack.

1,661,753. FRICTION SHOCK-ABSORBING MECHANISM. STACY B. HASELTINE, Chicago, Ill., assignor to W. H. Miner, Inc., Chicago, Ill., a Corporation of Delaware. Filed Aug. 30, 1926. Serial No. 132,397. 9 Claims. (Cl. 213—26.)



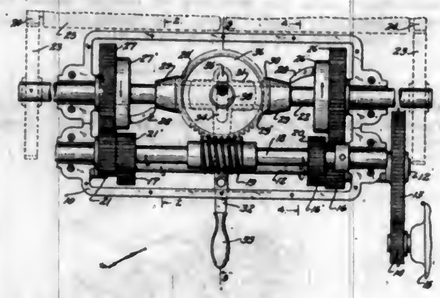
1. In a friction shock absorbing mechanism, the combination with a spring cage having a shell at the forward end thereof provided with opposed interior wedge faces; of wedge shoes co-operating with the shell wedge faces; a spring resistance; pressure transmitting elements between the wedge shoes and co-operating with the spring resistance, said elements normally extending beyond the outer ends of the shoes to initially receive the actuating pressure, said elements being moved relatively to the

shoes longitudinally thereof until the shoes are engaged and moved inwardly of the shell; and means for forcing



said pressure transmitting elements apart and maintaining the same in engagement with the wedge shoes.

1,661,754. TIRE AND WHEEL. SCHUYLER C. HATFIELD, Baltimore, Md. Filed July 20, 1922. Serial No. 576,360. 3 Claims. (Cl. 295—8.5.)



2. In combination with a vehicle wheel, a hard tire having a tread and an edge flange projecting outwardly radially therefrom beyond the tread, a bead projecting from the inner periphery of said tire at each side and a felly having a hook integral therewith at one side for engaging one said bead and removable hooked lugs at the other side engaging the other bead from the opposite side.

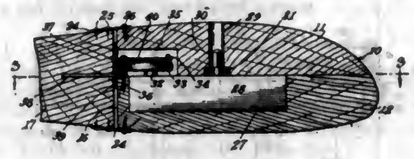
1,661,755. LUBRICATING APPARATUS. BENJAMIN F. HUBBELL, Cambridge, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,555. 18 Claims. (Cl. 284—18.)

1. Lubricating apparatus comprising, in combination, a lubricant-receiving nipple and a lubricant-expelling device having a coupling at its discharge end, said coupling axially receiving said nipple while providing axial clearance prior to completion of the coupling operation, a gasket and means held against rotation relative to said nipple during the coupling operation for taking up said clearance by positively moving said gasket toward said nipple thereby providing a tight joint with the lubricant-receiving end of said nipple.

1,661,756. AUTOMATIC REVERSING MECHANISM. ALBERT L. HUNT and JOHN L. NAUJOCK, Milwaukee, Wis. Filed July 23, 1926. Serial No. 124,868. 2 Claims. (Cl. 74—50.)

1. An automatic reversing mechanism, comprising a frame, a drive shaft journaled thereon, a countershaft journaled on the frame, a reversing shaft journaled on the frame and having means for transmitting motion therefrom, means for rotating the drive shaft, pinions gearing the drive shaft to the countershaft, gear wheels loosely mounted on the reversing shaft, one of said gear wheels being in mesh with one of the pinions on the drive shaft and the other gear wheel being in mesh with one of the pinions on the countershaft for receiving rotation in a reverse direction, shaft clutching means connected to the gear wheels, a clutch sleeve slidably mounted on the reversing shaft and having conical end portions for actuating the shaft clutching means of the gear wheels and having spaced shoulders, a lever member fulcrumed on the frame and extending between the shoulders and having an elongated slot, an eccentric shaft journaled on the frame, a worm wheel journaled on the eccentric shaft and having a wrist pin which enters the elongated slot, a worm mounted on the countershaft and in mesh with the worm wheel, and means for turning the eccentric shaft to swing the worm wheel into and out of gear with the worm.

1,661,757. MOBILE COLOR PROJECTOR. LOYD A. JONES, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Dec. 19, 1924. Serial No. 757,073. 6 Claims. (Cl. 88—24.)

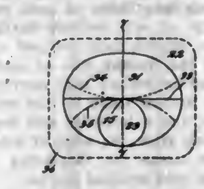


4. The method of producing mobile color effects that comprises projecting two images by two beams of light upon a common screen area, interposing in the beams filters that vary in their light transmitting properties over their areas, and each of which has a range of color transmitting properties complementary to that of the other, moving the filters simultaneously so that colors transmitted by the two beams are always complementary.

1,661,758. ANIMATED FISH TOY. DOUGLAS H. KING, Irvington, N. J. Filed Mar. 12, 1926. Serial No. 94,155. 2 Claims. (Cl. 46—40.)

2. A toy fish comprising a floating head, a plurality of spaced body members and a tail, pivoted in a vertical

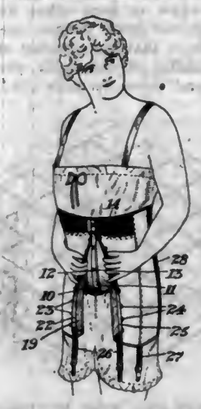
plane one to the next adjacent and to said head to permit limited relative lateral movement of each member, a motor in said head, a lever pivoted in said head, means



driven by the motor to actuate the lever, and an arm on said lever engaging the member next adjacent to the head to communicate motion thereto.

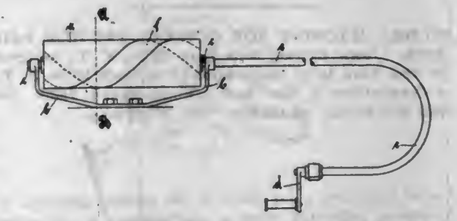
1,661,759. PIPE CLEANER. FRANK R. KING, Madison, Wis. Filed Apr. 18, 1925, Serial No. 24,153. Renewed Jan. 3, 1928. 3 Claims. (Cl. 137—70.)

1. A pipe cleaner comprising an elongated flexible main member, a cable positioned within said elongated member and adapted to limit the extension of such member, a second elongated member of tubular formation mounted upon said first mentioned elongated member, a handle secured to the rear end of said second elongated member, and a frictional clutch hand grip mounted upon said first elongated member rearwardly of said second elongated member.



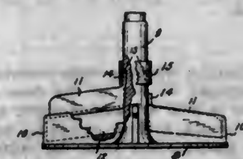
1,661,760. MODIFIED MULTIFOCAL LENS. JACOB P. KOCH, New York, N. Y., assignor of one-half to H. P. Nichols, New York, N. Y. Filed Oct. 10, 1923. Serial No. 667,597. 5 Claims. (Cl. 88—54.)

4. In the art of grinding a bifocal lens blank having a body portion and a reading segment composed of glass of different indices of refraction; the method which consists in grinding one face of the lens blank with a curve having a certain prescription value, regrinding the body portion with the same curvature from one point in the line of jointure between the body portion and the reading segment across the previously ground face to the opposite edge thereby to form on said face two identical curves forming an angle with the apex at said line of jointure and finishing the opposite face to give the body portion its prescription value.



1,661,761. APPAREL CORSET. WALDEMAR KOPS, New York, N. Y., assignor to Kops Bros., Inc., a Corporation of New York. Filed Aug. 14, 1925. Serial No. 50,163. 2 Claims. (Cl. 2—27.)

1. In an apparel corset and in each front portion thereof, an abdominal support member of elastic material extending from the upper edge of the garment downwardly with its lower edge adapted to conform to the groin of the wearer, a front steel member, and a front body member extending from a position appreciably below the upper edge of the elastic abdominal support member to the lower edge of the garment and overlying a portion of the elastic abdominal support member, the upper forward edge of the said body member being connected to the front steel member at substantially the

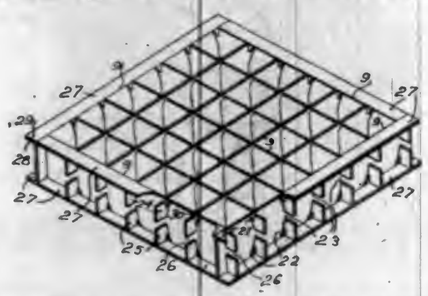


waistline from which point the forward edge of the front steel member normally tapers inwardly from the forward edge of the said body member.

1,661,762. DIRECTION INDICATOR FOR VEHICLES. HANS KREIDEL, Wiesbaden, Germany. Filed Oct. 28, 1927, Serial No. 229,324, and in Germany Jan. 20, 1926. 2 Claims. (Cl. 116—37.)

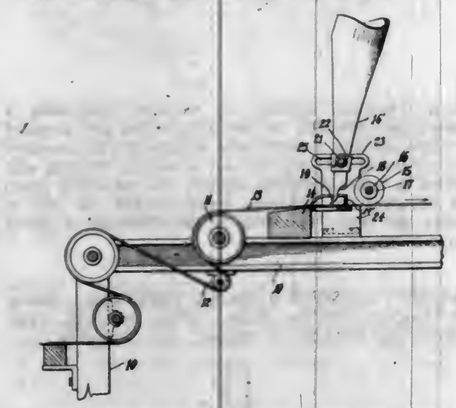
1. A direction indicator for vehicles, comprising a member provided with an indicating spiral and mounted to rotate about a substantially horizontal axis arranged transversely of said vehicle, and means for rotating said member in either direction, whereby the indicating spiral will be given an apparent travel toward the left or toward the right, according to the direction in which said member is rotated.

1,661,763. WASHING-MACHINE AGITATOR. HENRY S. LABISKY, Seattle, Wash. Filed Sept. 15, 1927. Serial No. 219,618. 7 Claims. (Cl. 259—134.)



1. The combination with a washing machine agitator having the usual vanes, of a separable auxiliary vane arranged to serve as an extension above the top of one of the usual vanes.

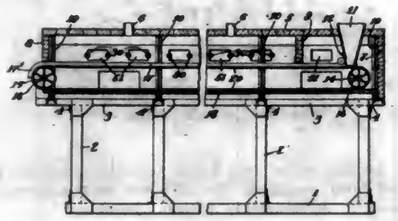
1,661,764. EGG CRATE. BERTHOLD A. LANGE, St. Louis, Mo. Filed Nov. 30, 1923. Serial No. 677,661. 1 Claim. (Cl. 217—34.)



In an egg crate, the combination with a plurality of intersecting strips each having their opposite ends pro-

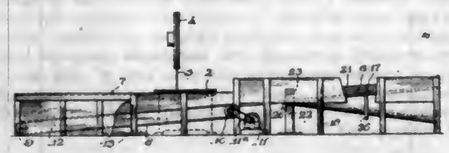
vided with insertible tongues that are divided into upper and lower sections by intervening notches; of four vertically disposed end strips, adjacent ones of which are arranged at right angles to each other and respectively provided with upper and lower flanges, one of said strips being shorter in length than its adjacent strips, and each strip having a plurality of transverse slits that are divided into upper and lower sections that are separated

by reinforcing intervening webs to receive the divided tongues of said intersecting strips, and when so engaged present an article bounded by a continuous pair of upper and lower flanges extending around the entire edges thereof, there being divided tongues provided at the ends of the shorter end strips for interlocking engagement with the transverse slits of said longer end strips, the top and bottom edges of all of said tongues abutting the inner face of its adjacent flange.



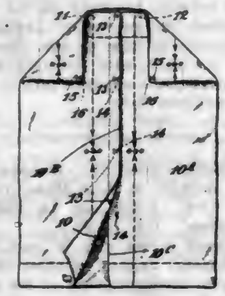
1,661,765. MACHINE FOR CUTTING TEXTILE FABRICS. JOHN LEIPER, New York Mills, N. Y., assignor to New York Mills Corporation, New York Mills, N. Y., a Corporation of New York. Filed Mar. 5, 1926. Serial No. 92,422. 3 Claims. (Cl. 26—12.)

1. The combination with the cloth carrying means and the cutters disposed to act on the face of the cloth while the latter is held flat and straight, of an exhaust pipe having a mouth portion extending entirely across the cloth and spaced apart from the cutters, the back wall of the exhaust mouth lying in close proximity to the fabric and the opening on the side next to the cutters.



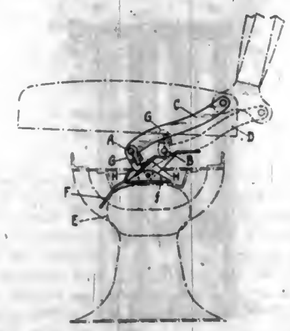
1,661,766. OVEN FOR BAKING BEANS AND THE LIKE. FRANCIS O. LIBBY, Portland, Me., assignor to The Twitchell-Champlin Company, Portland, Me., a Corporation of Maine. Filed Feb. 23, 1924. Serial No. 694,494. 5 Claims. (Cl. 107—57.)

2. In an oven for baking beans or the like, an elongated open bottom chamber, heaters arranged in the upper part thereof, flanged retaining guides extending longitudinally of said chamber, an intake at one end of said chamber, said guides projecting beyond the opposite end of said chamber, an endless conveyor comprising a plu-



rality of transversely disposed plates each having a close lateral bearing on said guides within the flanges thereof, the return of said conveyor being exposed outside of said oven and means for driving said conveyor at a predetermined speed.

1,661,767. LUMBER-RETURNING DEVICE FOR RIP-SAWS. EMIL C. LOETSCHER, Dubuque, Iowa. Filed May 28, 1927. Serial No. 194,916. 6 Claims. (Cl. 143—17.)



4. In a lumber return, the combination with a saw, a receiving table extending beyond the take-off side of said saw and in line with the path of the material therethrough, said receiving table comprising a laterally and downwardly curved surface terminating in a vertical edge, a conveyor extending longthwise of said receiving table below the lower edge of said inclined surface, said conveyor comprising an endless belt inclined upwardly and terminating beyond the feeding side of said saw, and a delivery table extending beyond said conveyor and comprising a relatively narrow ledge in line with the active surface of said belt, and a laterally and downwardly inclined surface sloping from the edge of said ledge adjacent said saw, and means for displacing the material from said ledge onto said inclined surface.

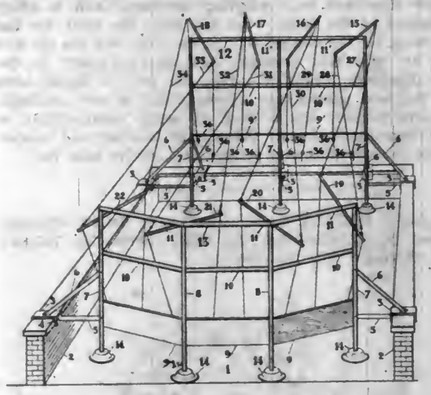
1,661,768. WRAP. EDITH ERD MARSHALL, Port Huron, Mich. Filed Aug. 14, 1926. Serial No. 129,207. 4 Claims. (Cl. 2—69.)

1. In a wearing apparel, in combination, a blank of textile fabric, a plurality of fastening means along the opposite edges thereof capable of maintaining the said edges in over-lapped position when the device is folded with an open bottom portion and a plurality of fastening means capable of maintaining opposite corners in non-abutting over-lapped approximately right-angled position forming a neck opening at the upper portion of the folder device and between the over-lapped corners.

1,661,769. HEAT DEFLECTOR. CHARLES H. MILLER, Albany, N. Y., assignor, by mesne assignments, to Consolidated Car-Heating Company, Inc., Albany, N. Y., a Corporation of New York. Filed Mar. 11, 1926. Serial No. 93,996. 6 Claims. (Cl. 237—28.)

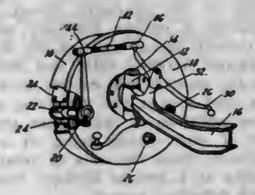
1. A heat deflector for a car seat mounted above the heater and below the seat and provided with a reversing connection to the back of the seat including a spring secured to the deflector, and means movable into engagement with said spring to yieldingly hold the deflector in its reversed position.

1,661,770. SPLIT SHINGLE. GEORGE E. NOBLE, Chehalis, Wash., assignor to Edwin H. Luke, Seattle, Wash. Filed Aug. 1, 1927. Serial No. 209,854. 12 Claims. (Cl. 108—8.)



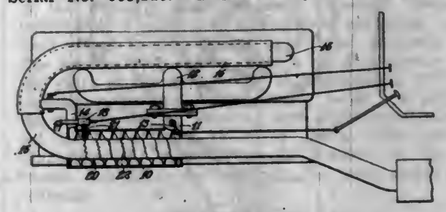
1. A rived shake tapering from a butt to a thinner tip, the butt thickness and the tip thickness being uniform throughout the width of the shake.

9. The method of splitting shakes which consists in splitting successive shakes from opposite ends of the blocks, initially scoring the end of the next shake at one end of the block before reversing the block to split off this shake from the opposite end.



1,661,771. ANTENNA. VINCENT J. REDMOND, New York, N. Y. Filed Mar. 5, 1926. Serial No. 92,400. 7 Claims. (Cl. 250—33.)

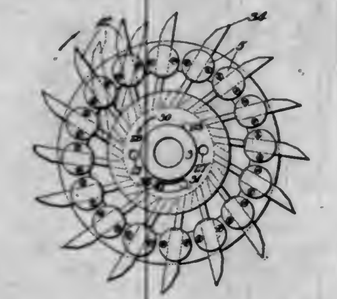
1. An antenna structure adapted to provide a comparatively large number of antenna wires in a minimum space, said structure including a pair of supporting frames, a plurality of pivotally mounted bars on each frame, a pair of wires for each two bars whereby the wires are arranged in pairs, and means for fastening said bars to the frames in such a manner that the wires of



each pair will cross and all of the wires will be so arranged that no two will be parallel.

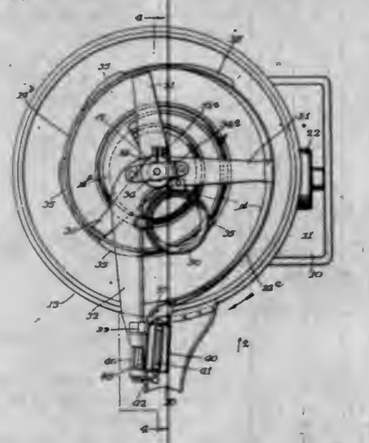
1,661,772. BRAKE-APPLYING MEANS. ROY S. SANFORD, South Bend, Ind., assignor to Bendix Brake Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 14, 1927. Serial No. 168,065. 4 Claims. (Cl. 188—194.)

1. Applying means for a brake on a swivelled wheel comprising, in combination, a lever extending generally horizontally away from the wheel and having its outer end swinging in an arc generally crosswise of the swivelling axis of the wheel, a brake-applying device at one side of the brake, and means connecting the outer end of the lever with said device which is adjustable to preserve the original position of the outer end of the lever with respect to the swivelling axis as the wear of the brake changes the applied position of said device.



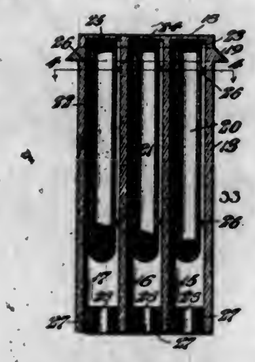
1,661,773. FUEL VAPORIZER AND MIXER. FRANK A. SMITH, Naugatuck, Conn. Filed Dec. 6, 1922. Serial No. 605,145. 4 Claims. (Cl. 261—79.)

1. A vaporizer for liquid fuel for internal combustion engines, comprising a tubular casing forming a chamber and having inlets at one end respectively for air and fuel and an outlet at the other end for a mixture thereof, a helical member disposed in said chamber between the inlet and the outlet thereof to provide with the casing and throughout its entire length a helical passageway of continuous



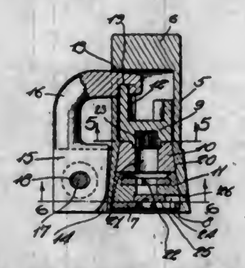
and smooth surface to insure against pocketing thereby of any fuel, said passageway being adapted to direct the air therethru in a whirling movement and to effect a mixture of the same with the fuel, the inlet for the fuel being on the engine side of the inlet for the air and both air and fuel passing thru the vaporizer in the same direction, means to direct the fuel in liquid form into the said passageway substantially in the longitudinal axis thereof, and a band of metal substantially in the longitudinal axis of the helical member and following its convolutions and adapted to receive said fuel.

1,661,774. ROTARY SAW. JOSEPH A. SMITH, Collingswood, N. J. Filed Dec. 15, 1924. Serial No. 755,815. 11 Claims. (Cl. 29—105.)



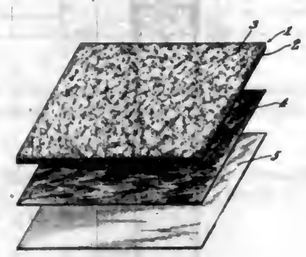
1. In a device of the character stated, a rotatable housing, a plurality of cutters pivotally mounted near the periphery thereof, means limiting the pivotal movement of said cutters between outer and inner positions thereof, means for causing said cutters to assume their outer positions, and means for deflecting said cutters from their outer positions to their inner positions; the pivotal centers of said cutters being at a constantly fixed radial distance from the axis of rotation of said housing and being at a greater distance from said axis than said cutter deflecting means.

1,661,775. BUN AND BREAD ROUNDER. FRANK STREICH, Joliet, Ill., assignor to Union Machinery Company, Joliet, Ill., a Corporation of Illinois. Filed July 7, 1927. Serial No. 203,932. 10 Claims. (Cl. 107—9.)



1. The combination with a base and a rotary bowl like carrier mounted thereon, of a spirally arranged mold board, stationarily supported on said base and contacting along its lower edge with the internal face of said carrier, and a series of kneading ribs on said mold board and located on the side thereof adjacent the internal face of the carrier, said kneading ribs being inclined with respect to the mold board and extending in the same general direction.

1,661,776. STORAGE-BATTERY CHARGE INDICATOR. THOMAS J. STROUSE, Pottstown, Pa. Filed Aug. 13, 1926. Serial No. 128,956. 6 Claims. (Cl. 136—182.)



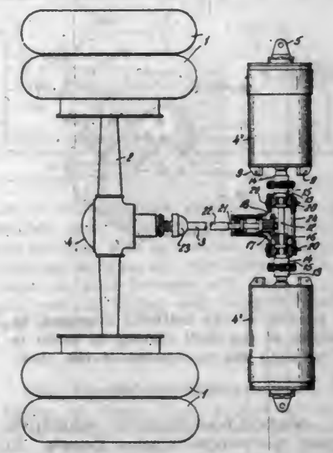
1. In combination with an electric storage battery comprising a container having opaque side and top walls, a liquid electrolyte therein and cathodes and anodes immersed in said electrolyte, of an indicator float adapted to submerge in the electrolyte when the specific gravity of the latter falls below a predetermined point, a generally upright, stationary tubular housing loosely surrounding said float, to guide the latter in a generally vertical direction between an upper and lower limit and to maintain the same constantly immersed in said electrolyte, said housing having an upper transparent terminal wall substantially flush with the upper opaque wall of said battery container and visible from without the same, against which transparent terminal wall, the float is adapted to abut from below in its upper limiting position, thereby to indicate visually from above, if the float is in the raised position.

1,661,777. PADLOCK. PETER SZCZEPCZENSKI, Niagara Falls, N. Y., assignor of one-half to Martin Gill, Niagara Falls, N. Y. Filed May 26, 1927. Serial No. 194,339. 6 Claims. (Cl. 70—105.)

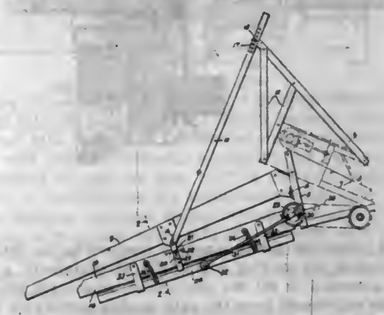
1. In a key hole guard for lock structures wherein the lock structure comprises a casing with tumbler cylinders therein, a key hole guard carried by a tumbler cylinder and movable into engagement with the casing to prevent turning of the tumbler cylinder by the key when shifted to permit passage of the bits of the key, said key hole guard being movable out of engagement with the casing after complete insertion of the key.

1,661,778. POWDER PUFF AND METHOD OF MAKING THE SAME. JOSEPH E. VALENTINE, Plainfield, N. J., assignor to Oxzyn Company, New York, N. Y., a Corporation of New York. Filed Aug. 19, 1926. Serial No. 130,163. 6 Claims. (Cl. 132—78.5.)

3. An article of manufacture of the character described including a body composed of a loose fluffy fibre secured to a fabric backing of comparatively loose weave to permit the passage of a current of powder-laden air therethrough to impregnate said fluffy fibre with powder and an ornamental backing, a layer of gutta percha interposed between said fabric backing and said ornamental backing to cause intimate adherence between said backings.



1,661,779. BATTERY CRADLE FOR ELECTRIC TRUCKS. WALTER S. WARD and BENJAMIN H. BRITT, New York, N. Y., assignors, by mesne assignments, to Commercial Truck Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed June 27, 1923. Serial No. 647,997. 2 Claims. (Cl. 180—68.5.)



2. In an electric vehicle, a battery support comprising a pair of frame members extending transversely of the vehicle and spaced apart a fixed distance longitudinally of the vehicle, a battery for supplying driving power to said vehicle, supports on said battery, hangers depending from said frame members and cooperating with said supports for holding said battery elevated between said frame members and downwardly extending portions on said frame members lying in close proximity of the battery longitudinally of the vehicle.

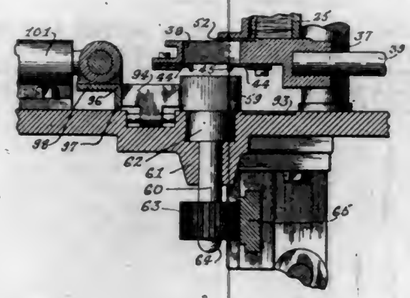
1,661,780. PROPELLING AND TRANSMISSION MECHANISM FOR VEHICLES. OLIVER F. WARHUS, Albany, N. Y., assignor to Versare Corporation, a Corporation of New York. Filed Jan. 31, 1925. Serial No. 6,154. 7 Claims. (Cl. 180—65.)

1. Propelling mechanism for the traction wheels of vehicles comprising a driving axle with which the traction wheels are operatively associated, a propeller shaft disposed substantially at right angles with said axle and operatively connected therewith, a driving element disposed substantially parallel with said axle and operatively connected with the propeller shaft, and a motor whose axis of rotation is substantially in alignment with the axis of said driving element and a detachable self-aligning connection between the motor and said driving element to permit removal of the motor and alignment of the element therewith.

1,661,781. COMBINED SHAKER SCREEN AND CONVEYER. JESSE B. WHITNALL, Milwaukee, Wis., assignor to Northern Conveyor & Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed Nov. 3, 1924. Serial No. 747,533. 2 Claims. (Cl. 209—247.)

1. The combination with a conveyor for elevating material, of a shaker screen therefor, comprising a frame attachable to the conveyer and having members connected to and projecting outwardly therefrom, a longitudinally extending fixed screen connected to some of the members and projecting outwardly therefrom, longitudinally extending side boards connected to the fixed screen and some of the frame members, said side boards being spaced apart a distance greater than the width of the fixed screen, a longitudinally extending movable screen member positioned below the plane of the fixed screen for receiving screened material throughout its length from the fixed screen, links pivotally connecting the movable screen member to the side boards, and means for oscillating the lower screen longitudinally.

1,661,782. CENTRIFUGE. LUDWIG ALTPETER, Trier, Germany. Filed Jan. 26, 1927, Serial No. 163,602, and in Germany July 8, 1925. 4 Claims. (Cl. 233—46.)



1. A centrifugal machine comprising a shell formed of two parts resting one upon the other, each of said parts having an annular flange extending radially there-

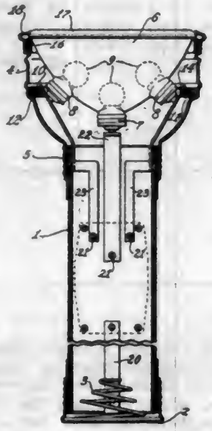
from at its circumference, said flanges being formed to provide between them an annular channel in communication with the interior of the shell and adapted to

receive a portion of the material displaced by the centrifugal action of the shell thereby to assist in caulking the joint between the two parts of the shell.

1,661,783. MATCH-BOX-FILLING MACHINE. KARL BERGSTRÖM, Berthierville, Quebec, Canada. Filed June 10, 1927. Serial No. 197,952. 25 Claims. (Cl. 226—12.)

1. A container filling machine comprising, in combination, means for moving a plurality of containers, a magazine arranged to fill the containers, means for transferring the containers from the said moving means into filling position relative to the magazine, and means for conveying the filled containers to a take-off position.

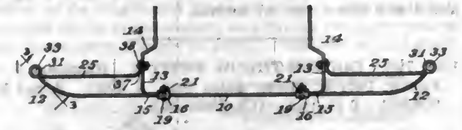
22. A match-box filling machine comprising, in combination, a support frame, a magazine casing supported on the frame, means for delivering a quantity of matches intermittently from the said magazine, a conveyor adapted to carry a plurality of boxes in intermittent successive series, a plurality of receivers disposed below and adjacent to the magazine adapted to reversibly rotate the boxes and periodically elevate the same for filling, a transferring means adapted to intermittently transfer the boxes in sucessivers series, from the conveyor onto the receivers and simpultaneously eject the filled containers from the receivers, and means for carrying away the filled containers.



1,661,784. SPOTLIGHT. GEORGE E. BLAKE, Springfield, Mass., and JOHN H. BRUNINGA, St. Louis, Mo., assignors, by mesne assignments, to Henry Hyman, New York, N. Y. Filed Nov. 11, 1922. Serial No. 600,272. 10 Claims. (Cl. 240—10.5.)

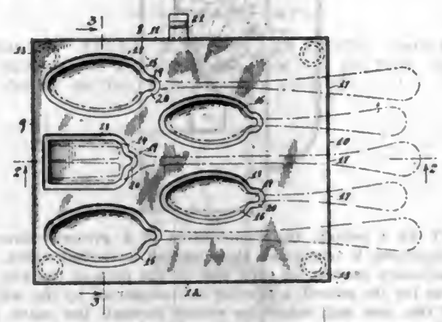
4. A battery hand lamp, comprising, a battery receiving casing having a shoulder spaced from the end thereof, an insulated lamp support resting against said shoulder, a lamp in said support, a clamping ring engaging the inside of said casing adapted to clamp said

support against said shoulder, and a circuit connection to said support.



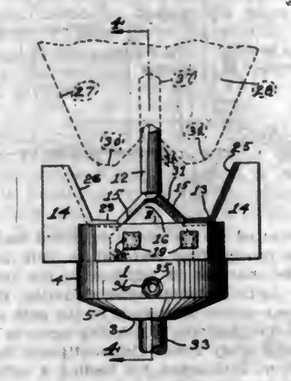
1,661,785. BATTERY HAND LAMP. JOHN H. BRUNINGA and EDWARD P. EVERS, St. Louis, Mo., assignors to Henry Hyman, New York, N. Y. Filed Feb. 12, 1926. Serial No. 87,858. 5 Claims. (Cl. 240—10.5.)

1. A battery hand lamp, comprising, a battery-receiving casing, a head thereon, an insulating ring having a notch seated in said head, a reflector having a plurality of lamp sockets thereon seated in said ring with a socket in the notch thereof, a plurality of switches on said casing, connections from said switches adapted to engage lamps in said sockets, and means cooperating with said insulating ring adapted to aline said sockets with said connections.



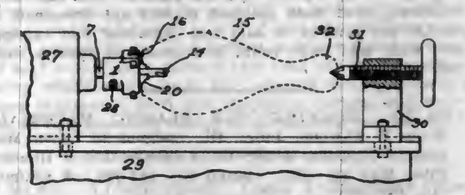
1,661,786. AUTOMOBILE BUMPER. EDWARD P. BULLARD, Jr., Stratford, Conn., assignor to The Bullard Machine Tool Company, Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 18, 1926. Serial No. 155,630. 5 Claims. (Cl. 293—55.)

1. The combination of two or more bars arranged one above the other, a tubular element embracing the ends of said bars, a bolt extending axially through said tubular element to secure said bar ends therein, and means upon one bar end adapted to interlockingly connect another



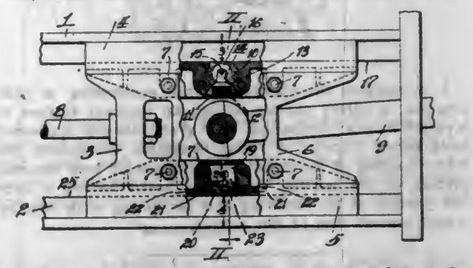
of said bars within said tubular element, whereby relative pivotal movement between said bars is prevented.

1,661,787. SPOON TRAY. ARRON R. CHISHOLM, East Orange, N. J. Filed Apr. 5, 1927. Serial No. 181,021. 3 Claims. (Cl. 65—65.)



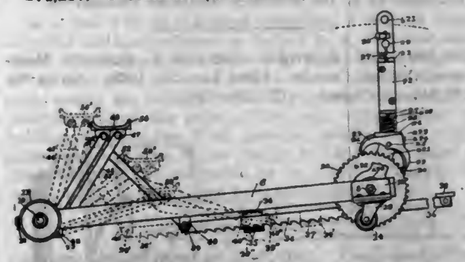
1. The tray described for supporting spoons, ladles, forks and similar utensils, comprising a plate having a plurality of depressions in its upper face each adapted to receive the effective end portion of one of such utensils and receive the drip therefrom, and a ledge on said plate having a plurality of notches adapted to receive and support the handles of such utensils in position to lead the drip from the shanks of said handles to said depressions.

1,661,788. REVOLUBLE FORMING TOOL. JOHN COBION, Richmond Heights, Mo. Filed July 2, 1926. Serial No. 120,043. 9 Claims. (Cl. 144—46.)



1. A tool for shaping a body to a round cross-section, comprising a head revoluble relatively to the body and having an end face provided with a seat thereon and an axial stem for centering the said body with respect to the said head, and a shaping element engaging the said seat and recessed to engage the said stem for preventing dislocation of the shaping element parallel to the said seat.

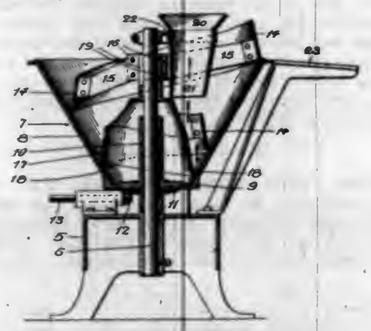
1,661,789. REVOLUBLE CUTTER. JOHN COBION, Richmond Heights, Mo. Filed July 2, 1926. Serial No. 120,044. 5 Claims. (Cl. 144—2.)



1. A tool of the character described comprising opposing clamping jaws, a centering stem clamped therebetween and provided with sockets on the opposite sides that span the gap between the said jaws, and a pair of cutting blades mounted between said jaws on opposite sides of said stem and having their inner ends projecting into the said sockets.

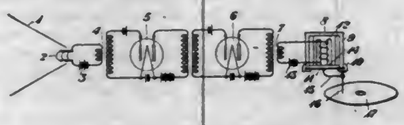
1,661,790. SELF-OILING-CROSSHEAD GIB. SAMUEL W. CRAWFORD, St. Louis, Mo., assignor, by mesne assignments, to National Bearing Metals Corporation, St. Louis, Mo., a Corporation of New York. Filed June 13, 1925. Serial No. 36,990. 2 Claims. (Cl. 308—5.)

1. In a crosshead, a gib therefor, a guiding element for said gib, said gib having an oil chamber opening onto the surface of said element, a lubricating roller rotatably engaging said guiding element, a support for said roller, said support having its base portion slidably engaging the sides of said chamber for maintaining said roller in a vertical position, resilient means located in said chamber constantly urging said roller into contact with said guiding element, and a boss positioned on the bottom face of said support for preventing lateral movement of said resilient means.



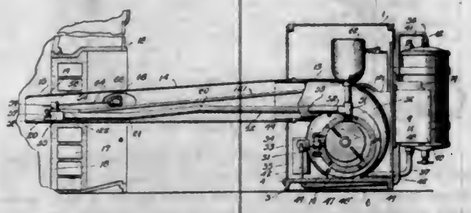
1,661,791. HOISTING JACK. CLYDE A. DUTRO, Bow, Wash., assignor of one-half to Harold T. Morton, Bellingham, Wash. Filed Mar. 10, 1927. Serial No. 174,137. 3 Claims. (Cl. 254—7.)

3. A hoisting jack consisting of a horizontally disposed dolly carriage frame, parallel-motion links pivoted to said frame below and to a jack head block above, a bolt crosshead reciprocal in guides in said frame, pivoted link connection between said bolt crosshead below and said head block above, a jack screw mounted for revolution in



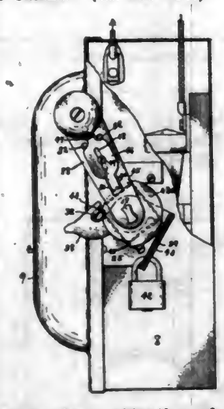
bearings in said frame at right angles with said crosshead, a nut crosshead engaged with said screw slidable in guides in said frame operable parallel with said bolt crosshead, pawl teeth fastened to said nut crosshead, a ratchet bar pivoted to said bolt crosshead and engageable with said pawl teeth, and means to revolve said jack screw.

1,661,792. ROUNDER FOR PLASTIC MATERIAL. WARD P. ELWOOD, Joliet, Ill., assignor to Union Machinery Company, Joliet, Ill., a Corporation of Illinois. Filed May 25, 1927. Serial No. 194,040. 8 Claims. (Cl. 107—9.)



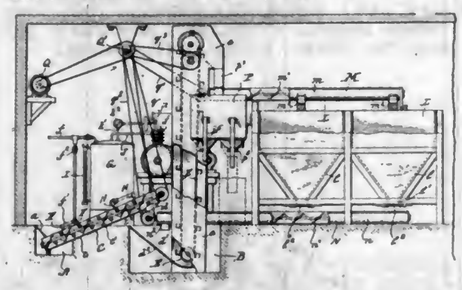
1. A rounder for plastic material comprising in combination, a rotary carrier having an internal surface of inverted conical formation, and a stationarily supported mold board therein, of spiral formation throughout the major portion of its extent contacting with said internal surface of the carrier, said mold board having a cone like portion at its receiving end contacting with said internal conical face of the carrier.

1,661,793. SOUND RECORDING AND REPRODUCING. LLOYD ESPENSCHIED, Kew Gardens, N. Y. Filed July 8, 1920, Serial No. 394,708. Renewed May 6, 1927. 4 Claims. (Cl. 179—100.1.)



1. The air-electric translating device; this being primarily an element in the electric circuit the resistance of which is controlled directly by the air waves as distinguished from being controlled indirectly by means of a diaphragm as in the ordinary telephone transmitter.

1,661,794. OIL BURNER. ORVILLE A. FOGARTY, Montreal, Quebec, Canada. Filed Dec. 23, 1925. Serial No. 77,345. 3 Claims. (Cl. 158—28.)



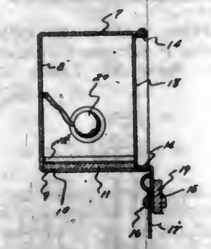
1. In an oil burner, a spout having its upper wall backcut from its lower wall at the outlet end, a nozzle located at the outlet end of the spout and having a forwardly and upwardly directed slot, means for delivering an oil stream from the nozzle slot, and means for delivering air above and below the oil stream.

1,661,795. DOUBLE-THROW SWITCH. HARRISON J. L. FRANK, Detroit, Mich. Filed Sept. 4, 1923. Serial No. 660,673. 6 Claims. (Cl. 200—50.)

1. In a switch, the combination of a pivoted contact comprising a triangular plate having a central notch, a stationary contact on each side of the pivoted contact, a case for the switch, a pivoted ball supported by the walls of the case and extending across through the notch in the stationary contact, a sleeve of insulating material enclosing the ball at said pivoted contact, a metal spool mounted on said sleeve within the notch in the pivoted contact, and means to swing the ball.

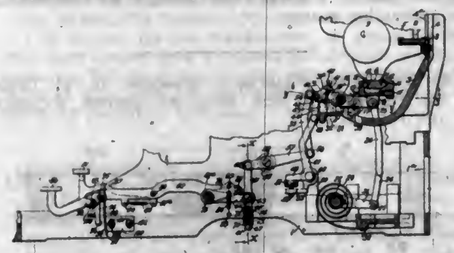
1,661,796. APPARATUS FOR TREATING COFFEE. HARRY G. GAMBLE, Detroit, Mich., assignor, by mesne assignments, to Coffee Research Company, St. Louis, Mo., a Corporation of Missouri. Filed Jan. 3, 1922. Serial No. 526,527. 4 Claims. (Cl. 99—2.)

4. An apparatus of the class described embodying a conveyor for transporting material in bulk and means carried by the conveyor in addition to the transporting elements for agitating said material during the transit thereof, a spray nozzle contiguous to the path of the material, means for supplying a washing agent to the spray nozzle, a second spray nozzle also contiguous to the path of the conveyor, and means for feeding a culture media in solution to the second spray nozzle.



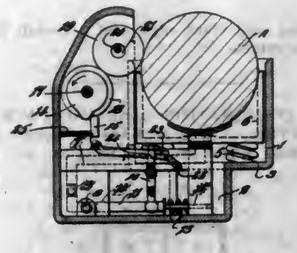
1,661,797. CAN OPENER. HERMAN GARRISON, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,233. 4 Claims. (Cl. 30—3.)

1. A can opener in the form of a lever of the second class, having a guiding fulcrum formed by a recess at the end of a handled stock, and a downwardly offset upper cut knife secured to the stock and extending forward past the fulcrum; said knife being laterally curved in the direction of its length and provided with an additional cutting edge on its lower margin, and having its upper cutting edge rearwardly concave in outline; the heel of said knife



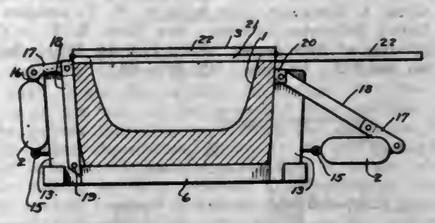
being marked by a line of flexion transverse to the longitudinal direction of the instrument, and that part of said heel which is adjacent to said line of flexion and posterior thereto, being deflected toward the concave side of the directional curve of the knife.

1,661,798. FRONT-LICENSE-PLATE LIGHT. CHARLES GITTERY, Jr., Detroit, Mich. Filed Nov. 18, 1925. Serial No. 68,779. 2 Claims. (Cl. 40—132.)



1. A device of the class described comprising a housing having top, front and bottom walls formed integral with each other and side walls, said bottom wall having an elongated opening formed therein; a transparent closure mounted in said housing over said opening; an illuminating means mounted in said housing adapted for projecting rays of light through said closure, a rear wall for said housing, said rear wall engaging between said top and bottom walls and provided at its edges with laterally turned outwardly directed flanges, said flanges lying in engagement with the inner surface of all of the walls of said housing, the lowermost of said flanges extending outwardly beyond the edge of said bottom wall and having a portion extending downwardly below the bottom wall, said downwardly projecting portion being flared outwardly at opposite ends beyond the end of said housing, and a license plate mounted on said downwardly projecting portion.

1,661,799. TYPEWRITING MACHINE. GEORGE GOULD GOINO, Middletown, Conn., assignor, by mesne assignments, to Remington Typewriter Company, a Corporation of New York. Filed Mar. 9, 1925. Serial No. 14,100. 18 Claims. (Cl. 197—73.)

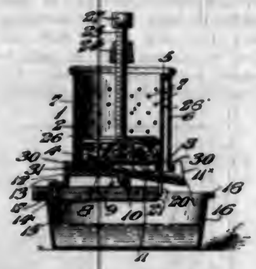


1. In case shift mechanism for typewriting machines, the combination of a shiftable element, two shift key lever members, a train of connections between said lever members and said element comprising yielding devices for affording lost motion between said lever members and said element, locking members mounted on said lever members and each provided with a locking key, and stationary devices engageable by said locking members under control of said locking keys, each of said shift key lever members being effective to release both of said locking members from engagement with said stationary devices, said yielding devices operating during such releasing operations.

1,661,800. LUBRICATOR. JAMES J. HENNESSY, New York, N. Y. Filed Oct. 17, 1923. Serial No. 668,995. 9 Claims. (Cl. 308—84.)

1. In combination, a journal, a lubricant reservoir, a lubricant supply pump, a rotatable member for operating said pump, and a floating roller carried solely by said journal and member in frictional contact with said journal and member for actuating said member from said journal.

1,661,801. LIFEBOAT. LAURA HILL, Seattle, Wash. Filed June 22, 1926. Serial No. 117,669. 1 Claim. (Cl. 9—3.)

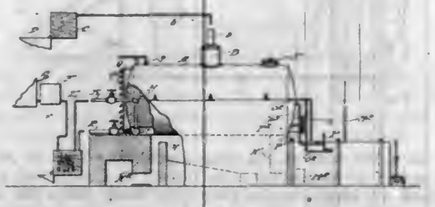


In a life boat of the class described, a boat in which a sealed air compartment is formed in a shell and additional air compartments formed in beams below the ends of the said boat, pontoons hinged to the sides of the said boat, means for holding the said pontoons in an upright position against the sides of the boat, other means for holding the pontoons in an extended position, and a plurality of transverse beams hinged to the upper edges of the said boat and adaptable to be folded in across the center of the boat and also to extend outward.

1,661,802. FRUIT-PRESS SUPPORT. CHARLES R. HITZ, Philadelphia, Pa., assignor of one-half to Hugh G. Doak, Philadelphia, Pa. Filed Dec. 24, 1926. Serial No. 156,860. 3 Claims. (Cl. 100—44.)

3. The combination of a receptacle, a plate of less area than the top of said receptacle having a bottom peripheral groove in which the upper edge of said receptacle is seated, said plate having a hole in the rear thereof, a

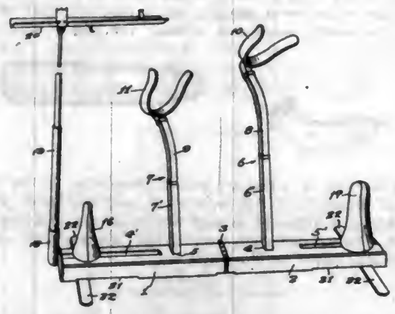
front edge, a fruit press having a bottom plate provided with a rear pendant pin seated in said hole and pendant



lugs engaging said front edge, and a trough discharging into said receptacle.

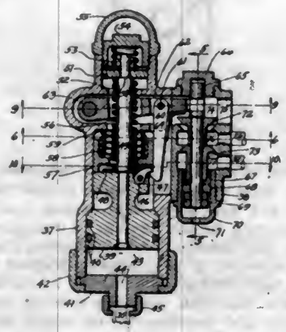
1,661,803. COMBINATION CASE AND PACKAGE FOR CIGARETTES. JAMES B. KAVAL, Chicago, Ill. Filed Jan. 7, 1925. Serial No. 983. 1 Claim. (Cl. 206—41.)

A container comprising a pair of box-like sections hingedly connected together, spring elements engaging the sections at their points of connection and normally urging the sections to closed position, a strip extending longitudinally of the sections and overlying and retaining the spring elements in place and latch means carried by the free ends of the sections.



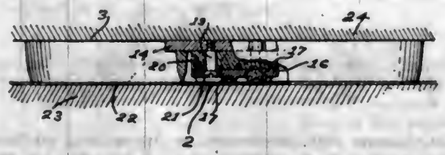
1,661,804. APPARATUS FOR TREATING OIL. FREDERICK A. KORMANN, New Rochelle, N. Y., assignor to United Refineries Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 14, 1921. Serial No. 444,745. 1 Claim. (Cl. 196—55.)

A still for converting high boiling point oil into oil of lower boiling point, embodying a still shell, a body of highly absorbent brick held in said shell to leave a vapor dome above and an oil space below the same, means for charging oil into the shell, and steam admission pipes at the bottom and at an intermediate height in the still shell, whereby steam may be charged into the body of absorbent brick at a plurality of levels.



1,661,805. SAXOPHONE-PLAYER'S STAND. AMBROSE LENTATY, Los Angeles, Calif. Filed Nov. 11, 1925. Serial No. 68,304. 1 Claim. (Cl. 248—40.)

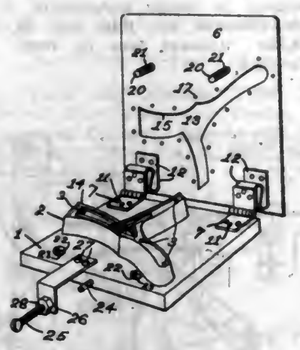
A saxophone player's stand comprising base members hinged together to fold upon each other, each provided on the underside with gains, bars pivoted in said gains and flush with the under side of said members and adapted to be extended to support the base from turning



over and adapted to be folded in the gains to make a compact package.

1,661,806. DRIFTING VALVE AND CONTROL MECHANISM. RAYMOND P. LOUGHLIN, Brooklyn, N. Y. Filed Feb. 5, 1925. Serial No. 7,185. 15 Claims. (Cl. 121—137.)

2. In combination with a steam reciprocating locomotive, means for conveying an auxiliary supply of steam from the boiler of the locomotive to the main engines of the locomotive, valve means for controlling said auxiliary supply of steam, a resilient element, means actuated by the opening of the throttle of the locomotive for increasing the potential energy of said resilient element, means actuated by the closing of the throttle of the locomotive for releasing potential energy from said resilient element, interruptable detaining means connecting said valve means and said resilient element whereby the opening of said valve means is effected by the release of potential energy from said resilient element and whereby the closing of said valve means is effected by interrupting said detaining means, and means actuated by variation of the locomotive steam chest pressure for interrupting said detaining means.



1,661,807. DIE. CHARLES A. MESSMER, Jr., St. Louis, Mo. Filed July 2, 1926. Serial No. 120,003. 9 Claims. (Cl. 101—28.)

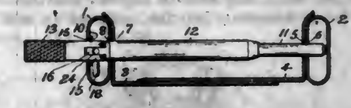
1. A device of the character described comprising a pair of dies, one of which is provided with a locating

socket for the other and the other of which presents a projection that is adapted to expand against the sides of the socket to maintain the dies in predetermined positions with relation to one another.

1,661,808. DIE. CHARLES A. MESSMER, Jr., St. Louis, Mo. Filed Sept. 4, 1926. Serial No. 133,546. 9 Claims. (Cl. 164—29.)

1. A die comprising a block member presenting a projecting forming portion adapted to operate on a blank of stock placed thereover, a stripper member for the forming portion and hinged at one end to the block member, and means borne by one of said members for resiliently spacing the other end of the stripper from the block.

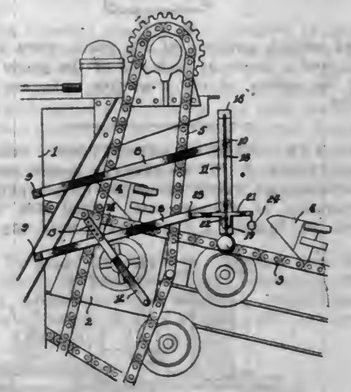
1,661,809. PROCESS OF MAKING TETRA-ALKYL LEAD. KENNETH P. MONROE, Penns Grove, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 25, 1924. Serial No. 701,641. 19 Claims. (Cl. 260—11.)



1. The process of producing a tetra-alkyl lead from a lead alloy and an alkyl chloride, which comprises treating one atomic proportion of lead, alloyed with two atomic proportions of a monovalent element capable of liberating hydrogen from water, with an alkyl chloride in the presence of less than 5.1 molecular percentage, based upon said chloride, of a neutral hydroxylic compound soluble in the alkyl chloride.

1,661,810. PROCESS OF PRODUCING TETRA-ALKYL LEAD. KENNETH P. MONROE, Penns Grove, N. J., and KI WILLIAMS, Old Hickory, Tenn., assignors to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Oct. 15, 1925. Serial No. 62,594. 14 Claims. (Cl. 260—11.)

1. A process for the manufacture of tetra-alkyl lead from lead alloyed with a monovalent element capable of liberating hydrogen from alcohol which comprises treating such alloy with an alkyl halide and an alcoholic solution of potassium hydroxide.



1,661,811. SHEET-RETAINING POST FOR LOOSE-LEAF LEDGERS. JOHN SCHADE, Holyoke, Mass., assignor to National Blank Book Company, Holyoke, Mass., a Voluntary Trust Association of Copartnership. Filed Feb. 3, 1927. Serial No. 165,547. 7 Claims. (Cl. 129—13.)

1. In a loose leaf ledger having side cheek pieces, a sheet retaining post having a handle pivoted thereto and provided with a laterally extending locking stud, said handle adapted to be turned whereby said stud will

lock against its adjacent cheek piece and thereafter fold at right angles within a suitable housing.

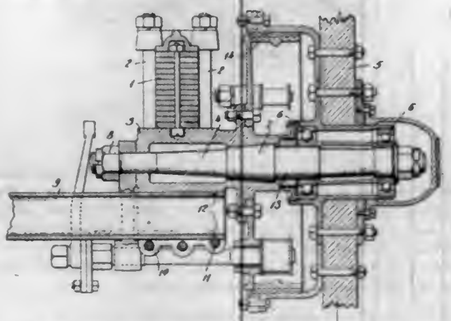
1,661,812. SIGHTING DEVICE FOR TRENCH DIGGERS. ALBERT A. SMITH, Berkley, Mich. Filed Mar. 3, 1927. Serial No. 172,241. 6 Claims. (Cl. 33—185.)

1. A sighting device for a trench digging machine, comprising a parallelogram having a fixed leg on a stationary part of the machine, a gauge arm connected to said parallelogram and adapted for support from a movable part of the machine, a pendulum carried by said structure, and a sight member articulated with said pendulum and adapted to be moved thereby.

1,661,813. PROCESS OF SINTERING ZINC ORES. HENRY J. STERLI, Cedar Grove, N. J. Filed Oct. 9, 1926. Serial No. 140,681. 10 Claims. (Cl. 75—28.)

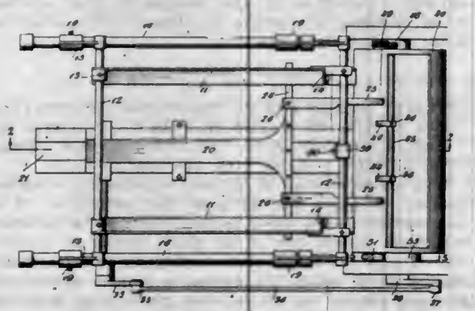
1. In the art of desulphurizing zinc sulphide ores the process consisting in roasting the ore down to a point where the residual sulphur in the ore, as sulphide, will be insufficient to carry on sintering of the ore, mixing the roasted ore with sufficient zinc residues to supply the carbon required to furnish the heat and reducing agent to decompose the sulphates in the ore, and causing internal combustion of said sulphur and carbonaceous material contained in the zinc residues by blast roasting in an oxidizing atmosphere to eliminate the sulphates in the ore and sinter the mass.

1,661,814. MEANS FOR CONTROLLING THE SWIVELING ACTION OF RAILWAY TRUCKS. CHARLES W. TODD, Schenectady, N. Y. Filed May 7, 1926. Serial No. 107,312. 1 Claim. (Cl. 308—223.)



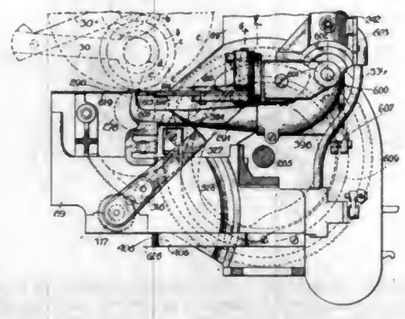
In a centre bearing for railroad vehicles, the combination of an upper bearing plate, for attachment to a body bolster, and a lower bearing plate, for attachment to a truck bolster, one of the plates having an annular groove, and the other plate having an annular flange adapted to fit within the groove, to form a swivel connection between the plates, each plate being provided, at its opposite ends, with a plurality of roller bearing seats, each seat comprising a rack having oppositely inclined portions, and oppositely inclined smooth bearing portions, on each side of the rack; a plurality of rollers,

one for each seat, each roller, having an intermediate portion formed with teeth adapted to mesh with the teeth of the rack, and smooth tapered portions on each side of the intermediate portion, adapted to roll on the



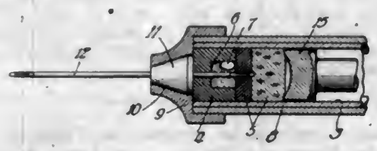
inclined smooth portions of the seats, when the plates swivel; and a frame at each end of the plates in which all of the rollers, at the respective ends, are rotatably mounted.

1,661,815. AXLE CONSTRUCTION. BENJAMIN H. BRITT, Bronx, N. Y., assignor, by mesne assignments, to Commercial Truck Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1925. Serial No. 10,525. 2 Claims. (Cl. 301—132.)



1. In a vehicle of the class described, a member rigidly secured to the vehicle spring suspension and having at least two recesses, a stub shaft removably secured in one of said recesses and extending from one side of said member to receive a vehicle wheel, and a non-driven axle removably secured in another of said recesses and extending from the other side of said member.

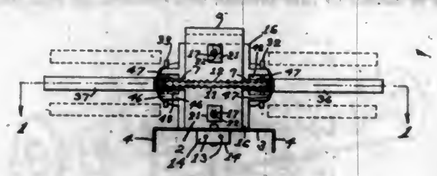
1,661,816. ENVELOPE-FEEDING APPARATUS. LUIGI CICCONE, Maspeth, N. Y. Filed May 19, 1926. Serial No. 110,142. 3 Claims. (Cl. 271—2.)



1. An envelope feeding mechanism comprising supporting means for a stack of envelopes, adjustable to accommodate various sizes of envelopes, a reciprocating slide, a supporting member carried by said slide and extending transversely thereof, elastic fingers having an inherent upward resiliency, secured upon said supporting member in spaced relation and arranged to pass between the flap and body of the terminal envelope of said stack for removing it therefrom, over a predetermined path, and a resilient controlling member for maintaining said envelope in said path against the resiliency of said fingers.

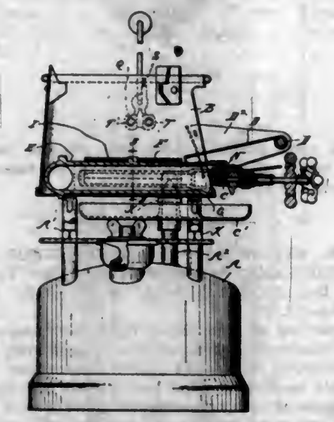
1,661,817. WINDER. HOWARD D. COLMAN, Rockford, Ill., assignor, by mesne assignments, to Edgar S. Nethercut, Evanston, Ill. Filed Sept. 15, 1919, Serial No. 323,839. Renewed June 18, 1923. 20 Claims. (Cl. 242—35.6.)

16. The combination of means for rotating a thread mass in the direction to unwind thread therefrom, a movable thread-taking hook, and a suction tube movable to carry a thread of the thread mass into the path of said hook.



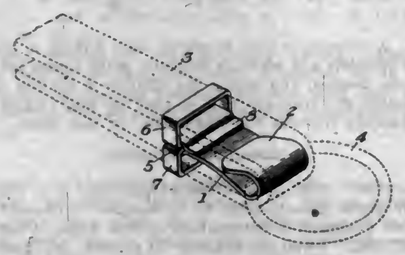
1,661,818. HYPODERMIC SYRINGE AND CARTRIDGE THEREFOR. HARVEY S. COOK, Valparaiso, Ind., assignor to Cook Laboratories, Inc., a Corporation of Delaware. Original application filed Mar. 2, 1922, Serial No. 540,628. Divided and this application filed Nov. 25, 1925. Serial No. 71,320. 6 Claims. (Cl. 128—218.)

1. A hypodermic syringe comprising, in combination, a syringe body having a needle seat at one end; a double ended needle having an enlargement intermediate its ends, said enlargement fitting the seat; a medicament cartridge fitting within the syringe body and having one end thereof sealed by a resilient recessed plug, the other end being closed by a resilient, slidable plug; the inner end of the needle penetrating the recessed plug and projecting beyond said plug so as to enter and be sealed by the slidable plug when the latter reaches the end of its travel through the cartridge.



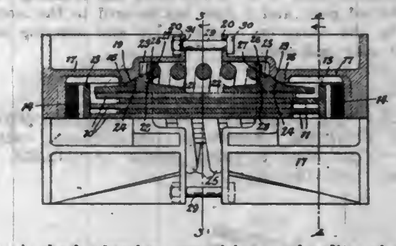
1,661,819. TOASTER. LEE FORREST FISHER, St. Louis, Mo. Filed Aug. 9, 1926. Serial No. 128,108. 6 Claims. (Cl. 53—5.)

4. A toaster comprising a support, heating means borne thereby and presenting opposing radiating faces, a toast holder pivoted to said support and capable of movement in a plane parallel to the latter and resilient



means tending to urge said holder toward said heating means.

1,661,820. FIRE-POT CONSTRUCTION. OTTO J. GROEHN, Detroit, Mich., assignor to Clayton & Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 30, 1921. Serial No. 518,881. 9 Claims. (Cl. 158—53.)



1. In a fire pot construction for plumbers' furnaces or the like, the combination with a burner having flame discharging means, of a generator located adjacent to a portion of said flame discharging means and adapted to deflect a portion of the entire burner flame upwardly, and a plate cooperating with other portions of the flame discharge means for deflecting other portions of the said entire flame.

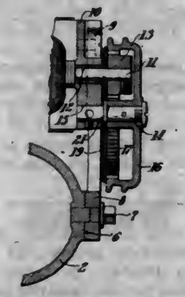
1,661,821. WEAR PLATE FOR STRAPS. ALFRED B. HAGELIN, Cleveland, Ohio, assignor to The Eberhard Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Sept. 23, 1926. Serial No. 137,259. 5 Claims. (Cl. 24—183.)

1. A wear plate curved to fit within the bight of a flexible strap and having a loop-receiving eye, and a strap-receiving loop, a portion of the periphery of which is held within the eye of the wear plate.

1,661,822. SHOCK ABSORBER. JOSEPH M. HALL, Hamilton, Ontario, Canada, assignor to Universal Draft Gear Attachment Co., Chicago, Ill., a Corporation of Illinois. Filed Mar. 16, 1927. Serial No. 175,721. 5 Claims. (Cl. 213—36.)

1. A shock absorber comprising a plurality of sets of intercalated friction plates which are adapted to move lengthwise relatively to one another, release followers engaging the outer ends of said sets of plates, main thrust followers movable one toward and from the other, release springs interposed between said release followers and said main thrust followers, lateral pressure creating means for pressing said plates together transversely, and a main spring resistance co-operating with said lateral pressure creating means.

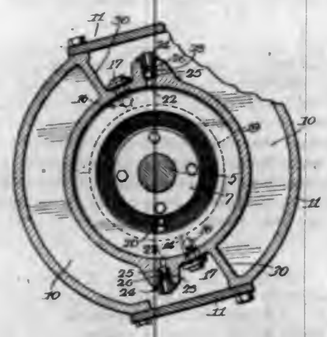
1,661,823. INSULATOR. KENT A. HAWLEY, New York, N. Y., assignor to Locke Insulator Corporation, Baltimore, Md., a Corporation of Maryland. Filed June 4, 1921. Serial No. 475,003. 8 Claims. (Cl. 173—318.)



1. Means for insulating and supporting a current carrying conductor from a grounded conductor, comprising a string of insulator units each having a conducting surface of high resistance which forms a continuous and unbroken path for leakage current between the current conductor and the grounded conductor.

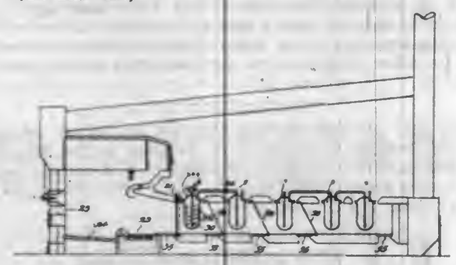
6. An insulator unit having its entire surface provided with a glaze embodying a high resistance conducting material.

8. An insulator for high voltage lines comprising a disc of porcelain having a path of resistance material extending over its exposed surface from the central portion of the upper surface to the central portion of the lower surface.



1,661,824. MOTOR-DRIVEN SEWING MACHINE. MARTIN HEMLER, Elizabeth, N. J., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed May 19, 1925. Serial No. 31,294. 1 Claim. (Cl. 172—36.)

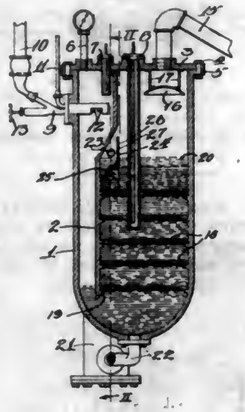
In a motor driving attachment for sewing machines, the combination with an electric motor having a frame and motor-shaft, said frame having a shaft bearing aper-



ture and a stud-pin aperture spaced from said shaft bearing aperture, of a stud-pin secured in said stud-pin aperture and formed with a collar between its ends, a driving pulley journaled on said stud-pin and having an internal gear, a pinion fixed to the motor-shaft and meshing with said internal gear, and a dust cap secured to the motor-frame by the collar on said stud-pin and covering said internal gear and pinion.

1,661,825. OIL CLEANER FOR INTERNAL-COMBUSTION ENGINES. ROBERT O. HENDRICKSON, Racine, Wis. Filed June 1, 1926. Serial No. 112,776. 3 Claims. (Cl. 184—6.)

1. In an engine of the class described, a flywheel casting having a circumferentially arranged centrifugal chamber formed therein, a feed channel formed in said casting, inwardly of the centrifugal chamber, inlet passages connecting said channel and chamber, valves in said passages closing towards the axis of the casting, springs pressing said valves toward their seats, and overflow passages for the escape of oil from said chamber.

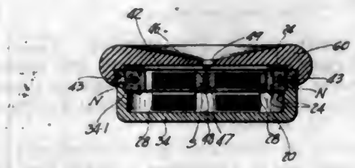


1,661,826. CONTINUOUS PROCESS FOR THE REFINING OF MINERAL OILS. ERIC TH. HESSLE, Lemont, Ill. Filed Dec. 6, 1923. Serial No. 678,924. 2 Claims. (Cl. 196—52.)

1. A process of converting hydrocarbon oils into lower boiling products, which includes the step of directing a stream of oil against a counter current stream of hydrogen gas and steam to form a fog of oil and passing said oil fog through a deep body of molten catalyst adapted to effect decomposition of the oil into products of lower boiling point.

1,661,827. CATALYTIC APPARATUS. ERIC TH. HESSLE and WILLY LELGEMANN, Lemont, Ill. Filed Apr. 26, 1926. Serial No. 104,541. 2 Claims. (Cl. 196—52.)

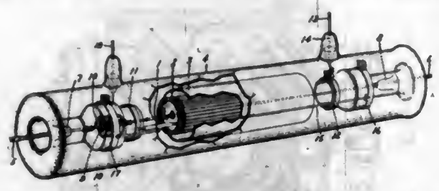
1. In an apparatus for the catalytic conversion of oils, a reaction vessel for containing a fluid catalyst, a partition in said vessel dividing said vessel into compartments communicating near the bottom, an oil fog producing device in one of said compartments and an oil discharge line leading from said other compartment whereby said oil fog is caused to pass through said catalyst, an equalizing



vessel in communication with said reaction vessel and draw-off means on said equalizing vessel for removing material from the surface of said catalyst.

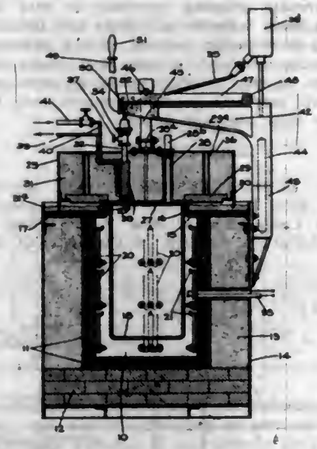
1,661,828. PAVING MATERIAL AND METHOD OF LAYING THE SAME. ERNEST HOPKINSON, New York, N. Y. Filed Dec. 23, 1922. Serial No. 608,745. 1 Claim. (Cl. 94—22.)

That method of surfacing a rigid and immovable load carrying foundation which consists in, separately mingling with a plurality of aqueous rubber compositions vulcanizing agents ineffective alone but effective to vulcanize in the presence of each other, removing water and associating the two compositions in intimate relation on the foundation, and vulcanizing the composition in situ on the foundation.



1,661,829. DYNAMO-ELECTRICAL VIBRATING UNIT. THOMAS H. HOWELLS, Salt Lake City, Utah. Filed June 4, 1925. Serial No. 34,830. 15 Claims. (Cl. 179—117.)

1. A dynamo-electric vibrating unit having a magnet, two complete and separate magnetic paths across the poles of the magnet, and means for shifting a portion of the magnetic flux from one path so that the said portion shall completely traverse the other path, or vice versa.

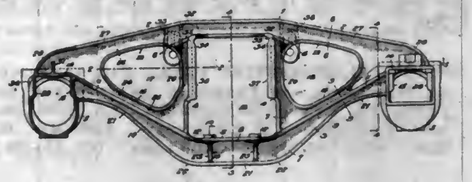


1,661,830. ELECTRON-DISCHARGE DEVICE. ALBERT W. HULL, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Nov. 21, 1922. Serial No. 602,436. 34 Claims. (Cl. 250—27.)

1. An electron discharge device comprising a cathode, an anode and a controlling grid, said electrodes being so spaced and the cathode being of such current carrying capacity that with an anode voltage not exceeding a predetermined value the normal current required to heat the cathode to a given operating temperature will produce in the space surrounding the cathode a magnetic field of such value as to increase substantially over a predeter-

mined operating range the change in anode current per unit change in grid voltage over its change in the absence of such magnetic field.

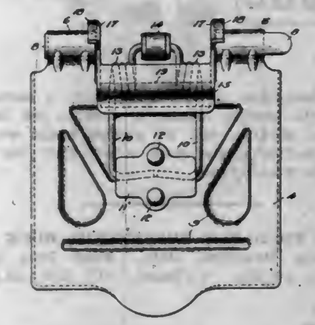
1,661,831. CARBURIZING APPARATUS. CARL L. IPSEN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 28, 1926. Serial No. 125,548. 8 Claims. (Cl. 266—5.)



2. Carburizing apparatus comprising an electric furnace having a top opening, a retort set in said opening, a cover for said retort, an inlet nozzle secured to said cover, and a pipe wrapped around said nozzle through which a cooling fluid is passed to prevent deposits of carbon on said nozzle.

1,661,832. PAVING MATERIAL AND PROCESS OF MAKING THE SAME. FRIEDRICH IWANSKI, Berlin-Copenick, Germany. Filed Sept. 27, 1926, Serial No. 138,111, and in Germany June 4, 1925. 6 Claims. (Cl. 18—47.5.)

1. The process of manufacturing paving material, which consists in steam-hardening a mixture of an excess of highly siliceous granular material with lime, and impregnating the resulting product with bituminous substances.



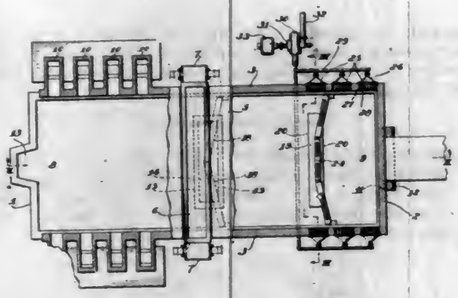
1,661,833. CAST-STEEL SIDE FRAME. BYERS W. KADEL, Baltimore, Md., assignor to The Symington Company, New York, N. Y., a Corporation of Maryland. Filed May 5, 1925, Serial No. 28,070. Renewed Aug. 8, 1927. 25 Claims. (Cl. 105—205.)

1. A car truck side frame comprising a compression member, a tension member, bolster guide columns interposed between intermediate portions of said members, said members being generally T-shape in cross-section, journal boxes at the ends of said frame and formed with brass lugs, said tension member being formed at its intermediate portion with an upper flange serving as a spring seat, said flange being continued diagonally

upward to opposite sides of said spring seat as an intermediate main flange of the tension member and joining with the journal box roof in line with the face of the inner brass lug.

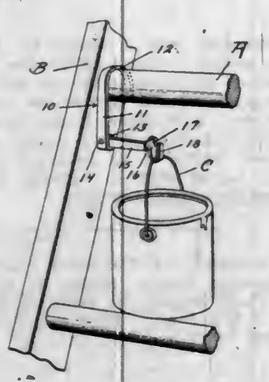
1,661,834. JOURNAL-BOX LID. BYERS W. KADEL, Baltimore, Md., assignor to the Symington Company, New York, N. Y., a Corporation of Maryland. Filed Feb. 25, 1926. Serial No. 90,669. 10 Claims. (Cl. 308—47.)

1. In combination with a journal box having a lug with a cam surface, a hinged lid therefor, a spring one end of which is connected to the lid and another end of which engages the cam surface, and retainer means pivotally mounted with respect to the lid and engaging an intermediate portion of said spring for stressing the same and holding it in assembled position, said means being formed with an outward extension preventing incorrect assembly thereof.



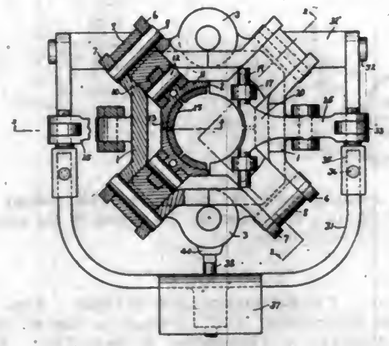
1,661,835. METHOD OF FORMING FLEXIBLE TUBING. HERMANN KELLER, Hilton, N. J., assignor to Forstner Chain Corporation, Irvington, N. J., a Corporation of New Jersey. Filed Apr. 9, 1927. Serial No. 182,325. 7 Claims. (Cl. 113—35.)

1. A method of forming an ornamental tubing, which consists in winding a plurality of channel-shaped strips of metal into helical coils one upon the other with the



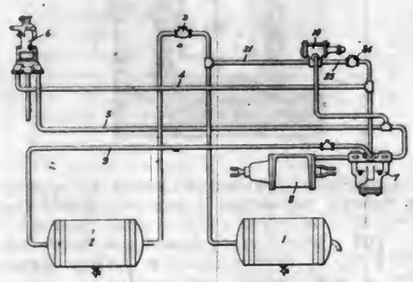
inwardly-extending side flanges of each outer coil extending into the channels between outwardly extending side flanges of adjacent inner coils and at the same time winding into helical form a filling strip of a different material than that of the inner and outer coils and positioned in the channels of one of them, and then removing the filling strip after the coils are formed.

1,661,836. GLASS-MELTING TANK. KARL G. KUTCHKA, Wilkinsburg, and THOMAS H. SWARTZLANDER, Aspinwall, Pa., assignors to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 18, 1926. Serial No. 95,627. 11 Claims. (Cl. 49—54.)



1. In combination in a melting tank, a melting end provided with heating means, a working end having a withdrawing opening, and an arched bridge wall lying below the surface of the glass intermediate the melting end and the working end.

1,661,837. FOLDABLE SUSPENSION HOOK. JOHN W. LITTLE, Hamilton, Ohio. Filed June 7, 1926. Serial No. 114,230. 6 Claims. (Cl. 248—22.)

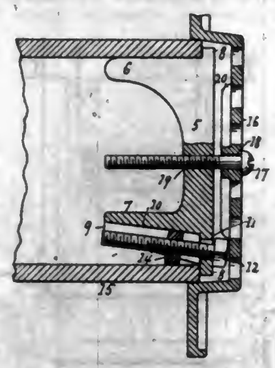


1. A device of the character described comprising a suspension member having a hook at one end thereof, an arm pivoted on the other end and disposable in a position at right angles to a plane passing through said suspension member and the bill of the hook thereon, said arm having a laterally extending free end portion parallel with said plane, and a hook pivoted upon said lateral extension and swingable in the plane thereof.

1,661,838. PIPE-SUPPORTING DEVICE. GERALD R. LIVERGOOD, Houston, Tex. Filed Apr. 5, 1926. Serial No. 99,910. 12 Claims. (Cl. 24—249.)

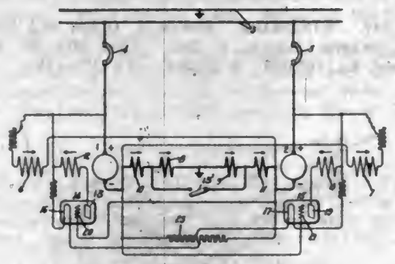
12. In a pipe-holding device, a tubular housing, jaws therein, arcuate gripping members on said jaws, the contacting faces between said jaws and gripping members being downwardly tapered, means connected with said gripping members to raise and lower said jaws and means on said housing connected with said jaws to move said jaws and gripping members away from said pipe when said jaws are raised.

1,661,839. FLUID-PRESSURE BRAKE. GEORGE MACLOSKIE, Erie, Pa., assignor to General Electric Company, a Corporation of New York. Filed July 26, 1926. Serial No. 124,849. 6 Claims. (Cl. 303—63.)



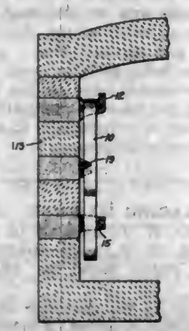
3. In a fluid pressure brake system, a main reservoir, an emergency pipe, a straight air pipe, an emergency valve, and a valve device for controlling a connection between said emergency pipe and said straight air pipe comprising a piston for actuating said device to establish said connection when the pressure in said reservoir decreases below a predetermined value, one side of said piston being subject to the pressure in said main reservoir, and means for exerting a force on said piston in opposition to the force exerted by the pressure in said reservoir.

1,661,840. CONDUIT-COVER CLAMP. JACOB MANNESCHMIDT, Jr., Brooklyn, N. Y. Filed July 9, 1924. Serial No. 724,984. 2 Claims. (Cl. 137—13.)



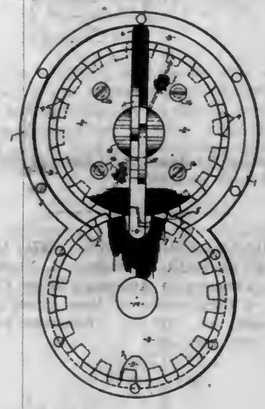
1. In a conduit cover clamp the combination with a shank member having a threaded bore arranged to set on the end of a conduit, adjustable devices for clamping the shank to the conduits of variable interior diameter, of a plate covering the mouth of the conduit adapted to contact with the wall of a building, said plate having

an aperture positioned opposite the bore in the shank, and a screw connected to the aperture engaging the



threaded bore for adjusting the plate to or from the shank independent of the clamping means.

1,661,841. REGULATING SYSTEM. GORDON R. MCDONALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Aug. 30, 1926. Serial No. 132,370. 8 Claims. (Cl. 171—223.)

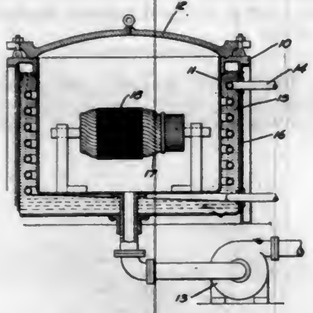


1. In combination, two sources of current connected in parallel, and means comprising an electron discharge device associated with one of said sources for controlling the current supplied by said source in accordance with a predetermined relation between the current outputs of the two sources.

1,661,842. ELECTRIC FURNACE. JAMES L. MCFARLAND, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 16, 1927. Serial No. 199,363. 1 Claim. (Cl. 266—1.5.)

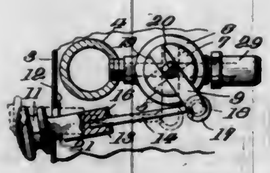
An electric furnace comprising a heat refractory wall forming a heating chamber, insulating supports secured to said wall, a ribbon-shaped heating resistor hung from said supports in a series of depending loops, beaded spacing members secured to said wall in alternate spaces between said loops near their lower ends, said heads overhanging the lengths of said resistor adjacent thereto, and wedge-shaped spacing members for said loops having parallel sides and projecting from said wall in the remaining spaces between said loops near the lower ends thereof, the edges of said wedge-shaped members extending horizontally.

1,661,843. HYDRAULIC BRAKE. EDWARD H. MCKINNEY, Salina, Kans. Filed June 1, 1925, Serial No. 34,027. Renewed Aug. 1, 1927. 3 Claims. (Cl. 188—92.)



1. In a hydraulic brake for motor driven vehicles, a housing having two rollers rotatably mounted therein, an annular compression chamber about the periphery of one of said rollers, said chamber being filled with oil concentrically positioned within said compression chamber, blades on the diametrical axis of said roller, said blades actuated by a toggle sliding said blades radially in opposite directions so that the ends thereof will cross said compression chamber, a shaft and toggle crosshead carrying said roller, a sprocket rigid on said shaft, said sprocket adapted to engage a sprocket on the drive shaft of the vehicle by means of a chain, a roller adjacent to first said roller so that the periphery of each will contact in their rotations, notches in the face of said roller, said notches being opposite each other and on the diametrical axis, gears on the corresponding sides of said rollers, said gears being in mesh so that the rotations of both rollers will be timed equal for the engagement of said blades and notches, a pushrod engaging with said crosshead, said rod and crosshead actuated by a foot lever all for the purpose described.

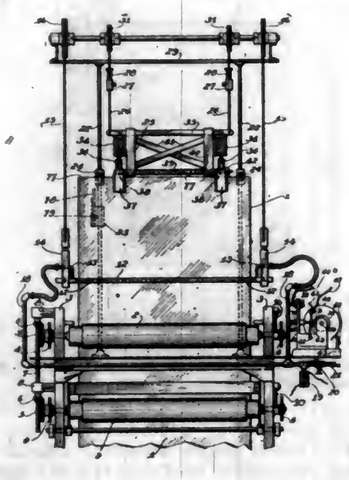
1,661,844. METHOD OF TREATING ELECTRICAL WINDINGS. HOWARD MILLER, Fort Wayne, Ind., assignor to General Electric Company, a Corporation of New York. Filed May 16, 1925. Serial No. 30,737. 5 Claims. (Cl. 91—70.)



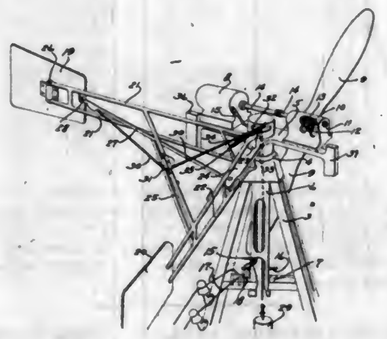
1. The method of treating electrical windings which consists in impregnating said winding with a varnish

thinned with a volatile solvent, driving off said solvent in a rarefied atmosphere at a low temperature such that

the varnish is not hardened, and then drying said winding to harden said varnish.



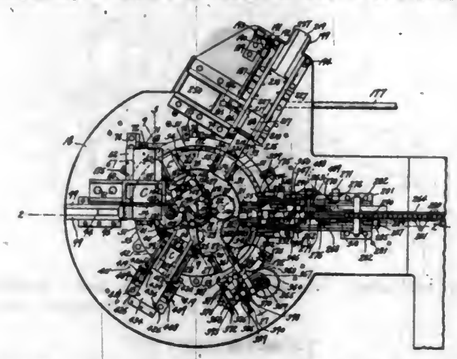
1,661,845. GAS-RANGE VALVE AND OPERATING MEMBER THEREFOR. FREDERIC G. NICOLAUS, Cleveland, Ohio, assignor to American Stove Company, St. Louis, Mo., a Corporation of New Jersey. Filed May 8, 1926, Serial No. 107,672. Renewed Dec. 3, 1927. 3 Claims. (Cl. 126—39.)



1. A gas stove having a closed structure, a burner and a manifold both embraced within the said structure, the manifold having a valve housing provided with an abrupt taper, a valve correspondingly shaped and fitting the said taper, a lever having its inner end rigidly connected with the valve, said lever projecting through a slot formed in the said housing, the said valve being thus subjected to the heat from the burner, the parts operating as described.

1,661,846. APPARATUS FOR SEVERING GLASS SHEETS. TRAVIS OAKES and ALFRED C. OAKES, Mount Vernon, Ohio, assignors to Pittsburgh Plate Glass Company, a Corporation of Pennsylvania. Filed Mar. 18, 1926. Serial No. 95,626. 12 Claims. (Cl. 49—50.)

1. An apparatus for separating sections from a continuously formed advancing sheet of glass, comprising electric heating means extending transversely of the sheet, means for clamping the heating means against the sheet so that it moves along with the sheet during the heating operation, and means actuated by the movement of the sheet for causing the clamping means to be actuated.

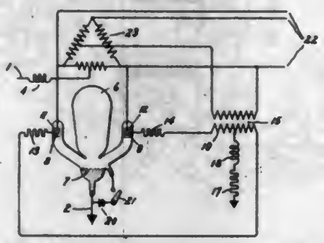


1,661,847. WINDMILL. EDWIN N. OLSON and PHILIP E. SOLBERG, Sharon, N. Dak. Filed May 28, 1927. Serial No. 195,035. 9 Claims. (Cl. 170—49.)

1. In a windmill, a rotatable head, a propeller journaled on the head in a radially and axially offset position in respect to the vertical axis of the head, a yieldingly held swingable arm on the head normally extending substantially parallel to the direction of rotation of the propeller and movable into a position in which it extends substantially radially from the vertical axis of the head, a swingable vane on the arm, and connections for holding the vane substantially parallel to the direction of rotation of the propeller in all of the different positions of the swingable arm.

1,661,848. PACKAGING MACHINE. ROBERT H. PLASS, Upper Montclair, N. J., assignor to Poloris Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 26, 1926. Serial No. 90,921. 33 Claims. (Cl. 93—6.)

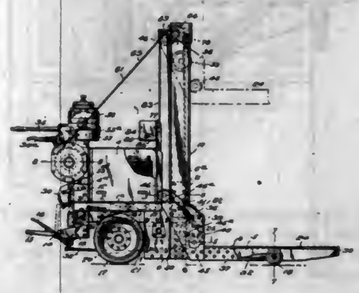
1. In a machine of the character described, the combination with a carton-conveyor, of a hopper for collapsed cartons, a reciprocable slide for feeding said cartons one by one from said hopper on to said conveyor, said conveyor being provided with a pair of cooperating gripper jaws, a cam-operated lever for reciprocating said slide, a bumper mounted on said cam-operated lever, a bell crank lever arranged to be engaged by said bumper for imparting a relative movement of one of said gripper



jaws with respect to the other to admit a collapsed carton and compressing said carton laterally, and an anvil movable into and out of position to cooperate with said gripper jaws for opening up said carton.

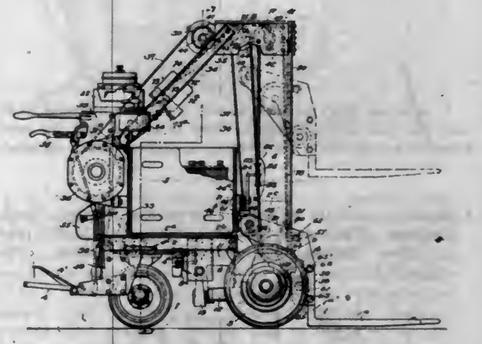
1,661,849. ABRASIVE COMPOSITION. HENRY R. POWER, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed May 31, 1922. Serial No. 564,959. 4 Claims. (Cl. 51—280.)

1. A paste for metal grinding formed with an inorganic material having a high absorptive power and having a granulated abrasive material incorporated therein, said paste also containing glycerine and being free of silicate of soda.



1,661,850. ELECTRICAL SYSTEM. DAVID C. PRINCE, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 18, 1925. Serial No. 30,938. 8 Claims. (Cl. 175—363.)

1. The combination of a polyphase transformer, a vapor electric device provided with anodes connected to the terminals of one phase of said transformer and with a cathode and grids arranged to cooperate with said anodes, a direct current circuit connected to said cathode and to said phase at a point intermediate its terminals, and means connected between one of said terminals and a point intermediate the ends of another phase of said transformer for causing the voltage applied to said grids to differ in phase from the voltage applied to said anodes.

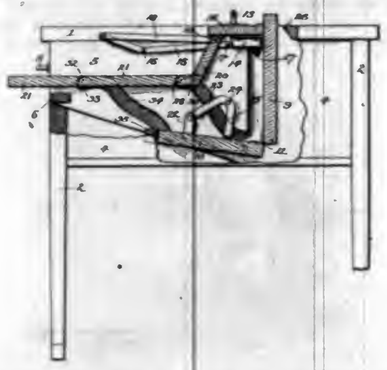


1,661,851. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 22, 1926. Serial No. 117,780. 8 Claims. (Cl. 187—11.)

5. An apparatus of the class described, the combination of a wheel mounted frame, a pair of guide members thereon, an elevating member having a shoe plate disposed in close relation to each said guide member, a pair of shafts extending through said shoe plates and supporting a pair of rollers in engagement with the opposite side walls of said guide members, a shaft supported by said member, a shaft carried by the upper portions of said

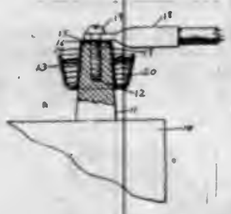
elevating guide members, sheaves on said shafts, flexible members operatively engaging said sheaves, means for winding up and unwinding said flexible members to raise and lower said elevating member, and devices between one of said guides and said elevating member to maintain said rollers in engagement with said guide member.

1,661,852. INDUSTRIAL TRUCK. EDWARD H. REMDE, Cleveland, Ohio, assignor to The Baker-Raulang Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 17, 1927. Serial No. 176,255. 9 Claims. (Cl. 187—11.)



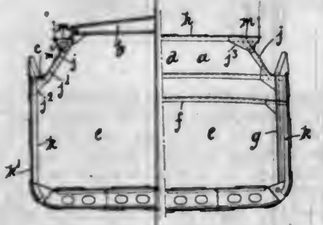
5. In apparatus of the class described, the combination of a frame, spaced guides mounted substantially vertically thereon, wheels for supporting said frame, a load engaging and carrying member having a shoe, comprising portions disposed in spaced relation to permit unobstructed view between and through the guides and each portion having an upper roller and a lower roller movably engaging the adjacent guide, means disposed below the lower roller for connecting the shoe portions together, and means for raising and lowering said member.

1,661,853. TABLE. ERNEST RHODES, Herkimer, N. Y. Filed Aug. 13, 1924. Serial No. 731,813. 10 Claims. (Cl. 312—25.)



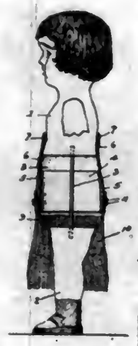
2. A table having a top and provided with a compartment therein; a cover for said compartment consisting of two integral parts pivotally connected together for completely covering said compartment; and connecting means between said cover sections and table, adapted,

upon movement of the cover, to cause said front section to assume an upright position at the rear of the



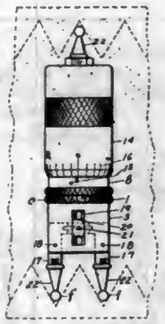
compartment and said rear section to assume a substantially horizontal position beneath the table top.

1,661,854. STORAGE-BATTERY DEVICE. FLORENCE C. RIDGELY, Detroit, Mich. Filed Feb. 20, 1925. Serial No. 10,483. 4 Claims. (Cl. 173—259.)



2. A hat shaped member having its crown adapted to fit over the end of a storage battery terminal, and its brim forming a receptacle for holding a non-corrosive element.

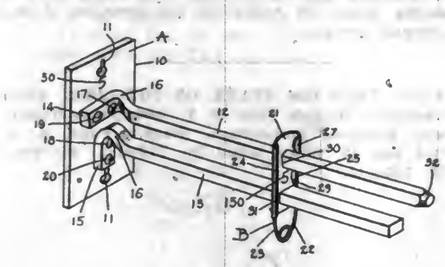
1,661,855. CARGO VESSEL. CUTHBERT RITSON, Blyth, England. Filed July 27, 1926, Serial No. 125,230, and in Great Britain Aug. 5, 1925. 6 Claims. (Cl. 114—72.)



1. In a cargo vessel, a fore-and-aft deck erection rising from the upper deck and having inwardly inclined sides above said deck which confine the portions of the cargo space above the deck in a fore-and-aft direction, hatch coamings supported by said inclined sides whereby the hatchways are elevated substantially above the deck to increase the cargo spaces, inclined beams supporting the plating of said inclined sides separate from but strongly connected to the usual side framing of the vessel and at their upper ends to the outsides of the hatch coamings, and platforms between and at the ends of each set of elevated hatchways.

1,661,856. ORNAMENTAL TOY DOLL. MICHAEL W. ROBICHAUD, Seattle, Wash. Filed Jan. 22, 1927. Serial No. 162,854. 3 Claims. (Cl. 46—40.)

3. A toy or the like comprising a suitable upright figure having supporting leg portions, an abdominal portion and a head and chest portion, the latter rigidly secured to the leg portion, the abdominal portion spaced from both the other portions and suspended from the head and chest portion for swinging movement relatively to both said other portions.

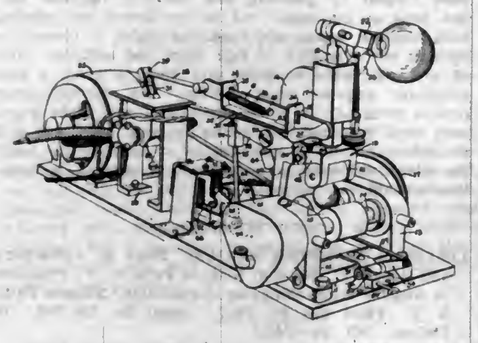


1,661,857. UNIVERSAL THREAD GAUGE. CHARLES J. SCHEN, Detroit, Mich. Filed June 21, 1924. Serial No. 721,428. 6 Claims. (Cl. 33—199.)

1. An inside gauge comprising a cylindrical body, a circumferentially graduated thimble mounted thereon, means whereby said thimble may be moved longitudinally thereon, a single thread engaging member attached to the end of said thimble, and projecting therefrom, two thread engaging members pivotally attached to the body, at the opposite end, and pivot means for allowing adjustment of said two thread engaging members simultaneously to engage consecutive thread grooves.

1,661,858. CLASSIFYING APPARATUS. ASHLEY M. STOKOE, St. Paul, Minn. Filed Mar. 3, 1927. Serial No. 172,430. 6 Claims. (Cl. 40—19.5.)

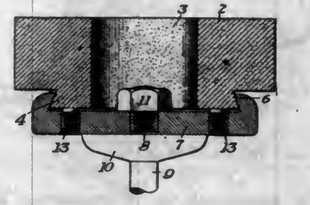
1. In a classifying device the combination with a plurality of brackets, of a plurality of markers arranged for application thereto, each bracket comprising a support having a pair of spaced parallel bars issuing outwardly therefrom, one of the bars of each pair being non-circular in cross section, the respective bars of each bracket being identical with the corresponding bars of each of the other brackets and differently angularly related, said



markers being differently apertured for application to their respective brackets.

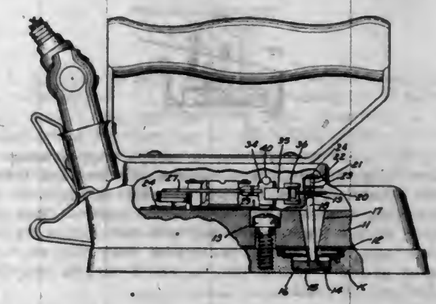
1,661,859. METHOD OF MAKING FURNACE LINING. GEORGE P. SUPPES, Johnstown, Pa. Filed Mar. 15, 1926. Serial No. 94,988. 2 Claims. (Cl. 25—157.)

1. The method of forming a furnace lining which consists in moulding a refractory composition into blocks, hardening the blocks by baking them in the presence of steam under pressure until the bond has matured, and then laying the blocks in the furnace to form a lining.



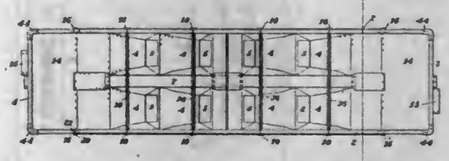
1,661,860. CONTROL MECHANISM FOR GOLF-BALL-WINDING MACHINES. EDWIN G. TEMPLETON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 30, 1926. Serial No. 138,794. 9 Claims. (Cl. 242—3.)

1. A winding machine comprising a frame, a bracket formed with upwardly projecting arms secured to the frame, a control lever slidably mounted in the arms, a spring tending to urge the lever in one direction, a control element for an electric circuit secured to one end of the control lever, a notch formed in the lever, an engaging finger for the notch adapted to hold the lever in operative position, a trip mechanism for the lever, and means to actuate the trip mechanism to free the lever upon the occurrence of thread breakage.



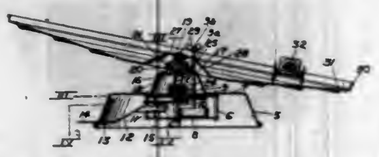
1,661,861. GRINDING WHEEL AND HOLDER THEREFOR. FRANK J. TONE, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Filed June 23, 1925. Serial No. 39,104. 2 Claims. (Cl. 51—209.)

1. A grinding wheel assembly including an abrasive wheel formed of bonded abrasive grains having an integral hub portion of reduced diameter thereon, a series of lugs disposed around the periphery of the hub portion, the peripheral surface of each lug being undercut, each lug also being outwardly curved from one end toward the other, and a metal holder secured to the hub portion having a central portion with a series of



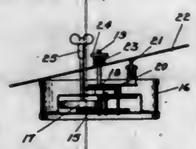
undercut lugs on the face thereof corresponding to the lugs on the said hub portion of the wheel, said lugs on the holder being adapted to embrace and interfit with the lugs of the said hub portion and to be forced into wedging relation therewith.

1,661,862. ELECTRIC HEATER. WILLIS N. VANATTA, Ontario, Calif., assignor to Edison Electric Appliance Company, Inc., Chicago, Ill., a Corporation of New York. Filed Dec. 29, 1924. Serial No. 758,501. 8 Claims. (Cl. 200—124.)



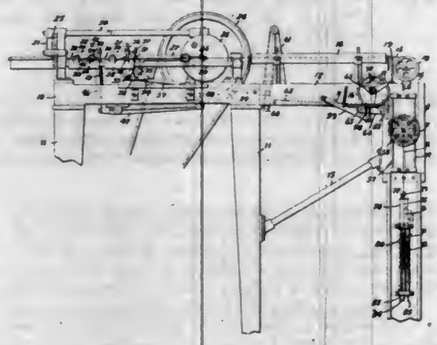
1. A temperature cut-out for electric heaters comprising control means in the circuit of said heater biased to open circuit position, a rotatable member for securing said control means in closed circuit position, a holding member for preventing rotation of said rotatable member having a pivotal off-center connection with said rotatable member, and temperature responsive means normally securing said holding member but releasing it to permit the opening of the heater circuit upon the occurrence of a predetermined temperature.

1,661,863. FREIGHT CAR. WILLIAM E. WINE, Toledo, Ohio, assignor to Wine Railway Appliance Company, Toledo, Ohio, a Corporation of Ohio. Filed Mar. 3, 1926. Serial No. 91,951. 19 Claims. (Cl. 105—249.)



1. A freight car having sides comprising spaced side plates and flanged bar stakes, the flanges of said stakes being secured to the side plates and the webs of the stakes extending within the spaces between the plates.

1,661,864. MECHANICAL TOY OR AMUSEMENT DEVICE. CHARLES ZABEL, Coraopolis, Pa., assignor, by mesne assignments, to McDowell Manufacturing Company, Millvale, Pa., a Corporation of Pennsylvania. Filed Sept. 27, 1923, Serial No. 665,114. Renewed July 28, 1927. 10 Claims. (Cl. 272—35.)

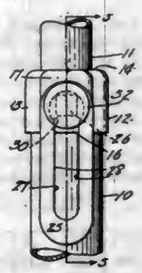


6. In a mechanical toy, a supporting housing, an inclined plate member freely mounted above the housing and provided with a track, a shaft vertically disposed in said housing, means carried by the housing to positively drive said shaft, and means comprising an eccentric element rotatable by said shaft in a substantially horizontal plane and operatively associated with said plate member to impart a gyratory motion thereto.

1,661,865. MECHANICAL RACING TOY. CHARLES ZABEL, Coraopolis, Pa., assignor to McDowell Manufacturing Company, Millvale, Pa., a Corporation of Pennsylvania. Filed June 29, 1925. Serial No. 40,145. 6 Claims. (Cl. 272—35.)

1. In a mechanical toy, a supporting housing, a motor located within the housing, an inclined dished plate member having a track rockably mounted on the supporting housing, revolving means spaced from the center of the plate connected with and driven by the motor and eccentrically contacting with the plate to impart gyratory motion thereto, and a gravity propelled object on the track.

1,661,866. APPARATUS FOR CUTTING WIRE INTO LENGTHS. WILLIAM P. ZABEL, Cleveland Heights, Ohio, assignor to General Electric Company, a Corporation of New York. Filed June 20, 1927. Serial No. 199,898. 7 Claims. (Cl. 140—140.)

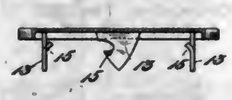


1. In an apparatus for cutting fine wire into lengths, the combination with a wire cutting means of a reel adapted to hold said wire, means for turning said reel to unwind said wire, means for intermittently advancing uniform lengths of said wire, intermediate means for applying a definite tension to the wire engaged by said advancing means, and means controlled by said tensioning means for controlling the operation of said reel turning means.

1,661,867. TENT PIN, STAKE, OR THE LIKE. ELIOT ARMSTRONG, Niagara Falls, N. Y., assignor to Niagara Metal Stamping Corporation, Niagara Falls, N. Y. Filed May 15, 1924. Serial No. 713,477. 4 Claims. (Cl. 135—15.)

4. A sheet metal device of the sort described comprising longitudinal angularly disposed flat side webs connected along one side of each to form a V-shaped body portion having a longitudinal, median ridge, a striking head formed by pressing and securing together said flat webs at the upper end of the device, an integral hook disposed below said head and which is formed by striking out a portion of said ridge and adjacent parts of said side webs whereby said hook is given a substantially angular cross section, and reinforcements formed integrally in those portions of said webs which have been weakened by striking out said hook, and said reinforcements being extended in a direction to resist the blows delivered on said head to prevent deformation of said web portions.

1,661,868. CLAMPING DEVICE. JOHN A. ARMSTRONG and GEORGE O. BENSON, Niagara Falls, N. Y., assignors to Niagara Metal Stamping Corporation, Niagara Falls, N. Y. Filed May 27, 1927. Serial No. 194,703. 10 Claims. (Cl. 24—243.)

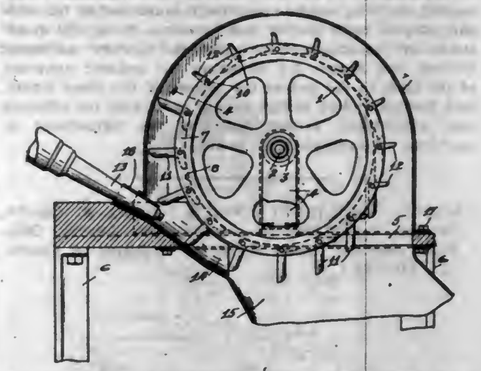


1. In a clamping device for clamping together two relatively movable members, a frame adapted to be secured to one of said members, a locking bolt supported on said frame to move into and out of locking relation to said other member, and a holding nut on said bolt which engages and is held from turning by said frame.

1,661,869. CHAIN. CARL AUGENSTEIN, Cranston, and ROBERT VOGEL, Providence, R. I., assignors to Automatic Gold Chain Company, a Firm composed of Edwin F. M. Speidel and Albert R. Speidel, Edgewood, R. I. Filed Dec. 9, 1926. Serial No. 153,527. 5 Claims. (Cl. 59—79.)

3. A bracelet structure comprising a series of extendible link units, each having a guide link formed of sheet stock folded to provide side walls and portions of a rear wall with their edges spaced apart and turned inwardly forming guiding lips, a band-shaped slide link having a broad plate extending beneath said lips and a narrow plate positioned to complete the rear wall of the guide link between said lips, laterally-extending abutment fingers on said lips, a link closing spring acting between said abument and the fold of said band link, and an integral cross bar on the adjacent end of the guide link detachably engaged by the hook of the slide link, said fingers on the guide link extending beneath the hook tongue to prevent a disengaging action of the hook except when the link parts are in extended position.

1,661,870. STREET MARKER. LEON F. N. BALDWIN, Edgewood, R. I., assignor of one-half to Benjamin S. Clark, Providence, R. I. Filed July 12, 1926. Serial No. 121,903. 3 Claims. (Cl. 94—1.5.)



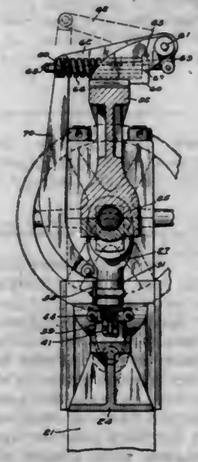
1. A street marker formed of a plate of sheet stock having a plurality of rearwardly extending prongs, the side edges of said prongs being tapered toward its end, one side edge of each prong being notched to render its contacting area less than that of its opposite edge whereby when driven into the material of the roadbed the plate has a tendency to rotate and force the roadbed material into said notch to assist in locking the plate in set position.

1,661,871. PROCESS FOR THE PREPARATION OF HETEROCYCLIC ARSENIC COMPOUNDS. ARTHUR BINZ and CURT RATH, Berlin, Germany. Filed Apr. 2, 1926, Serial No. 99,379, and in Germany Nov. 4, 1925. 7 Claims. (Cl. 260—14.)

1. Process for the preparation of organic arsenic compounds of the type $R—As=As—R_1$, wherein R is a heterocyclic group, and R_1 is a heterocyclic, isocyclic or open chain group, which comprises condensing an arsenic compound of R with an arsenic compound of R_1.

1,661,872. WATER MOTOR. EDWIN O. BRANINGTON, Rochester, N. Y., assignor of one-half to Oscar A. Peters, Rochester, N. Y. Filed Jan. 9, 1925. Serial No. 1,496. 8 Claims. (Cl. 253—136.)

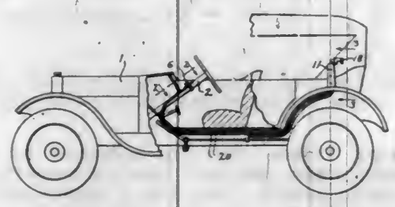
3. In a water motor, the combination of a wheel, a plurality of floats mounted for oscillatory movement on the wheel, each comprising two arms of unequal length at substantially right angles to each other, and a nozzle, both arms of each succeeding float receiving direct impact from the jet from said nozzle as the wheel rotates, the forward part of the under surface of the long arm



of each float being inclined to permit the end edge of the arm to pass close to the discharge end of the nozzle.

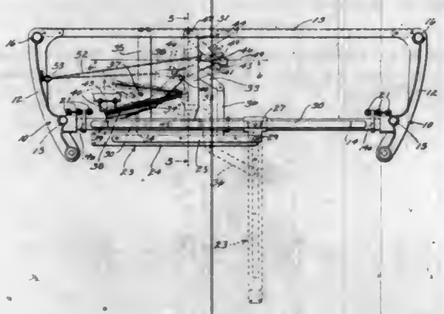
1,661,873. JOINT FOR THE MEMBERS OF BAR STRUCTURES. BERTHOLD BUXBAUM, Berlin-Charlottenburg, Germany. Filed Mar. 8, 1924, Serial No. 697,895. and in Germany Mar. 13, 1923. 5 Claims. (Cl. 287—14.)

1. A joint for members of bar-structures comprising, in combination, a joint-member consisting of a tubular part and a flat lug extending forth therefrom in the longitudinal direction thereof and having a hole; another joint-member consisting of a tubular member, a flat lug extending forth therefrom in the longitudinal direction thereof, and a projection located on this lug and being adapted to engage the hole of the other lug; and a bar adapted to be put through the first-mentioned tubular part and to check said projection in said hole, substantially as set forth.



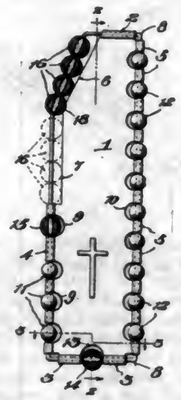
1,661,874. PRESS. ARTHUR A. BYERLEIN, Detroit, Mich. Filed Sept. 20, 1924. Serial No. 738,940. 18 Claims. (Cl. 78—13.)

1. In an apparatus of the character described adapted for working metal, a frame having therein a bed and a reciprocable slide arranged to receive therebetween the



metal to be worked, driving means for sliding said slide downwardly towards the bed and for returning it upwardly, yielding means operatively connected to the slide and adapted to be placed under tension during the downstroke of the slide and to assist the upward movement thereof, and means for adjusting the nearest approach of the slide to the bed at the bottom of the down stroke, said last-mentioned means having provisions for effecting said adjustment without affecting the adjustment or operation of said yielding means.

1,661,875. SIGNALING DEVICE. HARRY A. CAHILL, Newark, and HARRY H. DENNIS, East Liberty, Ohio. Filed July 23, 1927. Serial No. 207,916. 6 Claims. (Cl. 116—51.)



1. In a vehicle signal, a support adapted to display the signal fore and aft of the vehicle, a signal panel normally invisible, and a remote control means for causing said panel to be displayed in visible position both fore and aft of the vehicle, and resilient means for returning said panel to its inoperative position when released.

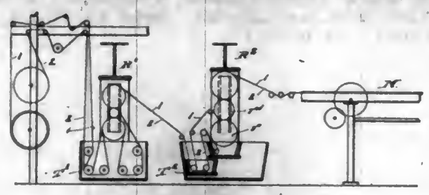
1,661,876. FOLDING BED. EDGAR COCKS, Los Angeles, Calif., assignor to Los Angeles Wall Bed Company, Los Angeles, Calif., a Corporation of California. Filed Dec. 3, 1925. Serial No. 72,869. 5 Claims. (Cl. 5—168.)

1. A folding bed, comprising a base, a bed frame pivotally mounted on the base to swing vertically thereon and overhang the base when in horizontal position, an auxiliary leg pivotally mounted on the base to swing from folded position, transversely of the bed, to extended position, longitudinally of the bed and beneath the overhanging portion of the bed frame, yielding means to normally hold said leg in extended position, means in connection with the bed frame to effect movement of said leg from extended to folded position, against the action of said yielding means, upon upward movement of the bed frame, and toggle means in connection with said moving means and bed frame to insure full extended movement of the leg.

1,661,877. PRAYER-BEAD DEVICE. JOHN COSTELLO, Providence, R. I. Filed Apr. 30, 1927. Serial No. 187,932. 5 Claims. (Cl. 235—123.)

2. In a prayer device, a plate having a series of cut-outs along one side thereof and having a cut-away part forming an inclined and a straight edge on its opposite side, wire means disposed along said sides of the plate, means to hold the wire means, in position, beads strung on the wire and arranged in the cut-outs, and movable beads strung on the wire means and slidable from the inclined to the straight edge and vice-versa.

1,661,878. GASKET. JOHN C. CROMWELL, Columbus, Ohio, assignor, by mesne assignments, to The Testite Company, a Corporation. Filed Jan. 12, 1923. Serial No. 612,258. 6 Claims. (Cl. 288—1.)



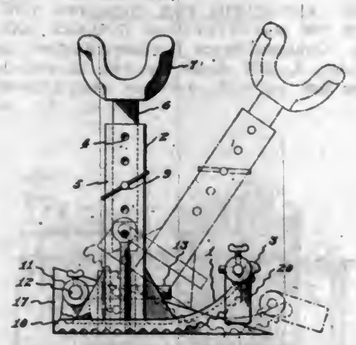
1. As an article of manufacture a hollow endless gasket having seat engaging portions on opposite faces thereof, one of the seat engaging portions having a flange extending beyond the plane of the body of the gasket and arranged to be seated in a groove in one of the elements to be packed, the flange extending substantially parallel with the axis of the gasket, substantially as described.

1,661,879. TREATMENT OF CELLULOSIC MATERIALS. DENIS DE GÖNCZ, North Adams, Mass., assignor to Arnold Print Works, North Adams, Mass., a Corporation of Massachusetts. Filed Sept. 22, 1924. Serial No. 739,201. 9 Claims. (Cl. 8—20.)

1. Process of treating natural cellulosic material of the character described which comprises applying to such material a solvent activating agent, and thereafter subjecting the material containing the activating agent to the superficial action of a cellulose solvent.

1,661,880. LAMINATED FABRIC AND METHOD OF MAKING IT. DENIS DE GÖNCZ and ALBERT S. JONES, North Adams, Mass., assignors to Arnold Print Works, North Adams, Mass., a Corporation of Massachusetts. Filed Feb. 19, 1925. Serial No. 10,263. 5 Claims. (Cl. 154—34.)

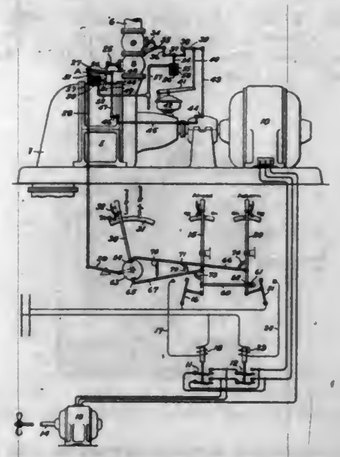
1. The method of joining preformed cellulosic fiber webs, which comprises preliminarily applying to the webs a caustic alkali, subsequently subjecting the webs thus prepared to the action of cuprammonium solution and bringing the webs together prior to the completion of



the ensuing action between the caustic alkali, the cuprammonium, and the cellulosic material of the webs.

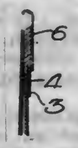
1,661,881. TREATMENT OF CELLULOSIC FABRICS. DENIS DE GÖNCZ and ALBERT S. JONES, North Adams, Mass., assignors to Arnold Print Works, North Adams, Mass., a Corporation of Massachusetts. Filed Dec. 9, 1926. Serial No. 153,720. 3 Claims. (Cl. 8—20.)

1. The method of treating natural cellulosic fibrous material of the character described, which comprises impregnating the material with causic solution, allowing the impregnated material to dry with the caustic therein, and subsequently subjecting the material containing the dry caustic to the superficial action of cuprammonium solution.



1,661,882. VEHICLE JACK, JAMES W. DERRICK, Philadelphia, Pa. Filed Oct. 30, 1926. Serial No. 145,285. 4 Claims. (Cl. 254—89.)

1. A vehicle jack comprising a standard adapted to support a vehicle including a flanged base having its front end portion curved upwardly, adjustable vehicle wheel traction means pivoted to said flanged base in spaced co-operative relation thereto, and stop means carried by said base and pivoted to the said upwardly curved end thereof and designed to engage with the floor or ground for arresting the rocking movement of said jack at any point between the inclined and normal vertical vehicle supporting position thereof.



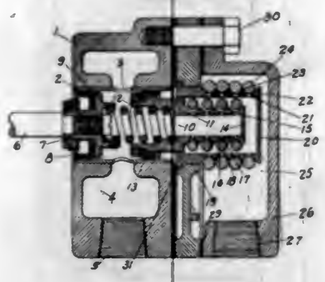
1,661,883. ELECTRIC-SHIP-PROPULSION INSTALLATION. EDGAR D. DICKINSON, Lynn, Mass., assignor to General Electric Company, a Corporation of New York. Filed July 19, 1922. Serial No. 576,165. 1 Claim. (Cl. 172—8.)

In a ship propulsion system, the combination of a prime mover, a generator driven thereby, a motor, switch means for connecting the generator to the motor whereby the motor may be connected to operate in either direction, a controlling means for the switch means, valve mechanism for controlling the admission of elastic fluid to said prime mover, a manually controlled means for said valve mechanism, a governor means also connected with said valve mechanism, means connecting said manual controlling means to said governor means for modifying the setting of it in accordance with the position of said manually controlled means, and interlocking means be-

tween said switch controlling means and said manually controlled means whereby the prime mover must be started before said switch means can be closed and said switch means must be closed before the prime mover can be operated above a predetermined low speed.

1,661,884. CONTAINER AND METHOD OF SEALING. JOHN M. DRIVER, Philadelphia, Pa. Filed Sept. 9, 1922. Serial No. 587,151. 2 Claims. (Cl. 229—62.)

1. A bag comprising a tubular blank sealed at one end and having one face extending at the other end beyond the end edge of the other face, and an adhesive on the outside and at the open end of said bag constituting securing means when the aforesaid open end is folded over to close the bag.



1,661,885. GAME APPARATUS. SHERWOOD E. EDWARDS, New Orleans, La. Filed July 30, 1927. Serial No. 209,489. 3 Claims. (Cl. 273—125.)

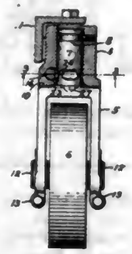
1. A game apparatus of the class described including a board constituting a playing field over which marbles are adapted to be rolled, a second board arranged thereunder constituting an inclined marble-returning runway, said boards being pivotally connected together at one end, means for spacing the boards apart at their other end, an easel for elevating the hinged end of the lower board whereby the upper board may be maintained in substantially horizontal position, the upper board at its hinged end terminating short of the lower one, whereby marbles rolling off of the upper board drop on

to the lower one and are returned to the shooter, said easel constituting a stop for blocking the marbles which roll off of the upper board and directing them on to the lower board.

1,661,886. PUMP. CHARLES P. EISENHAUER, Dayton, Ohio, assignor to The Duro Company, Dayton, Ohio, a Corporation of Ohio. Filed Mar. 2, 1927. Serial No. 171,942. 11 Claims. (Cl. 103—178.)

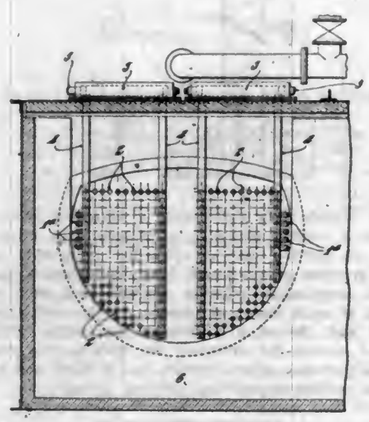
1. In combination, a cylinder having an inlet port and a plurality of radial ports, a sealing ring mounted on the exterior of said cylinder over said ports adapted to regulate the exit of liquid from the interior of the cylinder to the exterior thereof, said cylinder having an annular groove on the exterior thereof associated with the exit ends of said ports for forming a seating surface for said ring to facilitate the sealing of said ports, and a second cylinder having a plurality of radial ports and telescoping within the said cylinder, the two cylinders being relatively movable with respect to each other.

1,661,887. METHOD OF AND MEANS FOR PRESERVING VULCANIZED RUBBER. HANS WERNER FIEDLER, Leipzig, Germany. Filed Sept. 3, 1924. Serial No. 735,630, and in Germany Sept. 13, 1923. 2 Claims. (Cl. 18—53.)



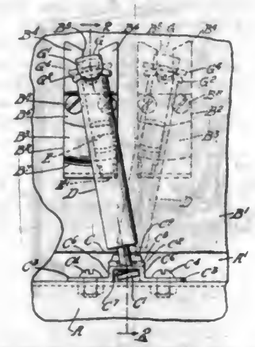
2. The process of producing a paste for preserving vulcanized rubber, consisting in mixing glycerine benzaldehyde and talcum, introducing the mixture into a solution of raw rubber in paraffin oil at about 140° C., and then raising the temperature of the solution to about 180° C.

1,661,888. METHOD OF AND MEANS FOR CONTINUOUSLY VULCANIZING RUBBER STOCK. GEORGE FREDERICK FISHER, Roselle, N. J. Filed Aug. 18, 1926. Serial No. 130,018. 13 Claims. (Cl. 18—53.)



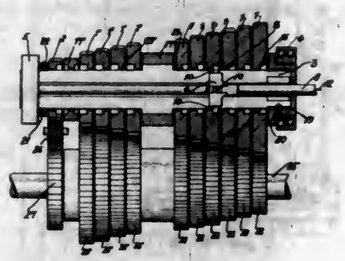
1. A method of continuously vulcanizing rubber stock which includes the step of carrying the stock in a moving liquid stream through a vulcanizing chamber and applying heat to the liquid which carries the stock through the chamber.

1,661,889. SWIVEL WHEEL. HENRY G. FRENCH and EDWARD W. MCSHEEN, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Sept. 27, 1924. Serial No. 740,418. 4 Claims. (Cl. 16—35.)



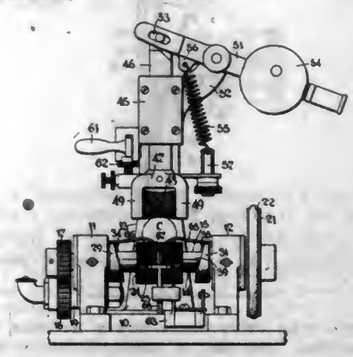
1. A swivel wheel comprising a socket member, a fork having a shank rotatably mounted therein, a wheel carried by said fork, said shank having a transverse recess in the side thereof, a pin mounted in said socket member having an eccentric portion for engaging in said recess whereby a rotative movement of said pin adjusts said fork angularly and clamps the same to said socket member.

1,661,890. APPARATUS FOR CLEANING THE FIRE TUBES OF MULTITUBULAR BOILERS AND THE LIKE. CHARLES BRUCE GARDNER, Stafford, England. Filed Apr. 8, 1927, Serial No. 182,114, and in Great Britain Mar. 10, 1926. 4 Claims. (Cl. 122—391.)



1. An apparatus of the class described, comprising a horizontal header having a fluid inlet, a series of blow pipes depending from the header in two rows, the pipes in one row being staggered in relation to the pipes of the other row, and a series of nozzles projecting horizontally from each blow pipe, the nozzles of one row of pipes being longer than the nozzles of the other row of pipes and extending between the pipes of the last mentioned row, with all the nozzles terminating in a common plane.

1,661,891. HOOD LATCH. CHARLES B. GILMORE, Chicago, Ill., assignor to Chicago Forging & Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 24, 1926. Serial No. 96,938. 20 Claims. (Cl. 292—114.)

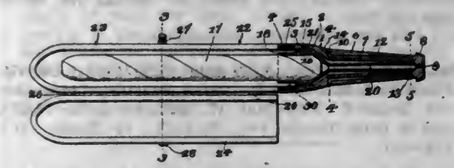


1. In combination with a closure, a latch member, a stem upon which said latch member is slidably mounted, a base upon which said stem is positioned adjacent said closure, yielding means normally thrusting said latch member downwardly toward said base, and a universal rolling connection between the bottom of the stem and said base.

1,661,892. CHANGE-SPEED MECHANISM. IGNACIO VIVES GIRONÉS, Barcelona, Spain. Filed Jan. 2, 1926, Serial No. 78,913, and in Spain Jan. 10, 1925. 2 Claims. (Cl. 74—59.)

1. In change speed gears of the kind in which two series of corresponding graduated gear wheels are disposed upon parallel spindles, the respective gear wheels of the series being constantly in mesh, means by which any one of the series of gear wheels is locked upon its spindle, consisting in combination of a spindle having a co-axial bore, radial slots extending from the periphery of the spindle to the said bore, the said gear wheels having key slots adapted to come into position adjacent the said radial slots in the said spindle, a member adapted to move within the bore of the said spindle, a head carried and rotatable on the end of said member, the said head having parts adapted to slide within the said radial slots, radially disposed keying bolts carried by the said head, means adapted to move the said keying bolts radially outward on the said keying bolts being set in line with the key slots of one of the gear wheels, and means for retracting the said keying bolts, substantially as described.

1,661,893. GOLF-BALL-WINDING MACHINE. JOSEPH P. GRIGGS, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 30, 1926. Serial No. 138,714. 10 Claims. (Cl. 242—3.)

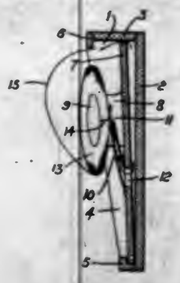


1. A winding machine comprising a plurality of ball supporting rollers, means to rotate the rollers, and means to reciprocate the respective rollers through different amplitudes.

1,661,894. MANUFACTURE OF ANHYDROUS MAGNESIUM CHLORIDE. ROBERT GRIESSBACH, Ludwigshafen-on-the-Rhine, and KURT RÖHRE, Mannheim, Germany, assignors to I. G. Farbenindustrie Aktiengesellschaft, Frankfort-on-the-Main, Germany, a Corporation of Germany. Filed Nov. 22, 1926, Serial No. 150,144, and in Germany Dec. 7, 1925. 2 Claims. (Cl. 23—91.)

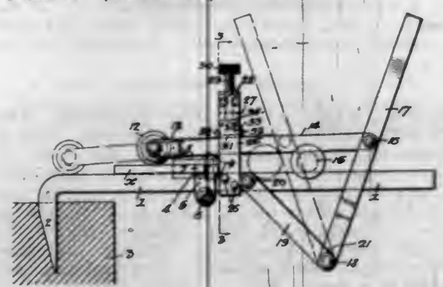
1. The process of producing anhydrous magnesium chloride which consists in treating crystallized magnesium chloride in a current of a gas mixture containing about between 10 and 25 per cent of hydrogen chloride at a temperature of about between 200° and 350° C., the drying temperature employed being lower within the range specified, the smaller the content of hydrogen chloride in the gases.

1,661,895. CIGAR AND CIGARETTE HOLDER. GEORGE HILSHANSKY, Johnstown, Pa. Filed Oct. 29, 1927. Serial No. 229,717. 2 Claims. (Cl. 131—51.)



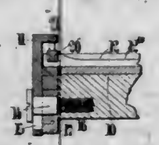
1. A cigar or cigarette holder comprising a tubular mouthpiece having a smoke outlet, a holder member for suspending a cigar or cigarette lengthwise, said member arranged in and connected to the mouthpiece and formed with a smoke conducting tube having one end anchored in the mouthpiece and opening into said outlet, said mouth-piece forming an air passage and formed with intakes communicating with said passage, and a tubular closed ash receptacle detachably connected to the mouthpiece for enclosing in spaced relation the cigar or cigarette suspended by said member.

1,661,896. PERFORATED-PAPER-ROLL HOLDER. WILLIAM V. HUNT, North Vancouver, British Columbia, Canada. Filed June 16, 1926. Serial No. 116,449. 2 Claims. (Cl. 242—55.2.)



1. In combination, a holder for a roll of material, means for directing a fluid agent toward one portion of

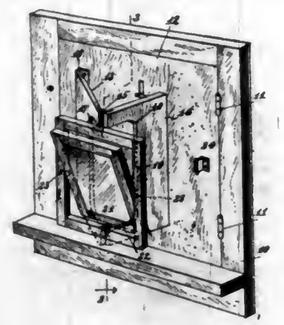
the roll to effect initial dislodgment of the free end of the roll and means for directing a fluid agent toward another



portion of the roll to impinge against the free end of the roll subsequent to the initial dislodgment thereof.

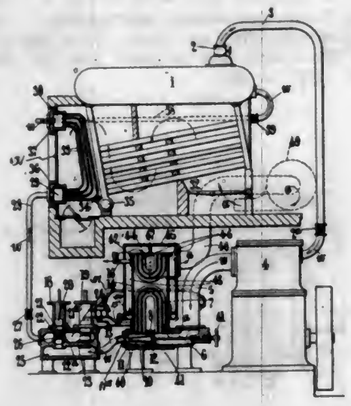
1,661,897. TILE CUTTER. GUSTAVE KOEHLER, Philadelphia, Pa. Filed Mar. 3, 1926. Serial No. 92,021. 3 Claims. (Cl. 125—23.)

1. A tile cutter comprising a frame for supporting a tile in correct position to be cut; an adjustable abutment gage for said tile; a rotary cutting tool adapted to be traversed across, and in engagement with, the face of the tile; a cutter bar for carrying said cutter; a roller bearing for said bar, loosely mounted intermediate said bar and said frame being capable of free movement longitudinally of said frame and said cutter bar; means for applying pressure to the cutter bar intermediate said cutter and said roller bearing; and means for moving the cutter across the tile.



1,661,898. PRINTING BED FOR EMBOSSING OR IMPRINTING MACHINES. ROLLS PERCIVAL LINK, London, England. Filed Mar. 17, 1926. Serial No. 95,371, and in Great Britain Dec. 19, 1925. 10 Claims. (Cl. 101—3.)

1. A printing bed for an embossing press having in combination therewith side plates movable vertically with respect to the bed and type supporting bars movably mounted in the said side plates.

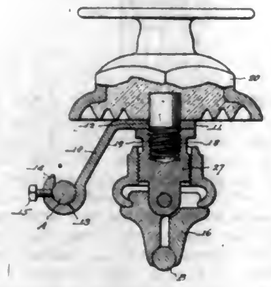


1,661,899. COMBINED DOOR AND MIRROR SUPPORT. DAVID ALONZO MARTENS, New York, N. Y., assignor to Sarah Lynagh Martens, New York, N. Y. Filed Feb. 12, 1927. Serial No. 167,827. 9 Claims. (Cl. 45—97.)

1. An adjustable support for mirrors including a panel having hingedly connected sections, each formed with a medial cut-out portion at the inner hingedly connected edges, and a mirror supporting frame fulcrumed upon the panel sections at the axes of the hinged connection therebetween and adapted when the panel sections are disposed

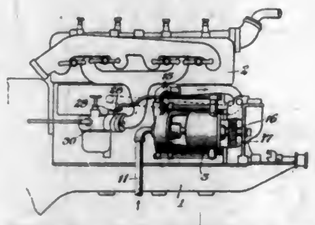
at an angle to each other, to swing laterally with respect thereto, the cut-out portions affording a clearance space for the swinging movement of the mirror supporting frame.

1,661,900. STEAM-POWER INSTALLATION. JOHN MCCALLUM, Glasgow, and HARRY PERCIVAL HARVEY ANDERSON, Lanarkshire, Scotland. Filed Feb. 3, 1927, Serial No. 165,706, and in Great Britain Feb. 1, 1926. 3 Claims. (Cl. 60—95.)



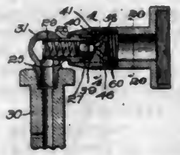
3. A steam power installation comprising a steam generator, a steam power unit, means for subjecting the exhaust steam simultaneously to positive heat abstraction and to the compressive effect of fresh quantities of further exhaust steam, the aforesaid steam being thereby partially condensed to form a mixture of steam and water, said means comprising a chamber into which exhaust steam from the steam power unit passes, a set of U-tubes, a second chamber communicating with the first chamber by means of the said set of U-tubes, a second set of U-tubes, means whereby cool air is drawn through said second set of U-tubes and forced into the combustion space of said steam generator, an auxiliary heater for said mixture comprising a pair of troughs, a plate carrying said troughs and adapted to form part of the back wall of the steam generator furnace, removable covers for said troughs, and C-shaped tubes connecting said troughs in series, and pumping apparatus for passing the said mixture into the water space of said steam generator.

1,661,901. VENEER AND METHOD OF MANUFACTURING. JAMES MCINTOSH, Norristown, Pa., assignor to Diamond State Fibre Company, Bridgeport, Pa., a Corporation of Delaware. Filed May 14, 1926. Serial No. 109,179. 7 Claims. (Cl. 154—2.)



3. The method of manufacturing thin veneer sheets, which consists in treating a fibre sheet with a resinous binder, laying said sheet against a face of a relatively thick body of fibrous material, hardening the binder under conditions such that at least a portion of said fibrous body adheres to the face of the sheet, and thereafter removing the sheet from said body with an adhering portion of the latter forming on one face of the sheet a fibrous surface.

1,661,902. FEED-WIRE SUPPORT. NELSON A. MICHAELSON, Uniontown, Pa. Filed May 27, 1927. Serial No. 194,738. 3 Claims. (Cl. 101—43.)

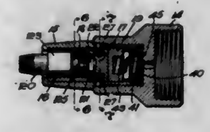


1. The combination with an insulator having a depending stud and hanger means having threaded engagement with said stud, of a feed wire support having a member formed with an opening to fit over said stud, said member of the feed wire support being clamped against the under side of the insulator by the hanger means.

1,661,903. GOVERNOR AND WATER CIRCULATOR. MARTIN JOHN MOHLER, Wyoming, Del. Filed Mar. 29, 1927. Serial No. 179,295. 1 Claim. (Cl. 123—175.)

In an internal combustion engine, in combination a casing, a pump chamber at one end of the casing, a propeller in the pump chamber, a shaft fixed to the propeller and mounted in the casing, means on the shaft for operatively connecting the same to the engine, a ring governor on the shaft, a collar moved by the governor, a shaft projecting through the casing, a crank arm on the shaft operatively engaging the collar, a second crank arm on the shaft, and a rod operatively connecting said second crank arm with the carburetor controlling valve of the engine.

1,661,904. LUBRICATING SYSTEM. HOWARD J. MURPHY, Reading, and MOSES F. CARR, Brookline, Mass., assignors, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,643. 30 Claims. (Cl. 284—19.)

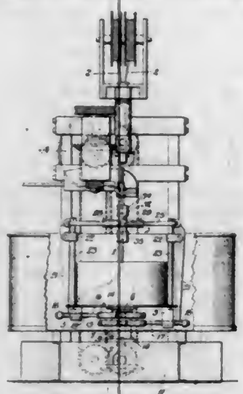


1. A lubricating system comprising a cup or nipple having a lubricant-receiving opening in one end thereof, polygonal lateral projections adjacent said end having said opening, in combination with a lubricant gun having a barrel, a lubricant expelling plunger and a nozzle at one end of the barrel, said nozzle presenting at the end thereof an opening permitting passage of the nozzle over said end of said cup or nipple and over said projections, and presenting portions that underlie said projections when the nozzle is turned relative to the cup or nipple, said nozzle rotatable by partial rotation of the lubricant gun barrel in one direction for quick engagement of said nozzle to said cup or nipple and by partial rotation in the other direction for quick disengagement of said nozzle from said cup or nipple, rotary valve means operatively interposed between the interior of said barrel and said nozzle and valve opening and closing means actuated by rotation of said barrel.

1,661,905. LUBRICATING APPARATUS. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,648. 5 Claims. (Cl. 284—19.)

1. Lubricating apparatus including a lubricant-delivering nozzle presenting means for engagement beneath projections on a lubricant-receiving nipple, and a sealing part movable relative to said means toward the nipple to seal the joint around a lubricant-receiving opening in the nipple, and cooperating pin and inclined slot means for positively effecting such movement, said sealing part having means for engaging the nipple to prevent rotation of said sealing part relative to the nipple during coupling.

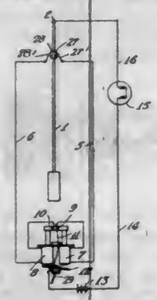
1,661,906. LUBRICATING APPARATUS. HOWARD J. MURPHY, Reading, Mass., assignor, by mesne assignments, to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed Mar. 14, 1922. Serial No. 543,659. 5 Claims. (Cl. 284—19.)



1. Lubricating apparatus comprising a lubricant gun having a discharge nozzle presenting a lubricant-pressed sealing part and a rotary valve cooperating therewith, and a coupling for engagement over a lubricant-receiving nipple presenting coupling projections, said lubricant-pressed sealing part including a gasket holder, a gasket for engagement with a face of the lubricant-receiving

nipple surrounding a lubricant-receiving aperture therein and a piston carried by said gasket holder and urging said gasket forwardly into sealed relation to said face of the nipple.

1,661,907. STEEL ALLOY AND PROCESS OF MAKING THE SAME. EDMUND PAKULLA, Remscheid, Germany, assignor, by mesne assignments, to Deutsche Edelstahlwerke Aktiengesellschaft, Bochum, Germany, a Corporation of Germany. Filed Sept. 18, 1924, Serial No. 738,525, and in Germany June 9, 1923. 2 Claims. (Cl. 148—13.)

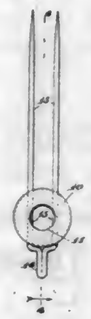


1. The process of manufacturing permanent magnets, which consists in heating high speed steel containing chromium and at least one of the elements tungsten, molybdenum or cobalt at a temperature above lowering temperature, and quenching the same in mild non-aqueous hardening agents.

1,661,908. MACHINE FOR FLATTENING TUBULAR MATERIALS. FREDERICK PALMER, Brooklyn, N. Y., assignor to Triangle Conduit Co., Brooklyn, N. Y., a Corporation of New York. Filed Dec. 9, 1926. Serial No. 153,717. 6 Claims. (Cl. 153—2.)

1. A mechanism of the character described, including a pair of reciprocating members having rotary mounting and between which a turning conduit is adapted to be positioned, and dies on said members adapted to engage opposite sides of the conduit and flatten the same, said dies so shaped as to subject the independent convolutions of the conduit to a step by step pressure operation.

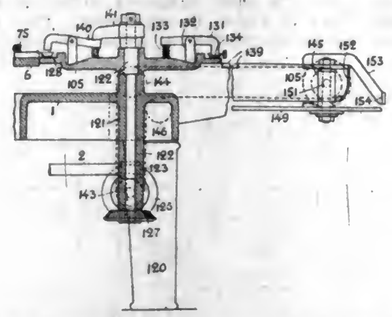
1,661,909. ELECTRIC CLOCK. CHARLES EDMOND PRINCE, Burchetts Green, England. Filed Aug. 6, 1924, Serial No. 730,449, and in Great Britain Aug. 10, 1923. 3 Claims. (Cl. 58—30.)



1. An electrically driven clock, comprising a time-indicating mechanism, an oscillating time-keeping element mechanically separate from the time-indicating mechanism, an electromagnetic device included in a circuit controlled by the time-keeping element, a spring external to the oscillating time-keeping element and arranged to be deflected and energized by the latter towards the end of an oscillation, and an element actuated by the said electromagnetic device and operating to deflect and energize said spring prior to its engagement by the oscillating time-keeping element, said electromagnetically actuated element being withdrawn from engagement with said spring during the period of engagement therewith of the oscillating time-keeping element.

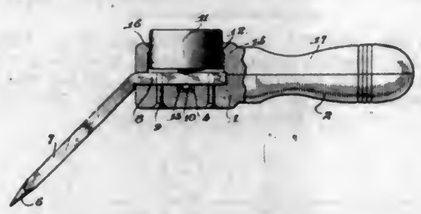
1,661,910. ANTISKID DEVICE. SVERRE QUISLING, Madison, Wis. Filed Jan. 24, 1927. Serial No. 163,189. 3 Claims. (Cl. 152—14.)

1. In an anti-skid device for tires a flat rectangular tread element for positioning against the tire tread and of a length to project laterally in both directions with respect to the sides of the tire, said element provided with an opening and a slot arranged in spaced relation, a pair of oppositely extending connecting means for abutting respectively against the inner face of the tread element, rear face of a wheel rim and opposite sides of a felloe, means extending through one of said connecting means and with said opening for securing one end of said element in position, and means extending through the other of said connecting means and with said slot for securing the other end of the element in position, said slot providing for the adjustment of the last mentioned means.



1,661,911. FASTENING DEVICE. DANIEL I. REITER, New York, N. Y. Filed Aug. 12, 1927. Serial No. 212,518. 10 Claims. (Cl. 24—150.)

1. A double pointed pin fastener of the class described including a flanged cap, a pair of generally parallel pins passed through the cap flange, and bent back into substantial parallelism with the plate.

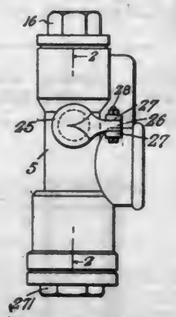


1,661,912. MACHINE FOR MANUFACTURING BOTTLE CAPS, SO CALLED CROWN CAPS. HENRY ARNOLD SKOV, Copenhagen, Denmark, assignor to A/S Dansk Pressefabrik, Copenhagen, Denmark. Filed Dec. 22, 1926, Serial No. 156,473, and in Denmark Jan. 12, 1926. 5 Claims. (Cl. 113—80.)

1. In a continually working machine for providing bottle caps with a lining and a cork disc in which machine the caps are intermittently carried through the machine through two or more parallel guide ways with a rotary pressing table provided with means for pressing down the cork discs in the caps and arranged at the delivery end of each of said guide ways; means intermittently operated from said machine for carrying the

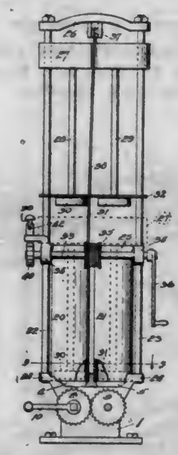
caps from said guide ways to said pressing table, means for leading the caps from said pressing table to a belt conveyor, a rotary controlling table receiving the caps from said belt conveyor, and a turn device which turns the caps over during their passage from the belt conveyor to the controlling table.

1,661,913. BATTERY TESTER. JOHN TAYLOR, Chicago, Ill. Filed Jan. 22, 1927. Serial No. 162,875. 5 Claims. (Cl. 175—183.)



1. A battery tester comprising a body portion having a pair of ways formed in one side thereof, prods having portions of the same engaged in said ways and directly connected to said body portion, portions of said prods extending beyond the body portion, a handle for the body portion, a resistor connected to the prods, a volt meter electrically connected to portion of said rods, cushioning means interposed between such volt meter and said prods, and a protective means arranged about the volt meter and connected to said body portion.

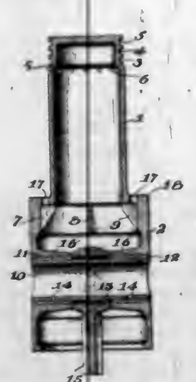
1,661,914. APPARATUS FOR THE CONTINUOUS GRINDING AND POLISHING OF GLASS IN THE FORM OF STRIPS OR PLATES. ROBERT FRANCIS TAYLOR, St. Helens, England, assignor to Pilkington Brothers Limited, Liverpool, Lancaster, England, a British Limited Company. Filed Apr. 17, 1924, Serial No. 707,234, and in Great Britain Feb. 6, 1924. 1 Claim. (Cl. 51—240.)



In continuous grinding and polishing apparatus of the type referred to, a series of tables one end surface of each of which abuts against the adjacent end surface of the next adjacent table, a ridge on one such abutting end surface, a recess in the other of said abutting end surfaces, the ridge and recess being in mutual engagement to prevent relative motion between said end surfaces in either direction perpendicular to the plane of the supporting surface of said tables, and means for retaining the end surfaces in abutment.

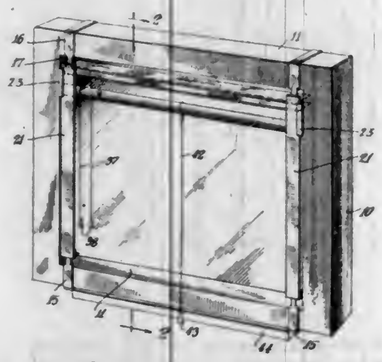
1,661,915. CYLINDER COCK. ANTISTENE ABBAMONTE, Cheyenne, Wyo. Filed May 2, 1924. Serial No. 710,607. 10 Claims. (Cl. 121—134.)

1. In a cylinder drain valve, in combination, a hollow casing having an internal valve seat near one end, a valve provided with a valve seat adapted to cooperate with the internal valve seat so as to close the opening, means comprising a spring for normally holding the valve away from its seat, said casing having a passageway adapted to be connected to the interior of a steam engine cylinder, said casing having also another opening which communicates with the atmosphere, said last named opening being located on the same side of the valve as the spring and on the side of the valve opposite from the first mentioned opening and a check valve in the last named opening which permits an outward flow but prevents an inward flow.



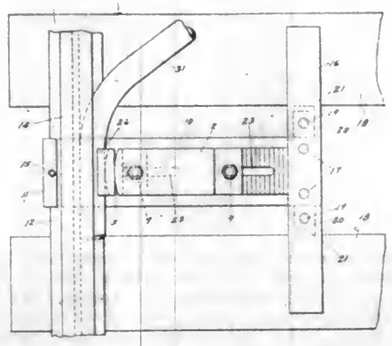
1,661,916. HOT-TAMALE-FORMING MACHINE. SAMUEL ALLEN, Jonesboro, Ill. Filed Apr. 5, 1926. Serial No. 99,774. 6 Claims. (Cl. 107—1.)

5. A hot tamale forming machine comprising a casing having two independent cylinders arranged side by side, a screw conveyor within each cylinder, intermeshing gears for revolving the conveyors at the same speed in direction toward each other, a receiving hopper for each cylinder, a supply hopper for each receiving hopper, one



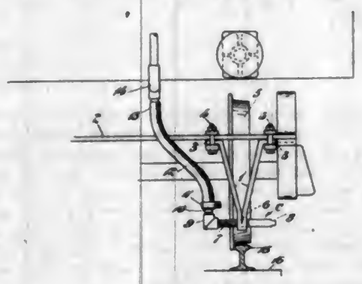
supply hopper adapted to contain meat and the other meal, a discharge nozzle for each casing cylinder and one of said nozzles being disposed within the other nozzle and spaced therefrom to provide a passage therearound, a pair of guide rods supported by the casing, a collar fixed to the upper ends of the supply hoppers through which said rods pass, a cross-bar for uniting the rods at their upper ends, a weight slidably mounted upon said guide rods, a piston for each supply hopper having connection with said weight, means for elevating said weight and the pistons connected therewith and means for locking the weight and pistons in their elevated positions.

1,661,917. PISTON. ALBERT ANDENSON, Marquette, Nebr. Filed Sept. 27, 1926. Serial No. 137,994. 2 Claims. (Cl. 74—108.)



1. A hollow piston comprising a large and small end section, a wrist pin having a diameter approximately one-third that of the large section in the large section for carrying a connecting rod, reinforcing elements within the piston between the large and small sections, suitable openings in the large section for allowing compression to escape and through which the piston may be lubricated.

1,661,918. LARGE-PANE-WINDOW CLEANER. VILMA BENO, Astoria, N. Y. Filed Nov. 2, 1927. Serial No. 230,581. 2 Claims. (Cl. 15—251.)

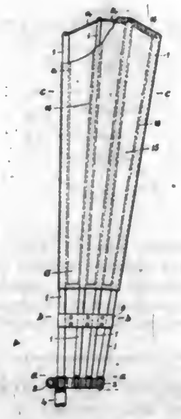


1. A window washing apparatus comprising pairs of upper and lower clamps to engage the top and bottom of a sash, resilient means for drawing the clamps into operative engagement, vertical guide bars carried at the adjacent ends of said clamps, slides operable on said guides, a wiper carried by said slides, and controllable means for spraying liquid, adjacent said wiper.

1,661,919. DEVICE FOR BENDING PIPE OR THE LIKE. JOHN H. CAREY, Portland, Oreg. Filed June 1, 1927. Serial No. 195,787. 4 Claims. (Cl. 153—82.)

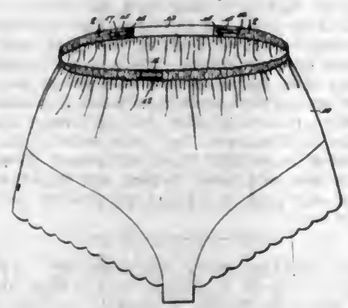
1. In a bending device of the kind described, the combination with a fulcrum piece, of a base plate adjustably connected thereto, and means on said base plate for detachably fastening it to a railroad rail when in place in a track.

1,661,920. SAFETY DEVICE FOR RAILWAY VEHICLES. FRANCIS CARLEY, Reid River, Queensland, Australia. Filed Feb. 10, 1927, Serial No. 167,303, and in Australia Feb. 23, 1926. 3 Claims. (Cl. 246—172.)



3. A safety device for railway vehicles comprising a bracket depending from the vehicle, a contact member projecting downwardly from the vehicle and terminating above the rail or permanent way level, said member being hollow and plugged at one end and screwed into the bracket, said member being formed at its plugged end and internally with means for rotating same by a spanner.

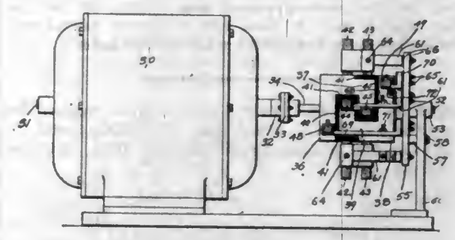
1,661,921. BLADE FOR PROPELLERS, VENTILATING FANS, AND THE LIKE. ALBERT CERVOL, Barking, England, assignor of one-fifth to John Alexander Fisher, one-fifth to Frederick William Shears, one-fifth to Edward Lumsden, and one-fifth to Charles Raymond, London, England. Filed July 23, 1926, Serial No. 124,497, and in Great Britain July 7, 1926. 3 Claims. (Cl. 170—161.)



1. A blade for propellers, ventilating fans, and the like; comprising a series of tapered spring rods, a base support secured to the thicker ends of the rods, said rods

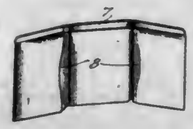
being arranged in fan shape, means for connecting the thinner ends of the rods loosely together, a covering consisting of flexible material encasing the rods and se-

cured thereto, and a flexible stiffener embracing all of the rods at a point between the ends of the covering and the support.



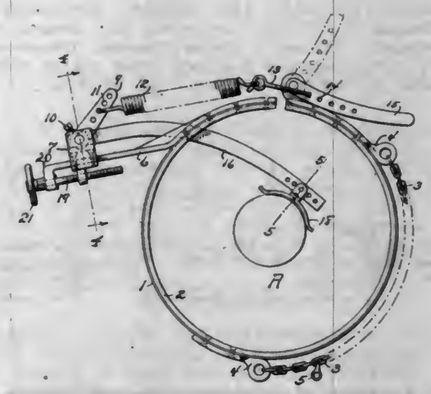
1,661,922. GARMENT. SAMUEL S. CHESNIN, New York, N. Y. Filed July 26, 1926. Serial No. 125,021. 1 Claim. (Cl. 2—237.)

A garment including a body encircling band of tubular formation throughout the major portion of its length, an elastic tape removably mounted in the tubular portion of the band and having its ends projecting through openings in the inner side thereof, hooks carried by the ends of the tape and engageable with eyelets riveted into the band, and patches over the outer face of the eyelets to conceal the ends of the hooks.



1,661,923. ROTARY RECTIFIER. CASSIUS M. CLAY, Mexico, Mo. Filed June 2, 1923. Serial No. 642,919. 11 Claims. (Cl. 175—364.)

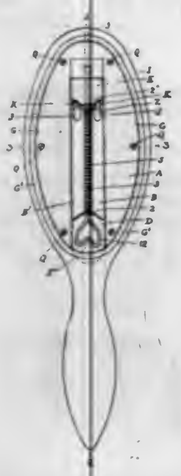
1. A rotary rectifier comprising a commutator formed of two ring sections having circumferentially extending projections, insulating material located between said sections and projections, the insulating material being circumferentially widened at the adjacent edges of said projections, brushes contacting with said ring sections for delivering an alternating electric current thereto, a plurality of brushes adapted to make and break contact consecutively with said projections at the zero point of the alternation of said current for taking a direct current therefrom, said last mentioned brushes being of less thickness than the circumferential width of the insulation



between said projections, and means for rotating said commutator synchronously with the cycles of the alternating current.

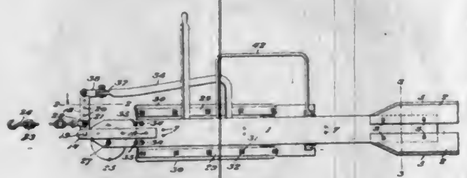
1,661,924. MANUFACTURE OF WALLETS AND POCKETBOOKS. CARL B. COOK, Haddonfield, N. J., assignor to Charles K. Cook Company, Incorporated, Camden, N. J., a Corporation of New Jersey. Filed May 13, 1927. Serial No. 191,122. 5 Claims. (Cl. 150—38.)

1. A wallet comprising a body portion having a pocket at each end and having a flap connected along one longitudinal edge with tongues adapted for insertion in said pockets.



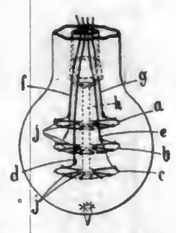
1,661,925. BRAKE-BAND LET-OFF. EMERY CORMIER, Nashua, N. H., assignor of one-half to Frederick Charles Sasse, Nashua, N. H. Filed Dec. 7, 1925. Serial No. 73,852. 3 Claims. (Cl. 139—107.)

1. A brake and let-off for a loom comprising a brake band engaging a part of the warp beam, a bracket arm projecting tangentially from said band, a frame slidably



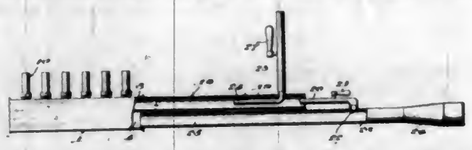
adjustable longitudinally of said arm, means for adjusting said frame toward and away from said band, a rock shaft carried by the frame, an arm projecting from the shaft, a coil spring having one end connected with the last mentioned arm and its other end connected with relation to the band, a second arm carried by the rock shaft, and a pressure plate carried by the second mentioned arm for engaging the warp on the beam.

1,661,926. BRUSH. ERIC LEOPOLD HUGO COSBY, Teddington, England. Filed July 19, 1926, Serial No. 123,456, and in Great Britain July 29, 1925. 3 Claims. (Cl. 15—176.)



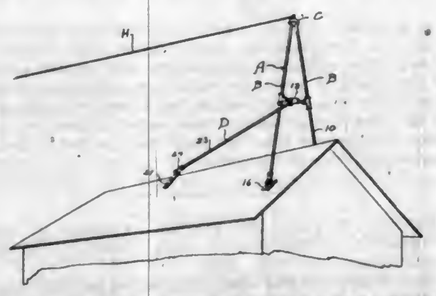
1. The combination with a brush back having a cavity in one face with a longitudinal recess in the center thereof and a bristle carrying plate for detachably mounting therein, of a metal liner for the cavity and recess and for the reception of the bristle carrying plate, said liner fitting within the recess and cavity of the back and being contiguous with the edge of said cavity.

1,661,927. DITCHING AND GRADING MACHINERY. CHARLES W. CUNDIFF, Owensboro, Ky., assignor to Owensboro Ditcher & Grader Company, Owensboro, Ky., a Corporation of Kentucky. Filed Aug. 31, 1923. Serial No. 660,444. 2 Claims. (Cl. 37—173.)



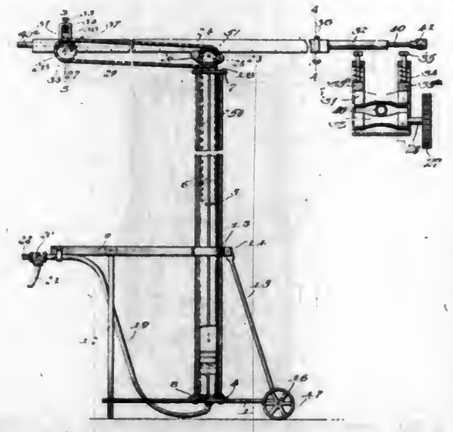
1. A machine of the character described including a moldboard having a concave depression formed adjacent an edge thereof, said depression beginning and terminating approximately in alignment with the main portion of said moldboard, and a cutting blade having a complementary portion fitted in the concave depression.

1,661,928. ELECTRIC LAMP. WILFRED DAWSON, London, England. Filed May 23, 1927, Serial No. 193,587, and in Great Britain June 16, 1926. 8 Claims. (Cl. 176—26.)



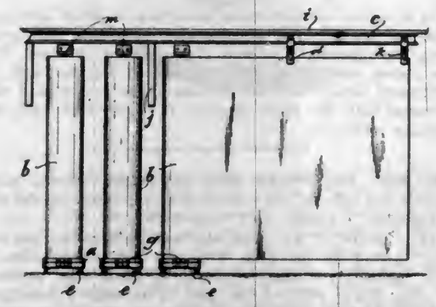
1. A multiple filament electric lamp having in combination a continuous filament divided into a plurality of sections in substantially parallel planes, and leading-in wires connected to each end of the filament and to points at the end of each intermediate section of the filament.

1,661,929. BLOW-BLAST GAS BURNER. HENRY V. DEEMAR, St. Louis, Mo., assignor of one-half to Herbert H. Deemar, Los Angeles, Calif. Filed Jan. 22, 1927. Serial No. 162,889. 2 Claims. (Cl. 158—109.)



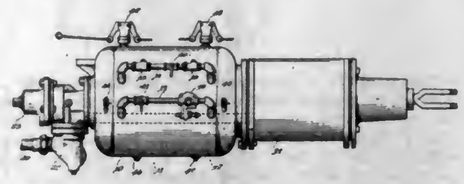
1. A flame tube for a blow blast gas burner comprising an inner, an outer and an intermediate tube arranged concentrically in spaced relation, the outer tube being longer than the intermediate tube, and the intermediate tube longer than the inner tube whereby the fuel is expanded at the end of the tube from which it is discharged and thereby operates to draw fuel up through the tube into which it discharges, the lower ends of the inner tubes having depending flared extensions, means for forcing air into said tubes through said extensions, and means for supplying an air and gas mixture to the intermediate tubes.

1,661,930. AERIAL MAST OR SUPPORT. CYRIL L. DIETRICH, Lookout Mountain, Tenn. Filed Dec. 30, 1925. Serial No. 78,444. 5 Claims. (Cl. 189—22.)



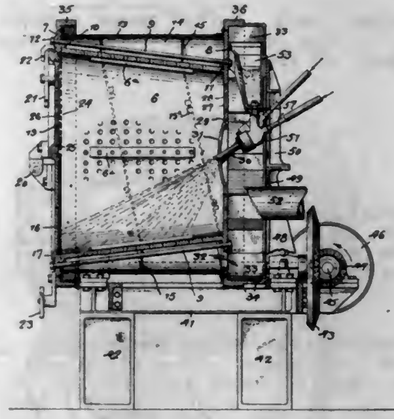
1. An aerial mast comprising a pair of upwardly converging supporting standards joined together at their upper ends, a cross tie connecting the intermediate portions of the standards, bearing plates pivotally connected to the base of each standard, a stay rod pivotally connected at one end to said cross tie, and an anchoring block pivotally connected to the opposite end of said stay rod.

1,661,931. PORTABLE SOOT BLOWER. JOHN JAMES DOLAN, Coshocton, Ohio. Filed Jan. 17, 1923. Serial No. 613,163. 3 Claims. (Cl. 122—390.)



1. In a portable soot blower, a movable carriage, a cylinder mounted on the carriage, means connecting said cylinder with a source of fluid under pressure, a piston movable in said cylinder, a head connected with the piston and projecting outwardly of the cylinder, a track rigidly connected with the head in a horizontal position, a shaft rotatably mounted transversely of the head, a gear rigidly connected with the shaft, a second shaft rotatably mounted at one end of the track, a gear rigidly connected with the second shaft, a chain connecting the two gears, a pressure roller rigidly connected with the second mentioned shaft, a pressure roller spaced above the first roller, a sleeve slidably mounted in the track, means for rotating the first mentioned shaft, a steam pipe slidably mounted within the sleeve and provided with a nozzle at one end and with means for connecting its other end with a source of steam under pressure, said connecting means being in engagement with the pressure rollers for causing reciprocation of the sleeve and pipe.

1,661,932. APPARATUS FOR STORING AND DISPLAYING LINOLEUM AND LIKE MATERIALS. HENRY ELLIOTT, Glasgow, Scotland. Filed Mar. 2, 1925, Serial No. 12,606, and in Great Britain Mar. 11, 1924. 10 Claims. (Cl. 242—55.3.)



1. A system for storing, handling and displaying stock rolls of linoleum and similar materials, comprising means for individually and rotatably supporting a plurality of such stock rolls in vertical adjacently disposed positions, hand operated clips adapted to be detachably secured to the upper edge of the material of any desired roll after a portion thereof has been unwound from said roll; and means located above said plurality of rolls for supporting said clips and permitting horizontal movement thereof, for supporting any desired length of the material in a vertical plane.

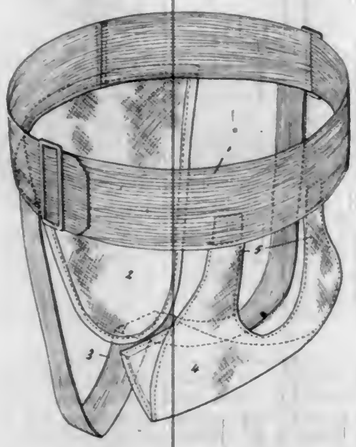
1,661,933. AIR BRAKE. CHETTIE P. FARRELL, Detroit, Mich. Filed May 13, 1927. Serial No. 191,174. 6 Claims. (Cl. 303—85.)

2. An air brake system including an air storage tank, an auxiliary storage tank, conduits connecting said tanks, one of said conduits affording communication in only one direction, the other of said conduits affording regulated communication only in one direction.

1,661,934. SAND-BLAST MACHINE. GEORGE C. FATSCHER and CLARENCE E. BILLINGS, New Haven, Conn., assignors to The New Haven Sand-Blast Company, New Haven, Conn., a Corporation of Connecticut. Filed Mar. 26, 1923. Serial No. 627,679. 5 Claims. (Cl. 81—8.)

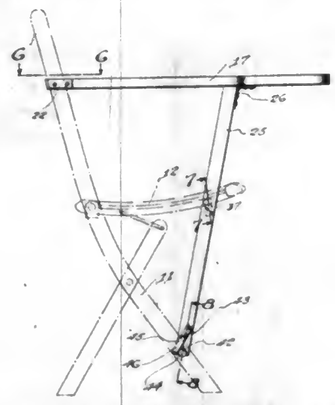
5. In a rotary sand blast barrel, a frusto-conical perforated barrel body, a cylindrical shell surrounding but spaced therefrom, rotary heads at opposite ends of and common to said frusto-conical barrel body and shell, the ends of which bear against the opposed faces of said heads, together with the bolts extending between said heads and located between the shell and frusto conical body and serving to unite the said parts into a rigid barrel unit.

1,661,935. CHUCK FOR EXTENSION BITS. THOMAS J. FEGLEY and GEORGE O. LEOPOLD, Philadelphia, Pa., assignors to North Bros. Mfg. Co., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 25, 1925. Serial No. 71,445. 3 Claims. (Cl. 279—90.)



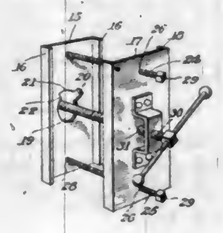
1. The combination in a chuck, of a spindle; a body portion secured to the spindle; a longitudinally movable socket portion arranged to turn with the spindle, said body portion having an abutment extending into the

socket of the socket portion; a casing enclosing the body portion and the socket portion, and having a shoulder beyond the socket portion to engage the head of a bit lo-



cated in the socket; and means for moving the casing longitudinally to clamp the head of a bit against the abutment on the body portion.

1,661,936. BELT. MAX F. FERATL, Richmond Hill, N. Y. Filed Apr. 18, 1925. Serial No. 24,200. 1 Claim. (Cl. 128—289.)

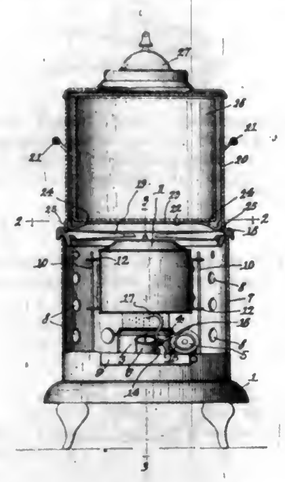


In a catamenial appliance, a supporting belt of elastic material, comprising two sections which are adjustably connected, a pad of water proof material having its edges rounded inwardly to the ends thereof, one of said ends being straight and the other end having strap extensions which are fixed to the back member of the belt at points equidistant from the center, a fabric front of semi-elliptical formation, having its widened edge fixed to the front section of the belt, a strap having its ends fixed to the sides of the front member of the belt and having its central portion lapped upon itself to underlie the outer and confronting ends of the pad and of the front piece, and the edges of the said pad and front piece being stitched to the said portion of the strap.

1,661,937. FOLDABLE CHAIR. GERVASIUS W. FISCHER and WALTER F. SUND, Madison, Wis. Filed June 12, 1926. Serial No. 115,581. 5 Claims. (Cl. 15—125.)

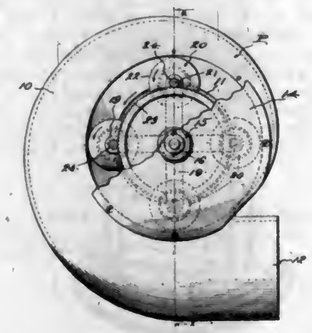
1. The combination with a foldable chair, of a table arm, means detachably connecting an end portion of the table arm to an adjacent side rail of the back frame of the chair, a supporting arm, means hingedly connecting the supporting arm to the table arm, means detachably connecting the supporting arm to an adjacent leg of the chair, and means carried by the supporting arm and engaging the seat member of the chair for forcing the supoprting arm into bearing relation with respect to said adjacent supporting leg when a weight is disposed upon the seat member.

1,661,938. KEY-PULLING DEVICE. HENRY A. FOLLINGSTAD, Chicago, Ill. Filed Apr. 6, 1927. Serial No. 181,521. 1 Claim. (Cl. 29—86.1.)



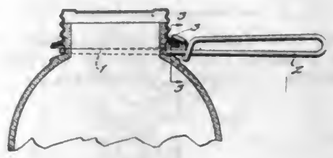
In a device of the class described, a plate provided with an opening and with a slot extending outwardly from the opening, a second plate, screws threaded into the plates, said plates being in spaced relation, and an additional screw mounted between those first named and threaded into the plate opposite that provided with the opening and slot.

1,661,939. OIL STOVE AND HEATER. ANNIE MARY GRAYSON, Macon, Ga. Filed Jan. 29, 1927. Serial No. 164,570. 1 Claim. (Cl. 126—96.)



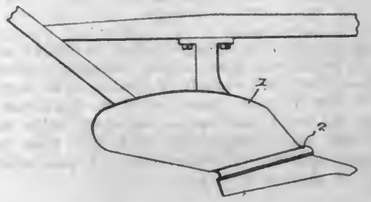
In a device of the class described, a base, an annular font carried by the base, a burner within the annular font, oppositely disposed upstanding guide rods mounted at their lower ends on the font, a chimney surrounding the burner, means for mounting the chimney on the guide rods for vertical sliding movement, a bearing mounted on the font, a shaft mounted to rock in the bearing and provided with inner and outer arms, the inner arm being engageable beneath the chimney to raise and to lower the chimney, the inner arm depending within the annular font when the inner arm is in an inopera-

tive position, the outer arm constituting means for operating the shaft, and a drum on the base and housing the guide rods, the shaft and the arms, the drum having an



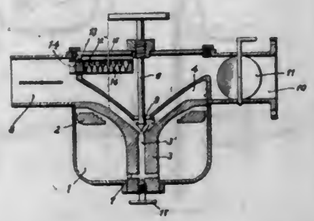
opening which renders the outer arm accessible, and a closure for the opening, the inner arm operating at a point approximately 90° remote from either guide rod.

1,661,940. IMPELLER. MAURICE W. GREEN, Hampton, Va. Filed Nov. 17, 1926. Serial No. 148,901. 10 Claims. (Cl. 170—159.)



1. In combination, a housing, an impeller including a driving shaft therefor rotatably mounted in the housing, a fluid intake through said housing substantially concentric with the impeller, said impeller embodying a series of cylindrical rotors mounted and supported in spaced relation on and around said shaft with their axes substantially parallel with the shaft axis, means for rotating said rotors around their individual axes as they are moved through a circular path around the impeller axis, and a support on the shaft for the ends of said rotors adjacent the housing intake, said support providing blade members for assisting flow of fluid through the intake, and said housing provided with a fluid discharge disposed substantially tangentially with respect to said impeller.

1,661,941. CAP TOOL. ANDREW HALVORSON, Franklin, Minn. Filed July 29, 1925. Serial No. 46,848. 1 Claim. (Cl. 81—15.1.)



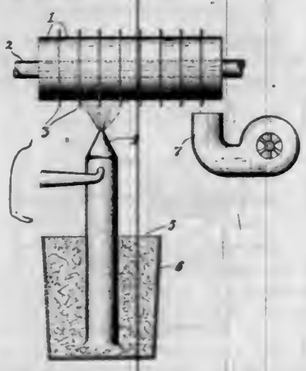
A jar-cap removing tool comprising a strip of heavy wire bent intermediate its ends into U-shape to provide a handle part, an extension on one limb of the U-shaped handle part bent into semicircular form to provide a jaw, the end of the other limb of the U-shaped part being twisted around the first limb at the junction of the jaw part with said first limb, and the extremity of the twisted part being bent into U-shape, with the free limb of this U-shaped part forming a lip, the jaw part being arranged to engage the bottom groove in the neck of a jar with the lip engaging the flange of a cap placed on the jar.

1,661,942. MOLDBOARD. TOM HAWKINS, Hollywood, Calif. Filed Oct. 30, 1925. Serial No. 65,848. 2 Claims. (Cl. 97—115.)

1. A plow having a single rib horizontally arranged on its mold board and formed of semi-circular shape in cross section for causing the soil to move away from the major portion of the board and to pulverize the soil.

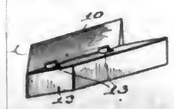
1,661,943. AIR-CONTROL DEVICE FOR CARBURETORS. JOHN BOYD HAYES, Jr., Pegram, Tenn. Filed Nov. 27, 1922. Serial No. 603,651. 1 Claim. (Cl. 48—180.)

In a carburetor, a partition separating the air inlet of the carburetor from the mixing chamber thereof, a perforated tube in the top part of the partition and forming a direct connection between the air inlet and the outlet, the end of the tube, toward the air inlet being open and its other end closed, a plug valve closing the open end and adapted to be moved inwardly



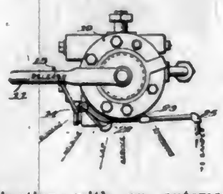
by the suction created by the engine to expose some of the perforations in the tube, a coil spring in the tube and a pin in the open end of the tube and against which the spring holds the valve.

1,661,944. UNIVERSAL SETTING GAUGE. PETER M. HEINZ, Dubuque, Iowa. Filed Feb. 16, 1927. Serial No. 168,734. 6 Claims. (Cl. 33—165.)



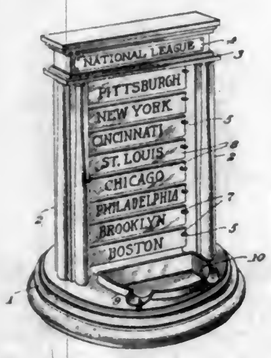
1. A gauge of the class described including a base block, an adjustable block screw threadedly connected to the base block and capable of limited axial movement relatively thereto, said adjustable block displaying scale marks on its upper face and a stationary finger carried by the base block cooperating with said scale marks, said finger limiting axial movement of the adjustable block in an upward direction.

1,661,945. DRY CELL. WILLIAM F. HENDRY, Ossining, N. Y., assignor, by mesne assignments, to National Carbon Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 23, 1924. Serial No. 688,057. 2 Claims. (Cl. 136—175.)



1. The method of making dry cells which consists in compacting the depolarizing mixture in tablets, applying to said tables a coating composed of granulated wood pulp, flour, zinc chlorid and water, drying the coating, pacing the coated tablets in a zinc container electrode, and passing a carbon electrode through said tablets.

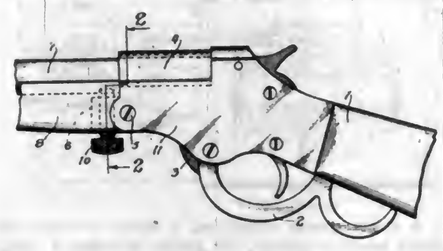
1,661,946. BRICK. HARLEY A. W. HOWCOTT, New Orleans, La. Filed Jan. 16, 1926. Serial No. 81,778. 3 Claims. (Cl. 72—38.)



1. A brick comprising a body formed with top and bottom faces upwardly and outwardly inclined in parallel from a central line longitudinally thereof, providing a centering trough on one face and a centering ridge on the opposite face.

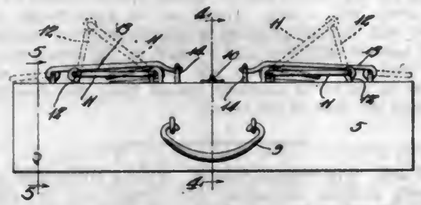
1,661,947. AIR BRAKE. WILLIAM R. HOWDON, Anniston, Ala. Filed Apr. 22, 1927. Serial No. 185,829. 10 Claims. (Cl. 303—56.)

2. In combination with an automatic brake valve of the character described, a valve adapted to cause sanding of rails previous to application of brakes by said automatic valve, said second mentioned valve being operable only after said automatic brake valve has been actuated from normally released position.



1,661,948. BASEBALL NOVELTY. LAWRENCE INNESS, Freehold, N. J. Filed May 9, 1927. Serial No. 190,064. 2 Claims. (Cl. 40—63.)

1. In a device for the purpose set forth, a base, spaced pillars arising therefrom, a cornice connecting the top of the pillars, equidistantly spaced offset hooks arranged in opposite pairs on the inner faces of the pillars, and said hooks designed for engagement through openings in the corners of data carrying plates.

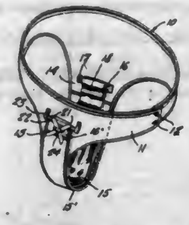


1,661,949. INTERCHANGEABLE RIFLE AND SHOT-GUN BARREL. LOUIS R. KRENEK, Lagrange, Tex. Filed May 18, 1926. Serial No. 108,918. 1 Claim. (Cl. 42—77.)

In a firearm of the type described, a gun stock, a pivotally mounted barrel section carried thereby, rifle and gun shot barrels interchangeably mounted in the barrel section, an extension on the forward end of the barrel section, each of the barrels having a recess in its lower side and a stud screw carried by the barrel section extension to enter the gun barrel recess to retain

the gun barrel in the barrel section, the barrel section, and rifle or gun shot barrel mounted therein being movable as a unit on the pivotal support for the barrel section.

1,661,950. ANIMAL TRAP. JOHN KRČ, Wallis, Tex. Filed May 26, 1927. Serial No. 194,396. 6 Claims. (Cl. 43—86.)

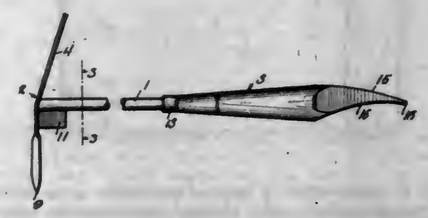


1. An animal trap comprising a tubular body, an obstruction attached to one side of the body and extending partly across the passage of the body intermediate the ends of the latter, a bait holder within the body and attached to the other side of the latter opposite said obstruction, choker-loop trapping mechanisms located at the opposite ends of the body, and laterally swinging trip catches for the respective trapping mechanisms pivoted to and extending through the top of the body at opposite sides of the obstruction.

1,661,951. GLOVE. GUSTAVE A. KURZ, Zanesville, Ohio. Filed Mar. 23, 1927. Serial No. 177,717. 4 Claims. (Cl. 2—167.)

1. In a hand covering a body of relatively non-stretchable material having stalls extending therefrom, the sides of the stalls being closed by fourchettes formed of knitted material having longitudinally extending ribs whereby the fourchettes may be stretched transversely.

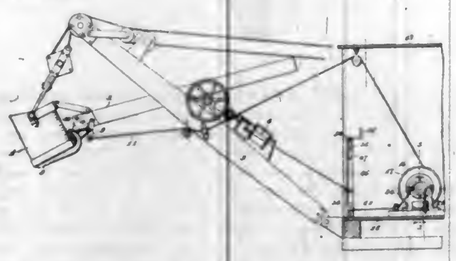
1,661,952. SANITARY GARMENT. FLORENCE G. MARK, San Diego, Calif. Filed July 14, 1926. Serial No. 122,420. 1 Claim. (Cl. 128—289.)



A sanitary napkin holder comprising a waist encircling band having front and rear tabs and a sling co-extensive with the rear tab, spaced horizontally aligned loops provided on said front tab, a front stay removably supported by said front loops a second set of loops provided on said front flap above the first said loops, a clamping stay loosely and removably supported by said second set of loops, flexible elements fixedly connected to said front stays and adapted to pass over said clamping stay for securing the free end of said sling and one end of a sanitary napkin therebetween upon the securing of the free ends of said flexible elements together and means for securing the opposite end of the napkin to the rear tab.

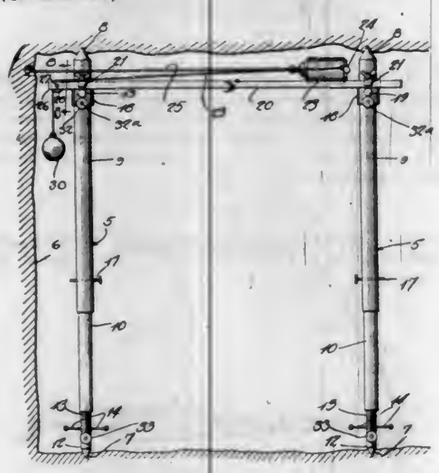
1,661,953. INDUCTIVE REACTOR. JAMES MCINTOSH, Norristown, Pa., assignor to Diamond State Fibre Company, Bridgeport, Pa., a Corporation of Delaware. Filed June 13, 1925. Serial No. 36,057. 2 Claims. (Cl. 175—359.)

1. An inductive reactor comprising a hollow cylindrical form of glass, a coil of wire embedded in said form with its ends projecting therefrom, a second form of glass adapted to fit within the first-mentioned form, and a coil of wire embedded in said second form and having its extremities projecting therefrom.



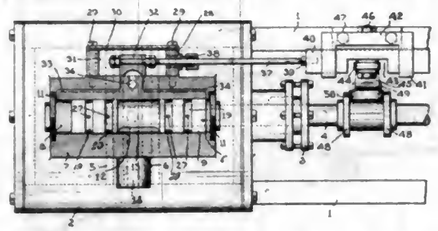
1,661,954. GARDEN TOOL. THEODORE R. MICHAELIS, Marinette, Wis. Filed Feb. 15, 1927. Serial No. 168,430. 1 Claim. (Cl. 97—66.)

A ground working instrument comprising an oblong head portion, a series of tines integral with the outer side thereof, a rectangular blade of a width coextensive with the length of said head portion, said blade having its inner end formed integral with the inner side of the head portion and extending rearwardly at an outward



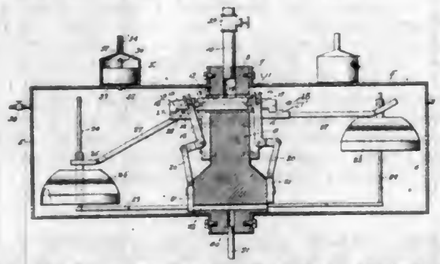
inclination with respect to said head portion, an oblong blade integral with one end of said head portion and of a width substantially the same as such end, said oblong blade extending rearwardly from said head and at an outward inclination, and a handle secured at the juncture of the rectangular blade and head portion.

1,661,955. SEMIAUTOMATIC TRIP FOR POWER SHOVELS. GEORGE G. MOBIN, Holyoke, Mass. Filed Apr. 7, 1926. Serial No. 100,410. 6 Claims. (Cl. 214—146.)



1. In a semi-automatic trip for power shovels a trip cable, a drum for said trip cable, a friction disk connected with said drum, a constantly rotating power member, spring means for normally holding said friction disk out of contact with said power member, manually actuated means for pressing said friction disk against said power member whereby said drum will be rotated and automatically actuated means for reversing the action of said manually actuated means when said manually actuated means have been released.

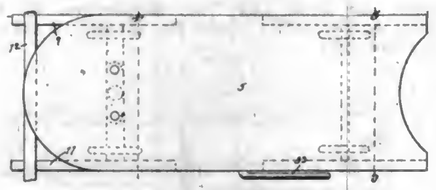
1,661,956. DRILL SUPPORT. JOHN NAGY, Jessup, Pa. Filed Sept. 30, 1927. Serial No. 222,955. 2 Claims. (Cl. 255—51.)



1. In combination, a pair of extensible props having lateral supporting arms adjacent corresponding ends, a drill supporting and guiding platform, means to secure the platform upon either of the corresponding sides of said arms, whereby the drill may be selectively supported adjacent the roof or adjacent the floor of a mine upon inverting the props, and weight operated means for moving the drill on the platform when the drill is supported in either position.

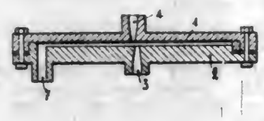
1,661,957. STEAM ENGINE. FRED J. POWELL, Jerome, Ariz. Filed Aug. 13, 1924. Serial No. 731,811. 3 Claims. (Cl. 121—157.)

1. A steam engine comprising a steam cylinder with a piston operable therein, the piston including a piston rod, a steam chamber, a balance valve controlling communication between the steam chamber and the steam cylinder, a casing for the balance valve and having ports of communication with the steam chamber and the steam cylinder, a slide valve in the steam chamber for controlling the steam passing through the ports of communication with the balance valve casing, the balance valve acting to control the steam passing through the ports communicating with the steam cylinder, a rod carried by the slide valve, a slide carried by the slide valve rod with a substantial elongated recess on one side, a guide frame for the slide, a pair of spaced annular shoulders on the piston rod, a lever pivoted on the guide frame, the lower end thereof carrying a wheel operating between said annular shoulders, and a wheel on the upper end of the lever, and a diameter less than the length of said recess so as to be normally spaced from the shoulders defining the ends of the recess.



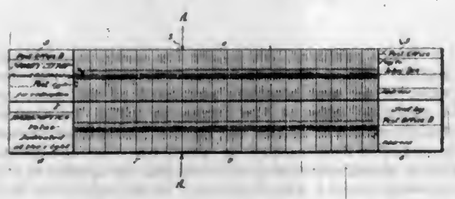
1,661,958. AIR COMPRESSOR. CALVIN OVERDORFF and JOHN JUHASZ, Johnstown, Pa. Filed Feb. 17, 1927. Serial No. 169,096. 3 Claims. (Cl. 230—90.)

1. An air compressor including twin chambers provided with air inlet and outlet openings and equipped with an interposed partition provided with a water inlet opening at the top and a water outlet opening in the bottom, a pressure operated valve slidably mounted in the partition to close communication through the inlet opening and provided with a pair of ducts singly alignable with the inlet opening to establish communication between the latter and one of the chambers, mechanism mounted on each side of the partition and engaged with the opposite ends of the valve including valves alternately slidable across the outlet opening in response to the movement of the first-mentioned valve when a predetermined water level is reached in each chamber.



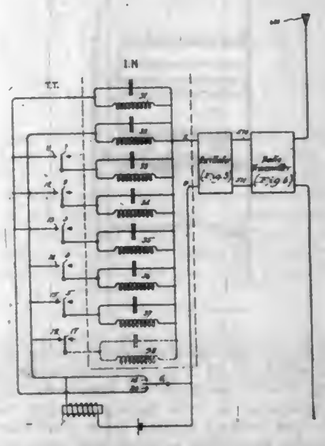
1,661,959. TOY. EARL REEK, Oakland, Calif. Filed Mar. 13, 1926. Serial No. 94,529. 1 Claim. (Cl. 188—5.)

In a toy of the character described, a board, a pair of front runners pivotally secured below said board, a pair of wheels positioned between said runners, a pair of rear runners rigidly secured to said board, a yoke pivotally mounted between said rear runners, an axle secured to said yoke, wheels positioned on said axle, a link connected to said axle and extending forwardly therefrom, a lever pivoted beneath said board, a crank formed on



said lever, the end of said crank being engaged by the end of said link in such a manner as to have its end bear against said board and at a point above the pivotal point of said lever.

1,661,960. INJECTOR OR ASPIRATOR. HENRI VICTOR RIEHL, Versailles, France. Filed Apr. 4, 1927, Serial No. 180,984, and in France Apr. 12, 1926. 3 Claims. (Cl. 230—95.)

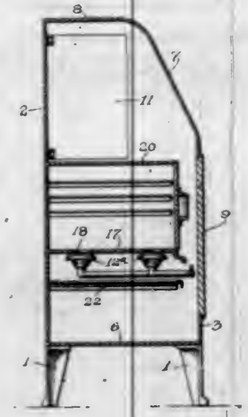


1. An apparatus for entraining and compressing gaseous or liquid fluids, which essentially comprises two walls with parallel surfaces, which are close together and are both pierced with an orifice, the projection of either orifice upon the opposite wall being tangent to the periphery of the other orifice, one of the said orifices serving for the motive fluid and the other for the suction.

1,661,961. CHECK. ALBA B. ROBINSON, Herkimer, N. Y. Filed Aug. 28, 1922. Serial No. 584,862. 1 Claim. (Cl. 283—59.)

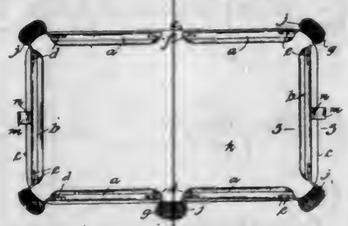
A check having on its face a central dividing line and a stub at each end thereof, the stub at the upper left hand corner of the check having imprinted thereon appropriate indicia designating a post office issuing the check and instructions with respect to its redemption at a second post office, the lower left hand corner having imprinted thereon "Redemption value indicated at the right," the upper right hand corner having imprinted thereon the post office at which the check is to be cashed and instructions as to wom it is payable and having at its lower corner appropriately designated space for the name and address of the sender, the body of the check being divided by transverse lines into one hundred blocks, said check having a central longitudinal line which divides the blocks into an upper and a lower series, said upper and lower series of blocks having imprinted therein the consecutive designations therefor from .01 to $1.00 and the said designations being reversely arranged with respect to the upper and lower series of blocks.

1,661,962. SIGNALING SYSTEM. NILS A. ROBINSON, New York, N. Y. Filed Mar. 14, 1927. Serial No. 175,313. 9 Claims. (Cl. 178—51.)



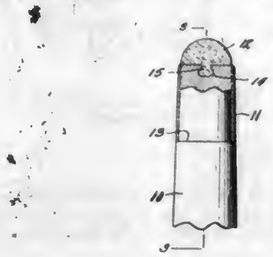
1. In a signaling system for transmitting characters in accordance with a prearranged code, means for recording the characters in succession in codified form, a timing device comprising an interrupter, a circuit including said timing device and a plurality of impedances constituting a network of variable impedance for generating alternating current impulses, the frequency of each impulse varying with each variation in impedance of the network and the duration of each impulse being measured by the timing device, the variations in impedance of the network being in turn controlled by the record code, and a channel into which the impulses are directed.

1,661,963. BRAKE SYSTEM FOR VEHICLES. FREDERICK HENRY ROYCE, West Wittering, near Chichester, England, assignor to Rolls-Royce Limited, Nightingale Road, Derby, England. Filed Feb. 5, 1926, Serial No. 86,159½, and in Great Britain Feb. 5, 1925. 5 Claims. (Cl. 188—204.)



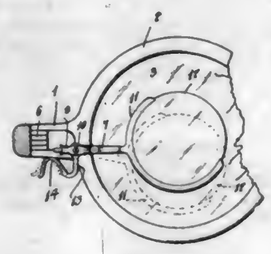
1. In a four wheel brake system, the combination with a frame having wheels journaled thereto at opposite ends thereof, and brakes controlling the rotation of said wheels, of a brake rod pivoted to said frame, a link having one end thereof pivoted to said frame, means for varying the friction between said link and said frame, a lever pivoted intermediate its ends to the free end of said link, an arm extending rigidly from said lever, means operably connecting the opposite ends of said lever to the brakes at opposite ends of said frame, and means connecting said rod to the free end of said arm to control the application of the brakes to all of said wheels.

1,661,964. GAS-RANGE CLOSURE CASING. MARY RUDIC, Philadelphia, Pa. Filed Nov. 12, 1926. Serial No. 147,994. 2 Claims. (Cl. 126—37.)



1. A gas range comprising a metallic casing of rectangular form, composed of front and rear walls, and top and bottom plates, mounted on standards above the floor and containing an oven having an open front and hinged door, gas burners located below said oven and a drip pan located below said burners, said casing enclosing all the essential elements of a gas range and forming a gas tight shield therefor, having an outlet for vapor, the rear wall forming the back wall of the oven, and the support for the drip pan, said casing extending above the oven and providing capacious warming spaces above and below the oven and drip pan, said casing having a door in front and an opening in the front wall closed by said door, said compartment being also formed with a door closed opening for access to the space above the oven.

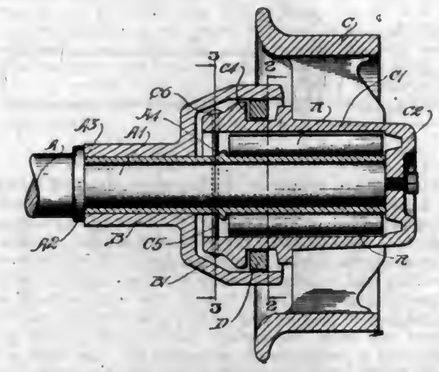
1,661,965. CONVERTIBLE DINING AND BILLIARD TABLE. THOMAS WILLIAM RUSE and ERNEST ARTHUR COX, Perth, Western Australia, Australia, assignors of one-third to Robert Glenn, Mount Hawthorn, near Perth, Australia. Filed Dec. 15, 1926, Serial No. 154,939, and in Australia Sept. 20, 1926. 2 Claims. (Cl. 273—5.)



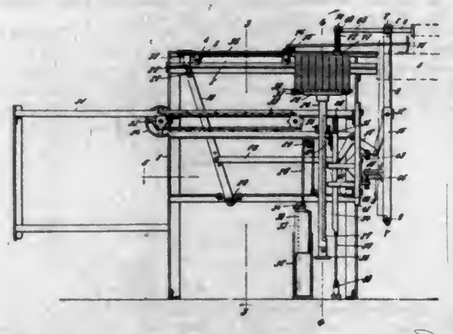
1. A frame for convertible billiard tables comprising two sectional side rails and two end rails, each carrying its respective resilient cushion, the upper face of each rail being provided adjacent each of its ends with two dowel-receiving openings, a plurality of pocket-forming and section and rail connectors, each comprising a net receiving bow having its ends bent into alignment to rest upon the upper surfaces of a pair of adjacent rails and having apertures in said ends to align with the dowel receiving openings of said rails, and removable dowels for insertion in the apertures of the terminals and the openings of the rails to secure said bows and rails together.

1,661,966. BILLIARD-CUE TIP. JOSEPH AUGUST RUZISKA and DAVIS LEE TAPP, Morgantown, W. Va. Filed Apr. 28, 1927. Serial No. 187,357. 3 Claims. (Cl. 273—70.)

1. A billiard cue, a tip therefor, the tip and cue being formed, one with a dove-tailed rib and the other with a dove-tailed slot into which the rib fits, and a collar fitting over the end of the cue and extending across the interlocking slot and rib.



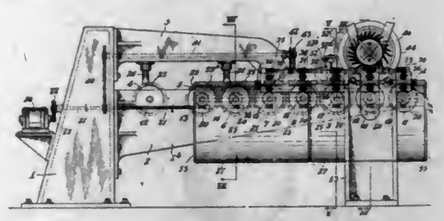
1,661,967. AUXILIARY LENS ATTACHMENT FOR SPECTACLES. JOSEPH SAVOIE, Central Falls, R. I. Filed Feb. 9, 1926. Serial No. 87,048. 3 Claims. (Cl. 88—41.)



1. In an auxiliary lens holder for spectacles, the combination with a spectacle frame carrying conventional lenses, of an arm pivotally supported at its outer end on an outer side of the frame to swing in a plane parallel with and across one of the conventional lenses, an auxiliary lens carried by the inner free end of the arm, a spring associated with the arm for urging it into frictional contact with the frame at its pivot and holding the same in adjusted positions, and an operating member carried by the outer end of the arm and having a part movable into engagement with the spectacle frame for limiting downward swinging movement of the arm and the auxiliary lens carried thereby, said operating member being bendable relative to the arm to vary the limit of downward movement of the arm and the auxiliary lens carried thereby.

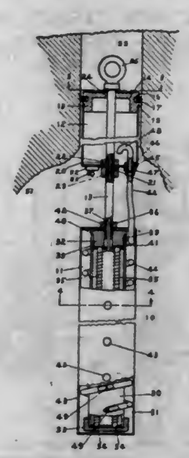
1,661,968. JOURNAL BOX AND AXLE. HUGH W. SANFORD, Knoxville, Tenn. Filed Feb. 16, 1924. Serial No. 693,273. 6 Claims. (Cl. 308—180.)

1. The combination of a journal, a hub having a fixed outer end wall extending across the outer ends of the below-mentioned rollers, a sleeve surrounding the journal within the hub, means independent of the sleeve for holding the hub on the journal, rollers between the sleeve and the hub, and means at the inner end of the hub for making engagement between the hub and the sleeve for the removal of the sleeve from the journal with the hub, substantially as described.



1,661,969. TILE-RECEIVING MACHINE. JOHN J. SEMASHKO, Morrisville, Pa. Filed Aug. 18, 1926. Serial No. 130,088. 2 Claims. (Cl. 214—6.)

1. A machine for the purpose set forth comprising an elevator, a weight for influencing the elevator in an upward direction, a cylinder in which the weight is guided, a valve controlled air port in the weight, a tile receiving tray on the elevator, a carriage movable over the elevator, a guide for the carriage, designed to wipe tile off of said carriage onto the tray, means for imparting a reciprocatory movement to the carriage, means for lowering the elevator a predetermined distance when the carriage is moved to discharge position, and means including an endless conveyor for removing the tray from the carriage when the elevator has been lowered a predetermined distance.

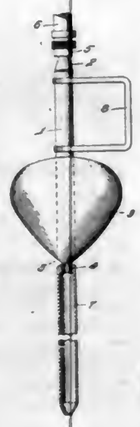


1,661,970. ELECTRIC WELDING MACHINE. FRANK L. SESSIONS, Lakewood, Ohio. Filed Jan. 13, 1923. Serial No. 612,436. 33 Claims. (Cl. 219—6.)

1. In apparatus for welding the contacting surfaces of a longitudinal, open seam in a metal shell, a freely suspended detachable yielding clamp adapted to encompass the shell, said clamp being shorter in length than the circumference of said shell to provide a space between the ends of the clamp, said clamp provided with stiffening flanges substantially the width of the clamp and being adapted to co-act with lateral-pressure devices for causing said clamp to exert circumferential pressure upon the encompassed shell.

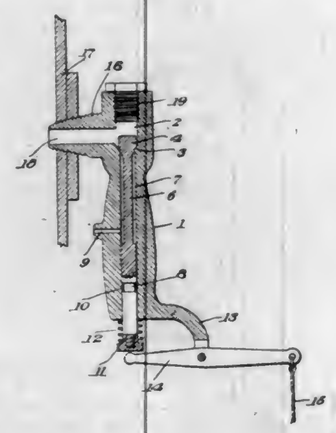
30. In apparatus of the class described, a non-attached yielding clamp adapted to encompass a metal shell, a seam-welding device, means for supporting and progressively traversing a metal shell encompassed by said clamp through the welding zone of said seam-welding device, and means adapted to engage said clamp and exert pressure thereon to cause said clamp to circumferentially compress said shell and press the seam surfaces thereof together.

1,661,971. STEAMER FOR OIL WELLS. BURTON W. SEYMOUR, Sr., Jamestown, N. Y. Filed Dec. 3, 1926. Serial No. 152,481. 8 Claims. (Cl. 219—33.)



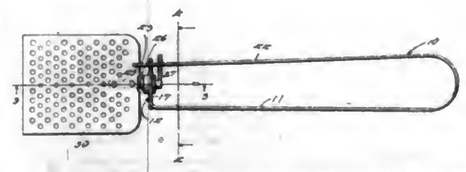
1. A steamer for oil wells and the like, comprising a tank, a cover plate therefor having openings therein, a heating unit, a rod connecting said tank and unit, a coil in said unit having holes therein, and connected to said tak, a source of heat in said unit, an expansion ring on said tank which contacts with the wall of said well and seals the same, whereby water poured into the well will enter said tank through said openings, pass into said coil in said heating unit, and escaping therefrom through said holes, be transformed into steam by said source of heat.

1,661,972. OIL DRAINER AND CLEANER. ELIAS A. SHADID, Mangum, Okla. Filed Oct. 11, 1926. Serial No. 141,014. 1 Claim. (Cl. 137—70.)



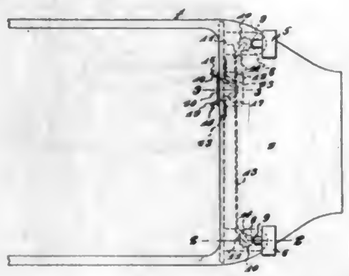
A device of the class described comprising a tube having constricted ends, one extremity of which is externally screw threaded so that an extension nozzle can be attached thereto and the other end being adapted to receive a chuck of an air hose, a U-shaped handle connected

with the upper portion of the tube and a resilient member surrounding the lower portion of the tube but leaving the threaded extremity exposed, the lower portion of



said member being of conical shape so that it will fit in inlets or hollow members of various sizes to close the same.

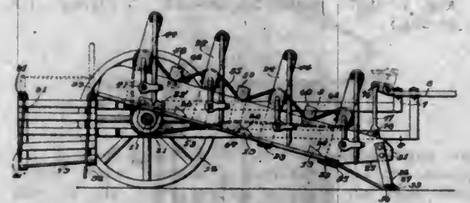
1,661,973. GAUGE COCK. JOHN C. SHAFFER, Tulsa, and LYNN S. MANKIN, Duncan, Okla. Filed Mar. 6, 1926. Serial No. 92,809. 1 Claim. (Cl. 251—134.)



A gauge cock, comprising a body having a rounded bore extending longitudinally therethrough, a valve seat therein and having angle ports communicating with its bore the outer port being surrounded by an offset threaded portion, a valve to engage the seat and having a stem snugly fitting the wall of the bore and extending therethrough, an adjustable head on the outer end of the stem, a spring surrounding the stem and exerting a tension between the head and the outer end of the body, said stem, from the valve end thereof, having spaced longitudinally extending grooves, and having a circumferential depression with which the grooves communicate and which is disposed opposite the port in the body, said stem having a second circumferential depression and a packing ring arranged therein and in contact with the bore of the body, and a plug closing the bore in one end of the body

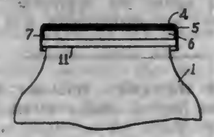
1,661,974. CULINARY UTENSIL. GEORGE J. SIMON, St. Louis, Mo. Filed Mar. 19, 1927. Serial No. 176,802. 3 Claims. (Cl. 294—8.)

1. A culinary utensil of the character described including a handle comprising a substantially U-shaped resilient element, one of the arms of the handle being shorter than the other and being provided with a head extending transversely of the U, said head having a transversely extending slot, an arm depending from the head, a bearing supported from the lower end of the arm, a shaft rotatable in said bearing and having a blade upon one end thereof and upon the opposite end thereof an arm provided with a longitudinally extending slot, the other arm of the handle being extended through the slot of the head and having a depending arm the lower end of which is engaged in the slot of the arm of the shaft, the last named arm of the blade by its inherent resiliency being normally disposed at the end of the slot remote from the first named arm of the handle, said blade, when the last named arm of the handle is in normal position, being disposed in a plane substantially paralleling the handle.



1,661,975. COWL LIGHT FOR AUTOMOBILES. CARL A. SMITH, Defiance, Ohio. Filed June 30, 1924. Serial No. 723,294. 1 Claim. (Cl. 240—61.)

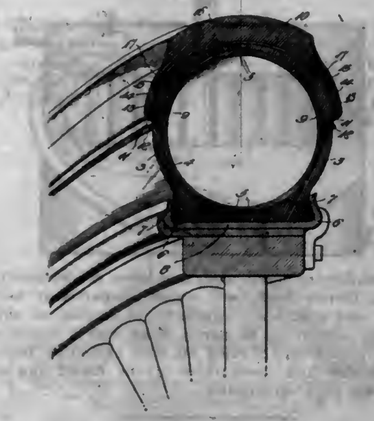
Headlights for motor vehicles including vertical shafts mounted for horizontal rotation, means for rotating the shafts, said rotating means including rods, the free ends of the rods being disposed adjacent to each other, pivoted levers connected with the rods, and movable in horizontal planes, said levers adapted to be operated simultaneously or independently to operate the rods, a plate having a slot through which the levers extend, teeth formed in the plate and against which the levers move, spring members connected with the levers and plates for holding the levers into engagement with the teeth.



1,661,976. HARVESTING MACHINE. JAMES N. STOVALL, Gorman, Tex., assignor of one-fourth to I. C. Underwood and one-fourth to C. E. Herrington, Gorman, Tex. Filed Feb. 21, 1927. Serial No. 169,968. 5 Claims. (Cl. 55—53.)

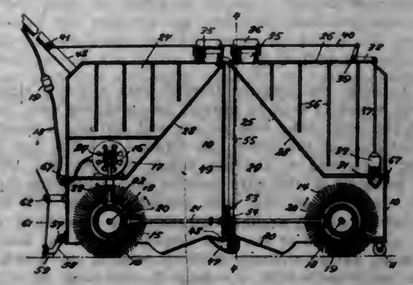
1. A peanut harvester comprising a combined vine elevating and sifter element normally inclining upwardly from front to rear, a vine digger means arranged between and depending from the forward ends of said element, revoluble conveyor reels supported from the sides of and operating within said element, and including reciprocatory conveyor bars bodily traveling in an arcuate path and pivoted guides for the bars, a portable body portion including supporting wheels and shiftably supporting said element from the rear of the latter, operating means for said reels driven from one of said supporting wheels, a combined vine collector and dumper supported from the body portion below the rear end of said element, said element including a slotted bottom, and sets of spaced vine retarders projecting upwardly from said bottom, the retarders of said sets arranged between said bars.

2. In a peanut harvester a combined collector and dumping element, said element being of skeleton form and including a pair of side walls, a bottom connected thereto, a rear wall hinged to the side walls and a forward wall hinged to the side walls, said element open at its top for the reception of the vines and said hinged rear wall providing a closure gate and said hinged forward wall providing an ejector for the vines collected, and means common to said hinged walls for synchronously shifting them in one direction to provide for the dumping of the collected vines.



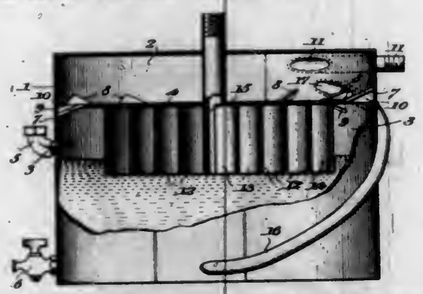
1,661,977. METHOD OF SEALING JARS AND THE LIKE CONTAINERS AND IMPROVED SEALING CAPSULE THEREFOR. JOHN WILLIAM SUTCLIFFE, London, England. Filed Nov. 23, 1925, Serial No. 70,916, and in Great Britain Nov. 29, 1924. 5 Claims. (Cl. 215—95.)

1. A closure for containers comprising an elastic sealing element for the neck of the container, a metal ring embracing said neck, a flange on said ring bearing on the sealing element, and a lower rim on said ring having an unbroken lower edge and weakened peripherally along and above said edge.



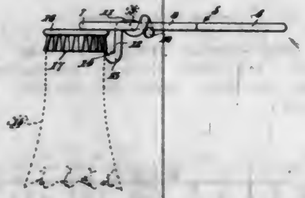
1,661,978. ARMORED PNEUMATIC TIRE. RAYMOND J. TALBOTT, Tulsa, Okla. Filed Sept. 16, 1926. Serial No. 135,903. 1 Claim. (Cl. 152—10.)

A pneumatic tire comprising two duplicate side walls of flexible material transversely curved to jointly form a tube chamber of substantially circular cross section, said walls having feather edges which overlap at both the rim side and the tread side of the tire, said walls being provided with beads at the rim side of the tire for engagement with the flanges of the usual rim and being provided also with external beads between the tread side and rim side of the tire, a transversely curved tread-carrying band around the tread portion of the tire having its edge curved first inwardly and then outwardly to provide rounded hooks, said hooks tenaciously engaging the last named beads but being removable therefrom when the tire is deflated, and a pair of outwardly flaring flanges joined to the outer sides of said band in outwardly spaced relation to said hooks, whereby upon outward springing of the hooked edges of the band said flanges are forced inwardly toward the adjacent body portion of the band and a renewable tread ring surrounding the remaining body portion of the band and having



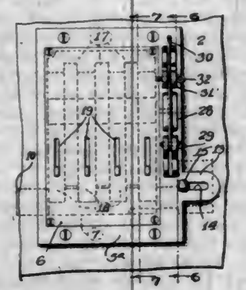
its edge portions disposed between the same and said flanges to be tightly gripped when the flanges move inwardly upon the inflation of the tire.

1,661,979. ELECTRICAL SCRUBBING AND DRYING MACHINE. ALEXANDER UGOLINI, Youngstown, Ohio. Filed Aug. 20, 1924. Serial No. 733,167. 1 Claim. (Cl. 15—50.)



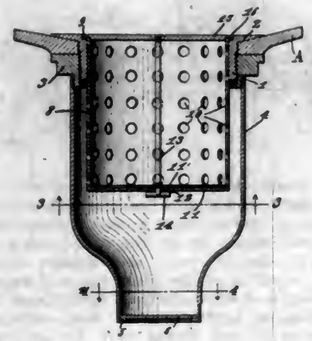
In a scrubbing machine, a wheel supported housing having side walls provided with oppositely located upstanding inverted V-shaped portions spaced from the ends of the housing, waste and fresh water tanks removably mounted upon the housing and having their bottoms and opposed walls shaped to conform to the shape of the side walls of the housing, means connecting the V-shaped portions of the side walls of the housing and the side walls of the tanks to hold the latter in place, a splash partition disposed transversely of the housing and extending downwardly from the apex of the V-shaped portions and dividing the housing into collecting chambers having downwardly and oppositely extending inclined bottoms open at their remote ends, scrubbing and gathering brushes mounted in the open remote portions of the collecting chambers adjacent the lower ends of the inclined bottoms, means to operate the brushes, means for supplying water from the fresh water chamber to the scrubbing brush, a receiving chamber beneath the adjacent ends of the collecting chambers, means adjacent the splash partition to collect and direct the collected water into the receiving chamber and means opratively connected with an element of the brush operating means to lift the water from the receiving chamber and deliver it to the waste water tank.

1,661,980. WHIRLPOOL MUFFLER. ALBERT P. J. VOIGT, Galveston, Tex. Filed Apr. 11, 1925. Serial No. 22,309. 8 Claims. (Cl. 261—79.)



1. A muffler including upper and lower compartments, a partition therebetween, said upper compartment having an inlet and said lower compartment having an outlet, and being adapted to be partly filled with a liquid, and a spiral passageway formed on, and extending between said partition and the surface of the liquid and communicating with said outlet.

1,661,981. BOTTLE-CAP REMOVER. WACLAW WASKEWICZ, Ludlow, Vt. Filed Feb. 9, 1926. Serial No. 87,069. 2 Claims. (Cl. 65—46.)

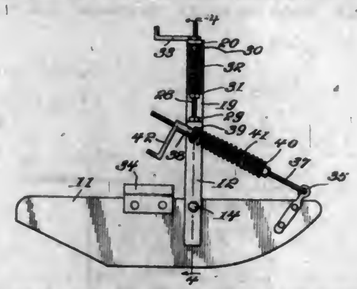


1. A bottle cap remover formed from a single strand of wire which is bent to provide an elongated body having a relatively long loop at one end forming a handle, a short loop at the other end forming a bottle cap engaging heel, and a straight shank between the loops with portions of the wire parallel and contacting each other; the end of the wire extending from the heel loop being twisted around the shank to strengthen the same, and the end of the wire extending from the handle loop being passed through the loop forming the heel and depending from within the loop in the form of a leg and a hook-shaped bottle flange engaging foot at the end of the leg.

1,661,982. GARAGE OR BARN DOOR LOCK. WALENTY WANAT, South Milwaukee, Wis. Filed Apr. 21, 1927. Serial No. 185,571. 6 Claims. (Cl. 70—76.)

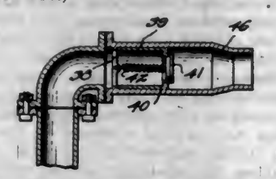
1. In a door lock of the type described, a lock casing set into a door, a sliding lock bolt in the casing, operating means for the bolt at the inner and outer sides of the door, sliding tumbler bars cooperating with the bolt, a handle for each tumbler bar exposed at the inner side of the door, the tumbler bars being operable by a key at the outer side of the door, said casing having an opening for the key and means operable from the inner side of the door to control the entrance to said opening.

1,661,983. REFUSE COLLECTOR. RALPH E. WENTZEL and JOHN T. GRIFFITH, Wilkes-Barre, Pa. Filed Aug. 1, 1927. Serial No. 209,937. 3 Claims. (Cl. 4—291.)



1. A device of the character described comprising a casing adapted to be associated with a plumbing fixture such as a sink and disposed below the drain opening thereof, a perforated receptacle arranged through the sink opening and supported in the casing, a spider including a rim arranged over said casing, means normally lying in the bottom of said receptacle to remove the contents thereof, said means being removable by said spider, and means for detachably securing said spider in operative association with said receptacle.

1,661,984. TIRE HEATER. WILLIAM WILEY, Galveston, Tex. Filed Nov. 4, 1925. Serial No. 66,873. 1 Claim. (Cl. 263—5.)

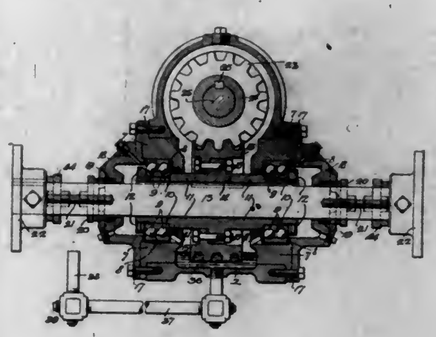


A tire heating apparatus comprising an annular brick wall provided with a hingedly mounted cover adapted to form with the brick wall a heating chamber for tires, said wall being provided with spaced radial passages, a concrete liner formed on the bottom and inner wall of the chamber, a metal ring located on the top of the back wall and having a depending annular flange embracing the outer face of the wall and an annular depending flange embracing the inner face of the wall, the depending flanges and the liners being provided with slots aligned with the radial passages of the wall, vertically disposed metal flanges depending from the ring and secured to the annular flanges and spaced from each other in the radial passages, and a burner disposed in each passage and projecting through the spaced vertical flanges, said burner terminating short of the inner end of the passages, and a flue connected with the cover.

1,661,985. CUTIVATOR ATTACHMENT. CARL WILSON, Chillicothe, Ohio. Filed Nov. 3, 1926. Serial No. 146,020. 3 Claims. (Cl. 97—188.)

1. A plant protector for cultivators comprising companion shields, adapted to be arranged at the opposite sides of the plant row, a standard for each shield adapted to clamp to the adjacent cultivator beam, a substantially U-shaped bracket pivotally supporting each shield and yieldably mounted for sliding movement on said standard, and means for adjusting each shield pivotally with relation to the ground, and yieldably supporting the shield for pivotal movement.

1,661,986. PUMP. AARON E. YETTER, Knoxville, Iowa. Filed July 21, 1926. Serial No. 124,020. 3 Claims. (Cl. 103—100.)

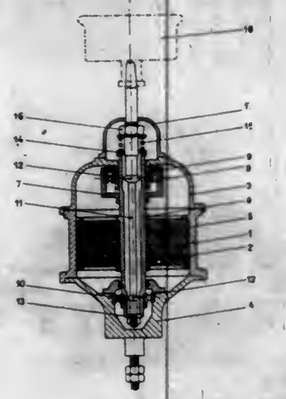


1. A centrifugal pump including a well pipe having its lower portion arranged in a body of fluid and an inwardly opening valve at the bottom of said pipe, a tubular shaft arranged above and in a line with the well pipe, packing between the shaft and pipe, antifrictional bearings supporting the tubular shaft and holding the same from longitudinal movement, a nozzle arranged at an angle on the outer end of the tubular shaft, means for revolving the shaft, a tubular piston in the nozzle, an outwardly movable valve for the piston, a spring fixed at one end of the nozzle connected with the valve and urging the valve in a direction to close the tubular piston and to urge the piston toward the axes of the shaft, and means limiting the sliding movement of the piston in the nozzle.

1,661,987. TABLE PAD. LOUIS M. ARNOPOL, Chicago, Ill. Filed Nov. 21, 1925. Serial No. 70,454. 8 Claims. (Cl. 45—68.4.)

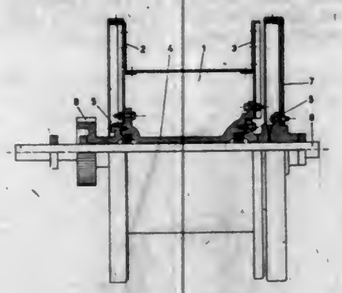
1. In a table pad, pliable in its entirety, the combination of a quilted body portion, a rubberized sheet on one side of said body portion and a plastic mixture of rubber and asbestos vulcanized between and with said rubberized sheet and said quilted body portion.

1,661,988. SPIRAL-GEAR BOX. ELWOOD B. AYRES, Melrose Park, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Oct. 15, 1925. Serial No. 62,563. 2 Claims. (Cl. 74—36.)



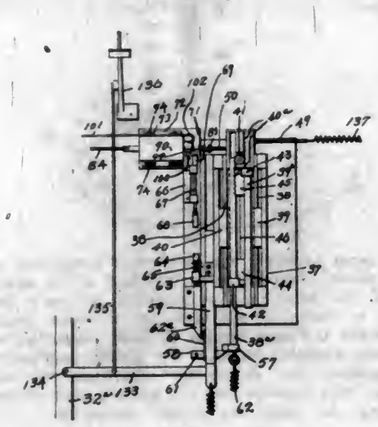
1. The combination in a spiral gear-box, of a casing having two through openings, one at right angles to the other and on different planes; flanged bearing-boxes closing the ends of the openings; ball-bearings in the boxes; two hubs, one hub being located in one through opening and the other hub in the other through opening, each hub extending through the ball-bearings and forming a support for the inner races for said bearings; a cap plate beyond the bearing-boxes and having packing; a shaft extending through each hub and through the packing in the cap plates, said shafts being keyed to the hubs; and bolts securing the cap plates and the flanged bearing-boxes to the casing.

1,661,989. SADDLE HORN. JOSEPH P. BALDWIN, Kingsville, Tex., assignor to The Kingsville Lumber Company, Kingsville, Tex. Filed June 9, 1927. Serial No. 197,600. 2 Claims. (Cl. 54—44.)



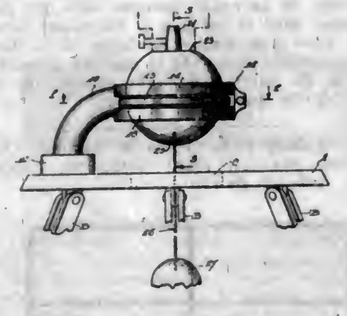
1. In combination, the swell of a saddle-tree, and a horn having a base seated on and secured to the swell and provided with a hook embracing the front edge of the swell.

1,661,990. DRIVING MECHANISM FOR WINDERS FOR ARTIFICIAL SILK. HENRI BÉNIT, Paris, France. Filed July 19, 1924, Serial No. 123,532, and in Germany Feb. 1, 1926. 1 Claim. (Cl. 308—140.)



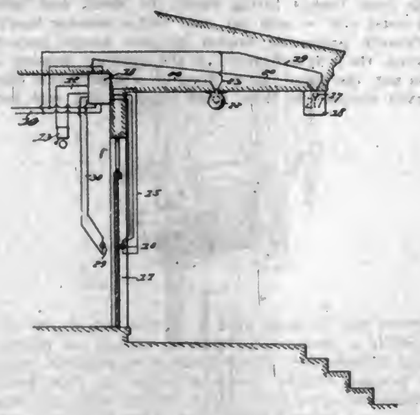
A driving system of the character described comprising an outer and an inner shaft, means for driving said outer shaft, collars formed on said inner shaft and engaging the outer shaft, said inner shaft being reduced in diameter and rendered flexible between said collars whereby the inner shaft is centered automatically at high speed, a housing enclosing the said shafts, and ball bearings between the said outer shaft and housing and disposed in the axes of said collars.

1,661,991. REEL FOR CABLES. HENRI BÉNIT, Paris, France. Filed Apr. 14, 1927, Serial No. 183,803, and in Germany May 3, 1926. 1 Claim. (Cl. 242—94.)



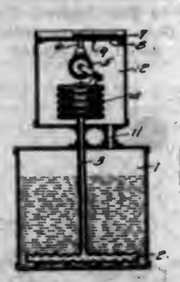
A reel for supporting wires and cables and also for use in the manufacture of such articles as well as for transporting them, having a free wheel independent of the drum which permits of the reel being rotated on this wheel and on the opposite flange of the drum in such manner that said wheel and said flange may rotate at different speeds without slipping.

1,661,992. AUTOMATIC PRESELECTOR AND SHIFTING DEVICE FOR SLIDING GEAR TRANSMISSIONS. JASPER BLACKBURN, Webster Groves, Mo. Filed Sept. 14, 1925. Serial No. 56,252. 14 Claims. (Cl. 74—58.)



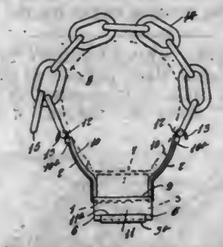
1. An automatic preselector and shifting device for sliding gear transmissions comprising a pair of rotatable and longitudinally sliding preselecting and shifting elements, means for moving said preselecting and shifting elements toward each other simultaneously, means for moving said elements away from each other simultaneously, means for automatically rotating said elements in one direction, hand or foot operated means for rotating said preselecting and shifting elements in the opposite direction, and means included in the last mentioned means for limiting the movement of the automatic rotating means whereby a preselection is automatically made.

1,661,993. LEVELING DEVICE. CARLOS JARAMILLO BORDA, Bogota, Colombia. Filed Dec. 4, 1926. Serial No. 152,640. 3 Claims. (Cl. 248—47.)



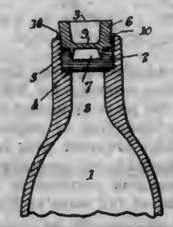
2. A self-leveling device of the character set forth including a weighted spherical supporting element, and a mounting therefor including a member carrying an annulus and upper and lower split ring members within which the spherical supporting element is mounted, the upper and lower split ring members being normally radially expanded to permit of free universal movement of the weighted spherical supporting element and including means for radially contracting the same to lock the element after the leveling operation.

1,661,994. AUTOMATIC PORCH LIGHT. GEORGE H. BROWN, Nevada, Mo. Filed Oct. 22, 1921. Serial No. 509,563. 1 Claim. (Cl. 177—311.)



A house service door alarm system having in combination an outside push button switch, an inside alarm device in circuit with said push button switch, an outside house identifying light unit, a door illuminating light unit, a source of electrical supply with which said push button switch and alarm device are in circuit, a switch for selectively and alternately connecting the house identifying light unit and the door illuminating light unit in circuit with said supply, said selective switch being operable in one direction by the push button switch, and a second interior push button switch for actuating said selective switch in the opposite direction.

1,661,995. GAUGE FOR LIQUIDS. KIRK BROWN, Montclair, N. J. Filed Oct. 28, 1924. Serial No. 746,275. 8 Claims. (Cl. 73—54.)

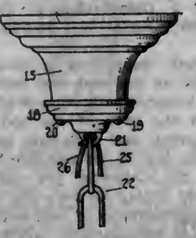


1. In a liquid gauge, a closed gas-containing member comprising a compressible chamber adapted to be positioned in the body to be measured and responsive to variations in the pressure thereof, an expansible chamber adapted to be positioned exterior to said body, and a connection between said two chambers, in combination with a movable pointer, means operable by said expansible chamber to actuate said pointer, a scale co-operating with said pointer and remaining in fixed position while the pointer travels between limits indicating the minimum and maximum of the liquid to be measured, and means intermediate the pointer and scale whereby the scale is repositioned when the pointer reaches either of said limits and continues its movement due to change in temperature.

1,661,996. TRACTION DEVICE. WILLIAM S. CALLERY, Dixon, Calif. Filed Feb. 9, 1926. Serial No. 87,101. 4 Claims. (Cl. 152—14.)

1. In a traction device, a traction chain holder formed of a single blank of material, side and end extensions on the blank, a fabric lining having interlocking engagement with the end of said extensions and means to detachably connect a traction chain to the ends of the side extensions.

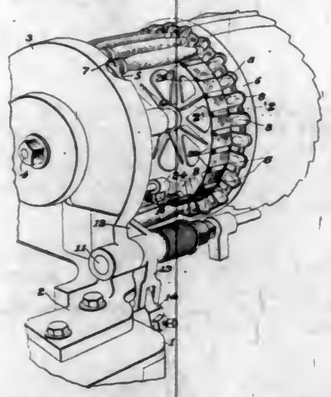
1,661,997. CAPSULE OR CONTAINER FOR GASES OR LIQUIDS UNDER PRESSURE. ROBERT HUNTER CAMPBELL, London, England. Filed Jan. 15, 1926, Serial No. 81,511, and in Great Britain Nov. 4, 1925. 1 Claim. (Cl. 220—24.)



For use with a container designed to confine fluids under pressure having an internally threaded neck with a shoulder projecting inwardly at the base of the threading, a one-piece closing element made wholly of soft metal adapted to spread outward under pressure and effect a tight closure with the threaded neck and lugs upon said closing element adapted to support the same on the open end of the container when the latter is being charged.

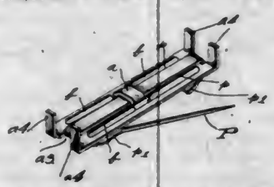
1,661,998. METHOD OF PREPARING DITHIAZYL DISULPHIDE. CLARENCE M. CARSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 7, 1926. Serial No. 134,141. 3 Claims. (Cl. 260—16.)

1. A method of preparing disulphides of mercaptothiazoles that comprises treating the corresponding mercaptothiazole with sulphur chloride.



1,661,999. LIGHTING FIXTURE. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Feb. 12, 1925. Serial No. 8,682. 4 Claims. (Cl. 240—85.)

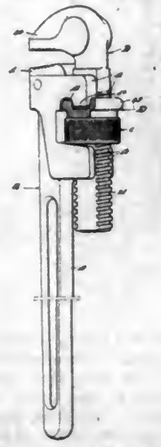
2. The combination with a lighting fixture of a junction box, a canopy secured thereto, a cap for said canopy,



means to secure a chain to said cap, means to secure said cap to said canopy, and means integral with said canopy to engage one of the links of a chain, said means being independent of the securing means for the fixture.

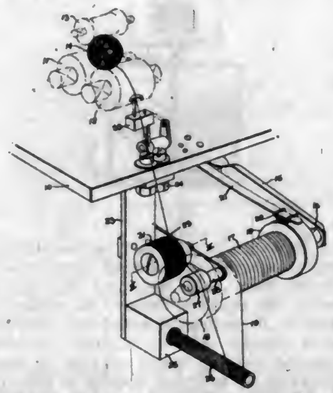
1,662,000. FILLING REPLENISHING LOOM. HARRY A. DAVIS, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed May 2, 1927. Serial No. 188,245. 7 Claims. (Cl. 139—248.)

1. In a filling replenishing loom, the combination of a rotary hopper having supports for filling carriers, a pad which bears upon the mass of wound filling on the filling carriers to prevent sloughing or displacement of the filling, and pad supports provided with loop portions which loosely support the pad for movement relative thereto that the filling engaging portions of the pad may conform to the contour of the mass of filling engaged by it.



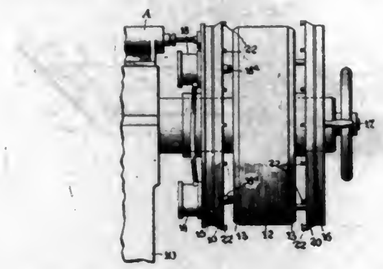
1,662,001. BADGE. CHARLES J. DIEGES, Brooklyn, N. Y., assignor to Dieges & Clust, New York, N. Y., a Corporation of New York. Filed July 7, 1927. Serial No. 204,036. 3 Claims. (Cl. 40—1.5.)

1. The badge described comprising a cross-bar formed with spaced-apart longitudinal ribs, penetrating teeth at the ends of said bar and slots in the cross bar between the teeth, and a safety pin disposed between said ribs and engaged in said slots.



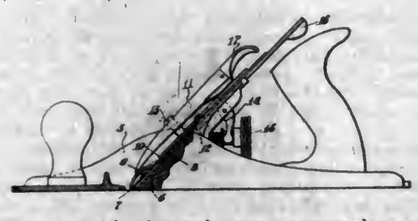
1,662,002. WRENCH. JOHN H. DOWD, Hartford, Conn., assignor to The Billings & Spencer Company, Hartford, Conn., a Corporation of Connecticut. Filed Dec. 15, 1925. Serial No. 75,565. 1 Claim. (Cl. 81—104.)

A pipe wrench comprising a drop-forged body-part having a handle at one end and provided at its other end with two longitudinally spaced-apart pairs of arms projecting from the back of the body-part and alining transversely thereof, said body-part having a stationary outwardly facing jaw on its opposite end, a pivoted jaw spaced beyond the stationary jaw and provided with a shank detachably fitting between the arms of each pair and disposed longitudinally of said body-part and adapted for adjustment in substantially parallel relation thereto, said shank having flat lateral faces and screw-threads at its opposite edges, a nut disposed between said pairs of arms and in threaded engagement upon the shank for turning on the shank to move the latter longitudinally, said nut engaging the inner pair of arms to limit the inward movement of said shank, and a rocker member of ring form loosely fitting about the shank and against the outer side of said nut, said rocker member having a forwardly projecting beaded annular flange projecting beyond the circumference of the rocking member and said nut, the outer pair of arms of said body-part having curved recesses in their inner edges facing said rocker



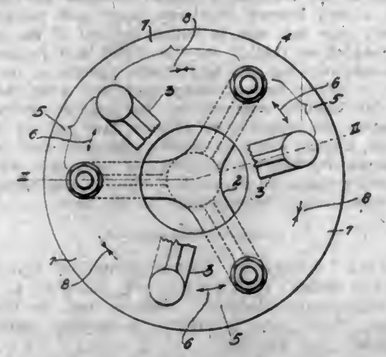
member and adapted to loosely receive therein the adjacent portion of said beaded flange, whereby the rocker member together with the nut and shank and the movable jaw carried thereby may swing as a unit upon the outer pair of arms, said rocking member being freely rotatable on the shank and independent of said nut, whereby when the wrench is laid on a surface the beaded flange spaces the nut from the surface and shifting of the nut is prevented incident to frictional contact between the wrench and the surface.

1,662,003. TENSIONING DEVICE FOR THREAD-WINDING MACHINES. WALTER J. ELDRIDGE, Lenoir, Tenn., assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 28, 1926. Serial No. 132,101. 10 Claims. (Cl. 242—3.)



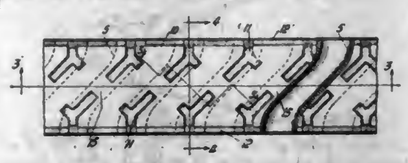
1. A tensioning device for thread winding machines comprising a support, a shaft on the support, a roller disposed in concentric relation to the shaft and supported thereon by means of anti-friction bearings, a lever pivoted on the support, means to move one end of the lever toward the periphery of the roller, and yieldable means on the lever adapted to exert pressure upon the roller.

1,662,004. BEAD-SETTING MECHANISM. ROSS E. JENKINSON, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed May 28, 1925. Serial No. 33,453. 9 Claims. (Cl. 154—10.)



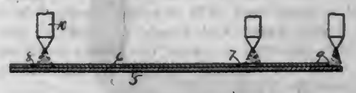
1. A device for setting a bead upon a tire carcass comprising an annular member formed with a plurality of spaced elements projecting laterally, each element being provided with an undercut curved surface adapted to engage the outer periphery of a tire bead for holding the bead in place upon the annular member.

1,662,005. CARPENTER'S PLANE. CHARLES A. JOHNSON, Unionville, Conn., assignor to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Jan. 23, 1926. Serial No. 83,217. 11 Claims. (Cl. 145—17.)



1. As an article of manufacture, a narrow plane cutter having its upper edge portion shaped for hinged engagement with a plane iron.

1,662,006. FLEXIBLE COUPLING. ELMER G. KIMMICH, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Jan. 26, 1923. Serial No. 615,162. 3 Claims. (Cl. 64—96.)

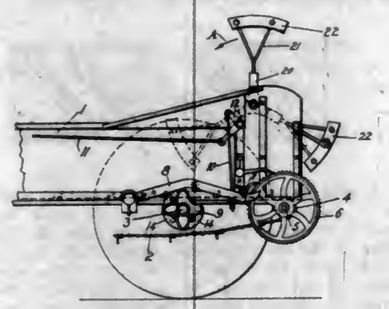


1. A flexible disc for driving connections having a set of holes for connecting the disc to a driving member and a set of holes for connecting the disc to a driven member, the sets of holes being so disposed that radii of the disc passing over the centers of the holes define tension zones and larger intermediate compression zones.

1,662,007. CUSHION TIRE. OTTO J. KUHLKE, Akron, Ohio, assignor to The Kuhlke Machine Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 17, 1927. Serial No. 176,043. 2 Claims. (Cl. 152—1.)

2. A solid tire of the cushion type provided with apertures in the body of the tire below the tread, the said apertures extending diagonally of the tire, the diagonal portions of the apertures being substantially transversely elliptical with the major axis of the ellipse extending radially of the tire and of such dimensions that the aperture in a radial plane transversely of the tire will be substantially circular.

1,662,008. PROCESS OF COATING METALS. WILLIAM HENRY LEGATE, West Hartford, Conn., assignor of one-half to Edwin E. Sage, Hartford, Conn. Filed Apr. 23, 1926. Serial No. 104,219. 3 Claims. (Cl. 91—68.2.)



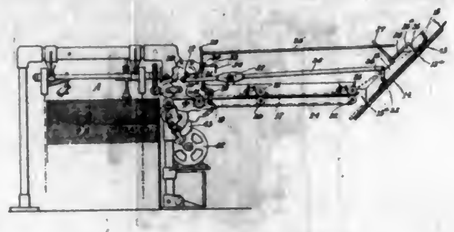
1. In the art of plating, the process for increasing the thickness of a piece of material while in its embryo state and which material when completed assumes a different configuration, said process consisting in applying to the piece of material to be thickened, a shield of a design similar to the embryo material to completely overlie the material with the exception of cut-out and cut away portions of the shield, then spraying a material having an affinity for the thickening material to the exposed portions of the piece of material to be thickened, then applying thickening material to said exposed parts resulting in amalgamation between the material to be thickened and the thickening material, shaping the piece of material into its completed form, and plating the entire article to produce a plain effect.

1,662,009. CIGAR CUTTER. WILLIAM HENRY LEGATE, West Hartford, Conn., assignor of one-half to Edwin E. Sage, Hartford, Conn. Filed June 7, 1927. Serial No. 197,171. 5 Claims. (Cl. 131—38.)

2. A cigar cutter including a support, a receiver movably mounted in the support and having a recess for a cigar tip, a pivotally mounted cutter carrier located within the receiver and having a cutter positioned to pass across said recess, and means on said carrier adapted to be engaged by said receiver to effect cutting movement of said cutter.

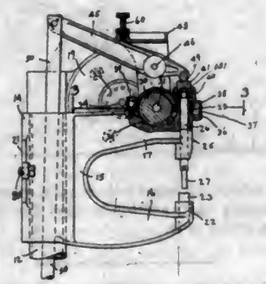
1,662,010. CONVERTED MANURE SPREADER. EDGAR C. LITCHFIELD, Cedar Falls, CLARENCE C. HERMANN, Waterloo, and VICTOR SPEER, Cedar Falls, Iowa, assignors to Henry L. Litchfield, Waterloo, Iowa, and Edgar C. Litchfield, Cedar Falls, Iowa. Filed Aug. 18, 1924. Serial No. 732,040. 1 Claim. (Cl. 275—3.)

The combination with a spreader body having a conveyor for slowly moving the contents toward a discharge point, of a rotatable beater wheel arranged in said body adjacent to said discharge point with its axis of rotation lying in a transverse vertical plane intersecting said conveyor, said beater wheel having scraping blades adapted to pass near said conveyor during the rotation of the beater wheel, and means for rotating the beater wheel in a direction to cause the blades to travel downwardly over the advance face of the approaching mass in the spreader body.



1,662,011. SEALING MEANS AND METHOD FOR WIRE-BOUND BOXES. EDWARD H. LUDLOW, Evanston, Ill., assignor to Wirebounds Patents Company, a Corporation of Maine. Filed Dec. 6, 1922. Serial No. 605,326. 5 Claims. (Cl. 292—325.)

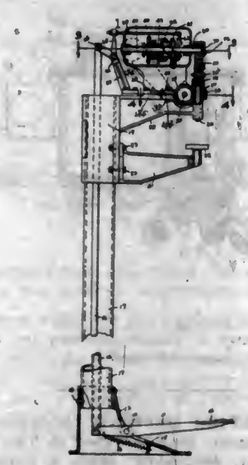
1. Means for sealing a wirebound box comprising a metal plate positioned between a box side and a wire binding and having a metal tongue projecting at approximately a right angle from the plate and intertwisted with the free ends of the wire binding; said tongue being formed of thin, soft metal, whereby if the twist is untwisted and again twisted the tongue will be so mutilated and broken as to leave evidence of tampering.



1,662,012. FEEDING MECHANISM FOR STAMP PRESSES. CHARLES E. MCMANUS, New York, N. Y., assignor to Crown Cork & Seal Company, Inc., New York, N. Y., a Corporation of New York. Filed Mar. 11, 1926. Serial No. 93,980. 17 Claims. (Cl. 271—18.)

1. A feeding mechanism embodying therein the combination with the feed shelf of a stamp press, means whereby a metal sheet may be moved along said shelf, and means adapted to remove and advance one metal sheet at a time from the top of a pile of sheets, of a support adapted to receive sheets moved from said pile, means for moving sheets along said support and delivering them to said feed shelf in operative relation to the means for moving them along said shelf, and intermittently operative means controlled by a plate

upon said shelf whereby said means for moving the sheets along said support is successively made operative to deliver a sheet to said shelf, and inoperative for an interval to afford a dwell during which a sheet may be fed along said shelf.

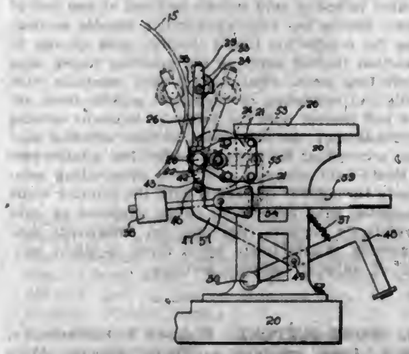


1,662,013. COMBINED METAL-WORKING MACHINE. FRANK RIESS, Indianapolis, Ind., assignor to Riess Manufacturing Company, Kokomo, Ind., a Corporation. Filed July 25, 1925. Serial No. 46,172. 1 Claim. (Cl. 29—26.)

A combined metal working tool of the kind described, including a main frame, a gear case secured to the frame, a tool carrying a spindle mounted in said gear case, a ball bearing race cap above and independent of said gear case and in which the end of the spindle is mounted so that it may be lifted and reciprocated with said race cap and be rotatable therein at the same time, a rocker arm pivotally connected with the race cap for forcibly reciprocating the spindle, means for actuating the rocker arm, a spiral gear splined on the spindle, a spiral wheel for driving said spiral gear, adjusting means for limiting the stroke of the rocker arm, and a housing connected with said frame for said spiral gear and spiral wheel, substantially as set forth.

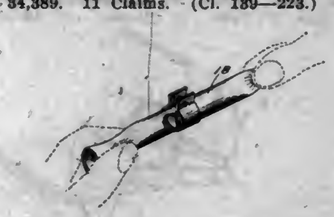
1,662,014. COMBINED METAL-WORKING MACHINE. FRANK RIESS, Indianapolis, Ind., assignor to Riess Manufacturing Company, Kokomo, Ind., a Corporation. Filed July 25, 1925. Serial No. 46,173. 3 Claims. (Cl. 29—26.)

1. A combined metal working tool of the kind described, including a frame, a plurality of constantly driven shafts, a tool carrying spindle reciprocable in said frame, means for reciprocating said spindle, means for clutching and unclutching the reciprocating means with one of said constantly driven shafts, means for rotating said spindle, and means for operatively con-



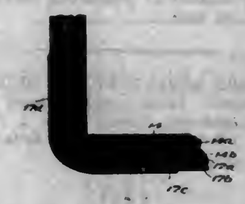
necting said rotating means with the other one of said constantly driven shafts or disconnecting the same, substantially as set forth.

1,662,015. METHOD OF PREPARING THIAZOLES. LORIN B. SEBRELL and JAN TEPPEMA, Akron, Ohio, assignors to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Original application filed June 17, 1925, Serial No. 37,861. Divided and this application filed Mar. 16, 1927. Serial No. 175,922. 4 Claims. (Cl. 260—44.)



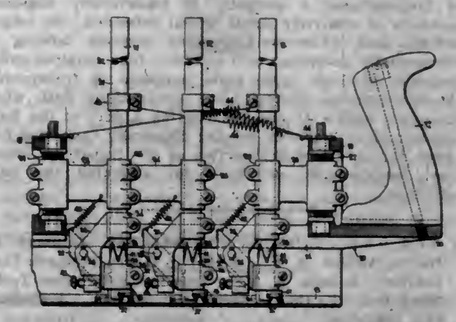
4. A method of manufacturing 2-mercaptobenzothiazole which comprises, causing diortho-dinitro-diphenyl-disulfide to react with a water solution of a basic sulfide in the presence of hydrogen sulfide and carbon bisulfide.

1,662,016. TIRE-BUILDING MACHINE. JESS A. SHIVELY, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed July 20, 1926. Serial No. 123,651. 8 Claims. (Cl. 154—10.)



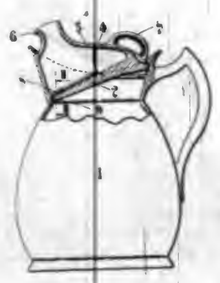
1. A tire building machine comprising a rotatable drum, and a stitcher device including a pair of arms movable along a line parallel to the axis of the drum and pivotable to swing in planes perpendicular to the axis of the drum, and a stitcher having a swivel connection rotatably mounted on each arm.

1,662,017. SHUTTLE. WILLIAM A. TEBO, Anthony, R. I., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed June 2, 1925. Serial No. 34,389. 11 Claims. (Cl. 139—223.)



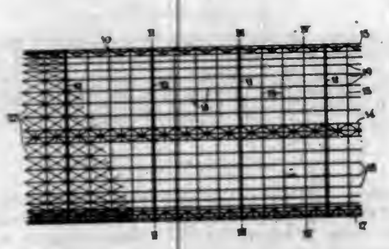
1. In a textile device having an opening therein, a yarn guide eye of infractible material in said opening and compressed elastic material between the walls of said eye and the wall of said opening securing the eye in the opening by the expanding action of said elastic material.

1,662,018. LEAKPROOF TANK COVER. WARD T. VAN ORMAN, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Apr. 28, 1921. Serial No. 465,164. 8 Claims. (154—46.)



1. A cover for a tank comprising a layer of relatively soft laminated rubber over the lower portion of the tank, a layer of relatively soft rubber over the upper portion of the tank, a strip of fabric joining the upper and lower layers, and an outside layer of fabric covering the entire tank.

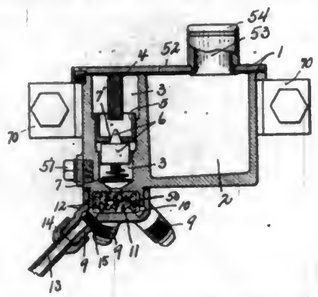
1,662,019. METHOD OF AND MEANS FOR DISTRIBUTING WASHERS TO THE PINS OF HEEL MOLDS. LAURENCE WETMORE, Akron, Ohio, assignor to The Goodyear Tire & Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Sept. 20, 1926. Serial No. 136,388. 11 Claims. (Cl. 18—1.)



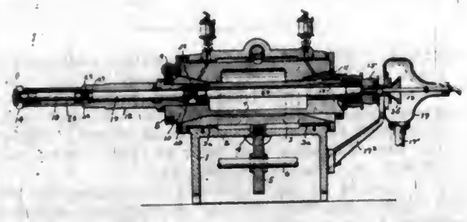
1. A device for applying washers to the pins of heel molds comprising a reservoir for the washers, an escapement device permitting the discharge of the washers to the pins, and magnetic means to control the discharge of the washers.

1,662,020. TEAPOT, COFFEEPOT, AND THE LIKE. EDMUND WILLIAM ABRAM, London, England, assignor to Eugene Ludlow Fondeville, New York, N. Y. Filed Mar. 15, 1927, Serial No. 175,569, and in Great Britain Mar. 17, 1926. 15 Claims. (Cl. 53—3.)

1. In a tea, coffee or like pot having an outlet with a clear throughway at the upper front part of said pot, a removable imperforate shutter formed to extend across the said pot below said outlet and to abut against the wall of the pot, liquid flowing to the outlet when pouring out being strained by percolating between said shutter and the said wall.



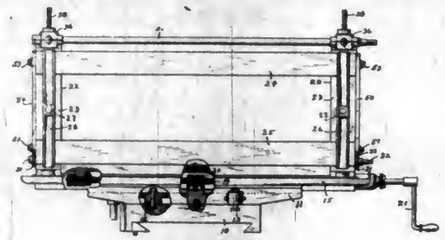
1,662,021. HULL STRUCTURE FOR RIGID AIRSHIPS. KARL ARNSTEIN, Akron, Ohio, assignor to Goodyear-Zeppelin Corporation, Akron, Ohio, a Corporation of Delaware. Filed June 21, 1927. Serial No. 200,475. 4 Claims. (Cl. 244—3.)



1. A rigid airship comprising a hull having a plurality of longitudinals, a plurality of transversely disposed members of relatively small lateral extension, the longitudinals and transversely disposed members defining a substantially polygonal hull contour, four longitudinally disposed relatively large keels composed of framework, the outer surface thereof being substantially flush with the outer surface of and constituting a part of the hull superstructure and wire bracing diagonally connected between the points of intersection of the transverse members, longitudinals and keels for stiffening the hull structure.

1,662,022. LUBRICATING SYSTEM. CHESTER A. BACON, Auburn, N. Y., assignor to Bowen Products Corporation, Auburn, N. Y., a Corporation of New York. Filed Oct. 17, 1922. Serial No. 595,090. 3 Claims. (Cl. 184—7.)

1. A chassis lubricating apparatus comprising a lubricant supply tank having a lubricant-containing chamber and a lubricant discharging chamber, a wick constituting the sole means of feeding lubricant from the containing chamber to the discharging chamber, means including a spring supported substantially balanced valve for dividing the discharging chamber into two chambers, an absorbent pad in the lower portion of the discharging chamber, and conduits leading from the lower portion of the discharging chamber to chassis bearings and adapted to receive lubricant from said pad.

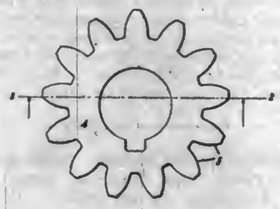


1,662,023. GRINDING MACHINE. WILLIAM J. BAUMBERGER, Davenport, Iowa, assignor to The Micro Machine Company, Bettendorf, Iowa, a Corporation of Iowa. Filed Nov. 20, 1922. Serial No. 602,068. 5 Claims. (Cl. 51—267.)

1. In a grinding machine for use in wet grinding, in combination, a hollow grinding wheel spindle comprising a plurality of longitudinally aligned hollow spindle sections, each said spindle section being rigidly supported in rotatable manner by suitable bearings adjacent each end thereof, operative connections between adjacent spindle sections whereby said sections may be simultaneously rotated by rotation of one spindle section, a grinding wheel secured to one of said spindle sections at one end of said spindle, means for rotating another spindle section, and means for conducting liquid through said spindle to the end section thereof carrying the grinding wheel, said liquid conducting means comprising a tube rotatable with said spindle and extending through said spindle from adjacent one end thereof past the joints of adjacent spindle sections to adjacent the other end of said spindle, said tube being secured at its ends to respective spindle sections in liquid-tight manner, said tube cooperating relatively closely throughout its length with the interior walls of said spindle, said tube being, when disposed in said spindle, relatively rigid in character but sufficiently flexible to function satisfactorily when there is slight misalignment of adjacent spindle sections.

1,662,024. WORK SUPPORT. WILLIAM J. BAUMBERGER, Davenport, Iowa, assignor to Micro Machine Company, Bettendorf, Iowa, a Corporation of Iowa. Filed Apr. 6, 1925. Serial No. 21,056. 5 Claims. (Cl. 51—217.)

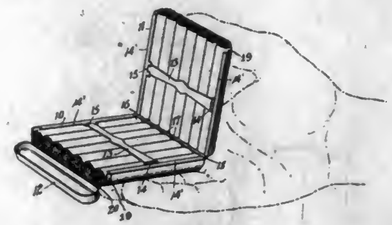
3. A fixture for supporting work in the path of a tool comprising a frame, a pair of vertically adjustable jaw members, brackets secured to said frame, adjustable means carried by said brackets for suspending said upper jaw member, a means releasably connecting said jaw members, means for preventing lateral displacement of said jaw members from said frame, and means for maintaining said jaw members continuously in parallel relation.



1,662,025. FIREARM. JOHN E. BRENNAN and CRAWFORD C. LOOMIS, Ilion, N. Y., assignors to Remington Arms Company, Inc., a Corporation of Delaware. Filed Apr. 23, 1924, Serial No. 708,414. Renewed Aug. 3, 1927. 11 Claims. (Cl. 42—1.)

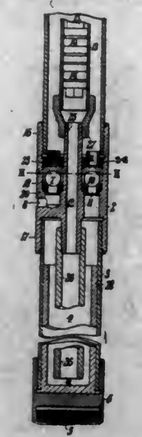
1. A gun barrel assembly comprising a breeched piece, a plurality of barrels having threaded connections with said breech piece, and means for retaining said barrels against relative displacement comprising a series of yokes having a rigid center part which extends between said barrels and spring fingers partially encircling said barrels.

1,662,026. METALLIC GEAR AND METHOD OF MAKING THE SAME. GERALD R. BROPHY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Sept. 2, 1925. Serial No. 54,150. 6 Claims. (Cl. 74—28.)



1. A gear comprising laminations of sheet steel, which laminations are united by fused copper.

1,662,027. TUNGSTEN PRODUCT AND ITS MANUFACTURE. ANTONIUS DE GRAAFF, Eindhoven, Netherlands, assignor to General Electric Company, a Corporation of New York. Filed Apr. 24, 1924, Serial No. 708,819, and in the Netherlands May 17, 1923. 5 Claims. (Cl. 176—182.)

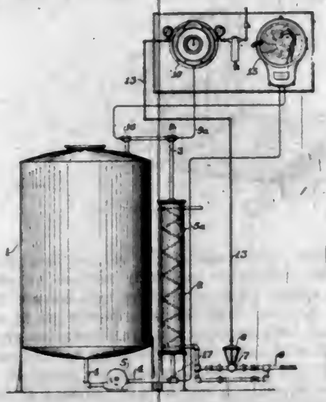


4. A tungsten filament for an incandescent lamp consisting of tungsten with a small per cent of a compound of one of the acid elements located in the periodic table in the righthand half of the third horizontal column, the per cent of the compound being less than 0.1% of the tungsten, said compound operating to modify the tungsten constituent to minimize the tendency of the filament to sag.

1,662,028. CIGARETTE CASE. MORRIS GOLD, Bronx, and AUGUST F. MOST and JOSEPH FOGEL, Brooklyn, N. Y. Filed Sept. 30, 1926. Serial No. 138,685. 1 Claim. (Cl. 206—41.)

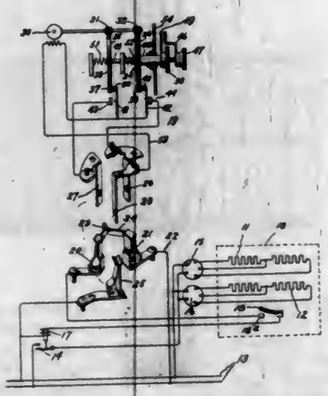
A cigarette case, comprising a pair of body sections, a spring hinge connecting said body sections at one end, a closure, a spring hinge connecting said closure to one of the body sections, said closure adapted to fit over the ends of both body sections, coacting means on the closure and one of said body sections serving to releasably hold the closure and body sections together, inwardly projecting flanges respectively on the side portions of both body sections strengthening the body sections and constituting facing abutments, and a retaining member connected with the inner edges of the flanges of both body sections and located within the plane of said flanges.

1,662,029. PUMP. TERENCE SHIELDS HARRINGTON, Hatton, near Wragby, England. Filed July 13, 1927, Serial No. 205,487, and in Great Britain Feb. 11, 1927. 10 Claims. (Cl. 103—165.)



1. A pumping apparatus comprising in combination a tube terminating in a piston barrel, a liquid piston within said barrel, a working barrel within said tube, pulsating means within said working barrel for causing the rise and fall of the piston, a fluid column confined between said pulsating means and liquid piston, a valve controlling the inflow of the liquid to be raised to the piston barrel, and a valve controlling the outflow from said barrel to the space between the working barrel and tube.

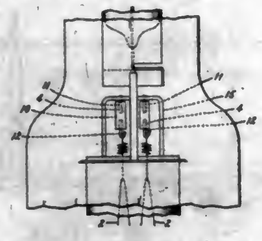
1,662,030. APPARATUS FOR CLEANING FIBROUS MATERIAL. THEODORE C. HAZARD, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed Dec. 2, 1926. Serial No. 152,290. 13 Claims. (Cl. 8—18.)



1. In apparatus of the character described, the combination with a closed vessel, of means for circulating a

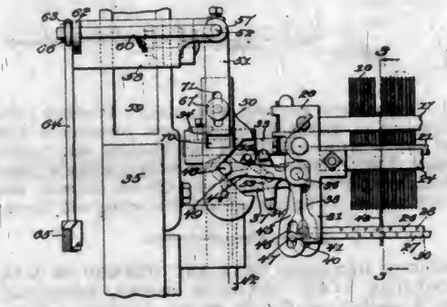
liquid through the vessel, a supply of steam under superatmospheric pressure connected with the vessel, a valve for controlling the flow of steam to the vessel and means

responsive to temperature conditions in the vessel for periodically actuating the valve to maintain the liquid under a periodically fluctuating vapor pressure.



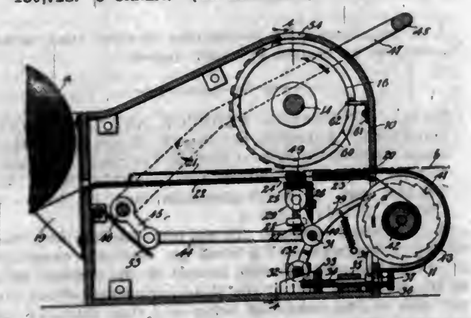
1,662,031. ELECTRICALLY-HEATED DEVICE. FRANCIS H. MCCORMICK, Glen Ellyn, Ill., assignor to Edison Electric Appliance Company, Inc., Chicago, Ill., a Corporation of New York. Filed Sept. 11, 1925. Serial No. 55,822. 8 Claims. (Cl. 219.)

1. The combination with an electrically heated device, of a thermostat arranged to control an electric circuit to regulate the temperature of said device, automatic time control means, connecting means including means normally maintaining said circuit closed, and cooperating means operated to open said circuit by the connection of said time control means whereby said automatic time control means may be connected in said circuit.



1,662,032. FILAMENT SUPPORT FOR VACUUM TUBES. DUDLEY A. MULLANEY, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Oct. 9, 1924. Serial No. 742,683. 4 Claims. (Cl. 250—27.5.)

1. An insulating support for an incandescent filament comprising a body member of fused quartz and a metallic filament retaining member whose one end is adapted to receive a filament and whose other end is embedded in said fused quartz body member, said other end being



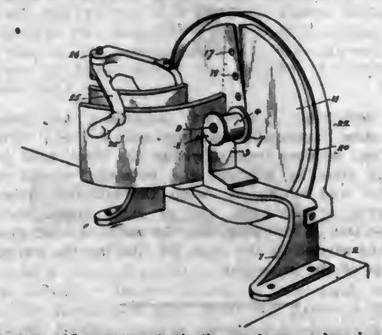
notched so that said member may be retained in position in the quartz when subjected to tension and to the heat of the filament.

1,662,033. WARP STOP MOTION FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 8, 1927. Serial No. 166,701. 8 Claims. (Cl. 139—351.)

1. A warp stop motion for looms having, in combination, a set of drop wires, means for supporting the drop wires, a detector ladder mounted below the drop wires, between the runks of which a fallen drop wire is adapted to pass, a trip ladder mounted below the detector ladder, means for reciprocating the detector ladder, loom stopping means, and connections between the trip ladder and the stopping means acting when a drop wire falls to stop the loom and open the drop wires.

1,662,034. RECEIPT RECORDER. CHARLES H. RICHTER, Trinidad, Colo. Filed Aug. 21, 1926. Serial No. 130,728. 5 Claims. (Cl. 101—100.)

1. A receipt recorder including a casing having a slot for the entrance of a bill to be receipted, means within the casing to hold an entered receipt, a table to sustain

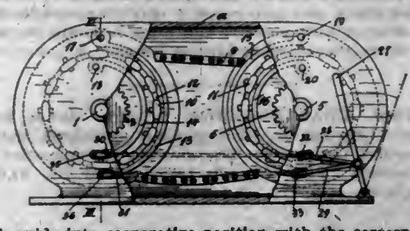


the receipt, a series of printing wheels for stamping the date and amount of the payment, a pad mounted adjacent to the wheels, means to reciprocate said pad to and from the wheel for printing the receipt, a drum adapted to mount a recording strip, means to guide said recording strip over the pad, means to effect printing on the strip as well as on the bill, and means to wind the strip after printing.

1,662,035. RETREAD MOLD FOR TIRES. FRANK L. SMITH, JACOB S. CAULFIELD, and CHARLES J. PETERSON, Sacramento, Calif. Filed June 24, 1926. Serial No. 118,229. 13 Claims. (Cl. 18—18.)

1. A tire retreading mold comprising a pair of matching circular sections arranged to receive a tire to be retreaded; means for securing the sections in closed relation around the tire; means engaging the outer surfaces of the side walls of the tire and arranged to be moved axially toward each other to press said walls together to expand the tread thereof against the inner surface of the mold; and means for circulating steam through the sections.

1,662,036. VEGETABLE CUTTER. ADOLPH STOLTENBERG, New York, N. Y. Filed Sept. 15, 1926. Serial No. 135,608. 1 Claim. (Cl. 146—115.)

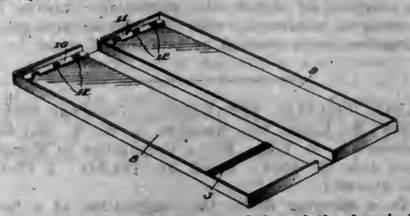


A vegetable cutter, including a base, a bearing on the base, a rotary cutting disk having mounting in the bearing, a vegetable guide fixed to the base having an open top and having concentric vertical walls spaced apart and curved horizontally, an arm projecting laterally from the base, a lever pivotally connected to the arm, and a follower on the lever between the vertical walls of the guide and movable in a horizontal plane concentrically with the curvature of said walls.

1,662,037. VARIABLE CHAIN DRIVE. RUDOLF WICHTENDAHL, Hanover, Germany. Filed May 9, 1927, Serial No. 189,973, and in Germany Jan. 20, 1926. 2 Claims. (Cl. 74—61.)

1. A chain drive comprising two shafts, an ordinary sprocket on each shaft, a disc alongside of said sprocket, a circular row of slides axially displaceable in said disc,

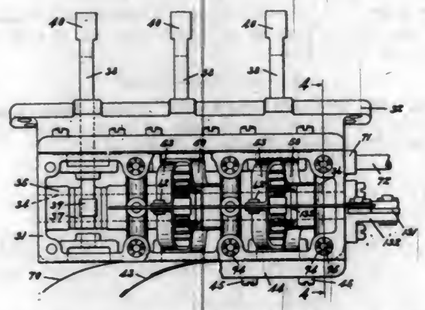
a stationary support, a pair of guides on said stationary support, a pin on each slide adapted to engage a groove defined in each of said guides, and means for placing



each guide into cooperative position with the corresponding pin, and for moving the other guide out of such position, and vice versa.

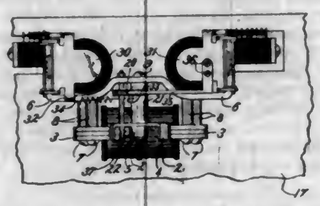
1,662,038. WINDOW CLEANER. FANNY BODENHOFER, New York, N. Y. Filed June 24, 1927. Serial No. 201,237. 2 Claims. (Cl. 15—220.)

1. In a window cleaner, a wire frame formed with a handle, looped portions at each end, said looped portions tapering toward the handle, and a substantially V-shaped opening adjacent one end of the handle and spaced from said looped portions, said looped portions being adapted to receive cleaning and drying cloths positioned so that part of the cloths will be pinched by the small ends of the looped portions, said V-shaped opening being adapted to receive one end of the drying cloth carried by one of said looped portions when the cloth is appreciably larger than the last mentioned looped portion.



1,662,039. CONTAINER FOR CRAVATS OR NECKTIES. JAN JOSEPH ANTOINE HEYNEN, Nijmegen, Netherlands. Filed May 24, 1927, Serial No. 193,842, and in Germany Mar. 31, 1925. 1 Claim. (Cl. 206—44.)

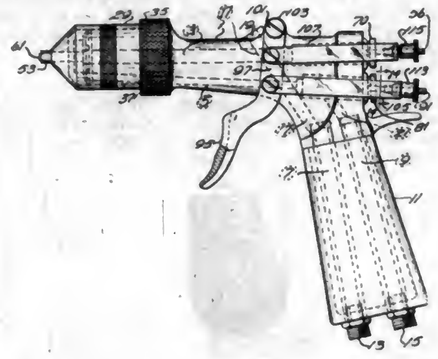
A container for cravats or neckties of the four-in-hand type comprising an oblong cover, an oblong bottom hinged to the cover at their longer edges to form therewith a



closed container, a cross-strip secured in the cover at one end thereof, a cross-strip secured in the bottom at one end thereof, a dovetailed recess in each cross-strip to hold the narrowed neck portion of a cravat or necktie, and a member extending across said cover to retain the free ends of the cravats or neckties in place.

1,662,040. CHARGE-FORMING DEVICE. ROGER KENNETH LEE, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Apr. 6, 1925. Serial No. 21,058. 8 Claims. (Cl. 123—28.)

1. A fuel supply device for a two-cylinder internal-combustion engine, comprising in combination, an engine; a fuel pump including a housing adapted to be secured to the crankcase of the engine; a pair of fuel pumps in said housing; engine-actuated means for operating the pumps; an exhaust port for each pump; a common intake passage for both pumps; a separate intake valve for each pump; and a common means tending to hold both intake valves closed.

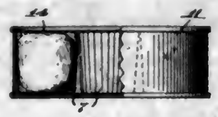


1,662,041. SWITCH-CONTROLLING DEVICE. RUDOLPH F. STEHLIK, Chicago, Ill., assignor, by mesne assignments, to Automatic Electric Inc., Chicago, Ill., a Corporation of Delaware. Filed Mar. 22, 1926. Serial No. 96,417. 28 Claims. (Cl. 179—16.)

1. In an impulse repeating device, an impulse receiving relay, a restraining spring for the armature of said relay normally under tension, and means for automatically increasing the tension of said spring to any one of a plurality of values, the particular value in any case being in accordance with the current strength of the impulses to be received by said relay.

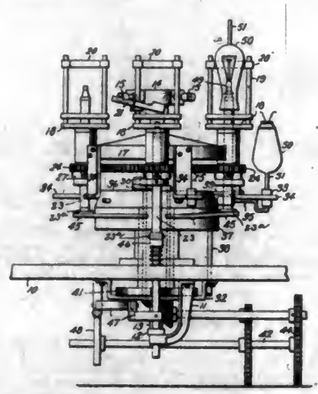
1,662,042. COATING APPARATUS. THEODORE BIRKENMAIER, St. Louis, Mo., assignor to W. N. Matthews Corporation, St. Louis, Mo., a Corporation of Missouri. Filed July 26, 1924. Serial No. 728,331. 2 Claims. (Cl. 91—45.)

1. In a spraying device the combination of a body; spraying means thereon comprising air ejecting and material ejecting means, valves for controlling fluid flow to said plurality of means; and means for making the air ejecting means operative before the material ejecting means, said means comprising stems reaching rearwardly from said valves, a trigger pivoted to said body, straps



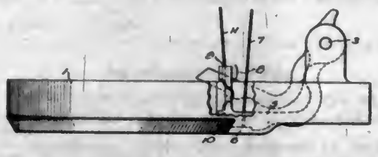
reaching around the rear of the device and pivoted to said trigger and adapted to consecutively cooperate with the air and paint valve stems and adapted to be thrown temporarily out of engagement therewith.

1,662,043. DETACHABLE SPOUT FOR FLUID RECEPTACLES. FRED MILLER OWEN, New York, N. Y. Filed Apr. 30, 1927. Serial No. 187,904. 4 Claims. (Cl. 221—23.)



1. A detachable connection comprising an integral tubular stem having side openings near one end thereof, a cross bar member located within the stem, said cross bar being pivotally mounted and normally coaxial with said stem and acting to swing through the openings transversely of the stem and at right angles thereto after insertion of said stem into the walls of a receptacle, and means carried by the stem for limiting the swinging movement of the cross bar.

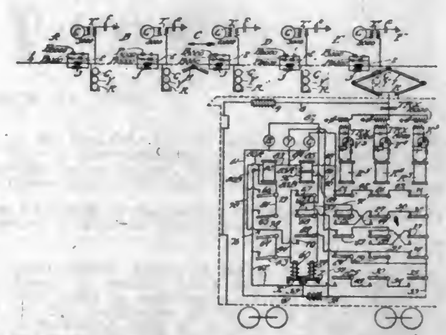
1,662,044. METHOD OF PACKING BAKED FRUITS AND VEGETABLES. GEORGE O. SANBORN, Los Angeles, Calif. Filed Mar. 9, 1927. Serial No. 173,822. 6 Claims. (Cl. 99—8.)



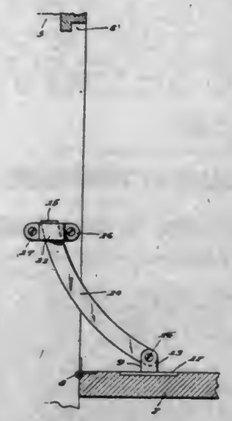
1. The method of canning baked apples and similar articles consisting in first subjecting the articles to a baking action, placing each baked article in an individual receptacle, packing a plurality of the receptacles in a container and hermetically sealing the container.

1,662,045. LAMP-MAKING MACHINE. FRANK W. PATTERSON, Arlington, N. J., assignor to General Electric Company, a Corporation of New York. Filed Apr. 22, 1924. Serial No. 708,240. 5 Claims. (Cl. 176—2.)

1. In a machine of the character described, the combination of a stationary valve seat provided with an exhaust port, a rotatable carrier comprising a valve and mounted to cause said valve to rotate on said valve seat, said valve having a port to cooperate with said exhaust port, an exhaust head mounted on said carrier and connected to said port in said valve, a sealing-in head constructed to hold a mount and a bulb and mounted on said carrier adjacent said exhaust head, sealing-in burners mounted adjacent said carrier to direct a flame across the path of said sealing-in head, and actuating mechanism for rotating said carrier to move said sealing-in head into and out of range of said burners.



1,662,046. YARN-PLAITING-TENSIONING MEANS FOR KNITTING MACHINES. JAMES MAIR, Philadelphia, Pa., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Jan. 13, 1927. Serial No. 160,860. 9 Claims. (Cl. 66—136.)



1. In a knitting machine, a member, such as a latch ring, having a throat therein, a yarn guide or finger movably mounted in said throat and having a formation whereby tension may be imparted to the yarn thereof close to the knitting point.

1,662,047. SYSTEM OF RAILWAY SIGNALING AND TRAIN CONTROL. JOHN A. MILLER, Glendale, Calif., assignor, by mesne assignments, to Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed June 25, 1920. Serial No. 391,790. Renewed July 19, 1927. 22 Claims. (Cl. 246—61.)

20. A system of the class described, comprising in combination with sections of a trolley wire, means for impressing high frequency currents thereon, and a roadway signal apparatus comprising high frequency detectors connected with said trolley wire sections respectively and adjusted selectively to respond each to a definite frequency impressed thereon, together with a movable unit comprising a high frequency detector adapted to be electrically connected with the trolley wire sections through a series resonant circuit, connection of the series resonant circuit of the vehicle with a trolley wire section intermediate the point of application of the high frequency currents and the roadway signal apparatuses serving to deprive the latter of the high frequency currents aforesaid.

1,662,048. CABINET-DOOR HANGER. MORRIS VICTORSOHN, Brooklyn, N. Y., assignor to Victorson Manufacturing Corporation, New York, N. Y. Filed Sept. 8, 1926. Serial No. 134,231. 1 Claim. (Cl. 45—91.)

In a cabinet, the combination with a hinged door, of an arcuate arm pivotally carried by said door, and a keeper member attached to said cabinet, said member embodying a housing having its bottom portion open, the top portion thereof being disposed in a horizontal plane and presenting a slot communicating only with the interior of said housing and adapted to slidably engage said arm, and a projection on the inner end of said arm and adapted to abut the plane surface of said keeper and support the door in open position.

Patents Nos. 1,662,049 to 1,662,807.

THE

OFFICIAL GAZETTE

OF THE

United States Patent Office.

Vol. 368—No. 2. TUESDAY, MARCH 13, 1928. Price—$10 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscription, $10.00 per annum; including annual indexes, $11.50; single numbers, 25 cents each.

PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.

CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. Patent Office, *Washington, Feb. 23, 1928.*

Weeber & Don, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Farmer Seed & Nursery Co., 918 Fourth Street west, Faribault, Minn., for registration of a trade-mark and trade-mark registered December 30, 1913, No. 94,778, to Weeber & Don, 114 Chambers Street, New York, N. Y., and a notice of such declaration sent by registered mail to said Weeber & Don at the said address having been returned by the post-office as undeliverable, notice is hereby given that unless said Weeber & Don, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

U. S. Patent Office, *Washington, Feb. 15, 1928.*

Joseph A. Arment, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Pacific Coast Biscuit Company, Central Building, Seattle, Wash., for registration of a trade-mark and trade-mark registered July 1, 1902, No. 38,542, to Joseph A. Arment, No. 9 North Sixth Street, Portland, Oreg., and a notice of such declaration sent by registered mail to said Joseph A. Arment at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said Joseph A. Arment, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

Notice of Cancellation.

U. S. Patent Office, *Washington, Feb. 15, 1928.*

The Rotor Vacuum Cleaner Company, Inc., its assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of The Apex Electrical Manufacturing Company, of Cleveland, Ohio, to effect the cancellation of the trade-mark registration of The Rotor Vacuum Cleaner Company, Inc., of 308 West One hundred and thirty-third Street, New York, N. Y., No. 99,008, dated August 11, 1914, and the notice of such proceeding sent by registered mail to the said The Rotor Vacuum Cleaner Company, Inc., at the said address having been returned by the post office as undeliverable, notice is hereby given that unless said The Rotor Vacuum Cleaner Company, Inc., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the Official Gazette for three consecutive weeks.

WM. A. KINNAN,
Acting Commissioner.

NOTICE.—AMENDMENT TO RULES OF PRACTICE.

PARAGRAPHING OF SPECIFICATIONS.

Attention is called to the amendment of rule 45, which reads as follows:

"In order to facilitate printing, each paragraph or claim should be completed on the page upon which it is begun and should not be split between two pages except where the length of a paragraph or claim requires more than one full page."

The purpose of this amendment is to facilitate the work of the Printing Office. That Office has found it expedient in printing specifications to divide the work on any one specification among different printers and since the pages of the specification can not be cut and the parts pasted together it necessitates, in cases where a paragraph or a claim is continued from one page to the next, the carrying of the page from one typesetter to another. It will therefore be seen that if the specifications are prepared as indicated in the amended rule, the work of the Printing Office will be very much facilitated with a consequent saving of time and expense.

If typewriting the specification as above outlined should necessitate leaving a considerable blank at the bottom of any one page, a diagonal line may be drawn across this space before the application is executed.

February 8, 1928.

WM. A. KINNAN,
Acting Commissioner.

Condition of Applications Under Examination at Close of Business March 2, 1928.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 93,850; Trade-Mark Division, 2,167. Oldest new case, June 8, 1927; oldest amended, June 14, 1927. DECISIONS IN PATENT AND TRADE-MARK CASES.

Supreme Court of the United States.

THE TEMCO ELECTRIC MOTOR COMPANY *v.* APCO MANUFACTURING COMPANY.

Decided January 3, 1928.

1. PATENTS—INFRINGEMENT—IMPROVEMENT MAY BE.
An improver can not appropriate the basic patent of another, and an improver without a license is an infringer and may be sued as such.

2. PATENTABILITY—INVENTION—COMMERCIAL USE EVIDENCE OF.
The patent in suit can not be held to be without merit when the usefulness of the device had been demonstrated by 10 years' use in very large numbers and a very profitable business.

3. PATENTS—ESTOPPEL.
That in a second application, which was in interference with an application of defendant's assignor, patentee described the device thereof as an improvement "over" the construction of the patent, *Held* not to estop patentee from claiming that the device of the defendant, made in accordance with such interfering application, was an infringement of the patent.

4. PATENTABILITY—VAGUENESS AND INDEFINITENESS.
Claim in suit when read in connection with the specification and drawings, both of which are clear, *Held* not vague and indefinite.

ON WRIT of certiorari to the United States Circuit Court of Appeals of the Fifth Circuit.

Mr. H. A. Toulmin and *Mr. H. A. Toulmin, jr.*, for Temco Electric Motor Co.

Mr. Clifford L. Anderson and *Mr. M. A. Keller* for Apco Mfg. Co.

Mr. Chief Justice TAFT delivered the opinion of the Court.

The Temco Electric Company, a corporation of the State of Ohio, filed this bill in equity against the Apco Manufacturing Company, a corporation of the State of Rhode Island, charging that the Apco Company had wronged the Temco Company by infringement of a patent for a shock absorber fitted for a Ford motor car, issued to Ralph P. and Wm. S. Thompson, assignors of one-third to Oliver P. Edwards, and assigned by them to the Temco Company and owned by it. The Apco Company answered denying the validity of the patent and its infringement, averring that it was inoperative and that the shock absorber which the Apco Company was making was made under a patent to one William Storrie, applied for March 18th, granted September 17, 1918, and numbered 1,279,035. The answer further set out the names of certain patents which were said to be anticipations of the patent upon which the suit was brought.

The district court held that the patent was a very narrow patent, and that claim No. 3 was invalid because it lacked words of description enough to make it operative. Deferring, however, to the decision of the district judges and of the Circuit Court of Appeals of the Sixth Circuit, it sustained the three claims of the patent but declined to grant a preliminary injunction. Though of opinion that the infringement had not been shown, nevertheless it entered a decree in favor of the appellee out of deference to two decisions of the circuit court of appeals, *K-W Ignition Company* v. *Temco Electric Motor Company*, 243 Fed. 588, and the same case reported again in 283 Fed. 873. The Circuit Court of Appeals of the Fifth Circuit declined to follow the two decisions, of the Circuit Court of Appeals of the Sixth Circuit, and reversed the judgment of the district court. There had been a cross appeal brought by the appellee to reverse the district court in its holding that the third claim was invalid and that cross appeal was denied, (11 Fed. (2d) 109). The case has been brought here by certiorari. 271 U. S. 653.

The patent sued on was issued to Ralph P. Thompson and William S. Thompson, of Leipsic, Ohio, assignors of one-third to Oliver P. Edwards, of Leipsic, Ohio. The application was filed October 10, 1912, and the patent was issued September 9, 1913, and numbered 1,072,791, and has since been assigned by the patentees to the Temco Company. The object of the patentees was to provide a shock absorber which would make riding in an automobile easy. They professed to accomplish this by supplying a set of quick-acting coiled springs in connection with the set of slow-acting and friction-retarded leaf springs originally built into the vehicle. The compression and recoil of the two sets of springs occurred at different times, in consequence of which their respective pulsations were not synchronous. The result was said, in the specifications, to be that the shock to the road wheel and axle was first absorbed by the coiled spring, and therefrom was transmitted to the body of the car and to the occupants through the slow-acting leaf spring. As the compression and recoil of the leaf spring were not the same as those of the coiled spring, the recoil of the coiled spring began to take place before the full effect of the shock to the road wheel could be transmitted through the leaf spring. This seesawing action, as it were, between the quick-acting coiled spring and the slow-acting leaf spring, the specifications said, caused a large portion of the effect from vibrations to be nullified by the action of one and reaction of the other of these springs taking place simultaneously, thus absorbing within the spring element the sharper vibrations. The device was intended to be specially adapted for attachment to Ford automobiles. Its availability was claimed to be such that the owner of a Ford car, without the services of a mechanic and without disturbing the operation or construction of the car, might, with slight instruction, remove the usual hanger which supported each end of each leaf spring and insert in its stead the plaintiff's attachment.

The absorber consisted of an upright metal guide, whose lower end was rigidly attached to the car axle, and provided a platform for the lower end of a coiled or torsion spring, inclosed in a cylindrical metal casing or hanger, bearing against and sup-

ported by the upper end of the coiled spring, and so was capable of upward and downward sliding movement on the guides, the stanchions or guides being adapted to maintain the vertical direction of the sliding movement of the absorber or torsional spring, and to limit the end movements of the leaf springs along the axle.

When the patent was issued there was a great demand to purchase the device and use it, and under the patentees, or under the K-W Ignition Company, which had a contract with the patentees, there were made and sold upwards of 134,000 sets of the shock absorbers, and about $2,250,000 was from time to time paid to the patentees for these absorbers, so that from 1912 for 10 years or more a very large business was done in the sale and use of the patented device. There was litigation over it, especially in the districts of the sixth circuit, where the validity of the patent was generally sustained, the first case having been heard by a former Justice of this Court while a district judge of the Northern District of Ohio. His opinion is recorded in the record. The case involved not only the validity of the patent, which after some hesitation he sustained because of its general adoption and success, but also presented a question whether the defendants in that case, the K-W Ignition Company, were not so bound by contract with the patentees as to estop them from defending against the patent. The district judge held, however, that the contract had expired and the obligations growing out of it had also expired, so that the issue tried was that of the validity of the patent. The district court's decree was affirmed by the court of appeals and the case was sent back for an accounting and an accounting was had against the defendant in that case and a judgment given for $292,938, against the K-W Ignition Company, which was a defendant there. In the present suit the bill set up this litigation in Ohio as evidence of the validity of the patent, but a straight issue of validity was also made and all the defenses known were advanced.

The district judge in Ohio in the K-W Ignition case was affected in his decision, that the Thompson patent involved invention, by the way in which the public eagerly took it and its marked success, and so, indeed, was the Circuit Court of Appeals of the Sixth Circuit. So are we.

The attack now made upon the patent is that it has been proved to be ineffective and 10 years' actual use results in some injuries to the shock absorbers by striking of the parts of the motor machine against the metal guides and cylindrical metal hangers in which the torsional spring is moved up and down. It appears that the real owners of the patent, realizing that there were defects in the operation of the absorber that should be remedied, applied to the Patent Office for a patent which should substitute for the stanchions or guides, on which the hanger around the torsional spring moved up and down in a vertical direction, a fixed radius link. The torsional spring of the patent inclosed within the casing or hanger attached to the upright guide did not, in moving or sliding up and down, retain a vertical direction but was sometimes tilted over by the weight of the car and its load. The change proposed, in regard to this, was that while the spring should be placed outside the upright or stanchion at the bottom of the spring the upright stem or guide or stanchion inside the spring should be maintained in a vertical position by the addition of a radius link united to another by a toggle joint which fixed the guide rigidly and would hold the coil spring up permanently in a vertical position. This permitted a widening of the coil spring at the bottom so as to make it conical and gave the spring more stability in its vertical position. The difference between a conical coil spring and one that is not conical does not make the two structures different in any respect but in degree of stability only.

The proposal of the plaintiff patentees to remove a defect by the substitution of the radius link for the metal guide and casing and hanger led to an interference proceeding with one William Storrie who claimed to have hit upon this change first, and in that interference proceeding in the Patent Office, Storrie was given a patent for the absorber with that radius link. Except for the radius link there is no difference in operation and result. The springs in a Ford car equipped with the defendant's device receive the shocks in the same order, operate in the same manner and produce the same results as those in a Ford car on which the springs of the plaintiff's patent are used. The function which the casing of the torsional spring and the hanger perform is exactly the same as that of the torsional spring and the radius link introduced in the Storrie patent under which the answer and the facts show the defendant's device was licensed and operates.

Storrie as patentee said in his specifications that his invention related to means for absorbing the vibrations and shocks in vehicle springs to such an extent as not to cause annoyance to the rider and strain to the springs of the vehicle, which would tend to cause such springs to crack or otherwise become disabled; that the invention provided a shock absorber embodying an expansible helical spring and supporting means therefor of novel formation, one of such supports being secured to the axle and the other being shackled or otherwise attached to the vehicle spring, the parts being arranged to control the vibrations or shocks not taken up quick enough by the main spring and thereby overcome the objectionable features therein mentioned. And then follow twelve different claims, most of which refer to a radius link pivoted to the support between the torsional spring and the main or laminated spring of the vehicle.

The claim made for the invention is that the real gist of it is in the arrangement of the parts, all of which were old, so that the first vibration and shock would be taken up from the axle by the torsional spring, and then having been divided up into vibrations should be communicated through the torsional spring and the absorber to the leaf spring and "dampened down," as the expression is, by its slower action, so as really to take up and absorb and make to disappear the shocks otherwise directly communicated from the road and the axle to the leaf spring. It is argued that, as these were all old parts, there was nothing new in the patent. We have examined the art with a view to considering that particular point. We think that the theory, that the Thompson patent had and has its real value in the function of the torsional spring directly to take up all the vibrations from the road and axle and quickly to divide them for the dampening effect of the slow-moving leaf spring of the car, was a sound one. There have been citations of early patents showing previous attempts of the same kind, but we have not been pointed out to one in which the torsional spring was so arranged as to take all the road vibrations and divide them up before reaching the main car spring, except those which have come after the Thompson original patent. This is true of the Bussing whether German, English and French patents, the Peugeot patent and the Cosset patent. It is true that by taking some of these structures or devices, notably the Bussing English patent, it may be possible to show how, by turning over on its back the specified device, the torsional spring could be made partly and ineffectively to perform this function, but as described in this or other cited patents there is no suggestion or recommendation of the arrangement in Thompsons'. They—all of them—use the main or leaf spring to take directly all or part of the vibrations from the axle and rely on the torsional spring to soften vibrations after they have passed or are passing through the main spring. The leaf spring in the Warner patent not only takes the greater road shocks directly but the entire spring arrangement is primarily built and put in at the factory while the axle is split into two parts and the device is not made a separate or separable part, a feature which is an important and needed advantage to adapt the absorber to use in a Ford car.

We may properly note, as bearing upon the issue whether there was something substantially in the elaborated claim of the Thompson specifications, that the defendants below called as a witness Mr. Storrie and that upon cross-examination he said that the defendant's device was within the Storrie patent and he made it clear that without the torsional spring to divide and neutralize the vibrations from the axle and ground, the good effect of the leaf spring to "dampen out" the vibrations from the road could not be effected.

[1] With respect to the Storrie patent, it is said that the patent in suit is not broad enough to justify an allowance of equivalents which would make the radius link an equivalent to the casing and hanger of the Thompson absorber. It is urged that if it is not an equivalent, it is at least an improvement on the Thompson patent in suit and that this is what Thompson was seeking when the interference proceedings were had. It was upon that theory, that the Storrie patent was an improvement on the Thompson patent, that the Circuit Court of Appeals of the Sixth Circuit in the suit between the Temco Company and the K-W Ignition Company decided that it could allow only recovery for royalties and not for profits, 283 Fed. 873, 876, 877. It is well established that an improver can not appropriate the basic patent of another and that the improver without a license is an infringer and may be sued as such. *Cochrane* v. *Deener*, 94 U. S. 780, 787; *Cantrell* v. *Wallick*, 117 U. S. 689, 694; *Yancey* v. *Enright*, 230 Fed. 641, 647; *Reed* v. *Hughes Tool Company*, 261 Fed. 192, 194.

[2] We can not concur with the district judge in this case or with the Circuit Court of Appeals of the Fifth Circuit in the conclusion that there was no merit in this patent when its usefulness was demonstrated by 10 years' use in such large numbers and by such profitable business. We must consider that the Storrie patent was really an appropriation of the original design of the Thompson patent whether it be, as we think it was, a patentable improvement thereon or the mere equivalent of the casing and hanger.

[3] It is argued that an estoppel works as against the Temco Company by the action of one of the Thompsons and an assignor of its patent because in applying for the second patent in what turned out to be the interference proceeding he had said that the radius-link device which was applied for related to an improvement "over" the construction disclosed in the original patent granted to them. If Thompson had said it was an improvement "upon" it would have been satisfactory, but the word "over" is supposed to indicate that he was making an application for a different patent. This is too fine a turn in language. In attempting to distinguish the new invention which he was seeking to have patented, he had said that the claims of the new patent were "obviously different in mechanical construction and functional results." This is said to estop the plaintiff from claiming that the Storrie radius link, which won in the interference proceeding, is only an improvement on the patent in suit as the basic patent upon which the Storrie patent was an improvement. But it was said in the Thompson application for a second patent in the Patent Office that the invention sought was of the general type disclosed possessing certain advantages not possessed by the construction of the prior patent, and it was specifically stated therein that the radius-link form was an improvement over a construction disclosed in the first Thompson Patent No. 1,072,791.

We have had to depend for knowledge of the contents of the application by Thompson for his second patent on the quotations in the briefs. This record has been so badly prepared and so much has been omitted in the printing that we should really reject the argument by the defendants as to estoppel altogether because the record as printed contains nothing upon which it can be based.

The district court and the circuit court of appeals in this case held that claim No. 3 of the patent in suit was void because inoperative and having no description upon which it could be properly used as a claim. The claim is as follows:

In automobile construction, wherein coiled springs are used auxiliary to leaf springs for absorbing shock to the road wheels, the combination of upright stanchions with the axle of the ground wheels, said stanchions being attached to the outer ends of said axle, leaf springs extending above the axle and between the stanchions, and supporting the chassis frame, the said stanchions being adapted to limit the end motion of the leaf springs and thereby prevent side sway of the chassis frame, hangers for the outer ends of said leaf springs, said hangers having a vertical movement and being guided therein by said stanchions, and coiled springs interposed between said leaf spring hangers and said axle of the ground wheels.

The district court in its opinion said:

For want of any statement as to how the leaf spring and helical spring are to be connected to and guided by the stanchions, I think claim 3 is incomplete and void.

The Circuit Court of Appeals of the Fifth Circuit said of the claim:

Appellee [the petitioner] has filed a cross-appeal and insists that the claim which the district court disallowed is valid. That claim is about as vague as it could be made. As pointed out by the district judge it fails to specify the means by which the leaf and helical springs can be connected to and guided by the stanchion. To sustain a claim as general as this is would be to allow a patent for a "result and not for the mechanism producing it".

[4] Reading the claim with the specifications and the drawings, which are both clear (*Howe Machine Co.* v. *National Needle Co.*, 134 U. S. 388, 394) its addition to the combination of coiled springs interposed between the leaf-spring hangers having vertical movement and guided by stanchions comprehends the link as shown in the drawings or any suitable connection between each leaf spring and its hanger and casing surrounding the coiled spring which is interposed between the leaf spring and the axle and ground wheel. It does not seem to us that the claim is vague; nor do we find nullifying incompleteness in it. *Turril* v. *Railroad Company*, 1 Wall. 491, 510; *Rubber Company* v. *Goodyear*, 9 Wall. 788, 795; *McClain* v. *Ortmayer*, 141 U. S. 419, 425; Walker on Patents (5th ed.) sec. 185. Neither did the Court of Appeals of the Sixth Circuit nor did the district courts of that circuit so find.

Our conclusion requires a reversal of the decree of the circuit court of appeals including its ruling on the cross appeal as to claim No. 3 and a remanding of the case to the district court for further proceedings in accord with this opinion.

Reversed.

Court of Appeals of the District of Columbia.

FESLER *v.* LYMAN.

No. 1,957. Decided December 5, 1927.

1. INTERFERENCE—PRIORITY—TESTIMONY.
Testimony on behalf of L. *Held* to establish conception and reduction to practice of the invention by him prior to any date of invention claimed by F. and priority properly awarded him.

2. SAME—SAME—SAME.
"We see no reason why the consistent testimony of these witnesses should not be accepted at its face value. As stated by the Assistant Commissioner, 'the issue in this case must be decided on the proven facts and not upon suspicion, conjecture or speculation.'"

APPEAL from Patent Office. Affirmed.

Mr. Earl F. Pierce, Mr. C. C. Bradbury, and *Mr. Elwood Hansmann* for Fesler.

Mr. Geo. W. Dorr and *Mr. G. E. Dunstan* for Lyman.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

ROBB, *J.:*

Appeal from concurrent decisions of the Patent Office tribunals in an interference proceeding awarding priority of invention to the junior party, Lyman.

The invention relates to what is known as high-pressure grease gun for lubricating automobiles. Unless the pressure was reduced in the gun of the prior art, when it was detached from the bearing, a certain amount of grease or oil would be forced through the nozzle. It was to overcome this difficulty that the invention in issue was developed. The invention is a comparatively simple one and easily understood by those familiar with the art.

Fesler alleged conception and disclosure of the invention on or about October 1, 1921, and reduction to practice on or about October 21 of that year. Lyman alleged disclosure in July of 1921 and reduction to practice in September of the same year, which it will be observed was prior to the earliest date claimed by Fesler.

The question before the Patent Office, as here, was solely one of fact, namely, whether Lyman's dates were substantiated by proof.

[1] Leon F. Schulze, manager of the Peerless Automatic Machine Co., of Cleveland, Ohio, testified to a disclosure of the invention to him by Lyman in July of 1921; that he, Schulze, made two drawings of the invention for Lyman, those drawings being in evidence as Lyman's Exhibits "D" and "E"; that he instructed his brother, Robert Schulze, foreman of the company's machine shop, to construct a gun in accordance with the drawings, and that such a gun was constructed. Robert Schulze testified that he personally made this gun in September of 1921, and there is evidence that it was immediately and successfully tested. The gun is in evidence and responds to the issue. There was other evidence of a corroborative character.

[2] We see no reason why the consistent testimony of these witnesses should not be accepted at its face value. As stated by the Assistant Commissioner, "the issue in this case must be decided on the proven facts and not upon suspicion, conjecture or speculation."

For the reasons more fully stated by the tribunals of the Patent Office, the decision is affirmed.

Affirmed.

Court of Appeals of the District of Columbia.

THE AMERICAN PRINTING INK COMPANY *v.* AMERICAN PRINTING INK COMPANY.

No. 1,967. Decided December 5, 1927.

1. TRADE-MARKS—SIMILARITY.
Two trade-marks including the name "American Printing Ink Co." in connection with certain other features *Held* not deceptively similar.

2. SAME—CORPORATE NAME—REGISTRABILITY OF MARK INCLUDING.
While a party can not be prevented from using its name in conducting its business, it may be prevented from registering it as the dominating feature of its trade-mark if the name is the same as that of another company unless disclaimer of the words forming that name is made.

APPEAL from the Commissioner of Patents. Modified and affirmed.

Mr. Wm. L. Symons for The American Printing Ink Co.

Mr. A. C. Fraser and *Mr. Louis E. Giles* for American Printing Ink Co.

Before MARTIN, Chief Justice, and ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.:*

Appellant, The American Printing Ink Company, opposes the registration by the appellee, American Printing Ink Company, of a trade-mark described in the application as comprised of the following elements:

1. The representation of a corpulent man with long hair and whiskers, in a costume of red, white and blue color, suggestive of the fanciful person known as "Uncle Sam". 2. A background including as a part thereof a conventional representation suggestive of a map of the United States, such representation including lines roughly indicating State boundaries and the location of the city of Chicago. 3. A highly distorted representation of a hemisphere having thereon an outline suggestive of a representation of the North American Continent and islands of the Pacific, so enlarged as to occupy the entire hemisphere. 4. The words "American Printing Ink Co." an abbreviation of applicant's corporate name, American Printing Ink Company.

The mark of the opposer consists of its corporate name used on a label giving the address of the company, and a scroll in which is printed the words "High Grade Printing & Lithographing Inks, Dry Colors, Varnishes."

It is conceded that the goods of the respective parties have the same descriptive properties. Two questions, therefore, arise; whether or not the marks are so nearly identical when used upon goods of the same descriptive properties as to cause confusion in trade; and whether or not the opposition should be sustained because of the use of the corporate name of the opposer by the applicant as a dominating feature of its mark. The tribunals of the Patent Office overruled the opposer on both propositions; and without stopping to discuss the distinctions, we are clearly of the opinion that they were right in holding that the marks are not so nearly identical as to lead to confusion.

The other proposition as to the use of the corporate name is not so clear. The difficulty arises from the fact that both the opposer and the applicant have each the same corporate name, and while the applicant cannot be prevented from using its name in conducting its business, it may be prevented from registering it as the dominating feature of its trade-mark. This can be obviated, however, by applicant filing a disclaimer of the words "American Printing Ink Co." With this modification we see no objection to the registration of the mark.

The decision of the Commissioner is affirmed upon condition that applicant file a disclaimer of the words indicated, otherwise the mark will be held unregisterable.

Patent Suits.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

885,135, F. P. Barney, Separable cuff link button, appeal filed Jan. 17, 1928, C. C. A., 1st Cir., Doc. 2205, *C. D. Lyons* v. *The Baer & Wilde Co.*

887,997, E. B. Cadwell, Vehicle tire, C. C. A., 2d Cir., Doc. 9522, *E. B. Cadwell et al.* v. *Firestone Tire & Rubber Co.* Decree affirmed (notice dated Jan. 20, 1928).

891,956, W. C. Schmidt, Indicating bottle, D. C., W. D. N. Y., Doc. 444–C, *W. C. Schmidt* v. *Todd Protectograph Co., Inc.* Dismissed Jan. 10, 1928.

918,388, R. C. Stubbs, Process of solidifying mortar and concrete formations, D. C., N. D. Ga. (Atlanta), Doc. 383, *R. C. Stubbs* v. *Driveway Co. et al.* Dismissed without prejudice Jan. 26, 1928.

923,557, F. Milliken, Pole, D. C., W. D. N. Y., Doc. E 972. *F. Milliken* v. *Lackawanna Steel Construction Corp.* Dismissed Jan. 10, 1928. Doc. E 973, *F. Milliken* v. *Bancroft-Jones Corp.* Decree as above.

1,007,647, C. R. Darnall, Process of purifying water and sewage, D. C. N. J. (Trenton), Doc E 2834, *Wallace & Tiernan Co., Inc.*, v. *Paradon Mfg. Co. et al.* Final decree Dec. 12, 1927.

1,031,789, F. W. Harris, Circuit interrupter, filed Dec. 10, 1927, D. C., S. D. Calif. (Los Angeles), Doc. E N–14–H, *Westinghouse Electric & Mfg. Co.* v. *Kelman Electric & Mfg. Co.*

1,156,122, J. C. Woodley, Fibrous composition and process of manufacture, D. C., W. D. N. Y., Doc. E 947, *The Richardson Co. et al.* v. *The Gould Storage Battery Co.* Dismissed Jan. 10, 1928.

1,206,780, F. H. Scantlebury, Method of sand-blast carving, D. C., W. D. N. Y., Doc. 547–C, *Phoenix Machine Co., Inc.*, v. *F. J. Hart.* Dismissed Jan. 10, 1928.

1,218,314, C. P. Read, Machine for placing springs in casings, filed in D. C., W. D. Mich. (S. Div.), *Simmons Co.* v. *National Spring & Wire Co. et al.*

1,220,150, O. J. Williams, Thermometer for cooling systems of internal-combustion engines, filed Jan. 23, 1928, D. C. E. D. Mich. (S. Div.), Doc. 2423, *The Moto Meter Co., Inc., et al.* v. *Cadillac Motor Car Co.*

1,630,085, Humphreys & McCarthy, Linoleum floor covering and process of manufacture, D. C. N. J. (Trenton), Doc. E 2767, *Armstrong Cork Co.* v. *W. & J. Sloane Mfg. Co.* Dismissed Jan. 17, 1928.

1,639,468, Rosenberg & Joha, Cap, D. C., E. D. Wis. (Milwaukee), Doc. 2144, *Reliable Knitting Works* v. *Lucknit Sweater Mills, Inc.* Patent held valid and infringed Jan. 19, 1928.

Re. 14,101, H. E. White, Method of manufacturing expanded-metal structures, D. C., N. D. Ohio (E. Div.), Doc. 847, *General Fireproofing Co,* v. *The Central Steel Co.* Dismissed without prejudice Nov. 9, 1927.

Des. 63,351, E. P. Benois, Bottle, filed Nov. 17, 1927, D. C. N. J. (Trenton), Doc. E 2954, *Coty, Inc.*, v. *T. C. Wheaton Co.*

Des. 64,419, S. Robert, Ash tray, D. C., S. D. N. Y., Doc. E 37/61, *S. Robert* v. *L. Barth & Co., Inc.* Patent held valid and infringed Jan. 30, 1928.

Des. 65,066, M. Klein, Dining-room lighting fixture, filed Nov. 26, 1927, D. C. N. J. (Trenton), Doc. E 2960, *Shapiro & Aronson, Inc.*, v. *S. Pearl (Newark Lighting & Fixture Co.)*

Adverse Decisions in Interference.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,439,495, H. M. Williamson, Radio receiving apparatus, decided January 31, 1928, claims 1, 2, 3, 5, 9, 10, and 12.

Pat. 1,544,636, G. E. Stewart, Control system for electric switches, decided February 3, 1928, claims 1 and 5.

Pat. 1,565,550, C. M. Crews, Typewriting machine, decided January 30, 1928, claims 3, 5, 6, and 7.

Pat. 1,629,015, D. F. Axelson, Spare-tire lock, decided February 24, 1928, claim 2.

Final decisions in interference have been rendered against the following trade-marks:

T. M. 185,972, Powdered cocoa, powdered chocolate and cocoa, Royal Cocoa Co., Jersey City, N. J. Registered July 1, 1924. Decided February 3, 1928.

T. M. 225,462, Lubricating oils, Pierce Petroleum Corporation, Wilmington, Del., and St. Louis, Mo. Registered March 22, 1927. Decided February 1, 1928.

Adjudicated Patents.

(C. C. A. Ohio.) The Hammond patent, No. 1,296,182, for single glass for instrument board in automobiles, *Held* invalid, and, if valid, not infringed. *Hammond* v. *Paige-Ohio Co.*, 23 F. (2d) 320.

(C. C. A. Mass.) The Bellis patent, No. 1,491,510, for fused eutectic salt bath, *Held* invalid. *Bellis Heat Treating Co.* v. *Heatbath Corporation*, 23 F. (2d) 239.

(C. C. A. Mass.) The Bellis patent, No. 1,520,744, for bath for heat-treating metals, *Held* invalid. *Id.*

Disclaimer.

1,483,872.—*Albert A. Densmore*, Brookline, Mass. POWER-TRANSMISSION MECHANISM. Patent dated February 19, 1924. Disclaimer filed February 24, 1928, by the patentee.

It is hereby stated that the words "means for positively transmitting motion of rotation from the abutment member to the pinion" as found in lines 10, 11, and 12 of claim 10, and the words "positively to rotate with the driving shaft" as found in lines 10 and 11 of claim 11 means a construction in which the transmission of motion *from the abutment member* to *the pinion* is independent of the function of springs or equivalent yieldable devices; and that the word "positively" as used in line 10 of claim 10 and in line 10 of claim 11 has the meaning, without possibility of substantial relative rotational (angular) slip of the abutment and pinion, and is exclusive of springs or like yieldable elements for transmitting the driving force from the abutment to the pinion; and any broader meaning or interpretation of such words or terms is hereby disclaimed.

TRADE-MARKS

OFFICIAL GAZETTE, MARCH 13, 1928.

[VOL. 368. No. 2.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

CLASS 1.

Raw or Partly-Prepared Materials.

Ser. No. 251,559. JEDDO-HIGHLAND COAL COMPANY, Jeddo, Pa. Filed July 6, 1927. Under 10-year proviso.

JEDDO

Particular description of goods.—Coal.
Claims use since 1892.

Ser. No. 257,204. TEXAS FARM BUREAU COTTON ASSOCIATION, Dallas, Tex. Filed Nov. 7, 1927.

BURO

Particular description of goods.—Bales of Cotton.
Claims use since Jan. 1, 1922.

Ser. No. 257,466. C. M. COMPANY OF AMERICA, INC., Chicago, Ill. Filed Nov. 12, 1927.

RUBBER FOAM

Applicant disclaims the word "Foam" apart from the mark shown in the drawing.
Particular description of goods.—Cellular Rubber.
Claims use since Nov. 4, 1922.

Ser. No. 258,697. THE S. OBERMAYER CO., Chicago, Ill. Filed Dec. 9, 1927.

PLUM

Particular description of goods.—Parting Compound for Molds.
Claims use since Dec. 19, 1925.

Ser. No. 258,755. MENDEL LAZOW, New York, N. Y. Filed Dec. 10, 1927.

Queen

Particular description of goods.—Chemically-Prepared Skins of Lambs, Calves, Ponies, Kangaroos, Marmots, and Rabbits, Natural, Dressed, and Dyed for Use in Fashioning Coats and Like Wearing Apparel.
Claims use since Dec. 1, 1927.

Ser. No. 258,958. THE PHILADELPHIA AND READING COAL AND IRON COMPANY, Philadelphia, Pa. Filed Dec. 15, 1927.

FAMOUS READING ANTHRACITE

The drawing is lined to indicate the color red. Applicant disclaims exclusive use of the words "Famous," "Reading," and "Anthracite."
Particular description of goods.—Coal.
Claims use since Oct. 25, 1927.

CLASS 3.

Baggage, Animal Equipments, Portfolios, and Pocketbooks.

Ser. No. 261,137. NORTH & JUDD MANUFACTURING COMPANY, New Britain, Conn. Filed Feb. 3, 1928.

Star

Particular description of goods.—Bits, Spurs, Stirrups, Buckles, Spur Straps, Pad Screws, and Metal Harness Trimmings.
Claims use since 1902.

CLASS 4.

Abrasive, Detergent, and Polishing Materials.

Ser. No. 245,800. FRANK NAPOLI, doing business as Joliet Cleanser Company, Joliet, Ill. Filed Mar. 15, 1927.

No claim is made to the words "Joliet Cleanser" apart from the mark as shown.
Particular description of goods.—Washing Compound.
Claims use since Nov. 1, 1926.

Ser. No. 259,098. SOLOMON D. BENOLIEL, doing business as International Chemical Company, Philadelphia, Pa. Filed Dec. 19, 1927.

John Bright

The trade-mark consists of the name of a deceased celebrity, John Bright, the distinguished English statesman and orator.
Particular description of goods.—Automobile Wash, General Cleanser Consisting of a Dry White Powder Soluble in Water and Used for General Household Cleaning and in Industry, Metal Polish, Floor Cleanser, and Parts Cleanser.
Claims use since Oct. 11, 1927.

Ser. No. 259,237. DAVID & BLUM, INC., New York, N. Y. Filed Dec. 22, 1927.

BUDASOAP
PARIS
NEW-YORK

Applicant makes no claim to the words "Paris" and "New York."
Particular description of goods.—Glove Laundry Soap.
Claims use since Oct. 1, 1927.

Ser. No. 259,582. RIVERSIDE MANUFACTURING CO., St. Louis, Mo. Filed Dec. 31, 1927.

DIAMOND-D-SOLVENT

Applicant disclaims the word "Solvent" appearing in the drawing.
Particular description of goods.—Cleaning Fluids for Removing Paints, Varnish, Etc., from Textile Fabrics.
Claims use since Aug. 23, 1915.

Ser. No. 259,584. RIVERSIDE MANUFACTURING CO., St. Louis, Mo. Filed Dec. 31, 1927.

SOLUENE

Particular description of goods.—Alcohol Soap.
Claims use since Jan. 1, 1926.

Ser. No. 259,585. RIVERSIDE MANUFACTURING CO., St. Louis, Mo. Filed Dec. 31, 1927.

EZANOLE

Particular description of goods.—Dry-Cleaning Soaps.
Claims use since Aug. 23, 1915.

Ser. No. 259,586. RIVERSIDE MANUFACTURING CO., St. Louis, Mo. Filed Dec. 31, 1927.

HEXITE

Particular description of goods.—Neutral Wet-Cleaning Soap.
Claims use since Dec. 1, 1927.

Ser. No. 259,587. RIVERSIDE MANUFACTURING CO., St. Louis, Mo. Filed Dec. 31, 1927.

ZOLVIT

Particular description of goods.—Liquid Soap Compounds.
Claims use since Aug. 23, 1915.

Ser. No. 259,589. RIVERSIDE MANUFACTURING CO., St. Louis, Mo. Filed Dec. 31, 1927.

TERGIT

Particular description of goods.—Detergent and Solvent Compounds.
Claims use since Dec. 1, 1927.

Ser. No. 259,590. RIVERSIDE MANUFACTURING CO., St. Louis, Mo. Filed Dec. 31, 1927.

ZEETONE

Particular description of goods.—Cleaning Fluids.
Claims use since Jan. 1, 1923.

Ser. No. 260,936. CHARLES W. CLARK, Westfield, Mass. Filed Jan. 31, 1928.

No. 17332

Particular description of goods.—Hand Soap.
Claims use since Sept. 12, 1927.

CLASS 5.

Adhesives.

Ser. No. 258,980. SCRIPTEX INK AND PASTE CO., Philadelphia, Pa. Filed Dec. 15, 1927. Under 10-year proviso.

WILLSTICK

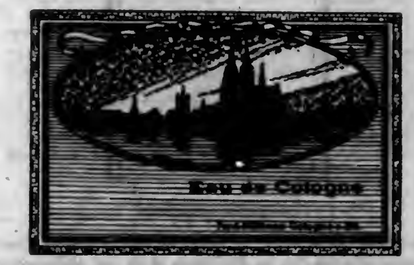
Particular description of goods.—Mucilage.
Claims use since 1864.

Ser. No. 260,805. CONSOLIDATED RENDERING COMPANY, doing business as Atlantic Packing Company, Boston, Mass. Filed Jan. 28, 1928.

ATLANTIC PACKING COMPANY

Particular description of goods.—Glue.
Claims use since about February, 1906.

CLASS 6.



Chemicals, Medicines, and Pharmaceutical Preparations.

Ser. No. 240,300. CHARLES E. FROSST & COMPANY, Montreal, Canada. Filed Nov. 19, 1926.

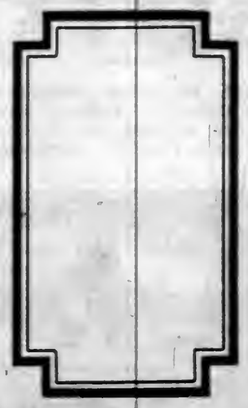
"TABLETS NUMBER 217"

No claim is made to the words "Tablets Number" apart from the mark as shown in the drawing.
Particular description of goods.—Pharmaceutical Preparation Consisting of Combinations Containing Acetylsalicylic Acid in Tablet Form Used for Headaches, Colds, Neuralgia, and Rheumatism.
Claims use since 1910.

Ser. No. 242,101. PAUL PETER MÜLHENS, doing business as Eau de Cologne- & Parfumerie-Fabrik "Glockengasse No. 4711" gegenüber der Pferdepost von Ferd. Mülhens, Cologne-on-the-Rhine, Germany. Filed Dec. 29, 1926.

The words appearing in the drawing, with the exception of applicant's name, are disclaimed apart from the mark as shown. The drawing is lined for the colors black, greenish blue, gold, and silver.
Particular description of goods.—Eau de Cologne Water, Perfumery, Hair Tonic, Shampoo, Pomade, Brilliantine, Cold Cream, Vanishing Cream, Rouge, Face Powder, Baby Powder, Shaving Lotion, Tooth Paste, Mouth Wash, Head Tonics, and Ethereal Oils for Perfumes.
Claims use since March, 1926.

Ser. No. 243,885. RHODIA CHEMICAL COMPANY, New York, N. Y. Filed Feb. 5, 1927.



R
CO
C

Particular description of goods.—Natural or Synthetic Aromatic Oils for Use as Perfumes or in the Manufacture of Perfumes or for Perfuming Soaps, Photographic Chemi-

cals; Medical Chemicals—Namely, Antipyrine, Pyramidon, Piperazine Hydrate, Resorcinol, Ethylchloride (for Anesthesia), Guaiacol Carbonate, Saccharin (Soluble and Insoluble); Technical Chemicals—Namely, Dimethylsulphate, Cellulose Acetate, Benzyl Alcohol, Hydrogen Peroxide, Formic Acid, Glauber Salts, Potash Alum, Ammonium Alum, Barium Chloride, Aluminum Sulphate, Dibasic Sodium Phosphate, Tribasic Sodium Phosphate, Yellow Prussiate of Soda, Yellow Prussiate of Potash, Pyridine, Aldehol, Triphenyl Phosphate.

Claims use since June 1, 1926.

Ser. No. 243,886. RHODIA CHEMICAL COMPANY, New York, N. Y. Filed Feb. 5, 1927.

Particular description of goods.—Natural or Synthetic Aromatic Oils for Use as Perfumes or in the Manufacture of Perfumes or for Perfuming Soaps, Photographic Chemicals; Medical Chemicals—Namely, Antipyrine, Pyramidon, Piperazine Hydrate, Resorcinol, Ethylchloride (for Anesthesia), Guaiacol Carbonate, Saccharin (Soluble and Insoluble); Technical Chemicals—Namely, Dimethylsulphate, Cellulose Acetate, Benzyl Alcohol, Hydrogen Peroxide, Formic Acid, Glauber Salts, Potash Alum, Ammonium Alum, Barium Chloride, Aluminum Sulphate, Dibasic Sodium Phosphate, Tribasic Sodium Phosphate, Yellow Prussiate of Soda, Yellow Prussiate of Potash, Pyridine, Aldehol, Triphenyl Phosphate.

Claims use since June 1, 1926.

Ser. No. 251,635. C. DE WITT THOMAS, doing business as The Menthopine Co., Gardena, Calif. Filed July 7, 1927.

MENTHOPINE-RUB

The signature forming a feature of the mark is that of applicant. The words "Menthopine-Rub" are hereby disclaimed apart from the mark as shown on the drawing.

Particular description of goods.—Ointment and Liniment for Use as an Aid in Inflammation and Congestion, Such as Asthma, Bronchitis, Catarrh, Chest Colds, Croup, Head Colds, Pneumonia, Sore Throat, Whooping Cough, Headache, Neuralgia, and Rheumatic Pains.

Claims use since Feb. 1, 1927.

Ser. No. 253,945. THE HELENE CO., Chicago, Ill. Filed Aug. 25, 1927.

Chek-it

Particular description of goods.—Material to Prevent the Continuation of Runs in Hosiery, Silks, Lingerie, and Other Garments.

Claims use since June, 1927.

Ser. No. 254,250. NOVADEL PROCESS CORPORATION, Buffalo, N. Y. Filed Sept. 1, 1927.

LUCIDOL

Particular description of goods.—Benzoil Peroxide and Other Solid Organic Peroxides Soluble in Oil and Suitable for Use in Bleaching of Oils, Fats, Waxes, and Similar Products.

Claims use since about August, 1924.

Ser. No. 255,704. EAGLE CHEMICAL COMPANY, Milwaukee, Wis. Filed Oct. 6, 1927.

Swurlit

Particular description of goods.—Stain and Incrustation Solvent and Disinfectant for Use with Closet Bowls and Traps.

Claims use since on or about Sept. 20, 1927.

Ser. No. 256,087. THE RADIUM EMANATION CORPORATION, New York, N. Y. Filed Oct. 14, 1927.

PLATRADON

Particular description of goods.—Radium, Including Radium Emanation.

Claims use-since Feb. 1, 1926.

Ser. No. 256,489. HERMAN SMITHLINE, doing business as Charmozol Chemical Co., New York, N. Y. Filed Oct. 22, 1927.

CHARMOZOL

Particular description of goods.—Tissue Builder—Namely, Preparation for Building Tissue; Cold Cream, Vanishing Cream, Bleach Cream, Lemon Cream, Brilliantine; Correct Tabs—Namely, Preparation for Purifying the Blood.

Claims use since Sept. 2, 1926.

Ser. No. 257,856. CHARLES JOHN CLARKE, Aberdeen, Wash. Filed Nov. 21, 1927.

Bio-Chem

Particular description of goods.—Dental Cream, Emulsion Made from Colloidal Natural Minerals for Internal Use in Indigestion and Other Troubles, Mineral Powder Which with the Addition of Water Becomes a Cream or Emulsion for Both External and Internal Use in Inflamed and Other Abnormal Conditions, Ointment for External Use for Abrasions, Skin and Scalp Troubles, Pile Suppositories, Pyorrhea Powder, Soapless Shampoo Powder, Toilet Cream, and Toilet Lotion.

Claims use since Nov. 1, 1926.

Ser. No. 257,955. Dr. M. ALBERSHEIM, Frankfort-on-the-Main, Germany. Filed Nov. 23, 1927.

DULMIN

Particular description of goods.—Perfumery, Hair Tonic, Mouth Wash, Rouge, Face Powder, Lip Sticks, Face Creams, and Depilatories.

Claims use since 1911.

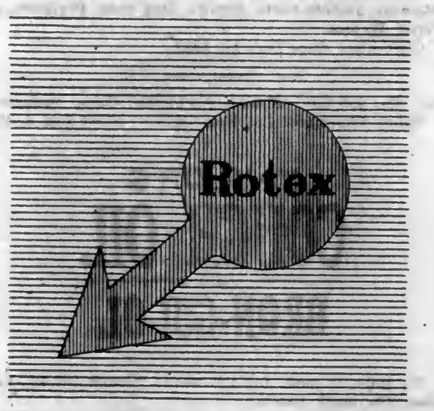
Ser. No. 258,030. CHARLES T. JOHNSTONE, doing business as The Kapex Company, New York, N. Y. Filed Nov. 25, 1927.

KAPEX

The drawing is lined for the color blue.

Particular description of goods.—Preparation for Colds, Catarrh, Simple Sore Throat, and Asthma.

Claims use since Feb. 15, 1927.



Ser. No. 258,336. MRS. MARTIN REGENSBURGER, doing business as La Diva Products Company, San Francisco, Calif. Filed Dec. 2, 1927.

Particular description of goods.—Preparations for the Treatment and Care of the Human Skin—Namely, Hand Lotions and Skin Cream.

Claims use since Feb. 10, 1927.

Ser. No. 259,461. ROTEX SURGICAL APPLIANCE CO., Detroit, Mich. Filed Dec. 29, 1927.

In the drawing the arrow is lined to indicate the color red, and this arrow is upon a background lined to indicate the color blue.

Particular description of goods.—Antiseptic Powder.

Claims use since Nov. 1, 1927.

Ser. No. 259,486. FELTON CHEMICAL COMPANY, INC., Brooklyn, N. Y. Filed Dec. 30, 1927.

Aquarome

Particular description of goods.—Aldehydes Suitable for Perfuming Purposes, Alcohols Suitable for Perfuming Purposes, Natural and Synthetic Essential Oils Suitable for Perfuming Purposes, Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eyedrops, Hand Lotions, Skin Lotions, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams, Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Deodorants, Disinfectants, Aspirin, Bay Rum, Perfumes, and Toilet Waters.

Claims use since Nov. 9, 1925.

Ser. No. 259,487. FELTON CHEMICAL COMPANY, INC., New York, N. Y. Filed Dec. 30, 1927.

Colorome

Particular description of goods.—Aldehydes Suitable for Perfuming Purposes, Alcohols Suitable for Perfuming Purposes, Natural and Synthetic Essential Oils Suitable for Perfuming Purposes, Astringents, Astringent Cerates, Bleach Creams, Beauty Creams, Cold Creams, Cleansing Creams, Obesity Creams, Refreshing Creams, Obesity Astringents, Dry Rouges, Liquid Rouges, Face Bleaches, Face Packs, Eyebrow and Eyelash Grower, Eyedrops, Hand Lotions, Skin Lotions, Face Powders, Talcum Powders, Sachets, Hair Salves, Hair Elixirs, Hair Tonics, Hair Oils, Shampoos, Hair Dyes, Bath Salts, Smelling Salts, Lip Sticks, Incense, Tooth Powders, Mouth Washes, Dentifrices, Tooth Pastes, Nail Powders, Nail Creams,

Nail Bleaches, Witch-Hazel, Peroxide, Petroleum Jellies, Witch-Hazel Salves, Camphor Creams, Foot Powders, Deodorants, Disinfectants, Aspirin, Bay Rum, Perfumes, and Toilet Waters.

Claims use since Dec. 17, 1927.

Ser. No. 259,700. NORMA W. TATEM, doing business as Tatem Pharmacal Co., Norfolk, Va. Filed Jan. 4, 1928.

TAYLOR'S
COUGH OIL
OR
BRON-GUI-OL

No claim is made for the words "Cough Oil or" apart from the mark shown.

Particular description of goods.—Medicine for Use in the Treatment of Coughs, Colds, Grippe, Bronchial Irritation, Consumption, and Pneumonia.

Claims use since July 21, 1926.

Ser. No. 259,734. JAMES J. LARMOUR, doing business as Larmour Products, East Orange, N. J. Filed Jan. 5, 1928.

Cornpatch

Particular description of goods.—Medicated Plasters for Treatment of Corns.

Claims use since Dec. 9, 1926.

Ser. No. 259,821. REDUC-O-TAB CO., New York, N. Y. Filed Jan. 7, 1928.

REDUC-O-TAB

Particular description of goods.—Pharmaceutical Preparation for the Gradual Reduction in the Weight of the Body of Corpulent or Obese Persons.

Claims use since Jan. 1, 1927.

Ser. No. 259,827. SYRUP PRODUCTS COMPANY, INC., New York, N. Y. Filed Jan. 7, 1928.

AUNTY FREEZ

The portrait appearing on the drawing is fanciful.

Particular description of goods.—Denatured Alcohol.

Claims use since Dec. 10, 1927.

Ser. No. 259,969. RENWICK T. SENIOR, doing business as Senex Chemical Company, Montgomery, N. Y. Filed Jan. 11, 1928.

SENEX

Particular description of goods.—Disinfectants and Insecticides.

Claims use since on or about Oct. 1, 1926.

Ser. No. 259,989. BELL CHEMICAL CO., INC., Chicago, Ill. Filed Jan. 12, 1928.

BEL-LITE

Particular description of goods.—Liquid Fluid for Filling Cigar and Cigarette Lighters.

Claims use since July 1, 1927.

Ser. No. 260,033. SALOL CHEMICAL CO., Chicago, Ill. Filed Jan. 12, 1928.

Protecto Spray

The word "Spray" forms a part of the registration sought only in association with the other features of the mark shown in the drawing.

Particular description of goods.—Vaginal Douche.

Claims use since Sept. 1, 1927.

Ser. No. 260,034. THE SCHRATZ CHEMICAL COMPANY, Detroit, Mich. Filed Jan. 12, 1928.

Particular description of goods.—Dry Crystalline Carbonate of Soda Known as Bath Flakes to be Dissolved in the Bath Water.

Claims use since Apr. 25, 1927.

Ser. No. 260,273. JOHNSON & JOHNSON, New Brunswick, N. J. Filed Jan. 18, 1928.

RUBAD

Particular description of goods.—Corn and Bunion Plasters.

Claims use since about February, 1919.

Ser. No. 260,286. PARKE, DAVIS & COMPANY, Detroit, Mich. Filed Jan. 18, 1928.

HEMATACOL

Particular description of goods.—Medicinal Preparation for Treating Cases of Malnutrition, Anemia, and General Debility.

Claims use since Nov. 16, 1927.

Ser. No. 260,320. I. G. FARBENINDUSTRIE AKTIENGESELLSCHAFT, Frankfort-on-the-Main, Germany. Filed Jan. 19, 1928.

Entodon

Particular description of goods.—Preparation for the Treatment of Secondary and Tertiary Syphilis, Angina Pectoris, Bronchial Asthma, and Arteriosclerosis.

Claims use since about March, 1924.

Ser. No. 260,483. THEODORE ANNELIUS, New York, N. Y. Filed Jan. 23, 1928.

ASAIS

Particular description of goods.—Cold Cream.

Claims use since September, 1927.

Ser. No. 260,627. COTY, INC., New York, N. Y. Filed Filed Jan. 25, 1928.

L'AIMANT
(MAGNET)

Particular description of goods.—Perfume, Toilet Water, Face Powder, Talcum Powder, Dusting Powder, Face Creams, Sachet, Brilliantine, Lotions for the Skin and Hair, Rouge, Lip Sticks, Bath Salts, and Eau Vegetal.

Claims use since Oct. 20, 1927.

No claim is made herein to the word "Anuric" except in association with the other features of the mark. The trade-mark is lined to indicate the color lavender or purple.

Particular description of goods.—Stimulant Diuretic in Tablet Form for the Kidneys.

Claims use since Jan. 12, 1928.

Ser. No. 260,668. AMERICAN BLUING COMPANY, Buffalo, N. Y. Filed Jan. 26, 1928.

BEAR

Particular description of goods.—Ammonia.

Claims use since Jan. 1, 1928.

Ser. No. 260,674. COLGATE & COMPANY, Jersey City, N. J., and New York, N. Y. Filed Jan. 26, 1928.

Seventeen

Particular description of goods.—Perfume, Toilet Water, Brilliantine, and Face Powder.

Claims use since Jan. 9, 1928.

Ser. No. 260,689. LUYTIES PHARMACAL COMPANY, St. Louis, Mo. Filed Jan. 26, 1928.

NINETY "99" NINE

Particular description of goods.—Preparation for the Relief of Coughs, Colds, Grip, and Acute Fevers.
Claims use since Apr. 20, 1927.

Ser. No. 260,745. CHARLES NESSLER, doing business as C. Nestle Co., New York, N. Y. Filed Jan. 27, 1928.

Nesteen

Particular description of goods.—Hair Dyes.
Claims use since about May, 1926.

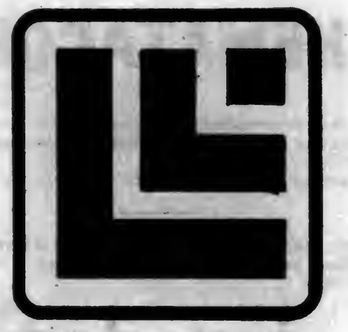
Ser. No. 260,746. CHARLES NESSLER, doing business as C. Nestle Co., New York, N. Y. Filed Jan. 27, 1928.

NEXIDE

Particular description of goods.—Lotions for Bleaching and Softening the Hair.
Claims use since about September, 1926.

Ser. No. 260,830. G. U. MATTHEWS, Centralia, Wash. Filed Jan. 28, 1928.

RE-O-LIN



Particular description of goods.—Healing Ointment.
Claims use since Nov. 30, 1927.

Ser. No. 260,873. GEORGE W. CARNAICK, doing business as Krinogen Company, New York, N. Y. Filed Jan. 30, 1928.

KRINOGEN

Particular description of goods.—Medicinal Product to Stimulate the Growth of the Hair.
Claims use since Jan. 16, 1928.

Ser. No. 261,068. LUCIEN LELONG, INC., New York, N. Y. Filed Feb. 2, 1928.

The figure shown consists of the letters "L. L."
Particular description of goods.—Toilet Waters, Hair Lotions, Complexion Powders, Creams for the Skin, Stringent Lotions for the Skin, Eau de Cologne, Liquids for Softening and Nourishing the Skin, Rice Powder, Compacts, Beauty Cream, Massage Cream, Rouge, Lip Paste and Lip Sticks, Eyebrow Pencils, Oil for Removing Make-Up Preparations, Solid or Liquid Substances for Imparting a Gloss to the Hair, and Bath Salts.
Claims use since May 1, 1927.

Ser. No. 261,079. SOCIETY OF CHEMICAL INDUSTRY IN BASLE, Basel, Switzerland. Filed Feb. 2, 1928.

POLYTEX

Particular description of goods.—Coal-Tar Colors.
Claims use since Mar. 3, 1927.

Ser. No. 261,080. SOLARINE COMPANY, Baltimore, Md. Filed Feb. 2, 1928.

it

Particular description of goods.—Chemical Preparation for Softening or Neutralizing the Alkaline Content of Water and for Removing Grease, Rust, and Other Stains from Fabrics and Other Substances.
Claims use since Jan. 18, 1928.

CLASS 9.

Explosives, Firearms, Equipments, and Projectiles.

Ser. No. 254,644. NITEDALS TÆNDSTIKFABRIK, Gronvold, near Oslo, Norway. Filed Sept. 12, 1927.

Running Horse

Particular description of goods.—Matches.
Claims use since June, 1927.

CLASS 11.

Inks and Inking Materials.

Ser. No. 259,810. WILHELM KORESKA, Vienna, Austria. Filed Jan. 7, 1928.

Particular description of goods.—Carbon Papers, Typewriter Ribbons, Inks for Rubber or Metal Stamp Pads, Inks for Telegraph Apparatus, Duplicating Inks, Hectographing Inks, and Indian Inks.
Claims use since Oct. 22, 1927.

CLASS 12.

Construction Materials.

Ser. No. 257,574. BROOKLYN TILE SUPPLY CORP., Brooklyn, N. Y. Filed Nov. 15, 1927.

BROOKLYN TILE SUPPLY CORP.

Particular description of goods.—Floor and Wall Tiles, Marble Base, Marble Slabs, and Thresholds for Doors.
Claims use since December, 1925.

Ser. No. 258,840. THE STANDARD LIME & STONE COMPANY, Martinsburg, W. Va., and Baltimore, Md. Filed Dec. 12, 1927.

No claim is made for the words "Portland Cement."
Particular description of goods.—Portland Cement.
Claims use since Nov. 8, 1927.

Ser. No. 259,063. JOHNS-MANVILLE CORPORATION, New York, N. Y. Filed Dec. 17, 1927.

ASBESTIC

No claim is made to the word "Asbestic" apart from the mark as shown in the drawing.
Particular description of goods.—Wall Plaster Composed of a Mixture of Crushed Serpentine Rock and Short-Fibered Asbestos.
Claims use since Dec. 2, 1927.

Ser. No. 259,448. JOHNS-MANVILLE CORPORATION, New York, N. Y. Filed Dec. 29, 1927.

Asbestile

Particular description of goods.—Asbestos Wood Composed of Cement and Asbestos.
Claims use since July 29, 1927.

CLASS 13.

Hardware and Plumbing and Steam-Fitting Supplies.

Ser. No. 259,798. DIAMOND MOTOR PARTS COMPANY, St. Cloud, Minn. Filed Jan. 7, 1928.

DIAMOND MOTOR PARTS COMPANY

No claim is made to the representation of a bolt apart from the mark shown.

Particular description of goods.—Axle and Spring Bolts.

Claims use since February, 1923.

CLASS 15.

Oils and Greases.

Ser. No. 248,652. HERRING-WISSLER COMPANY, Des Moines, Iowa. Filed Feb. 1, 1927.

Hermoline

Particular description of goods.—Lubricating Oils and Greases.

Claims use since 1912.

Ser. No. 259,618. CALUMET REFINING COMPANY, Chicago, Ill. Filed Jan. 3, 1928.

PRACTICOL
THE PRACTICAL MOTOR OIL

No claim is made to the words "The Practical Motor Oil" apart from the mark shown.

Particular description of goods.—Lubricating Oils.

Claims use since June 10, 1927.

Ser. No. 260,553. BRUCE LUBRICATING COMPANY, Providence, R. I. Filed Jan. 24, 1928.

BRULUCO

Particular description of goods.—Lubricating Oils and Greases.

Claims use since Jan. 3, 1928.

CLASS 16.

Paints and Painters' Materials.

Ser. No. 231,981. CONSOLIDATED PAINT CO., Los Angeles, Calif. Filed May 21, 1926.

CONCO

Particular description of goods.—Dry, Paste, and Ready-Mixed Paints, Paint Enamels, Varnishes, Paint Oils, Oil Stains, and Oil Colors.

Claims use since June, 1923.

Ser. No. 244,204. GUSTEN A. ANDERSON, doing business as Anderson Products Co., New York, N. Y. Filed Feb. 11, 1927.

Polish Master

No claim is made for the word "Polish" apart from the mark as shown in the drawing.

Particular description of goods.—Automobile and Furniture Polishes.

Claims use since May, 1926.

Ser. No. 245,231. SOCIETE DES OCRES DE FRANCE, Auxerre, France. Filed Mar. 4, 1927.

S.O.F.

Particular description of goods.—Ocres (Ochres) in the Nature of Paint Pigments.

Claims use since 1903.

Ser. No. 255,450. LEHMAN BROS., INC., Jersey City, N. J. Filed Sept. 30, 1927.

USA-COTE

Particular description of goods.—Dry, Ready-Mixed, and Paste Paints, Paint Enamels, Varnishes, Prepared Shellacs, and Waterproofing Paints.

Claims use since Sept. 16, 1927.

Ser. No. 257,104. HENRY LEDERER AND COMPANY, Chicago, Ill. Filed Nov. 5, 1927.

H-L

The lining on the drawing is for shading purposes only.

Particular description of goods.—Paint and Prepared Paint for Varnish of Floors, Woodwork, and All Interiors.

Claims use since July 1, 1925.

Ser. No. 259,528. B-C POLISH COMPANY, Atlanta, Ga. Filed Dec. 31, 1927.

EVER-GLOSS

Particular description of goods.—Polish for Automobiles, Pianos, Furniture, and All Painted and Varnished Surfaces.

Claims use since Jan. 3, 1927.

Ser. No. 260,223. GOHEEN CORPORATION OF NEW JERSEY, Newark, N. J. Filed Jan. 17, 1928.

BRITENOL

Particular description of goods.—Ready-Mixed Paint, Specifically Paint for Interior Use.

Claims use since on or about Jan. 3, 1927.

Ser. No. 260,524. TONY JOHN PETERSON, doing business as Tamms Silica Company, Chicago, Ill. Filed Jan. 23, 1928.

TAMTEX

Particular description of goods.—Powdered Cement Paint.

Claims use since Oct. 7, 1927.

CLASS 17.

Tobacco Products.

Ser. No. 260,531. ROSEDOR CIGARETTE CO., New York, N. Y. Filed Jan. 23, 1928.

Menthorets

Particular description of goods.—Cigars, Cigarettes, and Smoking Tobacco.

Claims use since Aug. 1, 1927.

CLASS 19.

Vehicles, Not Including Engines.

Ser. No. 248,923. THE PERFECTION MANUFACTURING COMPANY, St. Louis, Mo. Filed May 12, 1927.

Rock-A-Bye

Particular description of goods.—Baby Surreys, Baby Roadsters, Baby Carriages, Baby Toddlers with Detachable Tongues for Use as Vehicles.

Claims use since July, 1918.

Ser. No. 258,455. OTTO BRINKMANN, Astoria, N. Y. Filed Dec. 5, 1927.

SKI-ADS

Particular description of goods.—Aerial Advertising Devices—Namely, Captive Balloons and Blimps.

Claims use since Oct. 1, 1927.

CLASS 20.

Linoleum and Oiled Cloth.

Ser. No. 260,163. CONOOLEUM-NAIRN, INC., Philadelphia, Pa. Filed Jan. 16, 1928.

BONDOLEUM

Particular description of goods.—Prepared Floor Coverings of the Oiled-Cloth Type.

Claims use since Jan. 12, 1928.

CLASS 21.

Electrical Apparatus, Machines, and Supplies.

Ser. No. 242,837. THE KODEL RADIO CORPORATION, Cincinnati, Ohio. Filed Jan. 14, 1927.

Transifier

Particular description of goods.—Power-Current-Supply Units for Radio Apparatus.
Claims use since Dec. 1, 1925.

Ser. No. 245,941. WESTINGHOUSE ELECTRIC & MANUFACTURING COMPANY, East Pittsburgh, Pa. Filed Mar. 17, 1927.

CONSOLE

Particular description of goods.—Electric Cooking Stoves.
Claims use since Mar. 30, 1926.

Ser. No. 251,736. GRAYBAR ELECTRIC COMPANY, INC., New York, N. Y. Filed July 9, 1927.

GraybaR

The lines in the bar above the word "Graybar" indicate shading only.
Particular description of goods.—Telephone Annunciators, Residence Annunciators, Burglar-Alarm Annunciators, Hotel Annunciators, Hospital Annunciators, and Annunciators Used in Connection with Interphones; Autotransformers, Electric Batteries and Electric-Battery Holders, Battery Lamps and Lanterns, Electric Bells, Bell-Ringing Transformers, Buzzers, Circuit Breakers, Electric Conduits, Duct Logs for Electrical Conductors, Conduits and Fittings, Electric Dishwashers, Electric Fans, Electric-Lighting Fixtures, Electric Floor Polishers, Electric Hammers; Reflector Heaters, Air Heaters, and Water Heaters; Electric Incandescent Lamps, Insulating Compound, Electric Insulators and Supports, Interphones, Electric-Arc Lamps, Line Poles, Loud-Speaking Telephone Systems and Apparatus, Power Boards, Electric Power and Light Outfits, Electric Power Switches, Electric Pumps, Electric Ranges, Battery Charging Rectifiers, Electric Sewing Machines, Code Calling Systems for Industrial Plants and the Like, Sockets, Electric Lamp Sockets, Electric Stoves, Electric Tape, Telephone Transmitter Arms and Brackets, Toasters, Electric Transformers, Electric Utility Motors, Wall Plates for Switches and Electrical Appliances, Electric Warming Pads, Electrical Water Pumping Systems, and Water Heaters.
Claims use since January, 1926.

Ser. No. 253,669. SOCIÉTÉ DES MAGNÉTOS R. B., Paris, France. Filed Aug. 18, 1927.

VOLTEX

Particular description of goods.—Magnetos and Electric Ignition Systems or Units.
Claims use since Oct. 15, 1926.

Ser. No. 258,781. WIRELESS RADIO CORPORATION, Brooklyn, N. Y. Filed Dec. 10, 1927.

GLO-DIAL

No claim is made to the exclusive use of the word "Dial" apart from the mark shown in the drawing.
Particular description of goods.—Dials and Controls for Radiopanels.
Claims use since about Sept. 1, 1926.

Ser. No. 259,632. PAUL KOHLOFF, Marmaroneck, N. Y. Filed Jan. 3, 1928.

TRADE MARK SPRING-O-STRIP CONNECTOR

No claim is made to the words "Trade-Mark," "Spring-Strip," "Connector," and "Patented Dec. 15, 1925" and to the representation of the goods apart from the mark shown on the drawing.
Particular description of goods.—Spark-Plug Connectors.
Claims use since Dec. 18, 1925.

Ser. No. 259,649. SARVAS ELECTRIC COMPANY, INC., New York, N. Y. Filed Jan. 3, 1928.

TRITOX

Particular description of goods.—Automatic Trickle Charger for Storage Batteries.
Claims use since February, 1927.

Ser. No. 259,717. ELECTRIC VACUUM CLEANER COMPANY, INC., Cleveland, Ohio. Filed Jan. 5, 1928.

Premier Pic-up

Particular description of goods.—Electric Vacuum Cleaners and Parts Thereof.
Claims use since Sept. 7, 1927.

CLASS 22.

Games, Toys, and Sporting Goods.

Ser. No. 247,237. S. M. WOOD, Jr., San Francisco, Calif. Filed Apr. 9, 1927.

SIL GUT LYNE

Particular description of goods.—Fishing Lines.
Claims use since Dec. 27, 1926.

Ser. No. 255,664. JOHN C. MEAD, Palmyra, Mo. Filed Oct. 5, 1927.

LUCKY LONE STAR LINDY

Particular description of goods.—Card Game.
Claims use since Sept. 8, 1927.

Ser. No. 259,840. THE BURKE GOLF COMPANY, Newark, Ohio. Filed Jan. 9, 1928.

"PROGO"

Particular description of goods.—Golf Clubs.
Claims use since Nov. 1, 1927.

Ser. No. 259,920. MARY LOUISE MANCILL, Philadelphia, Pa. Filed Jan. 10, 1928.

WHIPPET

Particular description of goods.—Table Game Played with Pieces.
Claims use since Dec. 27, 1927.

Ser. No. 260,037. JOHN F. TOOHEY, doing business as Toohey Mfg. Co., Troy, N. Y. Filed Jan. 12, 1928.

ARCHERY GAME

No claim is made to the words "Archery" and "Game" apart from the mark as shown.
Particular description of goods.—Archery Games.
Claims use since Nov. 10, 1927.

Ser. No. 260,418. ANDREW ALBRIGHT, Jr., Newark, N. J. Filed Jan. 21, 1928.

FLYING FOOL

Particular description of goods.—Golf Balls.
Claims use since May, 1927.

Ser. No. 260,419. ANDREW ALBRIGHT, Jr., Newark, N. J. Filed Jan. 21, 1928.

RUBBERSET

Particular description of goods.—Golf Balls.
Claims use since May, 1927.

Ser. No. 260,691. JOHN F. MEYER, doing business as The Exhibit Supply Company, Chicago, Ill. Filed Jan. 26, 1928.

BATTER-UP

Particular description of goods.—Coin-Operated Amusement Machines.
Claims use since Jan. 14, 1928.

Ser. No. 261,071. JOHN F. MEYER, doing business as The Exhibit Supply Company, Chicago, Ill. Filed Feb. 2, 1928.

KNOCKOUT

Particular description of goods.—Coin-Operated Amusement Machines.
Claims use since Jan. 12, 1928.

CLASS 23.

Cutlery, Machinery, and Tools, and Parts Thereof.

Ser. No. 235,488. LIMITED COMPANY FORMERLY THE ŠKODA-WORKS, PLZEŇ, Prague-Smichov, Czechoslovakia. Filed Aug. 2, 1926.

Particular description of goods.—Steam Accumulators, Steam Engines, Steam Hammers, Explosion Motors of All Designs, Machine Plants for River Steamers and Seagoing Vessels, Steam Turbines, Water Turbines, Steam Condensers, Piston Compressors for Compressing Steam, Air, or Other Liquid; Rotary Compressors for Compressing Steam, Air, or Other Liquid; Road Rollers, Lifting and Transporting Machinery, Excavators, Hydraulic Presses and Hydraulic Plants, Printing Presses, Beet Dryers Utilizing the Smoke Gases of the Boilers, Plants for Fast Drying of Sugar Loaves and Cubes with Hot-Air Circulation, Drying Machines in the Textile Industry, Drying Apparatus with Drums for Industrial Distilleries, Drying Plants for Coal and Drying Apparatus in Pulverized Coal Equipment, Drying Plants for Hops; Transmission Parts—Namely, Gears for All Purposes, Spur Wheels and Bevel Wheels with Straight, Helical, or Double-Helical Teeth, Gears with Internal Teeth, Racks, Chain Wheels, Gear Boxes; Cream Separators; Apparatus and Plants Necessary for the Manufacture and Working of Grease—Namely, Bone Crushers, Grease Collectors, Coolers, Grease-Refining Apparatus, Plants for Lixiviating Solutions of Glue, Vacuum Apparatus for Glue, Refining Apparatus for Glue, Cooling Tables for Slabs of Glue and Drying Chambers for the Same, Copper Autoclaves, Iron Autoclaves with Copper Liners and Rotating Autoclaves for Fat Splitting, Separators and Washing Machines for Fatty Acids, Refining and Mixing Apparatus, Mixing Apparatus for Fatty Acids, Vacuum Distillation Apparatus for Stearin, Melting and Mixing Apparatus for Pure Stearin, Hydraulic Presses for Cold and Hot Stearin, Evaporating Plants for Glycerine with Precipitation and Recovery of Sodium Chloride, Distilling Apparatus for Pure Glycerine, Extraction Apparatus for Stearin, Boiling Vessels, Cooling Machines, Cutting Machines, Drying Chambers, Machines for Producing Soap Shavings, Mixing Apparatus and Stamping Machines for Toilet Soap, Melting Pans and Presses for Fat Residues, Machines for Making Margarine and Butter, Machines for Producing Lubricants; Apparatus for Manufacturing and Working Vegetable and Mineral Oils—Namely, Cleaning and Sorting Devices for Seeds, Machines for Removing Husks and the Like, Rolling Mills for Seeds, Roasting Apparatus for the Same, Hydraulic Presses for Oil, Machines for Moulding Fodder, Cutting Machines for Fodder, Mills for Fodder, Filter Presses for Oil, Distilling and Refining Apparatus for Oil, Solidifying Apparatus for Oil, Refining Apparatus for Edible Oil, Extraction Apparatus for Seeds and Fodder, Distilling Apparatus for Crude Oil, Refining Apparatus for Benzine, Filter Presses for Paraffin and Ceresine, Mixing Apparatus for Paraffin, Autoclaves for the Distillation of Petroleum Under High Pressure, Hydraulic Presses for Paraffin and Ceresine, Chambers for Separating Oil from Paraffin, Melting Pans for Paraffin and Ceresine, Distilling Apparatus for Tar Residues for the Production of Asphalt; Apparatus Necessary for Working Resin, Rubber, and Inorganic Colors—Namely, Melting Apparatus for Resin, Boilers for Resin, Turpentine Coolers, Varnish Boilers, Portable Storage Receptacles, Filter Presses for Turpentine, Vulcanizing Boilers, Grinding Machines for Paints, Kneading Machines for Enamel Paints, Disinfecting Devices for Hospitals, Municipal Disinfecting Stations, Disinfecting Apparatus for Railway Vehicles; Apparatus Necessary for the Chemical Treatment of Wood—Namely, Copper Pickling Apparatus for Wood in the Production of Paper, Iron Pickling Apparatus with Copper Liners, Cellulose Boilers, Plants for Impregnating the Wood of Railway Sleepers, Telephone and Telegraph Poles with Tar Oils and Cyanogen Compounds, Distilling Vessels, Coolers, Vacuum Apparatus for Extracting Acetic Acid, Distilling and Refining Apparatus for Pure Acetic Acid, Mixing Devices for Calcium Acetate, Machines for Manufacturing Sulphuric Acid, Vacuum Plants for Utilising the Waste Liquor from Paper and Cellulose Factories, Vacuum Apparatus for Potash Lye; Apparatus Necessary for Manufacturing Explosives—Namely, Autoclaves, Nitration Centrifuges, Mixing Apparatus, Vacuum Drying Drums, Graphiting Cylinders, Arrangements for Removing the Water from Nitrocellulose; Apparatus and Machines for Evaporating Brine and for Ammonium-Carbonate Works—Namely, Boiling Vessels, Refining Plants, Filtering Apparatus, Vacuum Stations with Separating Apparatus for Salt Crystals, Refining and Sorting Apparatus, Vacuum Apparatus for Concentrating Soda Lye, Ammonia Coolers, Apparatus for Leaching Out Salts, Mixing Apparatus, and Cast-Iron Distilling Columns for Soda Solutions; Apparatus and Machines for Manufacturing Artificial Manure—Namely, Sorting Drums, Dissolving Apparatus for Phosphates, Grinding and Sorting Drums for Bone Meal, Drying Chambers for Lixiviated Bones; Apparatus Necessary for Manufacturing Pasteboard—Namely, Impregnating Pans Heated by Steam or Directly Heated by Coal, Distilling Vessels for Tar, Refining Apparatus for Light and Heavy Oils; All Plants for Tanneries—Namely, Sorting Drums for Wood Cut in Pieces, Bark, and Acorns, Copper Vacuum Apparatus for Concentrating Tannin Solutions, Copper Drying Drums for Tannin Powder, Vacuum Drying Chambers for Tannin Powder; All Machinery for Breweries, Distilleries, Sugar Factories, for Coal and Other Mines, Gearing Rolls for Rolling-Mill Drive of Cast or Forged Steel with Double Helical Teeth, Large Gear Wheel Drives for Rolling Mills; Toothed Rings and Pinions for Steering Gears for Trucks, Automobiles, and Coaches; Complete Change and Differential Gears for Automobiles and Lorries, Reduction Gears for Marine Turbines, Bevel Wheels with Citroën Teeth for Water Turbines, Gear Wheels with Hardened and Ground Pinions Cut According to the System Employed for Tramway Motors, Complete Gear-Wheel Drives for Electric Locomotives; Ground and Hardened Driving Wheels for Lathes, Planing Machines, and Milling Machines; Transmission Gear for Navigable Balloons and Large Aircraft; Reduction Gearing for Textile Machinery, Tractors, and Motor Ploughs; Gas Cooling and Washing Apparatus, Gas Cleaners, and Gas Blowers (Compressors); Finished Castings, Being Parts for General Machine Construction—Namely, Rotors, Rolls, Levers, Riveting-Machine Frames, Eccentrics, Frames, Template Pipes, Hammer Monkeys, Anvil Blocks, Hammer Rests, Hammer Faces, Anvil Tables, Spindle Couplings, Claw Couplings, Roll-Housing Bearers, Cam Rollers with Cast Double Helical Teeth, Tables, Flywheels, Gear Wheels, Grooved Rollers, Calibrated Rolls, Cylinder Frames, Charges, Clay Cutters, Conveying-Worm Accessories, Conveying Worms, Edge-Mill Dishes, Milling Rings in High Percentage Very Tough and Resistant Manganese Steel or Chrome Steel, Breaking Jaws and Side Wedges in Manganese Steel, Crusher Beds, Trays, Rocker Arms, Crushing Cylinders and Cones, Smooth and Ribbed Cylinder Casings in Manganese Steel, Mixing Rolls, Kneading Rolls, Wing Rolls in Manganese Steel, Conveying Worms, Shaft Quadrants, Component Parts for Steam Turbines in Cast Steel, Rotors with Cast-In Blades, Riveting-Machine Bows and Uprights, Press Columns, Press Cylinders, Pilger Rolls in Special Steel for the Rolling of Seamless Tubes, Gear Wheels with Cast Teeth, Switches, Parts of Dredgers, Plough Bodies and Sundry Castings for Agricultural Machinery, Rope Forks and Rope-Fork Bearings, Component Parts of Electric Steel for Motor-Plough Building, Diesel-Motor Columns, Frames, Steam Cylinders, Valves for Steam-Engine Construction, Supports, Hammer Columns, Anvil Beds, Frames, Cylinders for Gas Engines, Steam Cylinders, All Cast-Iron Locomotive Parts, Automobile Cylinders, Chill Moulds of Every Kind up to 85 Tons in Weight, Connecting Rods, Crossheads, Complete Shaftings, Crank Shafts, Transmission Shafts, Propeller Shafts, Crossheadings, Connecting Rods, Piston Rods for Ships' Engines, Crank Shafts and Connecting Rods for Compressors and Diesel Engines, Turbine Wheels, Drums, and Rings up to the Largest Dimensions, Turbine Discs, Turbine Shafts, Rotors, Rotor Shafts, Flywheel Shafts; Small Forge and Spindle Pressing Plant—Namely, Buffers, Buffer Rods, Couplings, Balls for Cement Mills, Cramps, Striking Cramps, Spanners, Forged Vices, Styrian Type, Aluminum Brass and Bronze Alloy Castings for Driving-Gear Boxes, Pistons for Explosion Motors, and Component Parts for Water Turbines in Cast Steel.

Claims use since Mar. 26, 1925.

Ser. No. 255,807. GOTTHARD ALLWEILER PUMPEN FABRIK AKT.-GES., Radolfzell, and Baden, Germany. Filed Oct. 8, 1927.

The words "Schutzmarke" and "Pumpe" appearing in the drawing of the mark are disclaimed apart from the mark as shown on the drawing.

Particular description of goods.—Pumps for Household and Agricultural Uses and for Use in Horticulture and the Arts, and Parts of Pumps and Accessories for Pumps as Follows—viz, Pump Casings, Pump Lids, Pump Receptacles, Pump Boxes, Pump Levers, Pump Cylinders, Pump Pistons, Pump-Piston Rods, Pump Discharging Means, Pump Valves, Pump Handles, Pump Air Chambers, Pump Wheels, Pump Plungers, Agitators, Particularly for Sewage Pumps.

Claims use since June 10, 1886.

Ser. No. 256,533. THE NASH ENGINEERING COMPANY, South Norwalk, Conn. Filed Oct. 24, 1927.

Particular description of goods.—Air Compressors, Vacuum Pumps, Vacuum Heating Pumps, Boiler-Feed Pumps, Turbines and Turbine Engines, Centrifugal Pumps, Flat Box Pumps, Sewage Ejectors, Bilge Pumps, and Sump Pumps, Gas Compressors, Pump Strainers, Check Valves Used as a Part of the Pump Unit.

Claims use since Mar. 31, 1919.

Ser. No. 257,444. SERVICE PRODUCT CO., Willimansett, Mass. Filed Nov. 11, 1927.

No claim is made to the word "Rapid" apart from the mark shown in the drawing.

Particular description of goods.—Portable Hand Fire Extinguishers.

Claims use since July 9, 1927.

Ser. No. 259,116. HUGHES & HUGHES, New York, N. Y. Filed Dec. 19, 1927.

INIT

Particular description of goods.—Golf-Ball Markers.

Claims use since on or about Jan. 5, 1927.

Ser. No. 259,140. JUSTUS P. SEEBURG, Chicago, Ill. Filed Dec. 19, 1927.

Morning Dew

Particular description of goods.—Sprayers.
Claims use since Oct. 19, 1927.

Ser. No. 259,291. THE A. A. WOOD & SONS COMPANY, Atlanta, Ga. Filed Dec. 23, 1927.

"DUPLEX"

Particular description of goods.—Files.
Claims use since 1881.

Ser. No. 259,449. KENSINGTON STEEL COMPANY, Chicago, Ill. Filed Dec. 29, 1927.

KENSINITE

Particular description of goods.—Parts for Trench-Excavating Machines, Concaves for Gyratory Crushers, Jaw Plates for Jaw Crushers, Conveying Chains, Elevator Buckets, Pulverizer Hammers, Gears, Pinions, Sprockets, Rollers, Steam-Shovel Parts, Dipper Teeth, Traction Devices for Steam Shovels, Links for the Trackways for Self-Laying-Track Tractors.
Claims use since Jan. 5, 1927.

Ser. No. 259,799. DIAMOND MOTOR PARTS COMPANY, St. Cloud, Minn. Filed Jan. 7, 1928.

DIAMOND MOTOR PARTS CO ST CLOUD

No claim is made to the word "St. Cloud" and the representation of the goods apart from the mark as shown.
Particular description of goods.—Piston Pins, Bronze and Steel Bearing Bushings for Automobiles, and Water Pumps and Parts Thereof.
Claims use since February, 1923.

Ser. No. 259,876. RELAY MOTORS CORPORATION, Lima, Ohio. Filed Jan. 9, 1928.

RELAY

Particular description of goods.—Power-Transmission Mechanism for Motor Vehicles, Including Axle Assemblies.
Claims use since Feb. 1, 1926.

Ser. No. 259,881. SEVERINO SAFETY RAZOR CO., INC., New York, N. Y. Filed Jan. 9, 1928.

PERFECT FOUR EDGE TRADE MADE IN U.S.A. Patented Nov. 16, 26 MARK SEVERINO SAFETY RAZOR CO. INC.

No claim is made to the words appearing on the drawing except to the name of applicant corporation. The portrait is that of Ralph Severino, president of applicant corporation.
Particular description of goods.—Safety Razors and Blades Thereof.
Claims use since Dec. 1, 1927.

Ser. No. 260,070. ROBERT B. MINOR, San Antonio, Tex. Filed Jan. 13, 1928.

TANGO

Particular description of goods.—Can Openers.
Claims use since Dec. 14, 1927.

Ser. No. 260,158. ALLEN ELECTRIC AND EQUIPMENT COMPANY, Kalamazoo, Mich. Filed Jan. 13, 1928.

GENERAL EQUIPMENT CORP.

Particular description of goods.—Brush Sanders, Pole Screw Drivers, Pole-Piece Spreaders, Bench Plates, Bendix Pullers, Wheel Pinions, Bearing Pullers, Shaft Pullers, Transmission-Clutch Disc Pullers, Axle-Sleeve Pullers, Drills and Reamers, Metal-Working Lathes, Battery Handlers, Shaft Couplings, Bearing-Scraping Tools, Facing Tools and Cutters, Jigs, Vises, Work Clamps and Stands, Rivet Setters, Shop Dollies and Hoists and Lifting Hooks, Tow Bars, Emergency Axles, Straightening Presses and Mandrel Presses.
Claims use since Aug. 1, 1926.

Ser. No. 260,616. THE AMERICAN IMPORT COMPANY, San Francisco, Calif. Filed Jan. 25, 1928.

LAWNVAC

Particular description of goods.—Lawn Rakes.
Claims use since July 15, 1922.

Ser. No. 260,814. THE ECLIPSE LAWN MOWER CO., Prophetstown, Ill. Filed Jan. 28, 1928.

ELMCO

Particular description of goods.—Lawn Mowers.
Claims use since Oct. 1, 1927.

CLASS 25.

Locks and Safes.

Ser. No. 259,492. HAINES MANUFACTURING CORPORATION, Rochester, N. Y. Filed Dec. 30, 1927.

MEM-O-BUDGET

Particular description of goods.—Locks and Safes—Namely, Portable Savings Banks.
Claims use since Aug. 21, 1927.

CLASS 26.

Measuring and Scientific Appliances.

Ser. No. 252,196. HERMAN FOWLER, doing business as The Fowler Studios, Hollywood, Calif. Filed July 18, 1927.

KNOW YOUR OWN COUNTRY

Particular description of goods.—Motion-Picture Films.
Claims use since Oct. 15, 1926.

Ser. No. 259,335. PATRICK A. POWERS, Los Angeles, Calif., and New York, N. Y. Filed Dec. 24, 1927.

CINEPHONE

Particular description of goods.—Talking-Motion-Picture Films.
Claims use since Dec. 1, 1927.

Ser. No. 259,793. S. F. BOWSER & COMPANY, INC., doing business as Gasoline Register Company, Fort Wayne, Ind. Filed Jan. 7, 1928.

Meas-ur-chek

Particular description of goods.—Quantity-Recording and Receipt-Issuing Machines Used in the Sale of Gasoline.
Claims use since June 23, 1926.

Ser. No. 259,972. STANDARD GAGE COMPANY, INC., Poughkeepsie, N. Y. Filed Jan. 11, 1928.

"SUREMIKE"

Particular description of goods.—Micrometers.
Claims use since Dec. 1, 1927.

Ser. No. 260,429. DREM PRODUCTS CORPORATION, New York, N. Y. Filed Jan. 21, 1928.

CINOPHOT

Particular description of goods.—Automatic Exposure Meters for Photographic Purposes.
Claims use since Apr. 12, 1926.

Ser. No. 260,929. ANSCO PHOTOPRODUCTS, INC., Binghamton, N. Y. Filed Jan. 31, 1928.

MEMOSCOPE

Particular description of goods.—Photographic Projectors.
Claims use since Jan. 1, 1928

CLASS 28.

Jewelry and Precious-Metal Ware.

Ser. No. 255,046. ORESTE PENNINO, doing business as Pennino Brothers, New York, N. Y. Filed Sept. 21, 1927.

Particular description of goods.—Jewelry for Personal Use or Adornment Consisting of Finger Rings, Earrings, Bracelets, Pendants, Necklaces, Watch Bracelets, Bags, Brooches, Buckles, Bar Pins, Cuff Links, Lorgnettes, Studs, Scarf Pins, Hatpins, Vest Buttons and Handy Pins, All Made of or Plated with Precious Metal.
Claims use since Nov. 1, 1926.

Ser. No. 259,127. SAHATIEL G. MANDALIAN, doing business as Mandalian Manufacturing Company, North Attleboro, Mass. Filed Dec. 19, 1927.

LUSTRO-PEARL

No claim is made to the word "Pearl" except as herein associated.

Particular description of goods.—Mesh Bags and Purses and the Constituent Parts of the Same, All Made of or Plated with Precious Metal.

Claims use since Nov. 30, 1927.

Ser. No. 259,381. S. WECHTER COMPANY, Chicago, Ill. Filed Dec. 27, 1927.

Particular description of goods.—Manufactured Jewelry for Personal Wear Other Than Watches.

Claims use since 1908.

Ser. No. 259,833. AMERICAN JEWELRY CO., New York, N. Y. Filed Jan. 9, 1928.

D'ENCHANT

Particular description of goods.—Earrings, Collar Pins, Scarf Pins, Necklaces, Cases of Precious Metal for Face Powder or Rouge, Bar Pins, Brooch Pins, Cuff Links, and Bracelets.

Claims use since about Apr. 1, 1927.

Ser. No. 259,869. PARFUMS EDOUARDO, A CORPORATION, New York, N. Y. Filed Jan. 9, 1928.

Foursome

Particular description of goods.—Vanity Case or Compact Case Made of or Plated with Precious Metal.

Claims use since July 1, 1927.

Ser. No. 260,066. MADIER & MILENKO, New York, N. Y. Filed Jan. 18, 1928.

MM

Particular description of goods.—Finger Rings.

Claims use since Jan. 1, 1928.

Ser. No. 260,333. JOSEPH L. HERZOG & CO., New York, N. Y. Filed Jan. 19, 1928.

JLH

Particular description of goods.—Finger Rings.

Claims use since about Jan. 1, 1913.

CLASS 29.

Brooms, Brushes, and Dusters.

Ser. No. 259,674. COMMERCIAL PRESS, INC., Southbridge, Mass. Filed Jan. 4, 1928.

WONDER

Particular description of goods.—Cloths for Wiping and Polishing the Lenses of Eyeglasses and Spectacles.

Claims use since July, 1917.

CLASS 31.

Filters and Refrigerators.

Ser. No. 260,004. DOMESTIC ELECTRIC REFRIGERATOR CORPORATION, New York, N. Y. Filed Jan. 12, 1928.

The ALLISON

The drawing is lined to indicate blue.

Particular description of goods.—Electric Refrigerators.

Claims use since Nov. 10, 1927.

CLASS 32.

Furniture and Upholstery.

Ser. No. 260,862. UNITED STATES CABINET BED CO., New York, N. Y. Filed Jan. 28, 1928.

SUPEREST

Particular description of goods.—Mattresses.

Claims use since July 8, 1927.

CLASS 34.

Heating, Lighting, and Ventilating Apparatus, Not Including Electrical Apparatus.

Ser. No. 259,111. GENERAL WATER HEATER CORPORATION, Los Angeles, Calif. Filed Dec. 19, 1927.

BIG 4

Particular description of goods.—Gas-Heated Hot-Water Systems and Hot-Water Heaters.

Claims use since Oct. 13, 1927.

CLASS 35.

Belting, Hose, Machinery Packing, and Non-metallic Tires.

Ser. No. 259,075. RAMSEY ACCESSORIES MANUFACTURING CORPORATION, St. Louis, Mo. Filed Dec. 17, 1927.

RAMCO Sealflex

For the purposes of this registration only no exclusive claim is made to the representation of the piston ring and the inner ring apart from the mark as shown.

Particular description of goods.—Piston Rings.

Claims use since Oct. 15, 1927.

Ser. No. 259,076. RAMSEY ACCESSORIES MANUFACTURING CORPORATION, St. Louis, Mo. Filed Dec. 17, 1927.

RAMCO

Particular description of goods.—Piston Rings and Inner Ring for Piston Rings.

Claims use since Oct. 15, 1927, on piston rings, and since June 15, 1923, on inner rings.

Ser. No. 259,679. GOODALL RUBBER CO., INC., Philadelphia, Pa. Filed Jan. 4, 1928.

R-B

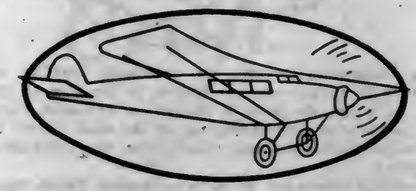
Particular description of goods.—Conducting Hose Composed of Rubber or Rubber and Fiber.

Claims use since Nov. 20, 1924.

Ser. No. 260,620. THE BADGER RUBBER WORKS, Milwaukee, Wis. Filed Jan. 25, 1928.

Particular description of goods.—Pneumatic Tires and Tubes Made Wholly or Partly of Rubber.

Claims use since Dec. 20, 1927.



Ser. No. 260,621. THE BADGER RUBBER WORKS, Milwaukee, Wis. Filed Jan. 25, 1928.

AIRPORT

Particular description of goods.—Pneumatic Tires and Tubes Made Wholly or Partly of Rubber.

Claims use since Dec. 20, 1927.

Ser. No. 260,622. THE BADGER RUBBER WORKS, Milwaukee, Wis. Filed Jan. 25, 1928.

Particular description of goods.—Pneumatic Tires and Tubes Made Wholly or Partly of Rubber.

Claims use since Dec. 20, 1927.

CLASS 37.

Paper and Stationery.

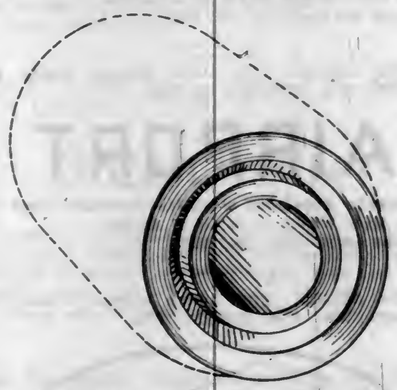
Ser. No. 258,434. STANDARD PAPER MANUFACTURING CO., Richmond, Va. Filed Dec. 3, 1927.

AIR LINE

Particular description of goods.—Coated, Enameled, and Plain Blotting Paper and Coated Paper, Printing and Writing Paper.
Claims use since Nov. 10, 1927.

Ser. No. 258,607. THE UNION PAPER & TWINE COMPANY, Cleveland, Ohio. Filed Dec. 7, 1927.

Firmfold



Particular description of goods.—Printing, Writing, and Book Papers.
Claims use since Jan. 1, 1927.

Ser. No. 259,204. FORT HOWARD PAPER COMPANY, Green Bay, Wis. Filed Dec. 21, 1927.

Nancy Lee

Particular description of goods.—Toilet Paper, Paper Towels, Paper Napkins, Paper Doilies, Paper Tablecloths, and Tissue Paper.
Claims use since June 27, 1927.

Ser. No. 259,730. THE GUMMED PRODUCTS COMPANY, Troy, Ohio. Filed Jan. 5, 1928.

The trade-mark consists of arbitrarily cutting or otherwise forming a circular groove in the face of the spool on which the tape is wound, no exclusive claim being made to the representation of the spool shown in the accompanying drawing apart from the trade-mark illustrated.

Particular description of goods.—Gummed Paper Tape, Ungummed Paper Tape, Gummed Cloth Tape, and Ungummed Cloth Tape.
Claims use since on or about July 1, 1914.

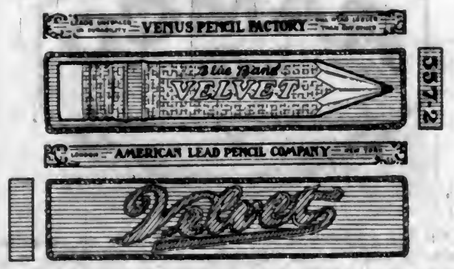
Ser. No. 259,811. WILHELM KORESKA, Vienna, Austria. Filed Jan. 7, 1928.

KORES

Particular description of goods.—Writing Paper, Typewriter Paper, Stencil Sheets, Addressing Stencil Cards, Tracing Paper, Copying Sheets, Rolls of Copying Paper for Duplicating Apparatus, Duplicating Papers for Hectographs and Copying Apparatus, Sketching Paper, Drawing Paper, Paper Graduated by Millimeter, Quadrats, Paper Rolls for Adding Machines, Wrapping Paper, Rubber Erasers, Pencils, and Pens.
Claims use since Oct. 22, 1927.

Ser. No. 259,888. VENDEX, INC., New York, N. Y. Filed Jan. 9, 1928.

NAMAD



Particular description of goods.—Pencils.
Claims use since Dec. 1, 1927.

Ser. No. 260,661. WM. G. WILLMANN PAPER CO. INC., New York, N. Y. Filed Jan. 25, 1928.

TRIBRO

Particular description of goods.—Printing and Writing Paper.
Claims use since Jan. 3, 1928.

Ser. No. 260,787. AMERICAN LEAD PENCIL COMPANY, New York, N. Y. Filed Jan. 28, 1928.

The carton as such, together with all the reading matter, is disclaimed apart from the mark shown on the drawing, with the exception of the words "Blue Band, Velvet, Venus, American Lead Pencil Company" and the numerals "557—2," the representation of a pencil being disclaimed apart from the mark shown on the drawing. The lining of the drawing indicates the colors blue, yellow, and brown.

Particular description of goods.—Pencils.
Claims use since December, 1924.

Ser. No. 260,788. AMERICAN LEAD PENCIL COMPANY, New York, N. Y. Filed Jan. 28, 1928.

The carton as such, together with all reading matter, is disclaimed apart from the mark shown in the drawing, with the exception of the words "Venus" and "American Pencil Co." The picture forming part of trade-mark is the goddess Venus.

Particular description of goods.—Pencils.
Claims use since January, 1906.

CLASS 38.

Prints and Publications.

Ser. No. 234,557. THE BUZZA COMPANY, Minneapolis, Minn. Filed July 15, 1926.

CRAFTACRES

Particular description of goods.—Gift Mottoes.
Claims use since June 1, 1923.

Ser. No. 255,870. THOMAS E. PICKERILL, doing business as The Thos. E. Pickerill Service, Placentia, Calif. Filed Oct. 10, 1927.

The portrait is that of applicant.

Particular description of goods.—Heading for a Newspaper Column.
Claims use since Sept. 23, 1927.

Ser. No. 257,616. THE CHAIN STORE PUBLISHING CORPORATION, New York, N. Y. Filed Nov. 16, 1927.

Chain Store Druggist

Particular description of goods.—Section of a Periodical Publication.
Claims use since Aug. 27, 1927.

Ser. No. 259,167. FRANK J. HALE, Washington, D. C. Filed Dec. 20, 1927.

THE NATIONAL POLITICAL WEEKLY
POLITICS
INDEPENDENT, NON-PARTISAN - NEWS AND COMMENT

Particular description of goods.—Weekly Newspaper.
Claims use since Dec. 19, 1927.

Ser. No. 259,186. SWETLAND PUBLICATIONS, INC., Los Angeles, Calif. Filed Dec. 20, 1927.

Beauty Craft
PICTORIAL

Particular description of goods.—Publication Issued Monthly.
Claims use since May 20, 1926.

Ser. No. 259,261. SWETLAND PUBLICATIONS, INC., Los Angeles, Calif. Filed Dec. 22, 1927.

Beauty Craft

Particular description of goods.—Publication Issued Monthly.
Claims use since Sept. 20, 1926.

Ser. No. 259,395. DAILY REVIEW CORPORATION, Rockville Center, N. Y. Filed Dec. 28, 1927.

'BUY-O-GRAPH'

Particular description of goods.—Newspaper Sections.
Claims use since Nov. 15, 1927.

Ser. No. 260,215. EDWARD DANFORTH, Atlanta, Ga. Filed Jan. 17, 1928.

The drawing is lined for shading only and to represent an imaginary character.
Particular description of goods.—Newspaper Column Published Periodically.
Claims use since January, 1925.

Ser. No. 260,275. KING FEATURES SYNDICATE, INC., New York, N. Y. Filed Jan. 18, 1928.

RIGHT ANGLES

The lining on the drawing represents shading and not color.
Particular description of goods.—Newspaper Articles.
Claims use since Jan. 3, 1927.

Ser. No. 260,642. MACNAIR-DORLAND COMPANY, INC., New York, N. Y. Filed Jan. 25, 1928.

SOAP.

Particular description of goods.—Monthly Magazine.

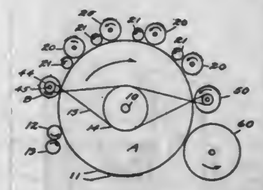
REISSUES

MARCH 13, 1928.

16,897. BAG-CLOSING MACHINE. THOMAS ALLATT, Westfield, N. J., assignor, by mesne assignments, to Millie Patent Holding Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 17, 1928. Serial No. 247,433. Original No. 1,637,509, dated Aug. 2, 1927, Serial No. 590,622, filed Sept. 26, 1922. Renewed Oct. 23, 1926. 22 Claims. (Cl. 226—56.)



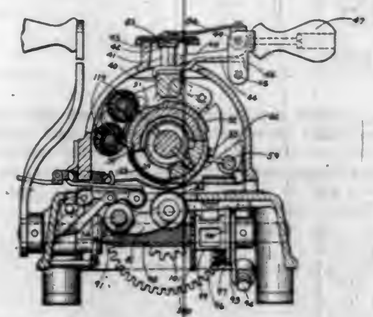
1. A bag-closing machine, comprising a metal strip feeding means, an intermittently moving bag-supporting table, an intermittently moving carrier for receiving said bags from said table, means for transporting the bags from said table to said carrier and puckering the mouths thereof, a second carrier, a cutting mechanism for severing metal bands from said strip, means for forming each band into substantially U-shape and transporting the same to said second carrier, said second carrier moving intermittently and bringing said U-shaped bands into operative relation to the bags on said first-mentioned carrier, and co-acting dies for forming the bands into ring-shape and applying the same to the bags so as to encircle and compress the puckered mouths thereof.

9. A bag-closing machine comprising a metal strip feeding means, a bag support, a carrier for receiving said bags from said support, means for transporting the bags from said support to said carrier and puckering the mouths thereof, a second carrier, a cutting mechanism for severing metal bands from said strip, means for forming each band into substantially U-shape and transporting the same to said second carrier, said second carrier bringing said U-shaped bands into operative relation to the bags on said first-mentioned carrier, and co-acting dies for forming the bands into ring-shape and applying the same to the bags so as to encircle and compress the puckered mouths thereof.

16. A bag-closing machine, including a carrier comprising an intermittently moving disk, equidistantly spaced arms projecting therefrom, each arm being provided on its outer end with a longitudinal slot receiving a bag, a lever, two horizontally disposed pins thereon, one above and the other one below said arms, and means for swinging said lever to and from said arms bringing said pins nearer to the center of said disk than the inner end of a slot in an arm before said carrier stops in its intermittent movement.

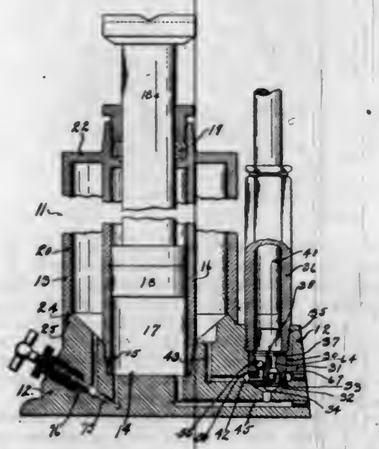
19. A bag-closing machine, including a carrier, equidistantly spaced means thereon for holding bags in puckered position on said carrier, means in operative relation to said carrier for closing thereon the puckered mouth of a bag, a knife also in operative relation to said carrier, means for causing intermittent motion of said carrier so as to bring the bags thereon step by step to said closing means and to said knife, and means for actuating said closing means and for causing said knife to move toward said carrier during each interval of rest of the latter.

16,898. LOOSENING ROLL FOR CARDING MACHINES. OWEN W. BRADBURY, Reading, Mass. Filed Sept. 27, 1927. Serial No. 222,392. Original No. 1,598,800, dated Sept. 7, 1926, Serial No. 600,425, filed Nov. 11, 1922. 12 Claims. (Cl. 19—98.)



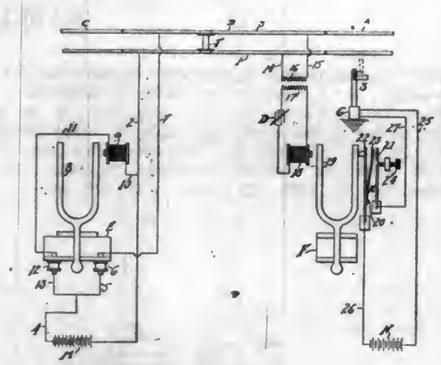
1. In a carding machine having a main cylinder covered with card clothing having wire teeth, workers, strippers and a doffer, the combination of a loosening roll having a longitudinal groove, an elastic strip imbedded in said groove, a metal strip imbedded in the elastic strip, yielding tapering needles carried by the metal strip, and means to retain the strip flexibly in position, the loosening roll being so set that the needle points penetrate between said wire teeth, with means to give the loosening roll an axial traverse motion, and means to cause the loosening roll to revolve in the opposite direction to, and at a greater surface speed than, the main cylinder.

16,899. PRINTING APPARATUS. WALTER B. PAYNE, Rochester, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Aug. 26, 1927. Serial No. 215,748. Original No. 1,593,809, dated July 20, 1926, Serial No. 608,152, filed Dec. 21, 1922. 21 Claims. (Cl. 197—6.2.)



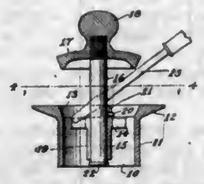
21. In a check writer, a carrier having a plurality of sets of type thereon, each set of type comprising two words superimposed one on the other, the letters of one

word gradually decreasing in height from one end of the word to the other and the letters of the other word gradually increasing in height from one end of the word



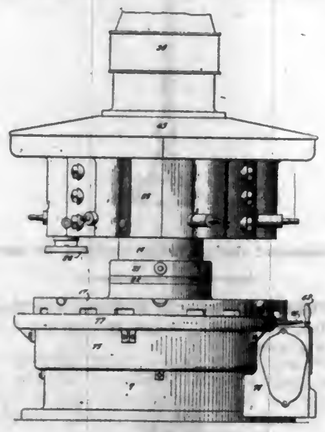
to the other, whereby the small letters of one of the words will be disposed beneath the large letters of the other word so that adjacent words will overlap.

16,900. CHECK-VALVE UNIT FOR HYDRAULIC JACKS. JOHN G. DYBENS, Los Angeles, Calif., assignor, by mesne assignments, to Herman D. Eberle. Filed Feb. 2, 1927. Serial No. 165,473. Original No. 1,610,499, dated Dec. 14, 1926, Serial No. 757,362, filed Dec. 22, 1924. 10 Claims. (Cl. 138—9.)



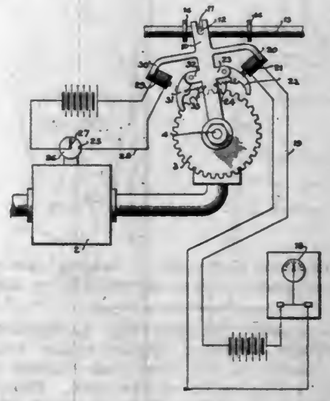
1. In a hydraulic jack, the combination of a head casting having a reservoir chamber and a cylinder, a base to which said head is secured, said base having a cavity, an intake passage connecting between said reservoir chamber and said cavity, and an exhaust passage connecting between said cylinder and said cavity, a pump barrel secured in said cavity, a plunger reciprocally disposed in said barrel, and a check valve unit in said cavity, said unit having an inlet passage connecting said intake passage with said barrel and an outlet passage connecting said exhaust passage and said barrel.

16,901. ELECTRIC SYSTEM. NEWMAN H. HOLLAND, Montclair, N. J., assignor, by mesne assignments, to Thomas A. Edison, Incorporated, West Orange, N. J., a Corporation of New Jersey. Filed June 11, 1926. Serial No. 115,353. Original No. 1,498,238, dated June 17, 1924, Serial No. 395,897, filed July 13, 1920. 26 Claims. (Cl. 246—34.)



1. In an automatic railway block signaling system, a direct-current circuit which is constantly closed during operation of the system, means comprising a vibratory reed which is extraneous to all circuits of the system for producing current pulsations of a given frequency in the direct-current circuit, a signal circuit, and means for controlling said signal circuit comprising a device normally in operative relation to said direct-current circuit and tuned to the frequency of the current pulsations in the latter, the presence of a train in a block with which said signal circuit is associated, placing said device in inoperative relation to said direct-current circuit, substantially as described.

16,902. WASTE VALVE FOR BATHTUBS AND LAVATORIES. JOHN N. MORTIMER, Lakewood, Ohio, assignor to The Central Brass Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 27, 1927. Serial No. 242,825. Original No. 1,630,352, dated May 31, 1927, Serial No. 142,278, filed Oct. 18, 1926. 2 Claims. (Cl. 4—295.)

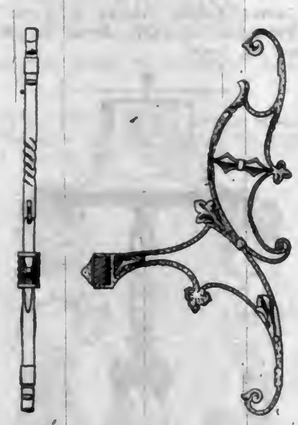


2. As a new article of manufacture, a waste valve for bathtubs comprising an externally threaded sleeve provided at its upper end with an outwardly extending flange, said sleeve having a beveled valve seat at its upper end, a tapered valve part adapted normally to seat therein and provided with a depending central supporting stem, an elongated hub adapted to accommodate said stem and permit its vertical movement therein, and provided with a radial connection interiorly of the threaded sleeve, the length of said stem being such as to permit the elevation of the valve part a sufficient distance to allow a tool to be brought into engagement with said radial connection and stem for the purpose of screwing the sleeve into the bathtub opening, and means for temporarily maintaining said valve part in its elevated position.

16,903. CIRCULAR-MILLING MACHINE. HOWARD C. ROSE, Detroit, Mich., assignor to The Ingersoll Milling Machine Company, Rockford, Ill., a Corporation of Illinois. Filed May 19, 1923. Serial No. 640,231. Original No. 1,421,030, dated June 27, 1922, Serial No. 175,170, filed June 16, 1917. 50 Claims. (Cl. 90—15.)

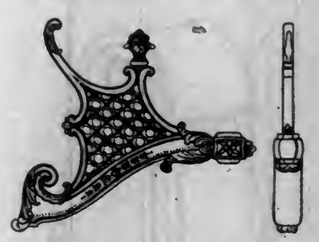
1. A circular milling machine comprising a work carrier and a tool carrier revolubly mounted and respectively equipped with a plurality of circumferentially arranged work holders and milling tools, and mechanism for continuously revolving the work and tool carriers and for causing, by such revolving movement, a relative movement in the plane of rotation between the work and the tools.

16,904. FLOW-REGULATING APPARATUS. LUIS DE FLOREZ, Pomfret, Conn. Filed Jan. 5, 1924. Serial No. 684,654. Original No. 1,426,718, dated Aug. 22, 1922, Serial No. 321,422, filed Sept. 3, 1919. 18 Claims. (Cl. 137—78.)



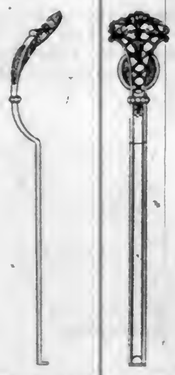
1. In a continuous flow regulating apparatus, the combination of a valve and a meter interposed in a circulation system, means for causing the actuation of the valve in one direction, and meter controlled means for actuating said valve in the opposite direction.

DESIGNS



MARCH 13, 1928.

74,642. LIGHTING-FIXTURE BRACE OR ARTICLE OF SIMILAR NATURE. HARRY AGLOW, New York, N. Y., assignor to The New York Lighting Fixture Mfg. Co., a Corporation of New York. Filed Jan. 7, 1928. Serial No. 24,770. Term of patent 3½ years.



The ornamental design for a lighting fixture brace or article of similar nature substantially as shown.

74,643. LIGHTING-FIXTURE ARM OR ARTICLE OF SIMILAR NATURE. HARRY AGLOW, New York, N. Y., assignor to The New York Lighting Fixture Mfg. Co., a Corporation of New York. Filed Jan. 7, 1928. Serial No. 24,773. Term of patent 3½ years.

The ornamental design for a lighting fixture arm or article of similar nature substantially as shown.

74,644. LIGHTING-FIXTURE BRACE OR ARTICLE OF SIMILAR NATURE. HARRY AGLOW, New York, N. Y., assignor to The New York Lighting Fixture Mfg. Co., a Corporation of New York. Filed Jan. 7, 1928. Serial No. 24,774. Term of patent 3½ years.

The ornamental design for a lighting fixture brace or article of similar nature substantially as shown.

74,645. LIGHTING-FIXTURE BACKPLATE OR ANALOGOUS ARTICLE. HARRY AGLOW, New York, N. Y., assignor to The New York Lighting Fixture Mfg. Co., a Corporation of New York. Filed Jan. 7, 1928. Serial No. 24,775. Term of patent 3½ years.

The ornamental design for a lighting fixture backplate or analogous article substantially as shown.

74,646. SOUND-AMPLIFIER CASING. JAMES S. BACH, Toronto, Ontario, Canada. Filed Aug. 12, 1927. Serial No. 23,071. Term of patent 3½ years.

The ornamental design for a sound amplifier casing, as shown.

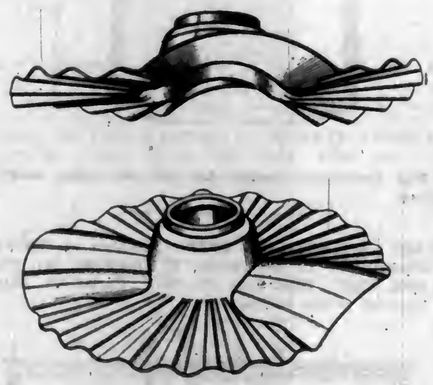
74,647. TORCHÈRE. OSCAR B. BACH, New York, N. Y. Filed Jan. 12, 1927. Serial No. 20,340. Term of patent 3½ years.

The ornamental design for a torchère, as shown.

74,648. TORCHÈRE. OSCAR B. BACH, New York, N. Y. Filed Jan. 12, 1927. Serial No. 20,341. Term of patent 3½ years.

The ornamental design for a torchère, as shown.

74,649. TABLE LAMP. OSCAR B. BACH, New York, N. Y. Filed Jan. 12, 1927. Serial No. 20,344. Term of patent 3½ years.

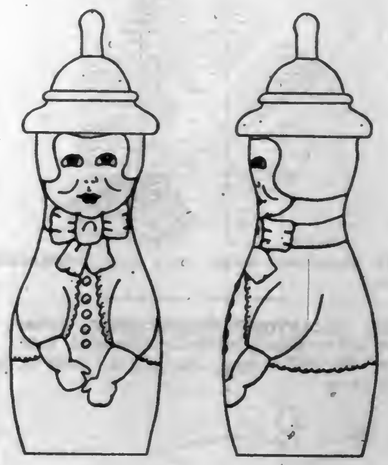


The ornamental design for a table lamp, as shown.

74,650. FLOOR LAMP. OSCAR B. BACH, New York, N. Y. Filed Jan. 12, 1927. Serial No. 20,348. Term of patent 3½ years.

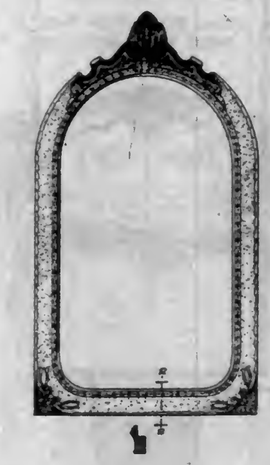
The ornamental design for a floor lamp, as shown.

74,651. REFLECTOR. PERCY S. BAILEY, Marblehead, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 29, 1926. Serial No. No. 18,208. Term of patent 14 years.



The ornamental design for a reflector as shown.

74,652. DOLL. CURTIS E. BATCHELOR, Oklahoma City, Okla. Filed June 10, 1927. Serial No. 22,886. Term of patent 7 years.

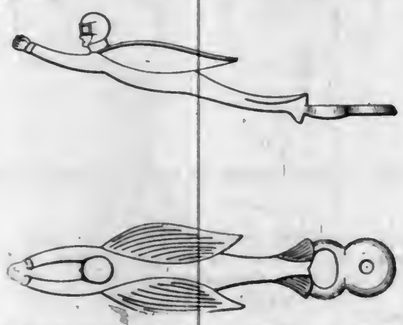


The ornamental design for a doll as shown.

74,653. NURSING BOTTLE. RUDOLPH W. BETTOLI, San Rafael, Calif., assignor of one-third to Hazel M. Peattie, San Rafael, Calif., and one-third to J. E. Trabucco, San Francisco, Calif. Filed Oct. 3, 1927. Serial No. 23,598. Term of patent 7 years.

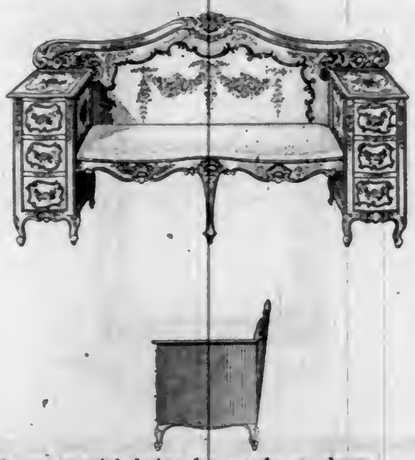
The ornamental design for a nursing bottle as shown.

74,654. PICTURE FRAME. EDWARD H. BOESE, Villa Park, Ill., assignor to Chicago Portrait Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 8, 1927. Serial No. 23,672. Term of patent 3½ years.



The ornamental design for a picture frame as shown.

74,655. SHOE. FRANK M. BOHR, Boston, Mass. Filed Nov. 21, 1927. Serial No. 24,226. Term of patent 14 years.

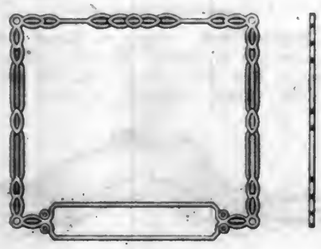


The ornamental design for a shoe, substantially as shown.

74,656. RADIATOR-CAP ORNAMENT. EUGENE BORDEN and ALPHONSE MARTELL, Hollywood, Calif. Filed Sept. 28, 1927. Serial No. 23,570. Term of patent 3½ years.

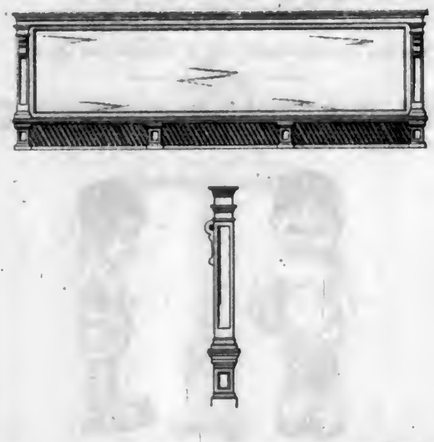
The ornamental design for a radiator cap ornament as shown.

74,657. SOFA. LEON BRAUS, New York, N. Y. Filed Dec. 16, 1927. Serial No. 24,501. Term of patent 7 years.



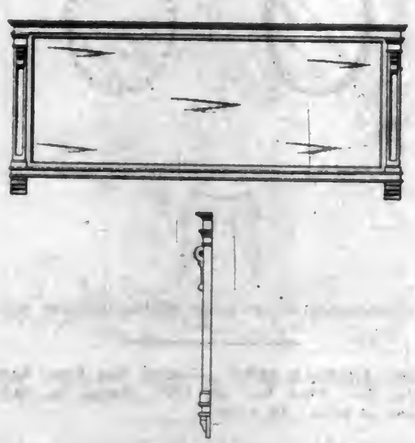
The ornamental design for a sofa, as shown.

74,658. KNITTED FABRIC. MILLARD D. BROWN, Philadelphia, Pa., assignor to Continental Mills, Inc., Philadelphia, Pa., a Corporation of Pennsylvania. Filed Mar. 24, 1927. Serial No. 21,301. Term of patent 7 years.



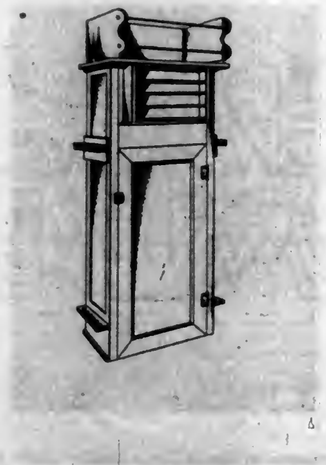
The ornamental design for a knitted fabric, substantially as shown.

74,659. ADVERTISING SIGN. WILLIAM G. BROWNE, Yonkers, N. Y., and ROGER W. OLMSTED, San Francisco, Calif. Filed June 20, 1927. Serial No. 22,498. Term of patent 14 years.



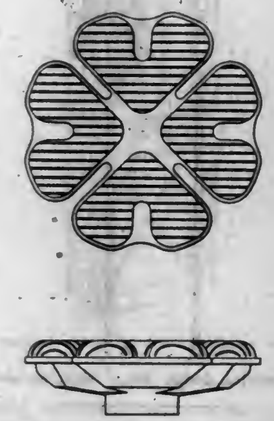
The ornamental design for an advertising sign as shown.

74,660. ADVERTISING SIGN. WILLIAM G. BROWNE, Yonkers, N. Y., and ROGER W. OLMSTED, San Francisco, Calif. Filed June 20, 1927. Serial No. 22,501. Term of patent 14 years.



The ornamental design for an advertising sign as shown.

74,661. ADVERTISING SIGN. WILLIAM G. BROWNE, Yonkers, N. Y., and ROGER W. OLMSTED, San Francisco, Calif. Filed June 20, 1927. Serial No. 22,502. Term of patent 14 years.



The ornamental design for an advertising sign as shown.

74,662. BILLIARD CABINET OR SIMILAR ARTICLE. JOHN H. CRITES, Ponca City, Okla. Filed Sept. 17, 1927. Serial No. 23,449. Term of patent 14 years.

The ornamental design for a billiard cabinet or similar article, as shown.

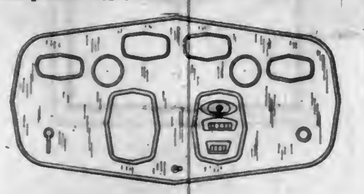
74,663. BURNER. JOHN ALGER DAHLSTROM, East Cleveland, Ohio, assignor to Perfection Stove Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 3, 1926. Serial No. 19,912. Term of patent 14 years.

The ornamental design for a burner as shown.

74,664. BOOK COVER. FRANCIS L. DAVIS, Bothell, Wash., assignor of one-half to Joseph C. Curtis, King County, Wash. Filed Aug. 26, 1927. Serial No. 23,216. Term of patent 8½ years.

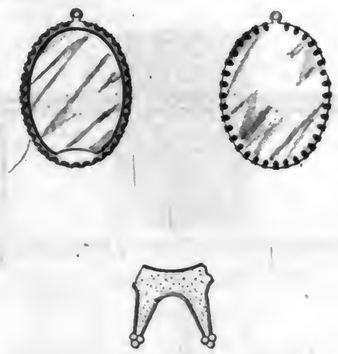
The ornamental design for a book cover as shown.

74,665. SIGN. HAL DICKINSON, Minneapolis, Minn., assignor to Duplex Art Sign Company, Minneapolis, Minn., a Copartnership consisting of Hal Dickinson, Inez Ida Deakin, and George S. Stinson. Filed Oct. 15, 1927. Serial No. 23,756. Term of patent 3½ years.



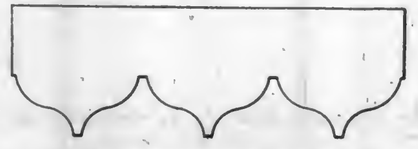
The ornamental design for a sign, as shown.

74,666. CABINET. FRANK F. DOLESHY, Seattle, Wash. Filed May 17, 1926. Serial No. 17,751. Term of patent 3½ years.



The ornamental design for a cabinet, as shown.

74,667. INSTRUMENT PANEL. EDWIN R. EVANS, Detroit, Mich. Filed Mar. 8, 1926. Serial No. 16,819. Term of patent 3½ years.



The ornamental design for an instrument panel substantially as shown.

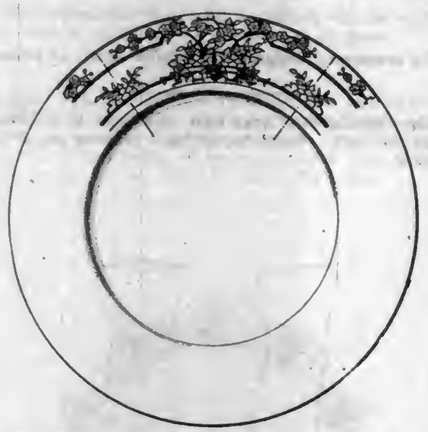
74,668. EMBLEM FRAME. WILLIAM J. FEELEY, Providence, R. I., assignor to Apostleship of Prayer, Incorporated, New York, N. Y., a Corporation of New York. Filed Sept. 14, 1927. Serial No. 23,407. Term of patent 14 years.

The ornamental design for an emblem frame, as shown.

74,669. SHINGLE STRIP. JOSEPH RAY FIFE, Kansas City, Mo. Filed Nov. 25, 1927. Serial No. 24,271. Term of patent 14 years.

The ornamental design for a shingle strip, as shown.

74,670. TEXTILE FABRIC OR SIMILAR ARTICLE OF MANUFACTURE. ALFRED J. HEINKE, Towaco, N. J., assignor to H. R. Mallinson & Co. Inc., New York, N. Y., a Corporation of Delaware. Filed Aug. 29, 1927. Serial No. 23,237. Term of patent 3½ years.



The ornamental design for a textile fabric or similar article of manufacture substantially as shown and described.

74,671. SHAWL. EMIL HOLENSTEIN, Brooklyn, N. Y., assignor to Edgar C. Hyman Co., New York, N. Y. Filed Nov. 8, 1926. Serial No. 19,684. Term of patent 7 years.

The ornamental design for a shawl substantially as shown and described.

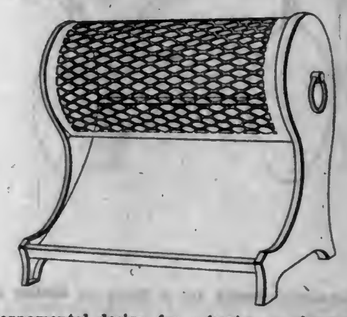
74,672. PLATE OR SIMILAR ARTICLE. FRANK G. HOLMES, Trenton, N. J., assignor to Lenox, Inc., Trenton, N. J., a Corporation of New Jersey. Filed Jan. 13, 1928. Serial No. 24,854. Term of patent 14 years.

The ornamental design for a plate or similar article, as shown, and described.

74,673. CASE FOR OPHTHALMIC MOUNTINGS. CARL R. JERRY, Rochester, N. Y., assignor to Shur-On Standard Optical Company, Inc., Geneva, N. Y., a Corporation of New York. Filed Dec. 29, 1925. Serial No. 15,893. Term of patent 7 years.

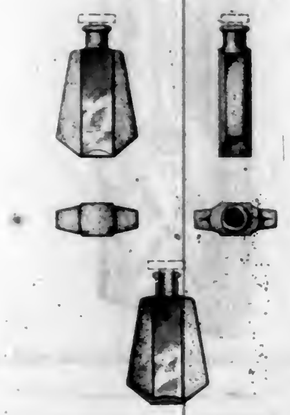
The ornamental design for a case for ophthalmic mountings, as shown.

74,674. TELEPHONE WALL CABINET. WILLIAM DANIEL JOHNSTON, Waco, Tex., assignor to Wm. Cameron & Co. Inc., Waco, Tex., a Corporation of Texas. Filed Apr. 16, 1927. Serial No. 21,622. Term of patent 14 years.



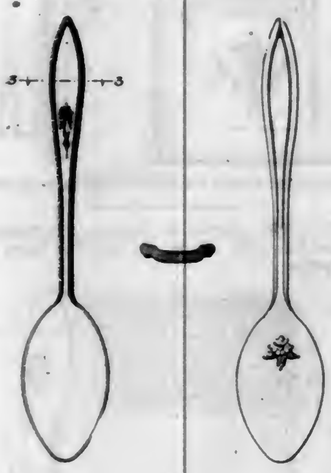
The ornamental design for a telephone wall cabinet, as shown.

74,675. WALL CABINET. WILLIAM DANIEL JOHNSTON, Waco, Tex., assignor to Wm. Cameron & Co. Inc., Waco, Tex., a Corporation of Texas. Filed Nov. 4, 1927. Serial No. 23,998. Term of patent 14 years.



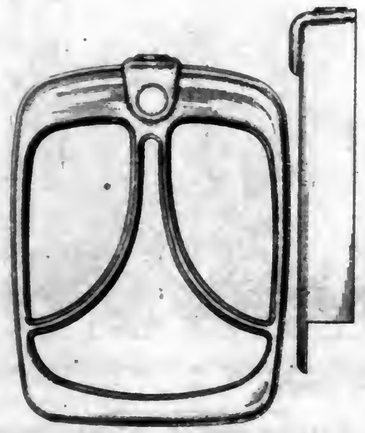
The ornamental design for a wall cabinet, as shown.

74,676. HEATER. EDWIN H. KEIPER, Swarthmore, Pa. Filed Nov. 11, 1926. Serial No. 19,673. Term of patent 14 years.



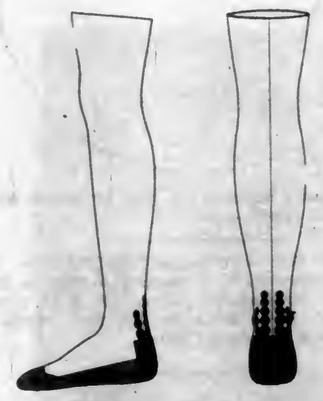
The ornamental design for a heater as shown.

74,677. BOTTLE OR LIKE CONTAINER. RICHARD W. KOHL, Cumberland, Md., assignor to Jaciel Perfumers, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 14, 1927. Serial No. 24,474. Term of patent 14 years.



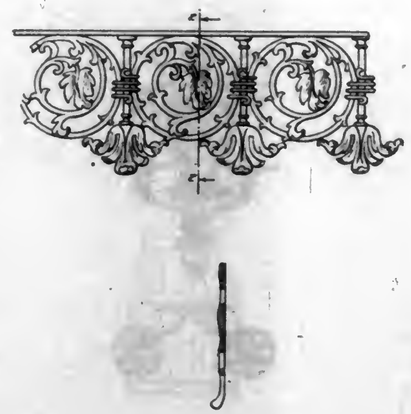
The ornamental design for a bottle or like container, substantially as shown and described.

74,678. SPOON OR SIMILAR ARTICLE. THOMAS B. LASHAR, Fairfield, Conn., assignor to Associated Silver Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 5, 1926. Serial No. 19,611. Term of patent 14 years.



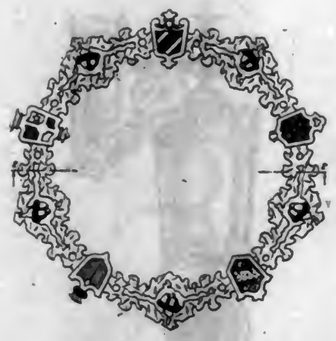
The ornamental design for a spoon or similar article as shown.

74,679. RADIATOR COVER. JOSEPH LEDWINKA, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Sept. 2, 1927. Serial No. 23,276. Term of patent 14 years.



The ornamental design for a radiator cover, as shown.

74,680. STOCKING. RUBY LEFI, New York, N. Y. Filed Oct. 14, 1927. Serial No. 23,751. Term of patent 14 years.

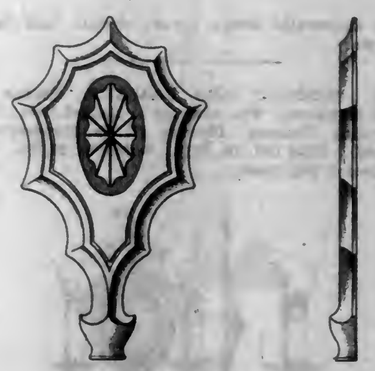


The ornamental design for a stocking, substantially as shown.

74,681. LIGHTING-FIXTURE BANDING OR ARTICLE OF SIMILAR NATURE. JOHN F. LIVERS, Kansas City, Mo., assignor to The Bailey-Reynolds Chandelier Company, a Corporation of Missouri. Filed Jan. 3, 1928. Serial No. 24,735. Term of patent 3½ years.

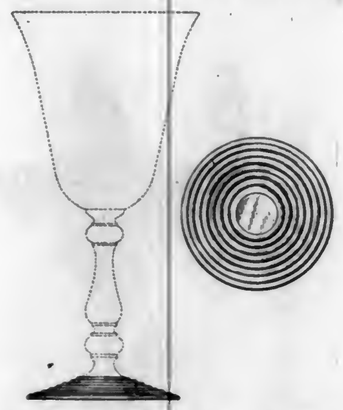
The ornamental design for a lighting fixture banding or article of similar nature substantially as shown.

74,682. LIGHTING-FIXTURE RING OR ARTICLE OF SIMILAR NATURE. JOHN F. LIVERS, Kansas City, Mo., assignor to The Bailey-Reynolds Chandelier Company, a Corporation of Missouri. Filed Jan. 3, 1928. Serial No. 24,736. Term of patent 3½ years.



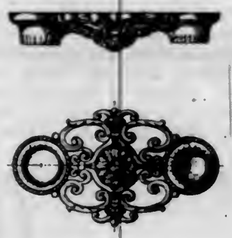
The ornamental design for a lighting fixture ring or article of similar nature substantially as shown.

74,683. PLATE FOR LIGHTING FIXTURES OR ARTICLES OF SIMILAR NATURE. JOHN F. LIVERS, Kansas City, Mo., assignor to The Bailey-Reynolds Chandelier Company, a Corporation of Missouri. Filed Jan. 3, 1928. Serial No. 24,787. Term of patent 3½ years.



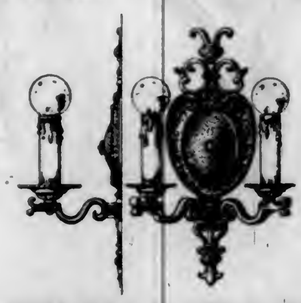
The ornamental design for a plate for lighting fixtures or article of similar nature substantially as shown.

74,684. LIGHTING-FIXTURE BACKPLATE OR ARTICLE OF SIMILAR NATURE. JOHN F. LIVERS, Kansas City, Mo., assignor to The Bailey-Reynolds Chandelier Company, a Corporation of Missouri. Filed Jan. 3, 1928. Serial No. 24,788. Term of patent 3½ years.



The ornamental design for a lighting fixture backplate or article of similar nature substantially as shown.

74,685. GOBLET. VIRGIL V. LOOMIS, Pittsburgh, Pa., assignor to United States Glass Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Aug. 26, 1926. Serial No. 18,882. Term of patent 14 years.



The ornamental design for a goblet, substantially as shown and described.

74,686. ELECTRIC-LIGHT FIXTURE. GEORGE LUDWIG, Milwaukee, Wis., assignor to Mutual Metal Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1927. Serial No. 23,700. Term of patent 3½ years.

The ornamental design for an electric light fixture, as shown.

74,687. ELECTRIC WALL BRACKET. GEORGE LUDWIG, Milwaukee, Wis., assignor to Mutual Metal Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1927. Serial No. 23,701. Term of patent 3½ years.

The ornamental design for an electric wall bracket, as shown.

74,688. ELECTRIC WALL BRACKET. GEORGE LUDWIG, Milwaukee, Wis., assignor to Mutual Metal Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1927. Serial No. 23,702. Term of patent 3½ years.

The ornamental design for an electric wall bracket, as shown.

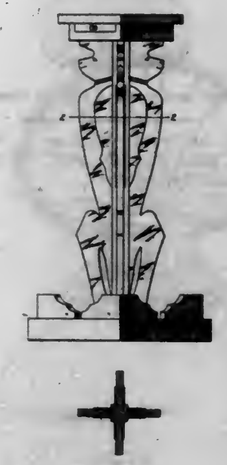
74,689. ELECTRIC-LIGHT FIXTURE. GEORGE LUDWIG, Milwaukee, Wis., assignor to Mutual Metal Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 10, 1927. Serial No. 23,703. Term of patent 3½ years.

The ornamental design for an electric light fixture, as shown.

74,690. BOTTLE. GEORGE N. MAB, Washington, D. C., assignor to American Ornamental Bottle Corporation, Lynchburg, Va. Filed Dec. 29, 1926. Serial No. 20,208. Term of patent 14 years.

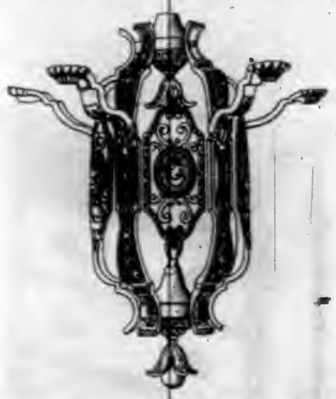
The ornamental design for a bottle, as shown.

74,691. BOTTLE. GEORGE N. MAB, Washington, D. C., assignor to American Ornamental Bottle Corporation, Lynchburg, Va. Filed Dec. 29, 1926. Serial No. 20,216. Term of patent 14 years.



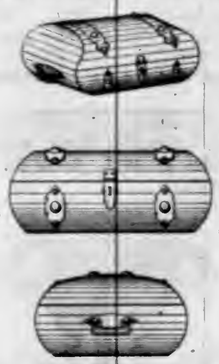
The ornamental design for a bottle, as shown.

74,692. CABINET. ARTHUR B. MODINE, Racine, Wis. Filed Nov. 19, 1926. Serial No. 19,782. Term of patent 14 years.



The ornamental design for a cabinet as shown.

74,693. STAND. ALBERT B. MONTGOMERY, New Haven, Conn. Filed Oct. 28, 1927. Serial No. 23,914. Term of patent 7 years.



The ornamental design for a stand as shown.

74,694. CHANDELIER. JOSEPH NOVIN, New York, N. Y., assignor to The Centre Lighting Fixture Mfg. Co., New York, N. Y., a Partnership consisting of Joseph Novin and Samuel Ribak. Filed Jan. 7, 1928. Serial No. 24,776. Term of patent 3½ years.

The ornamental design for a chandelier substantially as shown and described.

74,695. BOX. SAM NUSSBAUM, Berne, Ind. Filed Oct. 4, 1926. Serial No. 19,240. Term of patent 3½ years.

The ornamental design for a box as shown.

74,696. CUFF BUTTON. WILLARD A. ORMSBEE, Taunton, Mass. Filed Feb. 19, 1927. Serial No. 20,819. Term of patent 3½ years.

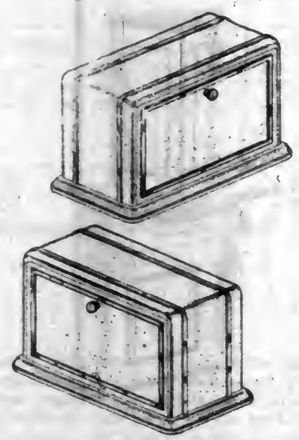
The ornamental design for a cuff button, substantially as shown.

74,697. TIE HOLDER. WILLARD A. ORMSBEE, Taunton, Mass. Filed Feb. 19, 1927. Serial No. 20,818. Term of patent 3½ years.

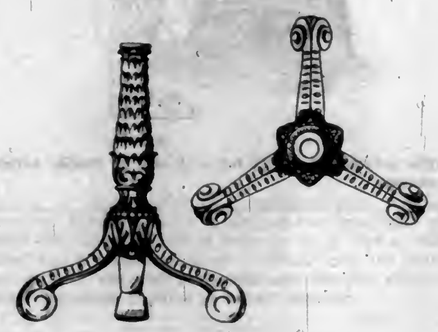
The ornamental design for a tie holder, substantially as shown.

74,698. PICTURE-MACHINE CASING. WILLIAM RABKIN, New York, N. Y. Filed Aug. 19, 1927. Serial No. 23,146. Term of patent 14 years.

The ornamental design for a picture machine casing, as shown.



74,699. SIGNAL-LIGHT CASING. VINCENT SCATENA, Pittsburgh, Pa. Filed Dec. 22, 1927. Serial No. 24,598. Term of patent 14 years.

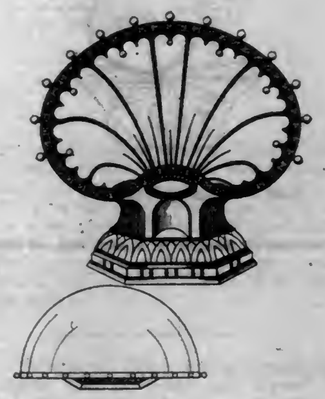


The ornamental design for a signal light casing, as shown.

74,700. SMOKER'S CABINET. SAMUEL B. SKLAR, Minneapolis, Minn. Filed Oct. 27, 1927. Serial No. 23,903. Term of patent 7 years.

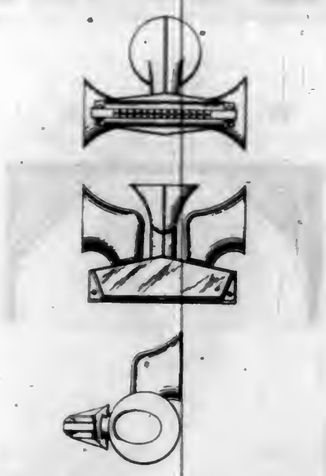
The ornamental design for a smoker's cabinet, as shown.

74,701. PEDESTAL FOR DISPLAY STANDS OR SIMILAR ARTICLES. JOSEPH SOBEL, Brooklyn, N. Y., assignor to Genuine Bronze Fixture Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Nov. 11, 1927. Serial No. 24,075. Term of patent 7 years.



The ornamental design for a pedestal for display stands or similar articles, as shown.

74,702. DECORATIVE TABLE TOP. FRANK SOHN, Chicago, and LOUIS G. MARMION, Villa Park, Ill., assignors to The Vitrolite Company, a Corporation of West Virginia. Filed Aug. 17, 1927. Serial No. 23,130. Term of patent 7 years.



The ornamental design for a decorative table top, as shown and described.

74,703. LOUD SPEAKER. LOUIS STEINBERGER, Brooklyn, N. Y. Filed Nov. 26, 1924. Serial No. 11,499. Term of patent 3½ years.

The ornamental design for a loud speaker, as shown.

74,704. HARMONICA. FERDINAND STRAUSS, New York, N. Y. Filed Jan. 6, 1928. Serial No. 24,761. Term of patent 7 years.

The ornamental design for a harmonica as shown.

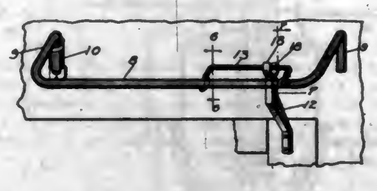
74,705. NECKLACE. DENNIS SWEENEY, Farmingdale, N. Y. Filed Oct. 15, 1925. Serial No. 15,123. Term of patent 7 years.

The ornamental design for a necklace, as shown.

74,706. TELEPHONE CABINET. EARL M. TRAMMELL, El Paso, Tex., assignor to El Paso Sash & Door Company, El Paso, Tex. Filed Nov. 11, 1927. Serial No. 24,086. Term of patent 14 years.

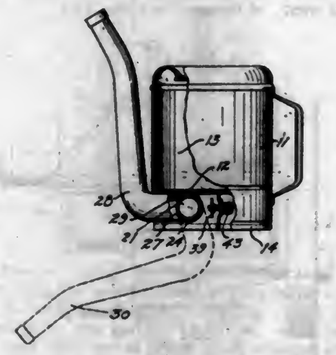
The ornamental design for a telephone cabinet as shown.

74,707. BOOK END OR SIMILAR ARTICLE. THOMAS S. WOODWARD, Lectonia, Ohio. Filed July 19, 1927. Serial No. 22,809. Term of patent 14 years.



The ornamental design for book end or similar article as shown.

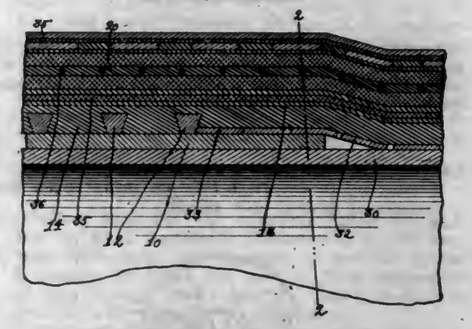
PATENTS



GRANTED MARCH 13, 1928.

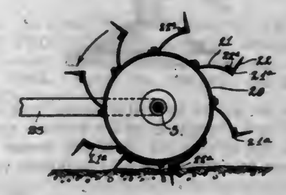
1,662,049. CURTAIN AND DRAPERY HANGER. CLARENCE E. ABEL, Denver, Colo., assignor of one-half to Joseph L. Frank, Los Angeles, Calif. Filed Dec. 8, 1925. Serial No. 74,046. 3 Claims. (Cl. 156—22.)

1. A curtain and drapery hanger of the character described, comprising a pivoted curtain-rod, a guide-rod having a jaw engaging the curtain-rod, a clamp-member cooperating with the jaw to fasten the guide-rod on the curtain-rod whereby the hem of a curtain may be supported along the rod at points on both sides of the clamp, and a bracket adapted for attachment to a swinging element, in guiding relation to the guide-rod.



1,662,050. SWING-SPOUT MEASURE. SCOTT E. ALLEN and OZRO N. WISWELL, Los Angeles, Calif., assignors to Swingspout Measure Co., Los Angeles, Calif., a Corporation of California. Filed Jan. 10, 1927. Serial No. 160,112. 5 Claims. (Cl. 221—26.)

1. An oil measuring vessel comprising: walls forming a chamber having a filling opening at the upper end; an arched rim extending inward from the upper edge of said walls; and a horizontal flange provided upon the inner edge of said rim and projecting substantially radially inward therefrom to serve as a level indicator.

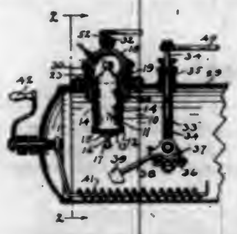


1,662,051. HOSE NIPPLE. HAROLD G. BRUNER, Wakefield, Mass., assignor to Boston Woven Hose & Rubber Company, Cambridge, Mass., a Corporation of Massachusetts. Filed Aug. 30, 1923. Serial No. 660,158. 4 Claims. (Cl. 285—80.)

1. The combination of a hose nipple provided with a locking device, of a hose upon the nipple having a flexible body portion provided with a non-flexible inner member affixed to said flexible body portion to form part thereof and surrounding said nipple, said locking device on the

nipple being embedded in the non-flexible inner member to be enveloped by the latter and lock the hose fluid-tight upon the nipple.

1,662,052. AGRICULTURAL IMPLEMENT. ORIN M. BULLOCK, Oakland, Calif. Original application filed Apr. 18, 1922, Serial No. 554,766. Divided and this application filed Feb. 15, 1923, Serial No. 619,317. Renewed July 13, 1927. 3 Claims. (Cl. 97—216.)



1. An agricultural implement comprising a drum, a plurality of resilient arms carrying blades mounted in spaced relation about the circumference of said drum, said arms being so curved as to conform to the surface of said drum when pressed thereagainst by contact with the ground, the spacing of said arms being such that just sufficient clearance is provided between an inwardly pressed arm and the connecting means on the drum for the next adjacent arm.

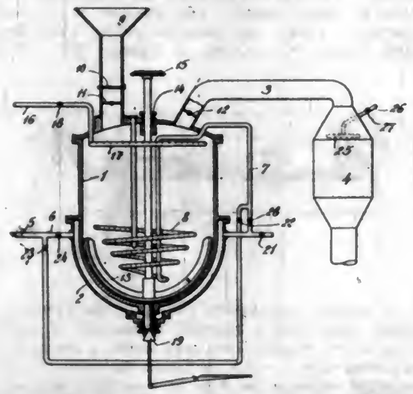
1,662,053. CHEMICAL FIRE-EXTINGUISHING DEVICE. JAMES EDWARD ALLEN and HENRY GEORGE SCHWOERPE, Logansport, Ind., assignors to Boyer Fire Apparatus Company, Logansport, Ind., a Corporation of Indiana. Filed Mar. 14, 1927. Serial No. 175,215. 2 Claims. (Cl. 169—32.)

1. In a chemical fire-extinguisher, an acid receptacle, a holder to receive the receptacle, a holder cap, pins projecting from the cap, said holder having vertical slots entering from its upper edge to communicate with hori-

xontal slots whereby said pins may be entered into said horizontal slots, a latch bar pivotally carried on the holder to swing in a vertical plane, and a spring normally positioning said bar to lie across the open end of said

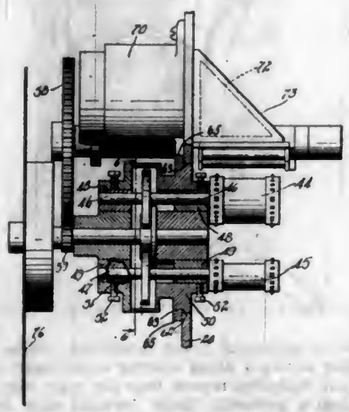
horizontal slot and to enter said vertical slot, a base in said holder, yielding members carried by the holder to retain said receptacle, and a plunger carried by said base adapted to be driven against the receptacle.

1,662,054. EYE-TESTING DEVICE. JOHN C. W. BEALL, Washington, D. C. Filed July 30, 1926. Serial No. 126,039. 10 Claims. (Cl. 88—20.)



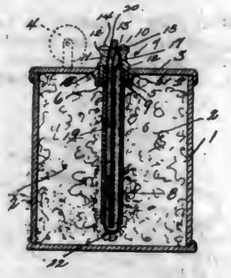
6. A device for use in eye-testing comprising means for obscuring the eyes alternately and a variable speed motor having means for driving the obscuring means at a rate of from one but less than sixteen obscurations per second.

1,662,055. CONNECTING DEVICE. HOMER P. CHANDLER, Mansfield, Ohio, assignor to The Ohio Brass Company, Mansfield, Ohio, a Corporation of New Jersey. Filed May 13, 1925. Serial No. 29,934. 4 Claims. (Cl. 200—115.5.)



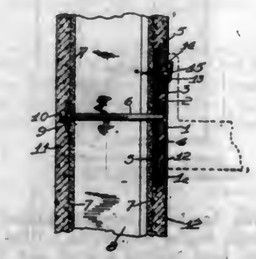
1. A feeder tapper comprising a pair of pivotally mounted jaws to engage and grip a conductor, operating means to engage the jaws externally thereof and to move relative thereto in a longitudinal direction to move the jaws into engagement with the conductor, a handle secured to the operating means and which, when rotated, will rotate the operating means, means connecting the operating means and jaws to move the jaws and said means relative to each other when the handle is rotated, means to secure a cable to said tapper and a fuse interposed between the jaws and the cable.

1,662,056. METHOD OF SUBLIMATION. CROSBY FIELD, Mahwah, N. J., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 22, 1920. Serial No. 367,821. 14 Claims. (Cl. 260—57.)



1. The method of effecting the sublimation of anthracene, anthraquinone, and the like which comprises charging the material in a finely divided state into a preheated subliming receptacle and stirring the material therein until it becomes plastic, and then passing a heated gas or vapor through the receptacle to promote the sublimation.

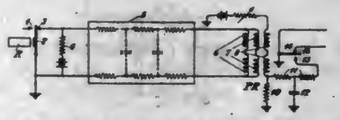
1,662,057. COMBINED MOTION-PICTURE CAMERA AND PROJECTOR. ARCHIE K. HADLEY, Milwaukee, Wis. Filed May 9, 1923, Serial No. 637,822. Renewed Sept. 6, 1927. 6 Claims. (Cl. 88—18.)



1. In a device of the type described, a moving picture machine having a film taking or projecting aperture therein and intermittent mechanism for moving a standard film past the aperture at various speeds, said mechanism comprising a plurality of spools of different diameters each adapted to be operatively connected to the film, common means for actuating said spools, and means for moving any one of said spools into operative engagement with the film, means for feeding the film to said spools, and means for changing the speed of said film feeding means.

1,662,058. WICK DEVICE FOR CIGAR AND OTHER LIGHTERS. STUART A. HARGRAFT, Chicago, Ill. Filed Feb. 4, 1927. Serial No. 165,861. 1 Claim. (Cl. 67—7.)

A device of the character described comprising a wick, a hollow cylindrical container for the wick, a head for supporting the container and carried on one end thereof, said head formed with an opening communicating with the interior of the container and the walls of the opening being flush with the interior wall of the container to provide a smooth riding surface for the wick, said opening being gradually restricted toward the mouth thereof to substantially the size of the wick, the body of the wick being doubled upon itself and enclosed within the container and head with one end projecting out of the opening in the head, the remaining end of the wick lying at all times within the restricted portion of the opening in the head, which restricted portion constitutes an obstruction preventing withdrawal of said end of the wick when the projected end of the wick is fed out of the container.



1,662,059. FIXTURE ANCHORAGE. WILLIAM GERALD HEMSWORTH and THOMAS ANDREW HEMSWORTH, Chicago, Ill. Filed June 10, 1927. Serial No. 197,978. 3 Claims. (Cl. 72—101.)

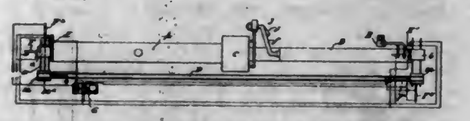
2. A fixture anchorage, comprising a body portion in the form of a grille, means for securing said body portion to wall, a plurality of metal plates covering the openings at the rear of the grille, the openings in front of said sheet metal plates being adapted to receive plaster, bracket holding means, and means for securing said bracket holding means to said plates, said last-named means being arranged to project through said openings and through said metal plates.

1,662,060. RELAY AND CIRCUITS THEREFOR. JOSEPH HERMAN, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 31, 1925. Serial No. 78,657. 4 Claims. (Cl. 175—320.)

1. A polar relay comprising an operating winding, a biasing winding, and an armature, and means controlled by said relay whereby when the armature is on one of its contacts the biasing current of small but definite value will flow through the biasing winding to produce a pull on the armature opposite to that of the

operating winding, and means whereby when the armature is on the other of its contacts the biasing current will be increased.

1,662,061. ALKYLATION OF CARBAZOL. RAY W. HESS and JOHN C. SIEMANN, Buffalo, N. Y., assignors to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 25, 1922. Serial No. 531,779. 24 Claims. (Cl. 260—46.)



1. The method of making an N-derivative of carbazol which comprises causing carbazol to react with an alkylating agent of the aliphatic series in the presence of an acid binding agent.

1,662,062. PROCESS OF MAKING INDOPHENOLS. RAY W. HESS, Buffalo, N. Y., and ORIN D. CUNNINGHAM, Indianapolis, Ind., assignors to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Mar. 25, 1922. Serial No. 546,859. 15 Claims. (Cl. 260—55.)

1. The method of making an indophenolic compound, which comprises condensing a carbazole compound with a para-nitrosophenol compound in the presence of sulfuric acid, and maintaining throughout the condensation an excess of the para-nitrosophenol compound.

11. The manufacture of condensation products of N-substituted carbazole and a p-nitroso-phenol by bringing an N-substituted carbazole and a p-nitroso-phenol together in presence of a condensing agent at a temperature not exceeding about minus 5° C. and maintaining the reaction-mixture throughout the condensation at a temperature below 0° C.

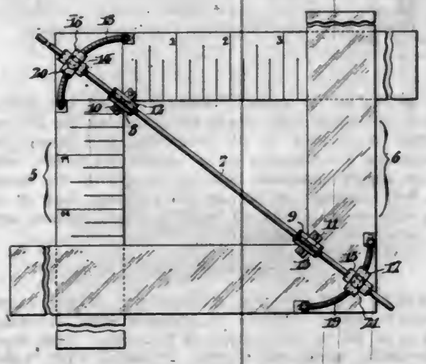
1,662,063. APPARATUS FOR FIRING CERAMIC AND OTHER PRODUCTS. CHARLES T. HOLCROFT, Detroit, and CHARLES E. DOLL, Mount Clemens, Mich. Filed Dec. 1, 1924. Serial No. 753,084. 64 Claims. (Cl. 25—142.)

1. In the art of "firing" articles, a tunnel kiln formation of the muffle type, means for advancing the articles through the tunnel of the formation, and means for establishing a circulation of air within the tunnel with the air supply admission adjacent an end of the tunnel and with pressure of the air greater than that of atmospheric pressure, the air being in direct contact with the advancing articles.

1,662,064. AUTOMOBILE RADIATOR. HARRY JAFFE, Detroit, Mich., assignor to Kalman Steel Company, Chicago, Ill., a Corporation of Delaware. Filed Sept. 21, 1925. Serial No. 57,687. 7 Claims. (Cl. 157—129.)

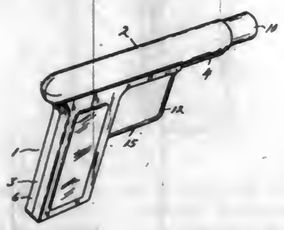
1. A radiator core comprising a plurality of vertically extending strips, the body portions of the strips being flat and extending in single thickness from the top to the bottom of the core, the strips having longitudinally

extending grooves adapted to cooperate to form vertically extending water passages in the core, portions of the strips partly severed and formed out of the planes of



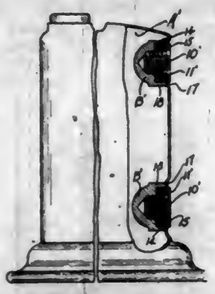
the strips the formed-out portions of adjacent strips contacting to space the water passages apart transversely of the core.

1,662,065. VANITY CASE. WILLIAM G. KENDALL, Newark, N. J. Filed July 29, 1926. Serial No. 125,632. 3 Claims. (Cl. 132—83.)



2. A vanity case comprising a rectangular casing having an opening in a wall thereof, a slidable tray adapted to be longitudinally slid to and fro through the said opening, a guide associated with said opening and consisting solely of a U-shaped metal strip independent of said tray and located within the said casing and the base of the said U-shaped metal member being opposite the opening in the said casing and being adjacent a vertical wall of the said casing, the said guide contacting with the rear wall and with the longitudinal walls of said casing, the legs of the said U-shaped guide member having longitudinal guide grooves formed therein, the rear portion of the said tray having lugs adapted to engage the guide grooves in said legs, the height of the said opening being sufficient to permit the rearward insertion of the said sliding tray, the outer ends of the said guide grooves being spaced from the outer ends of the said legs.

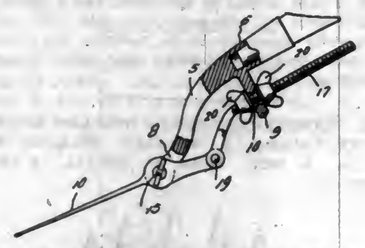
1,662,066. GAUGING DEVICE. REINHOLD KRUMM, Philadelphia, Pa. Filed Nov. 22, 1926. Serial No. 150,075. 4 Claims. (Cl. 33—95.)



1. A gauging device of the character described comprising opposing overlapping members enclosing an intervening exposure area, fittings having swivel connection with said members and a connecting rod slidably engaged in the fittings whereby the members may be moved toward or away from one another and relatively swung in varying the configuration and size of the exposure area.

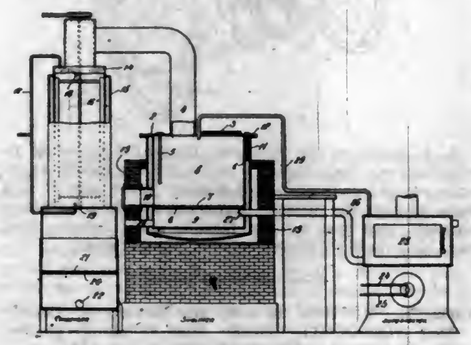
1,662,067. LIQUID GUN. CHARLES F. LEFEVER, Plymouth, Mich., assignor to Daisy Manufacturing Company, Plymouth, Mich., a Corporation of Michigan. Filed July 18, 1927. Serial No. 206,637. 7 Claims. (Cl. 42—56.)

1. In a gun, the combination of a frame, a reciprocable liquid barrel guided by said frame, a stationary piston cooperating with said barrel, a trigger connected to said barrel for moving the same in one direction, and a spring connected to said trigger adjacent the point of connection of said trigger to said barrel for moving said barrel in the opposite direction.



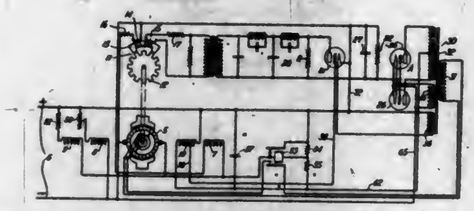
1,662,068. FITTING FOR SHEET METAL. JAMES IRONSIDE, Detroit, Mich., assignor to Clayton and Lambert Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 2, 1925. Serial No. 12,753. 3 Claims. (Cl. 220—91.)

1. In a tank having a laterally flanged aperture, a handle attaching means comprising a plug for engaging a handle, said plug having a skirt and flange portion forming an annular groove concentric with the axis of the plug, a charge of solder positioned in the end of said groove and said groove being adapted to receive said lateral flange, said skirt portion of the plug being adapted to be spun over against the surface of said tank adjacent said aperture.



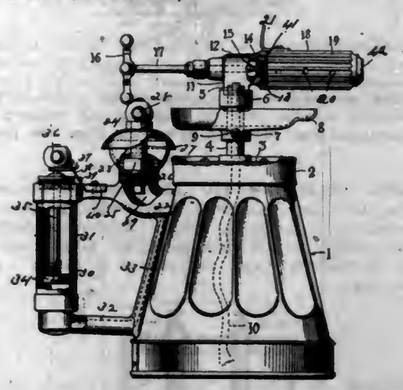
1,662,069. COMBINED GARDEN IMPLEMENT. ERNEST F. KEILIG, Ravenna, Nebr. Filed May 6, 1927. Serial No. 189,243. 1 Claim. (Cl. 306—4.)

In a convertible garden implement of the class described, a handle, a socket member including a socket receiving one end of the handle, and a longitudinally bowed shank terminating in a bifurcated head, said socket member being also provided with an angularly disposed apertured lug, an earth working blade provided with a shank having its intermediate portion disposed between the furcations of said bifurcated head and pivotally and separately connected therewith, a bolt pivotally connected to the free end portion of said shank and having an opposite end extending through the aperture in said lug, and re-



taining nuts carried by the threaded portion of the bolt and cooperable with the lug for holding said blade in different adjusted positions.

1,662,070. SUBLIMATION APPARATUS. CHAUNCEY A. LYFORD, East Aurora, N. Y., assignor to National Aniline & Chemical Co., Inc., New York, N. Y., a Corporation of New York. Filed Apr. 2, 1920. Serial No. 370,802. 3 Claims. (Cl. 23—264.)



1. A sublimation apparatus comprising a container for the material to be sublimed, means for introducing steam into the container beneath said material, means for introducing steam into said container above said material and means for condensing the sublimed material.

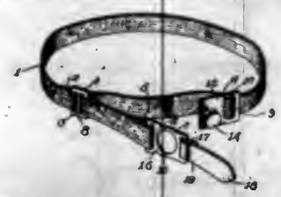
1,662,071. REGULATING SYSTEM. EMANUEL C. MANDERFELD, Boonton, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 4, 1926. Serial No. 127,091. 9 Claims. (Cl. 171—312.)

1. In a regulator system, a dynamo-electric machine, a three-element electron discharge tube, means for controlling said discharge tube in accordance with an operating characteristic of the machine, an amplifier having an input circuit controlled by said discharge tube and an output circuit for governing said machine to maintain said operating characteristic substantially constant, and means for varying the operation of said discharge tube in accordance with conditions obtained in the output circuit of the amplifier.

1,662,072. BLOWTORCH. BRUNO MARTIN, Saginaw, Mich. Filed Aug. 5, 1926. Serial No. 127,265. 4 Claims. (Cl. 158—33.)

1. In a blow torch, a tapered tank, lateral hollow supports thereon, an air pump on and in communication with said supports, and a pipe lying against and secured to the outer wall of the said tank and closely contacting therewith and communicating with one of the said lateral supports and with the tank.

1,662,073. CLIP FOR WRITING INSTRUMENTS. WILLIAM CLARKE S. MAYS, Providence, R. I., assignor to The Mays Manufacturing Co., Inc., Providence, R. I., a Corporation of Rhode Island. Filed Mar. 28, 1927. Serial No. 177,595. 4 Claims. (Cl. 24—11.)

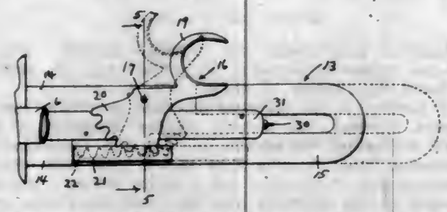


1. A method of forming a hollow ball on the clip for writing instrument, which consists in blanking from sheet stock a body portion having laterally extending wings and a tongue adjacent its end, the edges of which are respectively convexly and concavely shaped to fit together drawing said wings, tongue and adjacent body to form a cup, with the wings and tongue extending at right angles to the body, folding the end of said tongue towards the body and subsequently folding the said wings and tongue to form a complete hollow substantially spherically shaped formation.

1,662,074. FASTENER FOR SLEEVE BANDS. WILLIAM MCMEANS, Scranton, Pa. Filed Aug. 31, 1926. Serial No. 132,793. 1 Claim. (Cl. 24—77.)

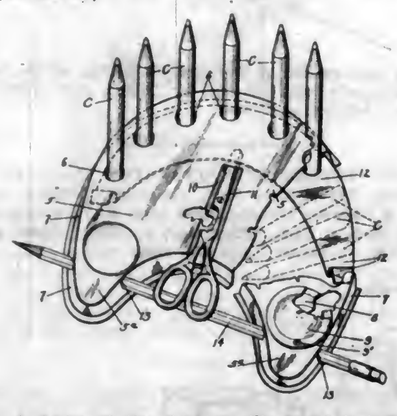
A fastener of the character described comprising companion members, one fastener member consisting of a plate having one end portion provided with transversely extending band receiving slots spaced from each other longitudinally of the plate and a button having a shank carried by and extending from the other end portion of said plate and at its outer end provided with an enlarged head, the other fastener member consisting of a plate having one end portion formed with a slot to receive an end portion of a band and its intermediate portion provided

with an enlarged opening materially greater in diameter than the head of said button and adapted to be disposed about the shank beneath the head of the button,



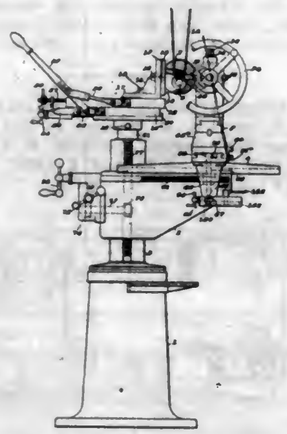
the other end portion of the plate having a slot formed transversely therein, and an actuating tab engaged in the last-mentioned slot and extending from the plate.

1,662,075. ELECTROLYTIC RECTIFIER. ADALBERT BÉLA MUNTYAN, Amsterdam, Netherlands, assignor of one-half to George Ernst Fischer, Amsterdam, Netherlands. Filed Oct. 15, 1924, Serial No. 743,813, and in the Netherlands Oct. 19, 1923. 1 Claim. (Cl. 175—318.)



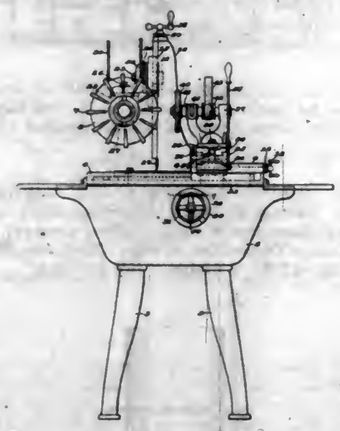
An electrolytic current rectifier comprising in combination: an electrolyte; electrodes of aluminium comprising anode and cathode members immersed in said electrolyte; and metallic oxide coatings of different thicknesses formed on said anode and cathode members by treatment while they are outside said electrolyte; said coated anode and cathode members having when in the electrolyte a constant difference of electrical capacity from one another per unit area of surface such that they possess the correct capacities corresponding to the strength of current for which the rectifier is constructed, remain unaltered, and are enabled to operate so as to transform the alternating current supplied directly into continuous current.

1,662,076. TRUMPET. JOSEPH B. NEWMAN, Ravenna, Ky. Filed June 10, 1927. Serial No. 197,885. 4 Claims. (Cl. 84—394.)



2. In a musical instrument of the class described, a trumpet embodying customary piston valves, each including a cylinder, a piston reciprocable in said cylinder, a slide valve for at least one of said piston valves, said slide valve including spaced parallel rigid branches, and a U-shaped slide mounted thereon, a finger actuated lever pivotally mounted on a part of the trumpet adjacent said slide, a rack carried by said slide, and a pinion carried by said lever and engageable with said rack, together with adjustable spring means for resisting the actuation of said lever and for returning said slide to normal closed position.

1,662,077. KINDERGARTEN CRAYON AND SCISSORS HOLDER. HATTIE B. SCHWARTZ, Pasadena, Calif. Filed Dec. 6, 1927. Serial No. 238,111. 5 Claims. (Cl. 120—1.)

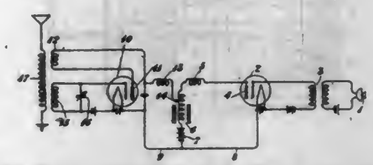


1. A device of the character illustrated including in combination a body having a series of holes therein to receive crayons endwise, a stop member at one side of said holes to limit the distance crayons can be inserted therethrough, said stop member forming space between said body and itself to receive crayons therebetween.

1,662,078. METHOD OF AND MACHINE FOR GRINDING FINE-TOOTH HOBS. OLE SEVERSON, Shelton, Conn., assignor to The O. K. Tool Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 12, 1925. Serial No. 1,876. 20 Claims. (Cl. 51—95.)

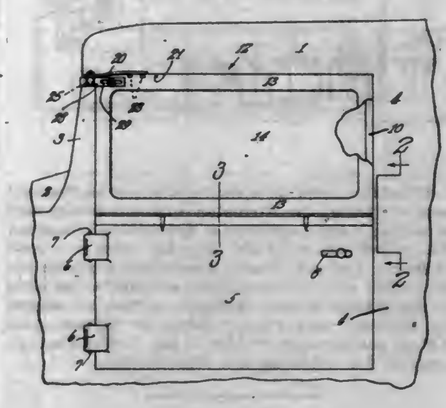
1. In a hob grinding machine, the combination comprising an arbor; a thread formed on said arbor having the same lead as the thread formed by the hob teeth to be ground; mechanism co-operating with said arbor thread for longitudinally moving the arbor in accordance with the rotation thereof and for holding the hob stationary during the grinding of the teeth; and indexing mechanism carried by said arbor for setting it in positions for grinding the various teeth in the hob thread.

1,662,079. MACHINE FOR GRINDING HOB AND DISK CUTTERS. OLE SEVERSON, Shelton, Conn., assignor to The O. K. Tool Company, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 2, 1925. Serial No. 6,255. 20 Claims. (Cl. 51—225.)



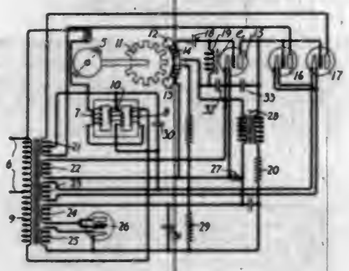
1. In a grinding machine, the combination comprising a carriage slidably mounted on the frame of the machine; a blank slide mounted on said carriage and movable in a direction perpendicular to the direction of the carriage movement; a blank varying arbor mounted on said blank slide; a wheel slide mounted on the frame of the machine and movable therealong in a direction perpendicular to the direction of carriage movement and in a plane parallel to said carriage plane; means for exerting a force tending to move the wheel slide towards the blank slide; and a grinding wheel mounted on said wheel slide.

1,662,080. PAPER PACKAGE. ULYSSES S. SILBAR, Grand Rapids, Mich. Filed Apr. 19, 1926. Serial No. 102,629. 1 Claim. (Cl. 206—57.)



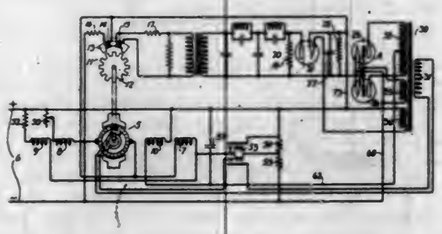
In a construction of the class described, an elongated envelope having an open lower end, a member located within the envelope, permanent securing means passing through said envelope and the member near the upper ends of said envelope and member, a plurality of sheets of paper folded about a vertical edge of said member and located within the envelope, and additional securing means passing through said paper sheets and member near the upper ends of said sheets, the upper ends of said sheets being located slightly below the first mentioned securing means, substantially as described.

1,662,081. HIGH-FREQUENCY MODULATING SYSTEM. HAROLD C. SILENT, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 24, 1924. Serial No. 715,701. 4 Claims. (Cl. 179—171.)



1. In a modulating system in which the modulating current varies the effective E. M. F. of the source of space current of a vacuum tube oscillator, the combination with an oscillator of a modulator and means to couple the said oscillator and modulator, the said means being so adjusted that the impedance of the circuit looking toward the said modulator is made equal to that looking toward the said oscillator.

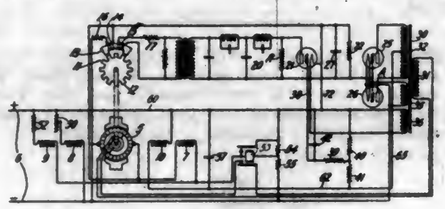
1,662,082. DEMOUNTABLE WINDOW. HINSDALE SMITH, Keyport, N. J. Filed Jan. 5, 1925. Serial No. 527. 7 Claims. (Cl. 296—45.)



1. The combination with a vehicle body having a door hinged thereto, of a demountable window, interlocking devices carried by said window and door adapted when in interlocked engagement to prevent a relative vertical separating movement thereof, a hinging device carried by said window and a part of said vehicle adjacent thereto for hingedly connectig said window to said vehicle to permit opening and closing of said door and window as a unit.

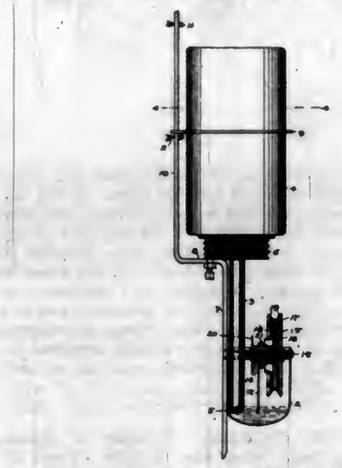
1,662,083. ELECTRIC REGULATOR. HUGH M. STOLLER, Mountain Lakes, N. J., and EDMUND R. MORTON, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 4, 1926. Serial No. 127,049. 18 Claims. (Cl. 171—312.)

1. The combination with a dynamo electric machine, of a regulator including a detector responsive to variations in the speed of said machine, and means for impressing upon said detector an E. M. F. proportional to the rate of change of the speed of said machine.



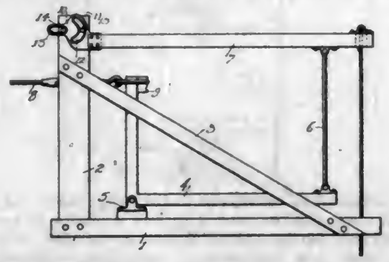
1,662,084. ELECTRIC REGULATOR. HUGH M. STOLLER, Mountain Lakes, N. J., and EDMUND R. MORTON, New York, N. Y., assignors to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 4, 1926. Serial No. 127,050. 15 Claims. (Cl. 171—119.)

1. Means for regulating a characteristic of an electrical system, comprising an alternator, a motor driving said alternator at a speed sufficient to produce high frequency waves, a low-pass filter fed by said alternator, said filter having a steeply sloping attenuation characteristic in the region of the frequency of said alternator when the characteristic of said system is normal, an electric space discharge tube for rectifying the current from said filter, and means responsive to the rectified alternating current for regulating said characteristic.



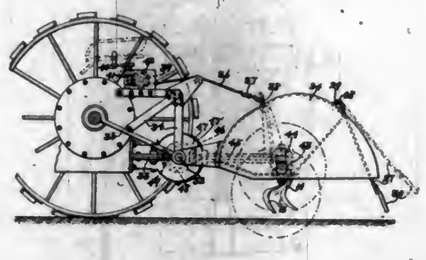
1,662,085. REGULATING SYSTEM. HUGH M. STOLLER, Mountain Lakes, N. J., assignor to Bell Telephone Laboratories, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 4, 1926. Serial No. 127,051. 16 Claims. (Cl. 171—119.)

1. In a regulator system, a dynamo electric machine having a regulating field winding for controlling an operating characteristic of the machine, means for automatically varying the excitation of said field winding to maintain said machine operating characteristic constant and comprising an electron discharge tube and an amplifier having an input circuit connected to said tube and an output circuit connected to said regulating field, means comprising a feed-back circuit for impressing a



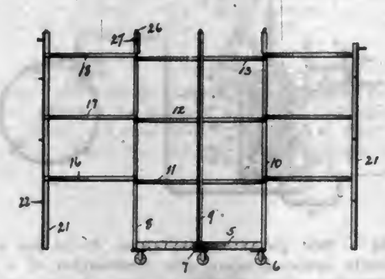
potential from the amplifier output circuit on said tube, and means for effecting a time lag in the feed-back from the amplifier output circuit to prevent hunting action.

1,662,086. OILING APPLIANCE FOR THREAD OR YARN. HERMAN F. STUHR, Cleveland, Ohio, assignor to The E. Konigslow Stamping & Tool Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 26, 1925. Serial No. 4,779. 4 Claims. (Cl. 91—48.)



1. An oiling appliance for thread or yarn, comprising an oil receptacle, a wheel within said receptacle having a central body and a hub of absorbent material, an oil collecting ring suspended from said hub, and tension hooks for the thread or yarn mounted upon said receptacle.

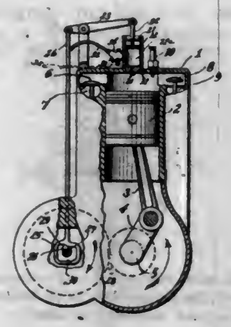
1,662,087. PUMPING JACK. DANIEL H. THOMAS and EDWARD A. SCHAMBS, Wichita Falls, Tex. Filed Jan. 31, 1927. Serial No. 164,900. 5 Claims. (Cl. 74—5.)



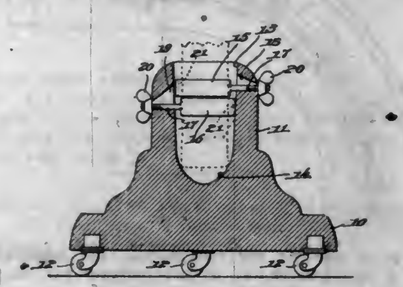
1. A device of the character described comprising in combination with a pumping jack, a plate having an arcuate opening at one end, and an elongated opening situated at right angles to said first opening; said plate being secured to the beam of said jack; and pins arranged stationary with respect to the mounting of said beam to operate in said openings to restrict and co-ordinate the vertical and lateral displacement of said beam.

1,662,088. TILLER. HANS VON RAUSSENDORFF, Chicago, Ill. Filed Oct. 25, 1926. Serial No. 143,826. 10 Claims. (Cl. 97—49.)

1. A tiller comprising a rotatable wreath including a ring having a plurality of tools with resilient curved shanks mounted on said ring and being arranged in succession and spaced so the shanks will engage and brace each other when a tool encounters a fixed obstacle.



1,662,089. BAG CARRIER OR RECEPTACLE SUPPORT. ANTONIO VIVERITO, New York, N. Y. Filed Jan. 18, 1927. Serial No. 161,943. 2 Claims. (Cl. 280—50.)

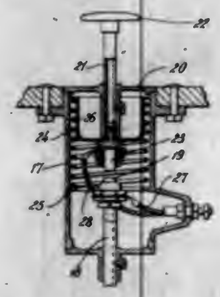


1. A carrier of the class described comprising a platform having floor rollers, a frame carried by the platform and consisting of a plurality of standards and segmental connecting hoops, a pair of swinging sections hingedly connected to opposed standards, said sections consisting of similarly located segmental hoops and vertical standards adapted to be interconnected completing an enclosure for a bag or receptacle.

1,662,090. INTERNAL-COMBUSTION ENGINE. HARRY G. VORHAUER, Long Beach, Calif. Filed Mar. 24, 1924. Serial No. 701,875. 2 Claims. (Cl. 123—33.)

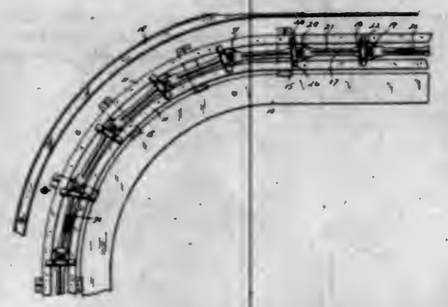
1. In an internal combustion engine, the combination with a firing chamber and a piston mounted to reciprocate therein, of an auxiliary pumping chamber and piston, means for admitting a rich mixture to said pumping chamber, means for regulating the action of the pump piston so that said rich mixture is injected into said firing chamber during the compression stroke thereof, and a Venturi-shaped discharge orifice between the auxiliary pumping chamber and firing chamber, and means separate from the auxiliary pumping chamber and piston for pumping air and fuel into the firing chamber to form a lean mixture in the firing chamber.

1,662,091. HOLDER FOR TREES AND THE LIKE. JOSEPH GIACENTO VUOZZO, Corona, N. Y. Filed Dec. 2, 1926. Serial No. 152,243. 1 Claim. (Cl. 248—38.)



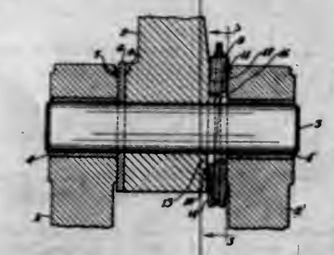
A tree holder of the class described comprising a weighted base having an upstanding portion bored to receive tree butts of various sizes, said bore terminating in a concaved surface to form a resting place for various sizes of tree butt ends; clamp bands arranged in said bore adjacent the mouth thereof one above another each having a stem forming part thereof, and extending through a slot in the wall of said upstanding portion diametrically opposite to one another, each stem being threaded to receive a thumb nut whereby said bands may be drawn towards a tree butt passing through them to thereby clamp a tree butt between them.

1,662,092. CONTROL OF GASOLINE ELECTRIC POWER SYSTEMS. OLIVER F. WARHUS, Albany, N. Y., assignor to Versare Corporation, a Corporation of New York. Filed Oct. 12, 1926. Serial No. 141,180. 4 Claims. (Cl. 74—81.)



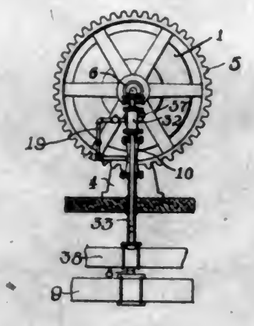
1. A controlling device for controlling an electric circuit and the throttle valve of an internal combustion engine comprising a movable member adapted to be connected with the throttle valve, a movable actuating device for said member having an initial movement inde-

pendent of said member before it operates the same, and an electric switch having contacts associated with said controlling device and adapted to be connected in said



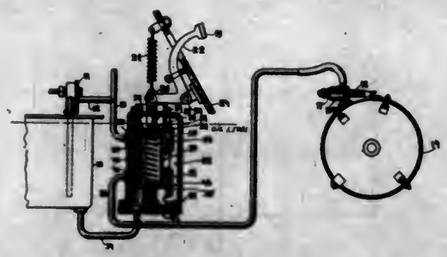
electric circuit, said contacts being arranged to be closed by operation of the actuating device before the actuating device operates said movable member.

1,662,093. CONVEYER-BAR CONSTRUCTION. HAROLD S. WELLS and HARVEY H. LIGHTLE, Detroit, Mich., assignors to Dodge Brothers, Inc., Detroit, Mich., a Corporation of Maryland. Filed Feb. 1, 1926. Serial No. 85,338. 17 Claims. (Cl. 104—172.)



2. In a conveyer bar construction, the combination with a curved track-way of two conveyer bar sections having lateral pivotal connection, and means carried thereby and embracing said track-way for preventing relative lateral or vertical displacement of said conveyer bar.

1,662,094. ADJUSTABLE BEARING. EDWARD J. WESP, Canton, Ohio, assignor to The Canton Foundry & Machine Company, Canton, Ohio, a Corporation of Ohio. Filed May 22, 1926. Serial No. 110,858. 5 Claims. (Cl. 308—163.)

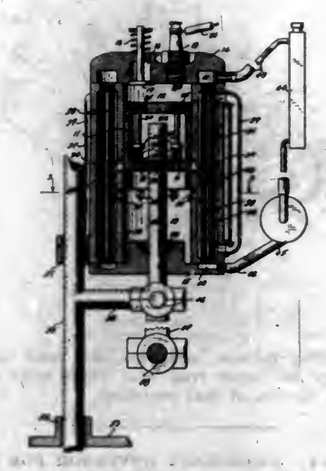


1. An adjustable bearing including a pair of washers, each washer having opposite faces inclined to each other, one of the faces of one of the washers abutting one of the faces of the other washer, and adjustable means maintaining the washers in abutment with each other, and the adjustable means including a U bolt engirdling peripheral portions of one of the washers, and means adjustably securing the ends of the U bolt on the other washer.

1,662,095. DOUBLE-WALL VENTURI STEAM FITTING. JOHN O. WOODSOME, Newton, Mass. Filed Jan. 9, 1926. Serial No. 80,230. 4 Claims. (Cl. 34—4.)

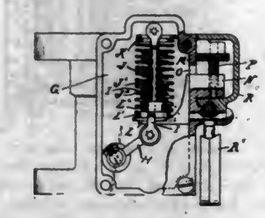
1. A steam circulating system for driers, comprising a steam inlet pipe into a drier, a Venturi type of fitting connected in said pipe, an exhaust pipe from said drier, a Venturi type of fitting in said exhaust pipe and a connection between the constricted portions of said fittings.

1,662,096. FLUID-PRESSURE-OPERATED VEHICLE BRAKE. VICTOR I. ZELOV, Rosemont, Pa. Filed Feb. 17, 1926. Serial No. 88,722. 13 Claims. (Cl. 188—152.)



9. In a fluid pressure transformer device for a hydraulically operated brake, the combination of a pair of cooperating valve members substantially immersed in fluid and normally effective upon movement relative to each other in one direction to deliver a pressure from the transformer device determined by the range of movment of the valve members, operating means for one of the valve members, a piston member carried by the other valve member and having fluid on one side thereof in the transformer device, and means carried by the first valve member adapted upon overtravel relative to the second valve member to engage the piston member and move it in a direction for developing pressure upon the exertion of force upon the operating means.

1,662,097. TWO-CYCLE INTERNAL-COMBUSTION ENGINE. ALFRED O. ANDERSEN, Bridgeport, Conn. Filed Dec. 5, 1923. Serial No. 678,600. 12 Claims. (Cl. 60—82.)

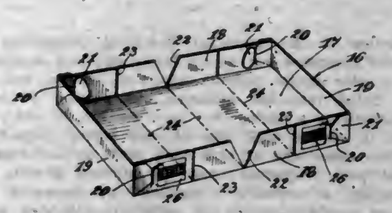


5. In an internal combustion engine, a cylinder, a piston in said cylinder forming a combustion chamber

and a pump chamber respectively on opposite sides of the piston, means for conducting fuel to the combustion chamber, means for conducting exhaust gases from the pump chamber, a gas chamber in the walls of the cylinder forming a cooling means for said walls by transfer of heat from said walls to the gases in said chamber, said cylinder being provided with openings leading to

said gas chamber from the combustion and pump chambers, and arranged to be respectively exposed by said piston alternately at the extremes of its stroke, a partition in the gas chamber between the openings leading from the combustion and pump chambers, gas conducting means communicating with the gas chamber adjacent the opposite ends thereof, and pipes for cooling fluid extending through the gas chamber.

1,662,098. GOVERNOR. JAMES W. ANDERSON, Detroit, Mich., assignor to Monarch Governor Company, Detroit, Mich., a Corporation of Michigan. Filed Mar. 26, 1921. Serial No. 455,765. 2 Claims. (Cl. 137—152.)

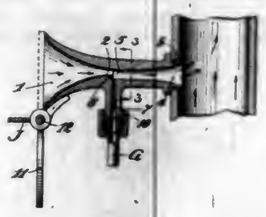


1. In a governor for internal combustion engines, the combination with a casing forming a portion of the engine intake, of a throttle valve in said casing having an eccentric axis to form an unbalanced construction, a stream lined member within said casing operatively connected to said throttle and actuated by the fluid current passing through said casing to close said valve, a plurality of springs forming a counteracting force upon said valve, and means for limiting the action of said springs to produce a characteristic substantially corresponding to the forces tending to close the throttle under constant speed conditions.

1,662,099. LOCKING DEVICE FOR MOTOR VEHICLES. OLAF A. ANDERSON, Hamilton, Ohio. Filed Mar. 9, 1925. Serial No. 14,180. 11 Claims. (Cl. 70—127.)

5. In motor vehicles, the combination with a control lever, and the motor ignition circuit, of a hollow knob on said lever, a switch in said circuit mounted in said knob, and lock-controlled means on said lever for actuating said switch.

1,662,100. PACKING CASE. CARL K. BLUM, Brooklyn, N. Y. Filed Mar. 9, 1927. Serial No. 173,834. 7 Claims. (Cl. 229—8.)



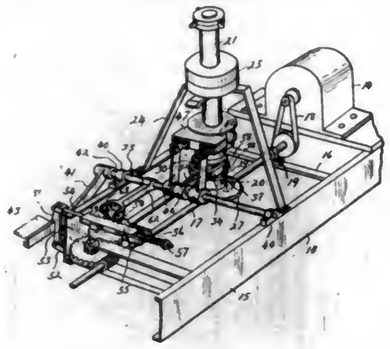
1. A packing case comprising a body having side walls and a cover for said body, the side walls of the said body being provided with slits and notches to permit of folding of the body to provide an object other than a packing case.

1,662,101. LIQUID-FUEL FEED. ENEA BOSSI, New York, N. Y., assignor, by mesne assignments, to Stewart Warner Speedometer Corporation, a Corporation of Virginia. Filed July 12, 1921. Serial No. 484,280. 4 Claims. (Cl. 158—36.)

1. An article of manufacture comprising an aspirator adapted to be connected to the manifold of a hydrocarbon engine and for producing a partial vacuum in a

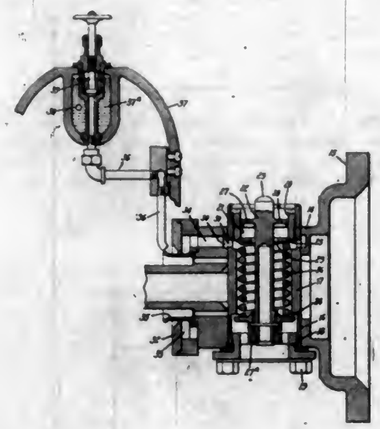
vacuum fuel feed system, said aspirator comprising a body portion provided with a funnel shaped bore at the outer end and terminating in a relatively small opening at the throat of the device, a shoulder adjacent the end

of said opening and a larger bore at the inner end of said body portion, the wall opposite to the said shoulder being a smooth wall, with a transverse passage entering said body portion adjacent said shoulder.



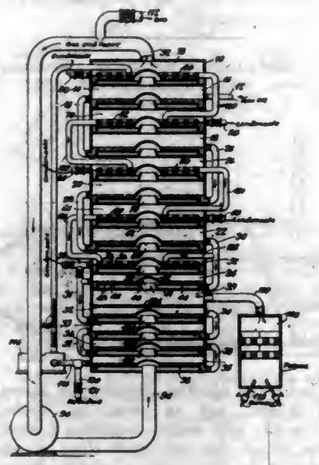
1,662,102. CANE. IRVING CAESAR, New York, N. Y. Filed July 22, 1926. Serial No. 124,226. 1 Claim. (Cl. 67—6.1.)

A device of the character described comprising a cane staff hollowed out at its lower end and provided with exterior screw threads adjacent its tip end, a lighter fitted into the hollowed out portion of said staff comprising a casing the lower portion of which is reduced in size, a wick tube on said casing projecting below the lower end of said cane staff, a horizontally disposed post projecting from the reduced portion of said casing, a vertically extending tube mounted on said post provided at its end adjacent said wick tube with lugs, a friction disk rotatably mounted on said lugs, said friction disk projecting below the free end of said wick tube, a sparking element in said tube in engagement with said friction disk, and a cap having interior threads adapted to mesh with the threads of said cane staff, said cap forming the tip of the cane and serving also to enclose said wick tube and friction disk.



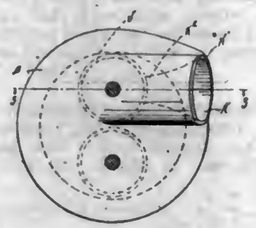
1,662,103. APPARATUS FOR TINNING MILK CANS. CHARLES A. COMP, Detroit, Mich., assignor to Buhl Stamping Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 20, 1925. Serial No. 24,707. 9 Claims. (Cl. 192—144.)

3. In a machine of the class described, the combination with a centrifuge and a driving shaft therefor, of a clutch between said centrifuge and driving shaft, a catch for maintaining said clutch engaged, a pinion rotatable in timed relation to said centrifuge, a longitudinally slidable rack engaging said pinion and a resil-



ient connection between said rack and catch adapted to disengage the latter from said clutch after a predetermined rotation of said centrifuge.

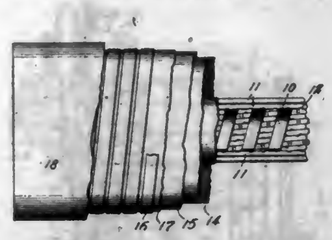
1,662,104. EMERGENCY GOVERNOR FOR ELASTIC-FLUID TURBINES AND THE LIKE. EDGAR D. DICKINSON, Beverly, Mass., assignor to General Electric Company, a Corporation of New York. Filed June 28, 1926. Serial No. 118,901. 3 Claims. (Cl. 264—17.)



3. In an emergency mechanism, the combination of a shaft, means providing an opening extending transversely of the shaft, a plunger in the opening, said plunger having its center of mass to one side of the center of rotation of the shaft, a governor spring which normally holds said plunger stationary, a flange carried by the plunger which defines with the adjacent wall of the opening a pocket surrounding the plunger, means whereby a liquid may be supplied to said pocket, and means for permitting the escape of liquid from said pocket.

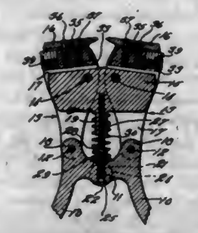
1,662,105. PROCESS AND APPARATUS FOR DISTILLING OIL. HENRY L. DOHERTY, New York, N. Y., assignor, by mesne assignments, to Heat Treating Company, New York, N. Y., a Corporation of Delaware. Filed July 7, 1920. Serial No. 394,490. 15 Claims. (Cl. 196—73.)

11. A process of distilling oil comprising passing oil as a series of connected bodies downwardly through a still, progressively heating the oil to evaporate a series of fractions thereof, the boiling points of the fractions being progressively higher as the oil flows downwardly and removing the fractions as vapors into condensed bodies of oil cooled independently of the oil being evaporated.



1,662,106. INTERNAL-COMBUSTION ENGINE. HERMANN I. A. DORNER, Hanover, Germany. Filed Feb. 15, 1926. Serial No. 88,409. 6 Claims. (Cl. 123—32.)

1. In an internal combustion engine of the Diesel type, the combination of a cylinder having a valve controlled inlet port in the head thereof and a single main inlet passage through said head communicating with said port and arranged to direct the incoming charge tangentially of the cylinder and oblique to the axis thereof.

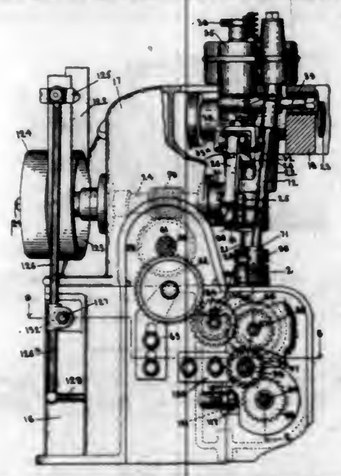


1,662,107. HIGH-TENSION ELECTRIC CABLE. LUIGI EMANUELI, Milan, Italy, assignor to Societa Italiana Pirelli, Milan, Italy, a Corporation of Italy. Filed Sept. 1, 1925. Serial No. 53,928. 8 Claims. (Cl. 173—266.)

1. In a high tension electric cable, the combination of a metallic core through which oil flows, said core forming a helix, current conductors stranded on and supported by the helix, means for forming channels between certain of the conductors so as to permit oil

from within the core to flow outwardly, dielectric material which surrounds the conductors and is impregnated with the oil, and an enclosing metal sheath.

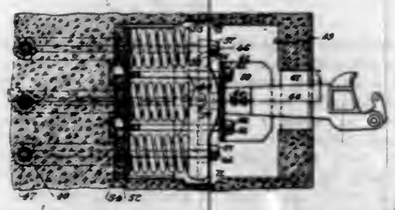
1,662,108. PLIERS. CHARLES P. FAY, Springfield, Mass. Filed Apr. 5, 1926. Serial No. 99,852. 6 Claims. (Cl. 81—199.)



1. In a tool of the class described, a pair of operating levers pivotally connected to turn upon a common fulcrum, a pivot pin forming said fulcrum, a pair of spaced plates pivotally connected to each operating lever and disposed on opposite sides of the same, a fulcrum bar disposed between said pairs of plates and extending across from the plates of one pair to those of the other with its side faces contiguous with the inner faces of said plates, each pair of plates being separately pivoted to said bar at laterally spaced points intermediate the ends of the plates, slidably engaged stabilizing members disposed in the space between said pairs of plates and between said bar and pivot and fixed one to said bar and one to said pivot, and a jaw carried by each pair of plates.

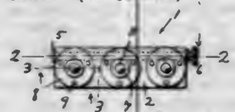
1,662,109. HIGH-SPEED-GEAR-GENERATING MACHINE. EDWIN R. FELLOWS, Springfield, Vt., assignor to The Fellows Gear Shaper Company, Springfield, Vt., a Corporation of Vermont. Filed June 7, 1923. Serial No. 643,884. 44 Claims. (Cl. 90—9.)

1. A gear generating machine comprising a rotatable and endwise movable cutter spindle having a gear-shaped planing cutter on one end and carrying an encircling series of rack teeth in planes perpendicular to its axis, means for rotating said spindle, an oscillative gear segment conjugate to said rack teeth in mesh therewith and mounted to oscillate in the same plane with the spindle, and automatic mechanism arranged and operated to oscillate said segment at high speed.



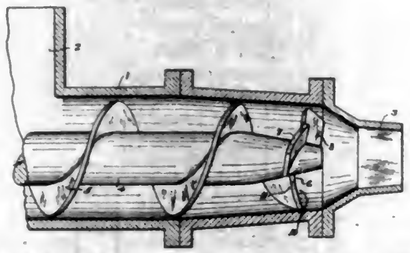
20. In a gear generating machine, the combination of cutter and work holders, spindles for the cutter and work piece mounted in the respective holders, one of said holders being movable to effect a relative movement of approach and recession between the work and the cutter, a shaft arranged in the line of travel of the holder which is so movable, gearing between said shaft and the spindle mounted in the latter holder through which rota-

tion of said shaft imparts rotation to said spindle, a bar adjustable in length connected to the last named holder and arranged in parallel with said shaft, and a cam



rotatably mounted on said shaft and driven therefrom at a different speed, and means operatively connected with said bar for giving movement to the last named holder.

1,662,110. DRAFT RIGGING FOR CONCRETE RAILWAY CARS. ARTHUR C. GRIEWANK, Oakland, Calif. Original application filed Oct. 31, 1918, Serial No. 260,434. Divided and this application filed Aug. 9, 1919. Serial No. 316,483. 11 Claims. (Cl. 213—49.)

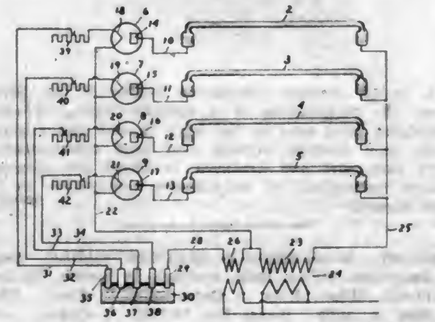


1. In combination with a railway car body, a longitudinally extending device the inner ends of which are secured to said body, an outer member slidable upon said device and limited in its outward movement thereby, coiled springs pressing said outer member outwardly, an inner member pressed inwardly by said springs, shock absorbing material between said inner member and the car body, a coupler, and devices for connecting the coupler with the inner member.

1,662,111. ANTISLIPPING DEVICE. RICHARD R. HALSTEAD, Beach, N. Dak. Filed Apr. 4, 1927. Serial No. 180,905. 1 Claim. (Cl. 36—61.)

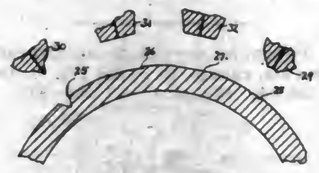
An anti-slipping device comprising a casing adapted to be embedded in a shoe heel, a rotatable shaft extending through the casing, a series of internally threaded housings adapted to be embedded in a shoe heel, an attaching flange formed on the upper portion of each housing for attachment to the bottom of the casing, an externally threaded calk arranged within each internally threaded housing, the lower end of each calk being pointed for engagement with the ground, a rectangular shank formed on the upper end of each calk and extending into the casing, a plurality of sleeves arranged in the casing directly above the respective housings, the bore of each sleeve being rectangular for receiving the rectangular shank of the respective calk, the shank being slidable in the sleeve, a worm wheel formed on the upper portion of each sleeve, said shaft being formed with a series of worms for cooperation with the respective worm wheels whereby the calks may be raised or lowered when the shaft is actuated.

1,662,112. EXTRUSION MACHINE. WILLIAM H. HARTMAN, Canton, Ohio. Filed Jan. 26, 1927. Serial No. 163,671. 9 Claims. (Cl. 25—14.)



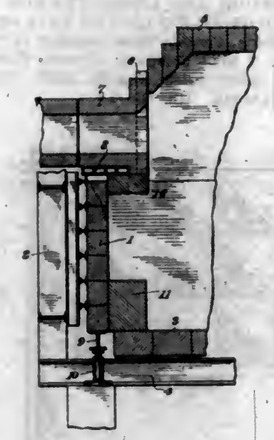
1. An extrusion machine including a casing, a die at one end thereof, and an auger for forcing material through the die, said auger comprising a shaft having a continuous spiral thereon terminating at the forward end portion of the shaft, and a spirally disposed balancing blade upon the shaft in advance of the end of the spiral.

1,662,113. CANAL AND THE FILLING AND EMPTYING OF THE LOCKS THEREOF. FRANCIS M. HENRY, Minneapolis, Minn. Filed Mar. 18, 1926. Serial No. 95,610. 19 Claims. (Cl. 61—8.)



1. The combination with upper and lower locks, of a canal section between said locks, and gate-controlled water-conveying means for filling and emptying the locks without disturbing the water in the canal section.

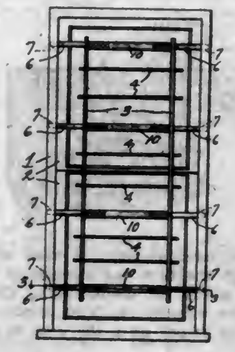
1,662,114. FLASHING AND REGULATING APPARATUS FOR DISCHARGE-TUBE DISPLAY. FRED HOTCHNER, Los Angeles, Calif. Filed Mar. 9, 1927. Serial No. 174,063. 21 Claims. (Cl. 176—124.)



1. A discharge tube in series with a thermionic regulating tube.

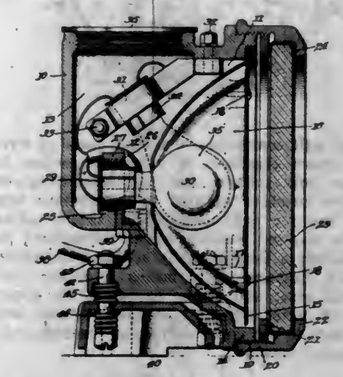
1,662,115. METHOD OF SLOTTING METAL PLATES. EDWIN A. JOHNSON, Houston, Tex., assignor to J. H. McEvoy & Company, Houston, Tex., a Corporation of Texas. Filed July 6, 1926. Serial No. 120,759. 5 Claims. (Cl. 148—9.)

1. A process of slotting metal plate or pipe comprising cutting in said plate a groove shaped to receive the nozzle of a cutting torch, preheating the surface along said groove, placing the torch nozzle directly in contact with the grooved surface to be cut, and moving the nozzle along said groove.



1,662,116. METHOD OF AND APPARATUS FOR PRODUCING MOLTEN GLASS. CHARLES B. KINGSLEY, Clairton, Pa., assignor to Mississippi Glass Company, a Corporation of New York. Filed Mar. 5, 1927. Serial No. 173,012. 2 Claims. (Cl. 49—54.)

1. The method of operating a glass melting apparatus comprising confining molten glass within tank walls, laying a new course of block under a wall section, and raising the new and old portions of said section to displace the top course of the old section in said side wall.

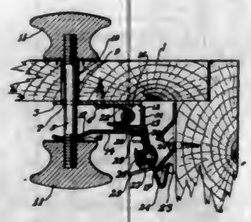


1,662,117. DOOR AND WINDOW GRATING. ALPHONS M. KUHL, Omaha, Nebr. Filed Feb. 28, 1925. Serial No. 12,283. 3 Claims. (Cl. 20—71.)

1. The combination with a window grating comprising spaced bars connected together by rods, of a locking device for locking said grating in a window opening, said device comprising a rotatable sleeve between the bars and engaging the bars, axially alined slidable bolts within the ends of the sleeve and slidably mounted in the bars, a member disposed within the sleeve and connected thereto centrally thereof, said member being provided with right and left hand threaded oppositely extending

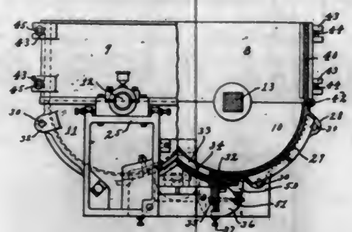
shafts threaded into the inner ends of the bolts and set screws carried by the inner sides of the bars and cooperating with the bolts.

1,662,118. HEADLIGHT. NILS D. LEVIN, Columbus, Ohio, assignor to The Jeffrey Manufacturing Company, a Corporation of Ohio. Filed Jan. 3, 1924. Serial No. 684,190. 1 Claim. (Cl. 240—41.)



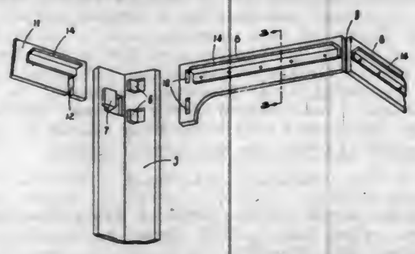
In a lamp, the combination of a casing having a reflector chamber at its front and a socket chamber in its rear, a socket support in the lower part of said socket chamber, a swiveling socket mounting therein, a removable clamping yoke co-operating with said support for securing said mounting in adjusted position, a socket carried by said mounting, and a removably mounted socket support in the upper part of said chamber angularly disposed relative to said first named support and having means permitting longitudinal socket adjustment, a socket carried by said removably mounted support, said sockets being alternatively adapted to support a bulb to project into said reflector chamber.

1,662,119. DOOR CATCH. MORGAN J. LEWIS, Massillon, Ohio. Filed June 3, 1926. Serial No. 113,475. 4 Claims. (Cl. 292—127.)



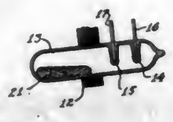
1. A door catch including an attaching plate for mounting upon a door and provided with a pair of angular ears, a latch member provided with a pair of

angular ears, a pivot pin connecting the ears of the plate and latch member, a striker, a spring between the plate and latch member for normally urging the latch member into engagement with the striker, a lever operatively asso-



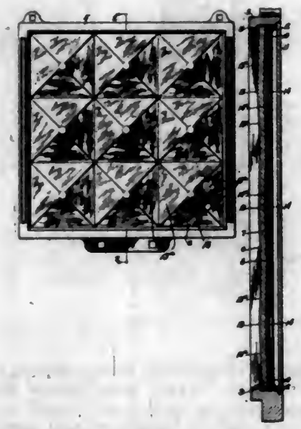
ciated with the latch member, a knob shank slidably mounted through the door and operatively connected to the lever and means for disconnecting the lever from the latch member whereby the latch member will remain engaged with the keeper when the lever is operated.

1,662,120. PUG MILL. MARTIN MADSEN, Monterey Park, Calif. Filed Apr. 20, 1927. Serial No. 185,222. 3 Claims. (Cl. 83—73.)



1. A pug mill comprising a mixing chamber having a sectional bottom composed of a central section having a discharge port therein, and two interchangeable reversible side members adapted to be reversed edge for edge and end for end; two paddle shafts, adjustably mounted in the end members of said chamber; paddles on said shafts; a longitudinally sliding gate adapted to control said discharge port; means to adjust the position of said gate; and means to adjust the upper surfaces of the lower edges of the side bottom members with reference to the upper surface of the adjacent edges of said central member.

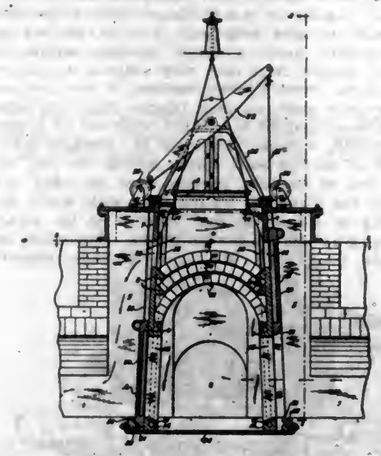
1,662,121. KNOCKDOWN TABLE. ROBERT DOUGLAS MONCRIEFF, Kingston, Ontario, Canada. Filed Mar. 11, 1927, Serial No. 174,673, and in Canada Dec. 11, 1926. 3 Claims. (Cl. 45—48.)



3. In a table of the knock-down type comprising angle-iron corner posts; said posts being provided with spaced inwardly directed tongues on one side and an inwardly directed tongue, the end of which is bent outwardly at an angle, on the other side; side members having openings fitted over said spaced tongues; cross end members having a slot near each end fitted over said tongues; and the ends of said cross end members abutting the ends of said side member to retain the same in fixed position; a top for said table and a means of supporting said top from said side members and end members.

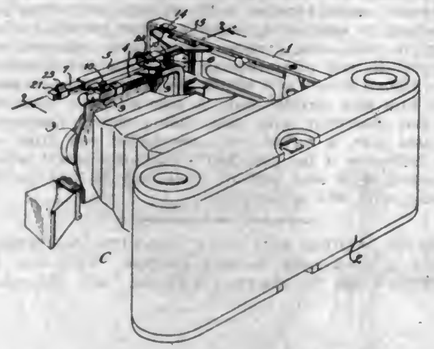
1,662,122. PRESSURE-ACTUATED CIRCUIT CONTROL. IRA E. MCCABE, Chicago, Ill. Filed Feb. 11, 1922. Serial No. 535,755. 13 Claims. (Cl. 200—81.)

1. A pressure actuated circuit control comprising a pressure responsive instrumentality; a carrier for a liquid contact circuit opening and closing device; a fulcrum associated and movable with said pressure responsive instrumentality on which said carrier is mounted for oscillating movement; a liquid contact circuit opening and closing device operatively associable with the carrier; and means co-acting with the pressure responsive instrumentality to oscillate the carrier; said mechanism including a yoke member connected at one point to the pressure responsive instrumentality and at another point to the carrier.



1,662,123. METHOD AND APPARATUS FOR DIFFUSING AND COLORING REFLECTED RAYS OF LIGHT. PARKE G. MYERS, Canton, Ohio, assignor to The Automatic Signal & Sign Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 1, 1923. Serial No. 655,100. 19 Claims. (Cl. 88—1.)

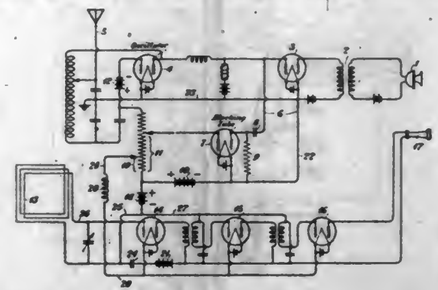
4. The method of coloring and diffusing rays of reflected light which consists in passing the same through a coloring medium associated with a transparent medium having its faces composed of a plurality of inclined faces, to and from a reflecting medium having a face composed of a multiplicity of inclined facets.



16. A reflector for rays of light including a transparent medium, a coloring medium associated with the transparent medium, each of said mediums being pressed to form a plurality of contiguous, shallow forms, and a reflecting medium back of the transparent and coloring medium.

1,662,124. FURNACE VALVE. RALPH D. NYE, Columbus, Ohio. Filed Dec. 2, 1926. Serial No. 152,185. 6 Claims. (Cl. 263—15.)

1. A valve mechanism for furnaces including an upright water-cooled valve seat, a gate valve slidably mounted against said seat, a bar spaced from the lower end of the seat and having a beveled inner face, and the lower end of the gate valve being beveled at a less angle than the bar, whereby the upper portion of the valve is tilted against the seat when in lowered position.



1,662,125. CAMERA FOCUSING DEVICE. PAUL C. OSCANYAN, Bogota, N. J. Filed June 9, 1926. Serial No. 114,709. 17 Claims. (Cl. 95—44.)

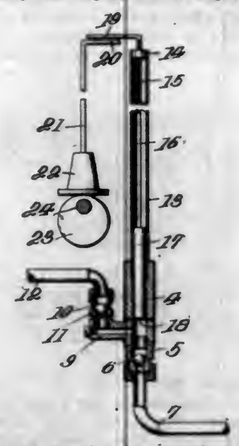
1. Focusing mechanism applicable to a camera and comprising relatively movable sights on a common axis, and means for varying the sight positions in accordance with movement of a camera part in focusing so that proper focus is established by coincidence of convergent direct sight lines from the eyes of an operator through the sights upon the object, the sight axis being located between the object and the observer and parallel to the plane of the observer's eyes and relatively near the latter.

1,662,126. DUPLEX RADIO SIGNALING SET. RALPH K. POTTER, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 31, 1925. Serial No. 66,084. 1 Claim. (Cl. 179—15.)

A carrier signaling set comprising transmitting apparatus including a high frequency oscillator circuit, a low frequency signaling circuit associated therewith whereby the high frequency oscillations may be modulated by the low frequency signals, a vacuum tube circuit having its grid circuit connected to said low frequency signaling circuit whereby the potential of said grid will be determined by the low frequency signaling currents, means controlled by said grid potential for con-

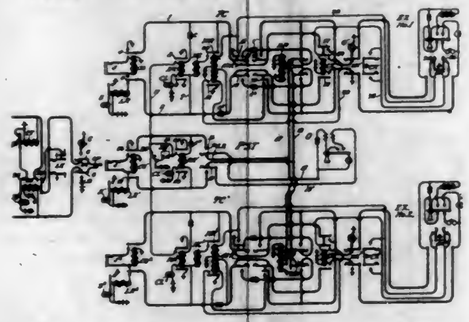
trolling the current flow in the plate circuit of said tube, a resistance included in the plate circuit of said tube, the potential drop across said resistance being controlled by the current flow in said plate circuit, and means controlled by said potential drop across said resistance for controlling said oscillator circuit.

1,662,127. DEEP-WELL PUMP. BERNIE G. PRIMROSE, Plemons, Tex. Filed Sept. 2, 1926. Serial No. 133,226. 9 Claims. (Cl. 103—225.)



1. In a deep well pump, a reciprocating member including connected pistons, each of said pistons including spaced metallic sections, one of which is provided with a flat reciprocating valve and a cylindrical rubber between said sections.

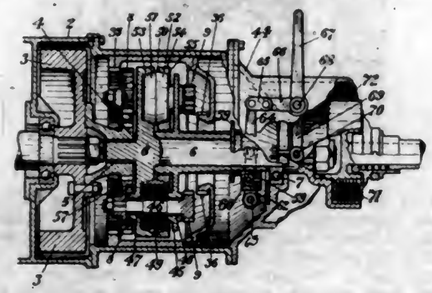
1,662,128. FUEL-FEEDING MEANS FOR CHARGE-FORMING DEVICES. ALBERT G. REDMOND, Indianapolis, Ind., assignor to Jacob Richard Francis, Flint, Mich. Filed Jan. 3, 1923. Serial No. 610,469. 1 Claim. (Cl. 158—36.4.)



The combination with a motor vehicle having an internal combustion engine provided with a charge forming device and a fuel tank for supplying fuel to said charge forming device, of a vertically disposed displacement pump in communication with said tank and said charge forming device, said pump having a weighted piston provided with a non-rotatable piston rod having

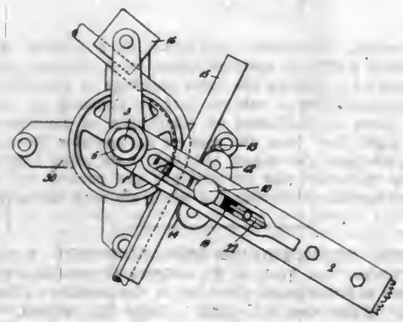
a lateral extension, a lift rod having an extension arranged under the extension of said piston rod and means driven by the engine for raising said lift rod in-

termittently to allow said piston to drop by gravity for forcing and maintaining the fluid in the pipe line leading to the charge forming device under pressure.



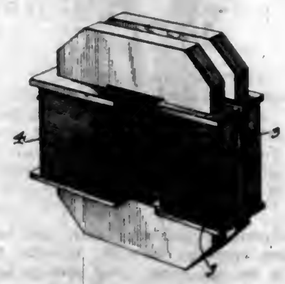
1,662,129. TELEPHONE SYSTEM. DANIEL B. ROBINSON, Cicero, Ill., assignor to Kellogg Switchboard and Supply Company, Chicago, Ill., a Corporation of Illinois. Filed May 17, 1924. Serial No. 713,879. 20 Claims. (Cl. 179—42.)

1. A telephone system including a trunk circuit terminating at one end in a jack terminal at a main exchange and at its other end in a subscriber's substation, an attendant's trunk circuit terminating in one end at said main exchange and at its other end in a telephone set, signal means for said attendant's trunk circuit for signalling the attendant at said attendant's trunk circuit, means in said first trunk circuit controlled from the main exchange for controlling said signalling means, means for said first trunk circuit controlled by the attendant for connecting said subscriber's substation in conversational circuit with the main exchange, automatic means controlled by said subscriber for disassociating said substation and said main exchange and for signalling for a disconnection at the main exchange, and means for said trunk circuit for permitting calls to be extended from the main exchange to said substation exclusive of the attendant.



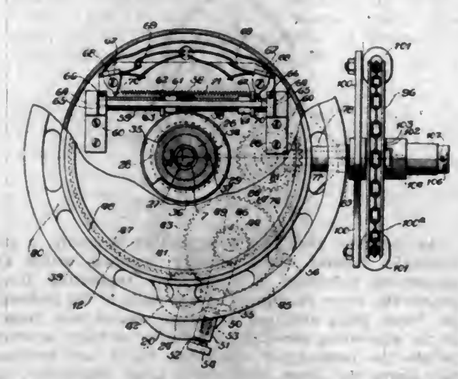
1,662,130. POWER TRANSMISSION GEARING. RALPH W. ROGERS, Franklin, Pa. Filed May 3, 1926. Serial No. 106,370. 6 Claims. (Cl. 74—34.)

1. In a power transmission unit, the combination of a gear member rotatably mounted and adapted to be driven or to drive, a plurality of mating gears comprising a set of planetary gears meshing with said gear member, each mating planetary gear rotatably mounted in a carrying body, said carrying body rotatably mounted co-axially with the said gear member and adapted to be connected to a driven or a driving member, in the said carrying body co-axial with each gear of the set of planetary mating gears a clutch friction surface, a plurality of friction rings each ring adapted to contact with one of the clutch friction surfaces of the carrying body, a pressure plate, on each friction ring additional friction surfaces adapted to contact with one of a plurality of friction surfaces formed in the pressure plate, a plurality of springs each spring having one end attached to one of the said friction rings its other end attached to the planetary mating gear with which the friction ring is co-axial so that rotation of the planetary mating gear relative to the friction ring winds up or unwinds the spring, the pressure plate slidably



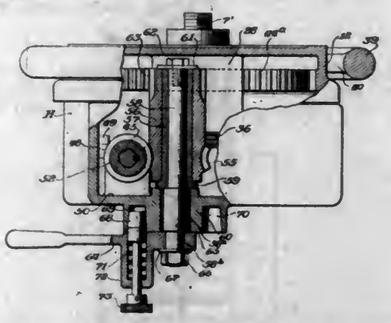
mounted on said carrying body, in said pressure plate a plurality of clutch friction surfaces adapted to contact with said additional friction surface of the said friction rings, a plurality of springs one end of each spring attached to or acting against the carrying body of the other end of each spring atached to or acting against the pressure plate thereby causing all friction surfaces to contact under pressure of the springs and setting up resistance to rotation of the spring rings relative to the carrying body and pressure plate, links attached at one end to said pressure plate the other end attached to a sliding sleeve, said sliding sleeve having a common axis with said carrying body, a yoke rotatably mounted on and concentric with said sliding sleeve, trunnions on said yoke, a forked lever, the forked end fitted to the trunnions of the yoke and a fulcrum for said lever, by which lever said pressure plate may be held out of contact with said spring rings.

1,662,131. TUBE AND LIKE BENDING MACHINE. LESLIE SCHONFIELD, London, England. Filed Jan. 5, 1927. Serial No. 159,193. 4 Claims. (Cl. 153—45.)



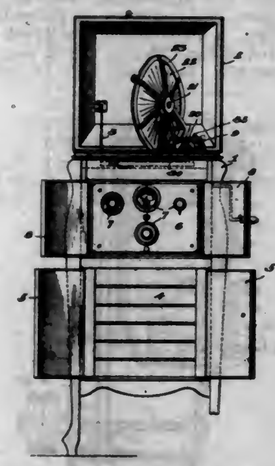
1. A tube or the like bending machine comprising in combination a support, a spindle mounted on said support, a bending lever mounted on said spindle, a curved former keyed to said spindle, a straight shield adapted to rest on the periphery of said former, a rocker pivotally mounted on said lever and a pair of rollers mounted in said rocker adapted to travel over the back of the straight shield to transmit the bending force therethrough to the tube or the like between said shield and former to bend the same around said former.

1,662,132. INDUCTANCE APPARATUS. BERT JOSEPH SIMMONS, Stillwater, Minn. Filed Nov. 16, 1925. Serial No. 69,535. 2 Claims. (Cl. 175—356.)



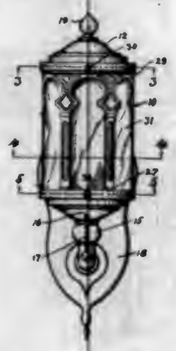
1. A potential transformer including separate core members, a coil embracing all of the core members, and separate coils mounted on the respective core members, one of said last named coils being provided for each core member, the windings of all of the coils being such that the actual ampere turns of the first mentioned coil will be one-half the combined ampere turns of the last mentioned coil.

1,662,133. VALVE-OPERATING MECHANISM. EMORY T. SMITH, Ludlow, Mass., assignor to The Chapman Valve Manufacturing Company, Indian Orchard, Mass., a Corporation of Massachusetts. Filed June 5, 1923. Serial No. 643,534. 5 Claims. (Cl. 74—7.)



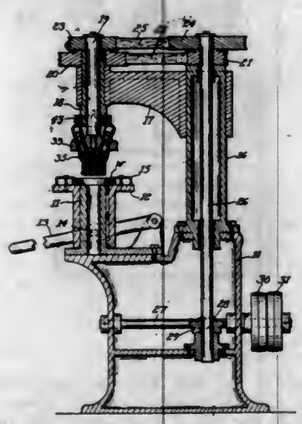
1. In a motion transmitting unit, in combination, an element to be moved, mechanism for effecting movement of said element, manually operable means for actuating said element, auxiliary manual operating means permanently carried upon as a part of said unit, means for disconnectibly connecting said auxiliary manual operating means to a source of power, gearing for increasing the leverage of said auxiliary manual operating means, and means for disconnectibly connecting said auxiliary manual operating means with said gearing for effecting movement of the element to be moved.

1,662,134. VALVE-OPERATING MECHANISM. EMORY T. SMITH, Ludlow, Mass., assignor to The Chapman Valve Manufacturing Company, Indian Orchard, Mass., a Corporation of Massachusetts. Filed Apr. 7, 1924. Serial No. 704,738. 16 Claims. (Cl. 74—36.)



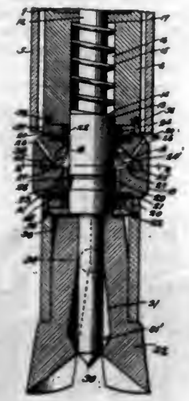
1. In a device of the character described, in combination, a casing, an element to be driven and including the movable part of said casing, a motor, driving gearing completely enclosed in said casing and including a worm connected to the motor, a worm gear and spur gear connected to the element to be driven, and means for displacing said worm gear and spur gear for disconnecting the motor from the movable part of said housing.

1,662,135. SOUND-REPRODUCING MEANS. GEORGE W. SMITH, Jr., Riverton, N. J., assignor to Victor Talking Machine Company, a Corporation of New Jersey. Filed Feb. 25, 1925. Serial No. 11,543. 3 Claims. (Cl. 179—100.1.)



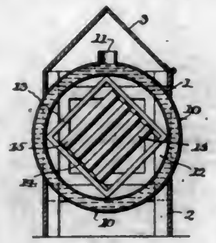
1. A device of the class described comprising, in combination, a talking machine cabinet having a motor board adjacent the top of said cabinet and talking machine mechanism therein, a hinged cover forming with the walls of said cabinet and said board a compartment above said motor board, reproducing mechanism of the hornless type in said compartment and including a large sized diaphragm adapted to be moved to an inoperative position in which it is housed within said compartment or to a playing position at an angle thereto when the cover is raised, radio receiving apparatus in said cabinet, and means carried by said motor board for employing said reproducing mechanism as the loud speaker of said radio apparatus.

1,662,136. LIGHTING FIXTURE. NORMAN F. STEVENS, Los Angeles, Calif. Filed Aug. 19, 1925. Serial No. 51,115. 3 Claims. (Cl. 240—11.)



3. In an ornamental lighting fixture a support including a bracket adapted to engage a wall, said bracket having a post thereon, a bottom member engaging said post, and a top member spaced from said post, each of said members having a peripheral flange thereon, a body engaging said peripheral flange on said top and bottom members, abutments on said body engaging said flanges on said top and bottom members, fastening means for securing said body to said members, a separately formed light transmitting panel fitted within said body, said body having portions thereof removed to provide apertures enabling light to pass through said panel.

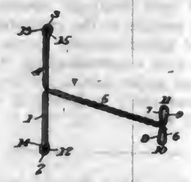
1,662,137. LAPPING MACHINE. KENNETH E. SUMMERS, Westboro, Mass., assignor to Bethel-Player Co., Westboro, Mass., a Copartnership consisting of Joseph N. Bethel and Sidney Player. Filed Mar. 4, 1924. Serial No. 696,870. 14 Claims. (Cl. 51—43.)



14. A machine for lapping internal conical surfaces comprising a lapping head, means to rotate said head, a plurality of lapping rolls, spindles for said rolls, bearings for said spindles in said head above and below said rolls and disposed in annular series about the axis of said head, said bearings and spindles being inclined with respect to the axis of said head, means to rotate said head, and means to reciprocate said spindles in said head, as said head is rotated.

1,662,138. UNDERREAMER. BENJAMIN FRANKLIN WALDRON, Duncan, Okla. Filed Apr. 28, 1925. Serial No. 26,494. 1 Claim. (Cl. 255—78.)

In an underreamer, a tubular body, said tubular body having lateral openings, laterally movable blocks supported within the openings, coiled springs for normally moving the blocks outwardly, pivoted fingers carried by the blocks, a vertically movable rod having a groove defining a shoulder, movable within the body, said fingers adapted to engage the shoulder to hold the rod in an elevated position, pivoted blades having enlargements at their ends, said rod adapted to engage the enlargements to lock the blades in their active positions, at the end of the tubular member, and said blocks adapted to move laterally to disengage the fingers and shoulder, and means for returning the rod to its initial position.

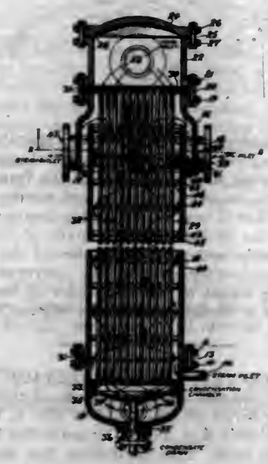


1,662,139. INCUBATOR. JIDY W. WHITLOW, Comanche, Okla. Filed June 27, 1925. Serial No. 40,035. 1 Claim. (Cl. 119—41.)

An incubator including a supporting structure, a substantially tubular water chamber mounted within the supporting structure, a rectangular supporting frame within the water chamber, the side walls of the rectangular frame being arranged at oblique angles with respect to the supporting structure, a plurality of trays arranged within the rectangular supporting frame and arranged one above the other, said trays being removably supported to permit the trays to be removed and reversed to change the position of the eggs and trays.

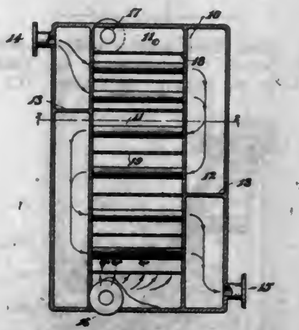
1,662,140. TOILET-PAPER HOLDER. WALTER L. WHITESIDES, Long Beach, Calif. Filed Feb. 8, 1926. Serial No. 86,818. 2 Claims. (Cl. 242—55.2.)

1. A toilet paper holder comprising a single piece of wire having an intermediate twisted portion forming a horizontal stem for rotatably supporting a roll of paper, one end of said stem having right angular extensions bent in opposite directions, forming loops of corresponding length adapted to be inserted through the opening in and to engage the edge of said paper roll, for retaining



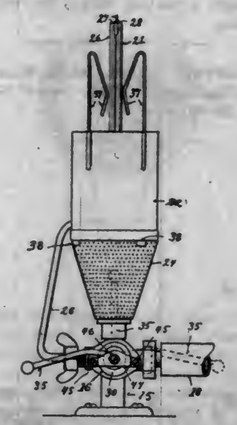
the same in position for use, and legs formed at the opposite ends of said stem for attachment to a wall, as described.

1,662,141. IMPULSE TRANSMITTER FOR AUTOMATIC TELEPHONE SYSTEMS. NEWTON BLADES and LEONARD VICTOR MARKS, London, England, assignors to The Sterling Telephone & Electric Company Limited, London, England, a Company of Great Britain and Ireland. Filed Mar. 1, 1927, Serial No. 171,894, and in Great Britain Mar. 15, 1926. 4 Claims. (Cl 179—90.)



1. An impulse transmitter, comprising a driver, a finger plate adapted to engage and set said driver on forward movement and otherwise wholly independent of it, means for returning said finger plate independently of said driver, means for returning said driver, an impulse mechanism operated by said driver in its return, and means rendering said finger plate inoperative until the return of the impulse sender is complete.

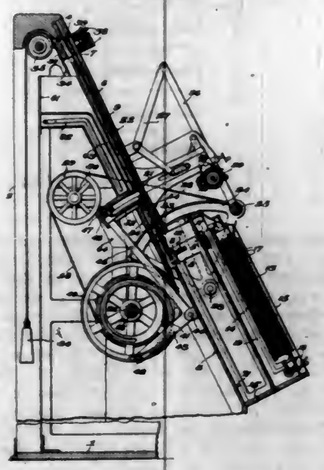
1,662,142. EVAPORATOR AND METHOD OF OPERATION. CARL F. BRAUN, San Francisco, Calif. Filed Mar. 14, 1922. Serial No. 543,584. 1 Claim. (Cl. 196—128.)



A method of distillation in a still consisting of an outer vertically disposed shell down through which a plurality of tubes extend, which consists in creating an upward flow of steam in the shell and around the tubes, simultaneously internally heating the walls of the tubes, by flowing hot oil downwardly therethrough to maintain a surface temperature on the walls of the tubes higher than that of the steam in the shell throughout their length and flowing thin films of oil on the outer surfaces of the tubes, to distill the same.

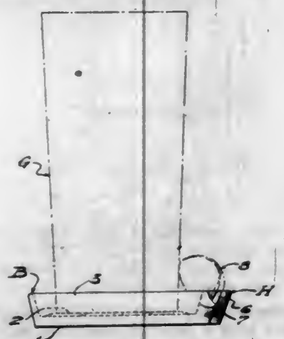
1,662,143. HEAT-EXCHANGE APPARATUS. CARL F. BRAUN, Pasadena, Calif. Filed Mar. 28, 1923. Serial No. 628,187. 2 Claims. (Cl. 257—230.)

1. Heat exchange apparatus, comprising a shell, a plurality of tubes arranged in parallel within the shell, bypass chambers at the opposite ends of the shell with which sets of the tubes communicate whereby a fluid may recurrently flow across the shell, through the tubes, and in alternate directions, means for admitting another fluid to the shell at one end and withdrawing it from the opposite end of the shell whereby the flow of fluid through the shell will be around the tubes and lengthwise of the shell, and means interposed between groups of tubes for alternately increasing and then abruptly decreasing the velocity flow of the finid as it passes through the shell and around the tubes.



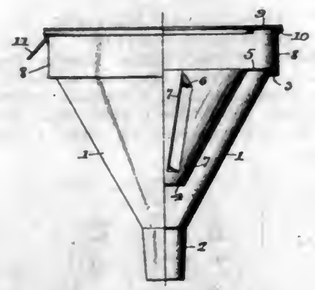
1,662,144. BOTTLE-WASHING APPARATUS. EDWARD BRUNHOFF, Cincinnati, Ohio, assignor to The Brunhoff Manufacturing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 25, 1922. Serial No. 563,638. 3 Claims. (Cl. 15—95.)

1. A bottle washing apparatus comprising a valve casing provided with a base for mounting the same, a supply conduit communicating with said valve casing, a vertically disposed nozzle leading from said valve casing, a perforated container for abrasive material mounted upon



said valve casing and surrounding said nozzle, a tube aligned with said nozzle but spaced therefrom, adapted to deliver an abrasive charged current of fluid into a bottle, an imperforate splash shield mounted upon said abrasive container and surrounding said tube, means carried by said shield for retaining the bottle in inverted position about said tube, a rinsing conduit leading from said valve casing and terminating in a portion extending adjacent to and parallel with said tube for entry therewith within the bottle, and a multiway valve plug within the valve casing for selectively controlling the flow of water to said tube or said rinsing conduit.

1,662,145. PRINTING AND CASTING MECHANISM. FRED A. DOLPH, Washington, D. C. Filed June 27, 1924. Serial No. 722,779. 16 Claims. (Cl. 190—7.)



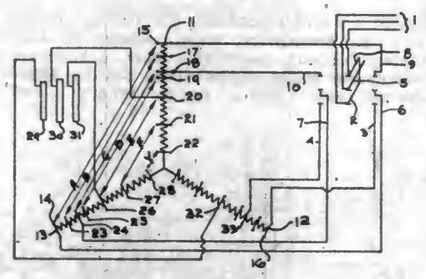
1. A device of the class described comprising a frame, a plurality of rectilinearly movable type bars mounted thereon, said bars being provided with printing and matrix characters, means for selectively limiting movement of said bars in one direction, a platen adapted to coact with said printing characters, means adapted to coact with said matrix characters for forming a linotype slug, and common actuating means for said platen and last-named means.

1,662,146. COASTER. GRANT CALVIN ELLIOTT, Wilmington, N. C. Filed Apr. 7, 1927. Serial No. 181,772. 1 Claim. (Cl. 65—61.)

A coaster consisting of a dish body bounded by a peripheral wall having a drainage opening directed toward the deepest point of the bottom of the body, said wall being provided at its exterior with an extension disposed transversely across said drainage opening, one end of the extension being provided with a bowl-shaped sump with which said drainage opening communicates and the other end portion of the extension being provided with a gullet, said gullet opening at one end at the end of the extension and communicating at its other end with the sump, said gullet having its longitudinal dimension disposed substantially tangentially with relation to the surface of the wall.

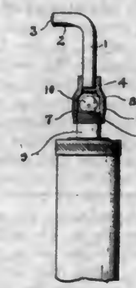
1,662,147. FUNNEL. NELS FARDEN, Battle Lake, Minn. Filed Feb. 26, 1926. Serial No. 90,788. Renewed Aug. 1, 1927. 1 Claim. (Cl. 226—29.)

A funnel comprising the usual frusto-conical body terminating in a relatively small substantially cylindrical spout, and a second frustoconical portion of lesser diameter having its walls substantially parallel with the said body and having a flat rim at its top, said second portion provided with a plurality of passages therethrough each having at one margin an inwardly extending flange.



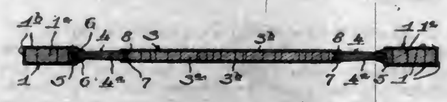
1,662,148. TRANSPORTATION TRUCK. ALVIN J. GARD, Beaver Crossing, Nebr. Filed Oct. 8, 1926. Serial No. 140,326. 3 Claims. (Cl. 198—233.)

1. In combination with a conveyor apparatus, a truck for transporting the same comprising an elongated frame, an axle connected with the center of the frame, a wheel at each end of the axle, said axle and wheels supporting the frame so that it can tilt, depending means at the rear of the truck for attachment to a part of the conveyor apparatus, means adjacent the center of the truck for attachment to another part of the conveyor apparatus and depending means at the front part of the truck for attachment to a further part of the apparatus.



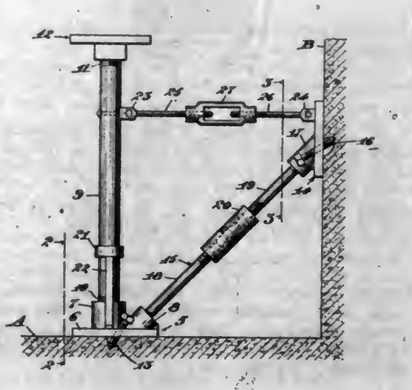
1,662,149. ELECTRIC-FURNACE VOLTAGE CONTROL. ALBERT E. GREENE, Medina, Wash. Continuation of applications Serial No. 207,966, filed Jan. 3, 1913; Serial No. 157,931, filed Mar. 28, 1917; and Serial No. 322,298, filed Sept. 8, 1919. This application filed May 23, 1923. Serial No. 640,932. 16 Claims. (Cl. 266—1.5.)

1. In combination with the electrodes of an electric furnace a transformer system comprising a plurality of secondary windings connected together in series relation, a conductor for carrying the current from said secondary windings to an electrode, and means for regulating the relative value and direction of induced voltage in the



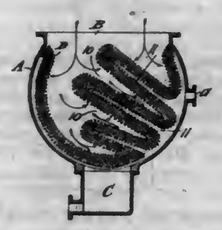
separate secondary windings for controlling the voltage between the outer ends of the two windings when connected in series.

1,662,150. FUSED-QUARTZ TRANSILLUMINATOR. CHARLES H. KERR, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Apr. 5, 1926. Serial No. 99,817. 3 Claims. (Cl. 128—23.)



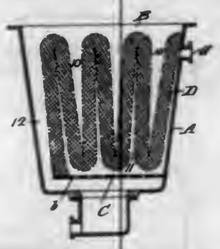
1. In a device of the character described, a handle having a screw threaded terminal portion, a lamp in the terminal portion, an annular cap having an internal screw threaded portion to fit the terminal portion of the handle, a lamp cavity beyond the screw threaded portions, a lens seat beyond the lamp cavity and an opening for a long rod like lens beyond the lens seat, a heat absorbing lens in the lens seat and a transparent long rod like lens in the opening in the annular cap and extending therebeyond.

1,662,151. WOOD-DOOR CONSTRUCTION. EMIL C. LOETSCHER, Dubuque, Iowa. Filed Nov. 18, 1926. Serial No. 149,021. 6 Claims. (Cl. 20—35.)



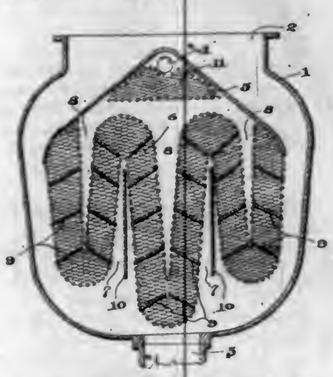
1. A wood door comprising an outer frame, an inner panel frame within said outer frame consisting of panel frame members mitered together at their ends, a central panel surrounded by said panel frame and consisting of a core of substantially the same thickness as the inner edge portions of said panel frame members and outer layers of veneer projecting beyond the edges of said core, and lying flush along the inner marginal portions of said panel frame.

1,662,152. TOOL SUPPORT. WENDELL LOGG, Los Angeles, Calif. Filed Mar. 5, 1927. Serial No. 173,107. 3 Claims. (Cl. 81—41.)



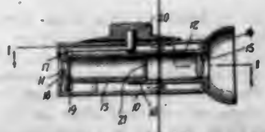
1. A structure comprising a floor member and a wall member and means for exerting a variable pressure between said members, a column arising from said floor member and a work support on said column, and a brace extending between said column and wall member.

1,662,153. CONDENSER. CHARLES B. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 3, 1925. Serial No. 47,675. 7 Claims. (Cl. 257—43.)



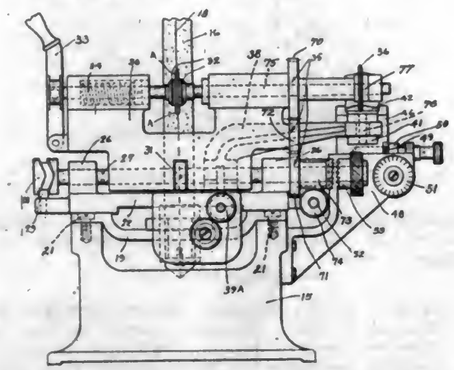
1. In a steam condenser, a tube bank consisting of a shallow belt of tubes forming the steam condensing surface between the exhaust inlet and air outlet and of substantially uniform flow resistance throughout the length of the belt, said belt being arranged in folds providing steam spaces on the inlet sides of the folds and air spaces on the exit sides of the folds, said belt having its ends joining the casing on the same side of the hot-well and separated from the casing on the opposite side of the hot-well to leave a space for the passage of exhaust steam from the exhaust inlet to the hot-well between the tube casing and the tube bank.

1,662,154. CONDENSING APPARATUS. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Aug. 5, 1925. Serial No. 48,239. 9 Claims. (Cl. 257—43.)



1. In a steam condenser, a tube bank consisting of a shallow belt of tubes extending between the exhaust inlet and air outlet, and a condensate spray plate extending over the lower part of the condenser, said tube belt being arranged to provide space for the passage of exhaust steam to the lower side of the spray plate.

1,662,155. CONDENSER. CHARLES E. LUCKE, New York, N. Y., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Feb. 8, 1927. Serial No. 166,780. 10 Claims. (Cl. 257—43.)



1. In a surface condenser having tubes arranged in a belt to form vertically extending sections, a plurality of horizontally inclined condensate guide plates across said tube belt for receiving the condensate from the section of tubes immediately above and discharging said condensate into the steam entering the tube belt.

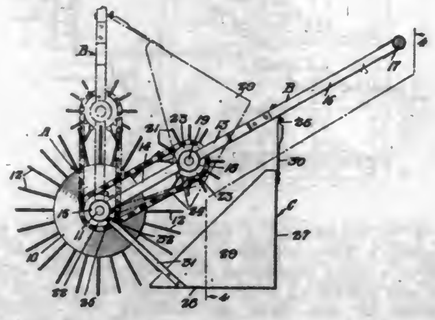
1,662,156. EXPOSURE METER. EMIL MAYER, Vienna, Austria, assignor to Drem Products Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1927. Serial No. 186,333. 2 Claims. (Cl. 88—23.)

1. An exposure meter comprising a casing having an opening adapted to admit light, a tube having an open end adjacent the said opening, the said tube having associated therewith a field, and a movable slitted member located intermediate the said opening and the open end of the said tube, the said movable slitted member having a plurality of slits of varying light permeability, the respective slits being of varying width, the broad ends and the narrow ends of successive slits being adjacent each other.

1,662,157. LENS-GRINDING MACHINE. ALBERT E. MAYNARD, Southbridge, Mass., assignor to American Optical Company, Southbridge, Mass., a Voluntary Association of Massachusetts. Filed Feb. 14, 1925. Serial No. 9,193. 1 Claim. (Cl. 51—101.)

In a device of the character described, a base, a rotatable grinding wheel mounted on the base and having a double bevelled edge with the apex of the bevel forming the periphery of the grinding wheel, a support pivoted on the base to swing transversely to the plane of the grinding wheel in the plane of the axis of said wheel and about an axis tangent to the peripheral apex, a lens holding spindle rotatably mounted on said support to swing in the plane of the grinding wheel toward and away therefrom, means for oscillating the lens holding spindle longitudinally, a lens former shape on the lens holding spindle and rotatable and movable longitudinally therewith, a slidable contact shoe having a contact face corresponding with the face of the grinding wheel and guided on the base to maintain its parallel relation to the grinding wheel, means on the swinging support engaging the shoe to slide the same as the support is swung on its pivot to follow the former and means to adjust the shoe to compensate for the change in relationship of the former and shoe due to the swinging of the support.

1,662,158. FERROUS ALLOY. CHARLES MEIER, Valparaiso, Ind. Filed June 20, 1925. Serial No. 38,438. 3 Claims. (Cl. 75—45.)

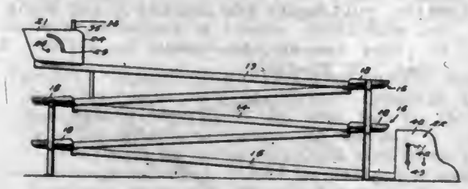


1. A ferrous alloy adaptable for use in its melted state in permanent steel molds, comprising 2 to 4% carbon, 2.5% silicon, 60% chromium 1 to 3%, titanium 1 to 3%, aluminum .5 to 1%, manganese .5 to 3%, and phosphorus .25 to 1%.

1,662,159. VEHICLE STAY BLOCK. CHARLES L. MICHOD, Chicago, Ill., assignor to E. S. Evans & Co., Inc., Detroit, Mich., a Corporation of Delaware. Filed Apr. 18, 1925. Serial No. 24,019. 1 Claim. (Cl. 188—32.)

In a device of the class described, a triangular shaped member comprising a wheel engaging leg of arcuate contour and transversely concaved cross section, a strut integrally formed with said leg and extending from the apex to a support along a line passing substantially through the axis of a wheel engaged by said leg, and a removable reinforcing member in the space between said leg, support and strut said leg and strut having downwardly extending, outwardly flaring flanges on their lateral edges.

1,662,160. LEAF COLLECTOR. CLIFFORD C. MYRICK, Tucson, Ariz. Filed Jan. 31, 1927. Serial No. 164,866. 1 Claim. (Cl. 55—145.)

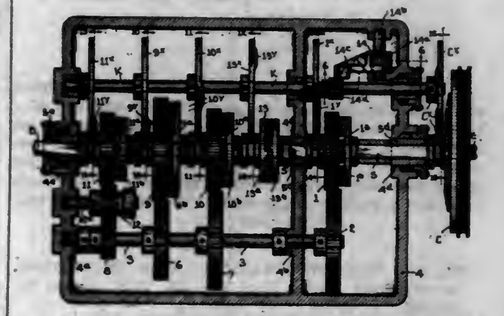


A leaf collector comprising a fork shaped member having secured thereto, centrally of its rear, a rearwardly extending handle bar, the sides of said member formed with a forward pair and a rear pair of aligning bearings, a front and rear spindle mounted in said bearings, a gathering element carried by and driving the forward spindle, a cleaner element for the gathering element carried by the rear spindle, means for driving the rear spindle from the forward spindle an open front container arranged rearwardly of said elements and below the same, a detachable connection between the container and handle bar centrally of the top of the rear of the container, and hanger members between the lower pair of bearings and the sides of said container.

1,662,161. METHOD FOR ORNAMENTING TEXTILES. LENORE NEETHLING, Chicago, Ill. Filed Sept. 23, 1925. Serial No. 58,128. 2 Claims. (Cl. 41—17.)

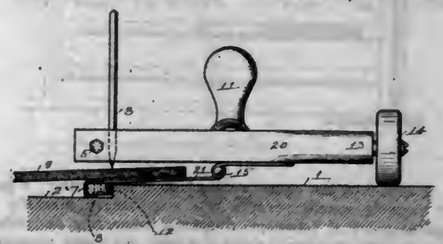
1. The method of ornamenting textiles which consists in first preparing a design on blotting paper; stretching the textile over said design; and then tracing said design on said textile with liquid coloring matter by means of a ball-pointed lettering pen, substantially as described.

1,662,162. GAME APPARATUS. HENRY M. NESTOR, Omaha, Nebr. Filed Mar. 29, 1927. Serial No. 179,309. 11 Claims. (Cl. 273—86.)



1. In game apparatus, a plurality of trackways of the same length and identical inclination, means at the upper end of the trackways for simultaneously releasing therein objects which will move by gravity from the upper to the lower end thereof and means at the opposite end of the trackways and actuated by the passage of an object moving along any of the trackways for positively barring the subsequent passage of an object along any of said trackways.

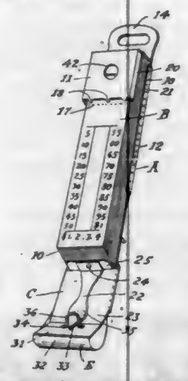
1,662,163. AUTO TABLE. GLENN H. NORQUIST, Jamestown, N. Y. Filed Aug. 7, 1924, Serial No. 730,781. Renewed July 25, 1927. 3 Claims. (Cl. 45—61.)



3. In a folding table, brackets projecting from one end of said table and having flanges bent downwardly at right angles thereto, said brackets being adapted to rest upon the edge of a support, legs pivotally secured to said table near the opposite end thereof, a loop pivoted at the bracket end and extending below said legs and a catch fixed to said table, said catch adapted, when said table is folded, to engage said loop and hold said legs against the underside of said table with the legs projecting beyond the bracket end of said table, and said loop when disengaged from said catch, being adapted to support said legs below and at an angle to said table, whereby ends of said legs will engage said support and coact with said brackets to hold said table in a horizontal position.

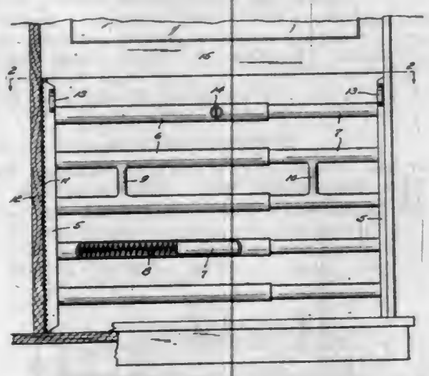
1,662,164. VARIABLE-SPEED TRANSMISSION. ROSS H. PRATT, Washington, D. C. Filed July 26, 1926. Serial No. 124,895. 2 Claims. (Cl. 74—59.)

1. In a variable speed transmission including driving mechanism and a driven shaft carrying a plurality of clutch controlled transmission gears, a cam shaft carrying a disk-like cam adapted to directly engage with one of said clutches and actuate said clutch to engage the transmission gear with the driving mechanism and means for operating said cam.



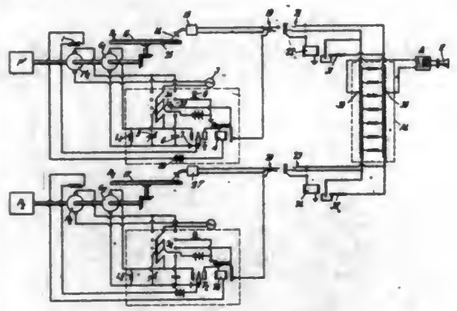
1,662,165. MARKING AND CUTTING DEVICE. SIMON PUNT, Grand Rapids, Mich. Filed Feb. 8, 1926. Serial No. 86,797. 1 Claim. (Cl. 33—42.)

In a gaging device for marking a work sheet in connection with a base to which the sheet is to be applied having a horizontal surface and a vertical surface, said



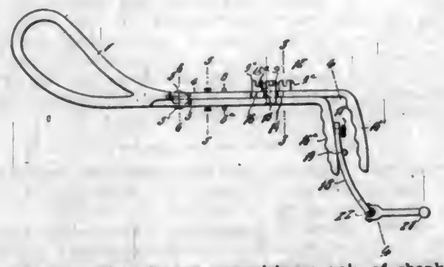
device comprising: a pair of members connected to swing toward and away from each other and adapted to receive the work sheet therebetween, one of said members carrying a tool extending toward the other of said members, said other member being adapted to engage said horizontal surface and having a gaging part extending from its under side and engaging said vertical surface, and said other member and tool engaging the opposite sides respectively of the work sheet in the operative movement of the device along said surfaces and the work sheet.

1,662,166. CHECK HOLDER AND CUTTER. CHARLES T. RASCHICK, St. Paul, Minn. Original application filed Feb. 2, 1920, Serial No. 355,572. Divided and this application filed June 23, 1921. Serial No. 479,803. 4 Claims. (Cl. 206—40.5.)



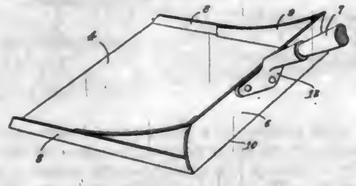
1. A check holder comprising a back, an over-lapping end formed on said back for enclosing the stub end of a book of checks, a pair of raised looped members cut out of said back, a U-shaped spring clamp adapted to be secured to said back within said looped members, said spring normally extending out of the plane of said back to press the book of checks against said over-lapping end.

1,662,167. WINDOW GRATING. OTTO M. REXINGER, Beverly Hills, Calif. Filed Dec. 28, 1926. Serial No. 157,565. 1 Claim. (Cl. 20—71.)



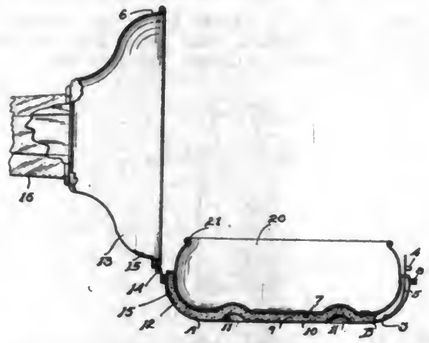
A device of the character described, comprising; a pair of variably spaced parallel side members; a plurality of spaced pairs of telescopic members connecting and aligning the side members; springs within the outer telescopic members adapted for pushing the inner telescopic members outwardly to separate the side members; and means for locking the telescopic members in extended position.

1,662,168. SWITCHING APPARATUS AND SYSTEM. JOHN LOUIS REYNOLDS, Long Island City, N. Y., assignor, by mesne assignments, to Electrical Research Products Inc., a Corporation of Delaware. Filed Apr. 1, 1927. Serial No. 180,326. 11 Claims. (Cl. 179—100.1.)



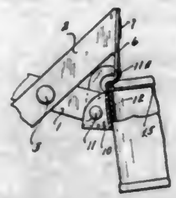
1. In combination, a sound translating device comprising a driven element, a motor for driving said element, a sound reproducing device operated under control of said translating device, and means automatically controlled by said motor for rendering said translating device ineffective to control said reproducer while the speed of said motor is varying.

1,662,169. OBSTETRICAL FORCEPS. RICHARD D. RODERICK, Jermyn, Pa. Filed Nov. 3, 1926. Serial No. 146,026. 4 Claims. (Cl. 128—323.)



1. An obstetrical forceps comprising a pair of shanks each with its own pivoted blade, notches near the blade pivot latched to lock either blade in any of a plurality of angular blade adjustments, the members of the forceps being relatively movable longitudinally, and a clamp to fix the members in any adjusted position.

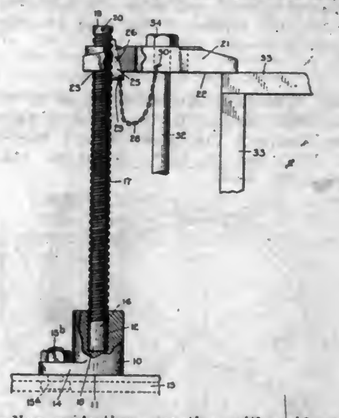
1,662,170. IMPLEMENT FOR HANDLING AND WORKING CONCRETE. GUSTAF R. SAHLSTROM, Rockford, Ill. Filed Apr. 18, 1927. Serial No. 184,517. 2 Claims. (Cl. 72—136.)



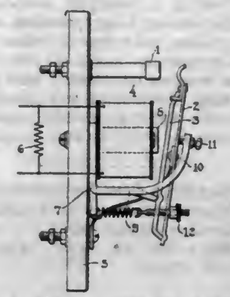
1. An implement for handling and working loose materials such as concrete comprising a scoop having a broad flat bottom and a scraping blade at its heel end, and a handle for manipulating the implement either as a scoop or for leveling and smoothing the top of a bed.

1,662,171. SMOKER'S STAND. JOSEPH W. SAVERY, San Francisco, Calif. Filed Aug. 23, 1926. Serial No. 131,044. 1 Claim. (Cl. 131—51.)

A smoker's stand of the class described comprising a partly spherical base, a partly spherical cover hinged to open radially on said base, a taper tube fixed to said cover, a tray on said tube, and a waste receptacle in said base adapted to extend above the meeting line of said base and said cover.



1,662,172. CAN OPENER OF THE NIPPER TYPE HAVING AN ADJUSTING HEAD. AUGUST C. SCHAEFER, Portland, Oreg. Filed Nov. 9, 1926. Serial No. 147,256. 3 Claims. (Cl. 50—3.)



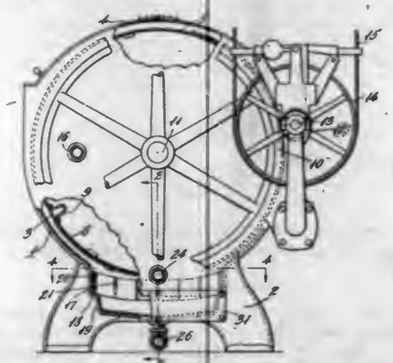
1. In a device of the class described, the combination of nipper jaws normally separated by spring means, a cutter head secured to the outer end of the upper jaw, the penetrating point of which is normally disposed opposite of the center line of the jaw member, a slot formed in the cutter head, an adjusting head movably disposed on the outer end of the lower jaw, a projection formed on the forward end of the adjusting head and projecting through the slot formed in the cutter head and adapted to engage with the upper edge of the can.

1,662,173. ADJUSTABLE CLAMPING STRAP FOR MILLING AND LIKE MACHINES. BERNARD R. SCHNEIDER, Jersey City, N. J. Filed Apr. 21, 1926. Serial No. 103,595. 4 Claims. (Cl. 90—59.)

1. In an adjustable set-up device, the combination of an upright having a body portion provided with a vertically aligned set of laterally extending projections, a horizontally extending member provided at one end thereof with an opening at one side including a tapered slot for receiving said body portion of said upright, the side of said opening opposite said one side being substantially smooth, means for exerting pressure downwardly on said horizontally extending member, and a wedge-shaped member arranged to be positioned within said tapered slot to hold said horizontally extending member against downward displacement, said wedge-shaped member having a substantially smooth face for engagement with said substantially smooth side of the opening and further having a face provided with laterally extending projections coacting with said vertically aligned set of laterally extending projections of said upright.

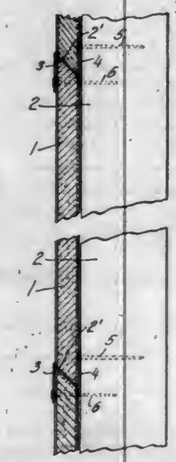
1,662,174. ELECTROMAGNETIC RELAY. EDWIN W. SEEGER, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 17, 1920. Serial No. 381,858. 9 Claims. (Cl. 175—335.)

1. A relay including an operating winding to be supplied with energy from a source of undulating current of variable frequency, but substantially constant magnitude, and means associated with said winding for varying the flux produced thereby upon variations in the frequency of the current supplied thereto to render said relay responsive at given frequencies and unresponsive at other frequencies.



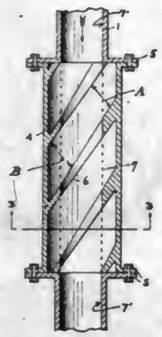
1,662,175. ARTICLE-HOLDING CLIP. VIOLA THORNE, Grand Rapids, Mich., assignor of one-half to Roman F. Glocheski, Grand Rapids, Mich. Filed June 18, 1927. Serial No. 198,479. 2 Claims. (Cl. 24—255.)

2. A clip of the class described, comprising a substantially flat base, a spring member attached at one end to said base and having its other end spaced away from



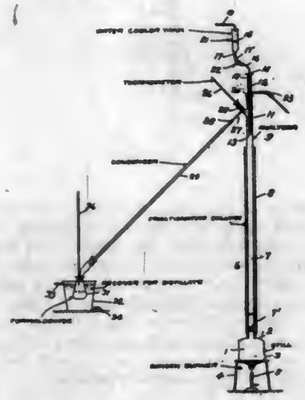
the base and two heads of hard, smooth surface material semi-spherical in form attached one to the base and one to the spaced away end of the spring member and normally bearing against each other, the end of the spring member and the surface of the head attached thereto being flush with each other.

1,662,176. WASHING MACHINE. IVAN M. TULL, Cincinnati, Ohio, assignor to The American Laundry Machinery Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 21, 1921. Serial No. 454,151. 14 Claims. (Cl. 8—8.)



1. In a machine of the character described, the combination of a casing, a rotatably mounted cylinder in said casing, said casing being provided with a trough beneath said cylinder, said trough being provided with a rest, means supported upon said rest for retarding agitation of the washing or cleaning fluid in said trough, means for drawing off the fluid to a level corresponding approximately with the top of said agitation retarding means, and means for draining said trough.

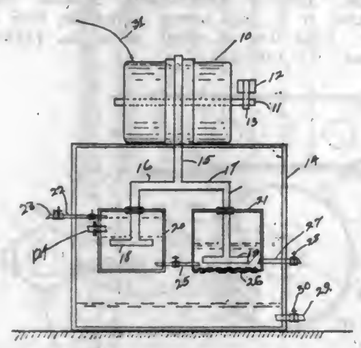
1,662,177. BUILDING CONSTRUCTION. CLARENCE EDGAR WILLIAMS, Buffalo, N. Y., assignor to National Gypsum Company, Buffalo, N. Y., a Corporation of Delaware. Filed Nov. 15, 1926. Serial No. 148,441. 7 Claims. (Cl. 72—16.)



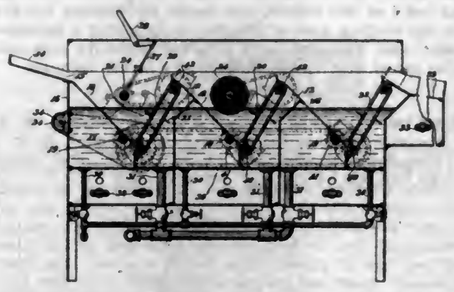
1. A device for use in building construction comprising a web adapted to be arranged on the upper edge of a board, a depending flange formed on said web and extending over a portion of the front face of the board, and an upwardly extending flange arranged in the plane of the rear face of the board.

1,662,178. DREDGER PIPE LINE. NATHANIEL A. YUILLE, San Francisco, Calif. Filed Jan. 19, 1927. Serial No. 162,035. 4 Claims. (Cl. 302—14.)

1. A flanged section of dredger pipe provided internally with a spiral fin, said section being aligned with and secured to a length of pipe having a plain bore, and said spiral fin having a bore or internal free space substantially equal to the bore of said length of pipe.



1,662,179. PROCESS FOR CONCENTRATING FORMALDEHYDE SOLUTIONS. ADOLPH ZIMMERLI, New Brunswick, N. J. Filed Jan. 28, 1924. Serial No. 689,052. 10 Claims. (Cl. 260—138.)

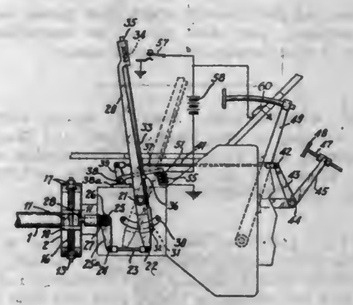


1. The process of preparing a stronger formaldehyde solution from a weaker solution which comprises refluxing the weaker solution until an equilibrium has been established between the formaldehyde and its polymers and hydrates, and then fractionally distilling the same.

1,662,180. APPARATUS FOR AND METHOD OF TREATING FLUIDS. JOHN P. BALL, Chicago, Ill. Filed June 9, 1927. Serial No. 197,648. 2 Claims. (Cl. 210—1.)

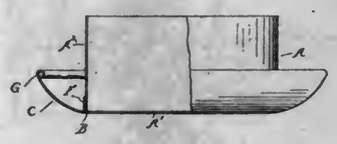
1. Apparatus of the character described comprising a vessel provided with a controllable outlet adjacent to the bottom thereof, a pair of receptacles mounted within said vessel in spaced relation with the bottom thereof, one of said receptacles having a fluid introducing conduit adjacent to its top and connected with the second receptacle by a conduit adjacent to the bottom thereof, said second receptacle being provided with a foraminated bottom, a high speed rotating element mounted on said vessel, means for placing said high speed rotating element out of balance to induce vibration, and means intermediate of said high speed rotating element and said receptacles whereby the liquid therein is subjected to the vibration set up in said unbalanced high speed rotating element.

1,662,181. DISHWASHING MACHINE. JAMES BARRY, Grafton, Calif. Filed May 21, 1923, Serial No. 640,837. Renewed Nov. 23, 1927. 2 Claims. (Cl. 15—74.)



1. A dish washing machine comprising a housing divided transversely into three independent compartments, separate fluid inlet and discharge connections for each of said compartments, said housing being formed with an entry opening at one end and an exit opening at the other end, a foraminous inclined floor member in each compartment, said floors being disposed in parallelism, and each having an opening therein adjacent its lower end, transversely disposed lower rotary brushes disposed one beneath the floor member in each compartment and projecting partly through the opening therein to engage dishes passing over said floor, upper rotary brushes disposed one in each of the first two compartments, said brushes being disposed above the floor members, whereby dishes passing over the floor members will pass between the upper and lower brushes and be engaged thereby, an inclined conveyor in each compartment, said conveyor being inclined oppositely to the floor member so as to be disposed between the lower end of the floor member in the compartment and the upper end of the floor member of the succeeding compartment whereby dishes fed into the first compartment will pass downwardly over the floor member between the brushes and then be elevated by the conveyor and deposited upon the top of the floor member of the succeeding compartment.

1,662,182. PROCESS FOR TREATING RUBBER WITH ALDEHYDE DERIVATIVES AND PRODUCTS. SIDNEY M. CADWELL, Leonia, N. J., assignor to The Naugatuck Chemical Company, Naugatuck, Conn., a Corporation of Connecticut. Filed May 14, 1926. Serial No. 109,178. 7 Claims. (Cl. 18—53.)

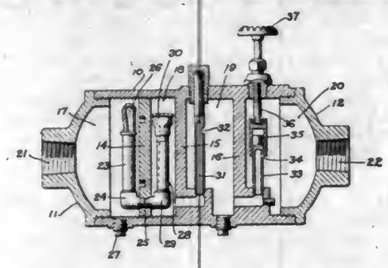


1. A process for retarding the deterioration of rubber which comprises combining with rubber an excess of a condensation product having the dual properties of an accelerator and a retarder of deterioration, and soft vulcanizing the rubber.

1,662,183. BRAKE MECHANISM FOR AUTOMOBILES. THOMAS CHANN, New York, N. Y. Filed Apr. 29, 1927. Serial No. 187,483. 5 Claims. (Cl. 188—106.)

1. The combination with an automobile having a service brake pedal for operating the service brakes, of a second brake biased to brake applying position, means for maintaining said second brake out of brake applying position, and means associated with said service brake pedal for releasing said second brake to brake applying position.

1,662,184. MILK-CAN COVER AND METHOD OF FORMING THE SAME. CHARLES A. COMP, Detroit, Mich., assignor to Buhl Stamping Company, Detroit, Mich., a Corporation of Michigan. Filed Sept. 21, 1925. Serial No. 57,772. 7 Claims. (Cl. 220—42.)

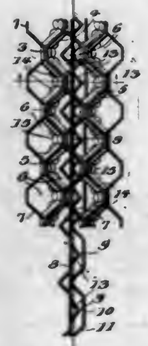


1. A closure comprising a pressed sheet metal blank having an integral head portion, annular cylindrical flange portion and rounded fillet therebetween and a bell flange member having an inturned portion externally connected to said first mentioned member and forming a reinforcement adjacent said rounded fillet.

1,662,185. CONDENSATION TRAP. DAVID S. GARCIA, Oakland, Calif. Filed Aug. 10, 1927. Serial No. 211,963. 5 Claims. (Cl. 137—103.)

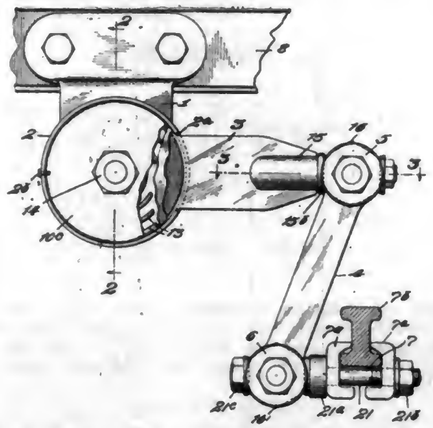
1. A condensation ejector trap comprising a shell having an inlet port at one end and an outlet port at its other end, said shell being interiorly partitioned to provide a receiving chamber in communication with the inlet port and an ejector chamber in communication with the outlet port, fluid conveying means for conveying fluid from the receiving chamber, said conveying means

receiving fluid from a point above the inlet port whereby the receiving chamber will be partially filled with water to form a steam seal, an ejector nozzle arranged within



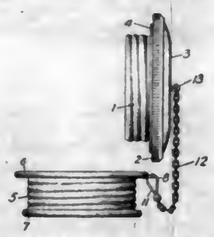
the ejector chamber through which fluid passes into the ejector chamber, and valve means for controlling the discharge of fluid through the ejector nozzle.

1,662,186. CONDENSER. JOHN F. GRACE, Arlington, N. J., assignor to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed Nov. 10, 1926. Serial No. 147,411. 12 Claims. (Cl. 257—43.)



1. In a condenser, a plurality of cooling water receiving tubes, a baffle segregating certain of said tubes to form an air cooling zone, the normal inlet of air into said zone being across the lowermost edge of said baffle, said baffle having an emergency air inlet therein above its lowermost edge.

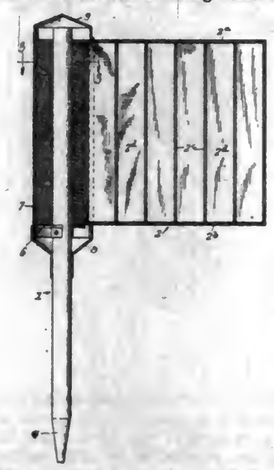
1,662,187. RADIATOR CORE. JOSEPH D. HARRIS, Detroit, Mich., assignor to McCord Radiator & Mfg. Co., Detroit, Mich., a Corporation of Maine. Filed June 27, 1925. Serial No. 40,111. 3 Claims. (Cl. 257—130.)



1. In a radiator core, the combination with two spaced apart corrugated plates, of a flat spacer plate between the corrugated plates and having a plurality of truss-like projections extending into the corrugations of one of the corrugated plates and in contact therewith for holding the spacer plate against the other corrugated plate, the latter having the crowns of its projections flattened to increase the area of contact with the spacer plate, said spacer plate being provided with a plurality of V-shaped projections struck out therefrom and with the openings made in the plate by certain of the projections opposite said flattened portions.

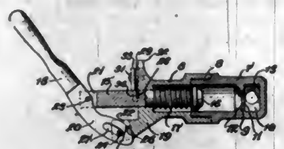
1,662,188. SHOCK ABSORBER. EDWARD HELMUS, Brooklyn, N. Y., and LEWIS C. BURNET, Glen Ridge, N. J. Filed May 16, 1924. Serial No. 713,681. 6 Claims. (Cl. 188—130.)

1. In a shock absorber, a shock absorbing means a bracket for securing the shock absorbing means to the chassis of the vehicle, an arm extending outward from the shock absorbing means adapted to be rotated through an angle of 360 degrees, and means for securing the arm to the running gear of the vehicle including a universal joint, said universal joint including mutually perpendicular pivots, and friction washers of a fibrous material.



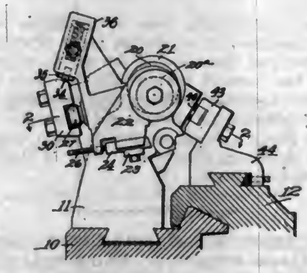
1,662,189. STOPPER. FRANK S. HYATT, Brooklyn, N. Y., assignor to Brass Goods M'f'g. Co., Brooklyn, N. Y., a Corporation of New York. Filed Apr. 23, 1926. Serial No. 104,008. 2 Claims. (Cl. 220—30.)

1. In a device of the character described, a neck provided with a flange terminating in a curled edge forming a hollow bead with a cutaway portion therein, a wire supported within said bead and having a part thereof exposed at the point of said cutaway portion, a stopper for insertion within said neck, and a flexible retaining element rotatably connected to said stopper and attached to the exposed portion of said wire.



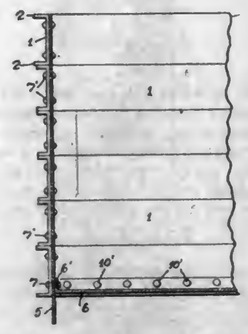
1,662,190. SIGNAL FLAG AND METHOD OF MAINTAINING SAME. DANIEL F. JONES, Chicago, Ill. Filed Nov. 5, 1926. Serial No. 146,206. 4 Claims. (Cl. 116—173.)

4. A signal flag embodying therein, a staff, a strip of bunting in excess of a flag length, one end of said bunting strip being rolled upon said staff to form a supply and the other end forming the flag proper which is maintained at proper size by withdrawal of the bunting from the supply on the staff and a collar on the staff below said supply and engaged thereby to prevent telescoping of the same and a casing removably mounted



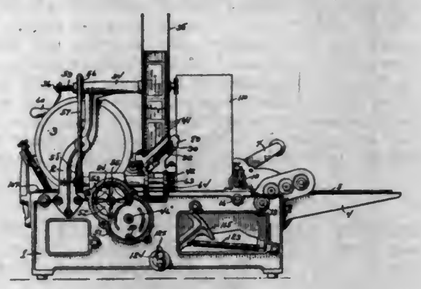
on the staff and enclosing said supply and having a longitudinal slot through which said other end of the bunting extends.

1,662,191. VALVE. EDWARD KENER, Jr., Buffalo, N. Y. Filed Apr. 2, 1926. Serial No. 99,389. 8 Claims. (Cl. 251—164.)



1. In a valve, a valve mechanism having a longitudinally movable operating plunger, said plunger having a recess on its upper side, a locking bar pivotally mounted to one side of said plunger and extending transversely across the upper side thereof, the longitudinal edge of said locking bar being adapted to drop into engagement with said recess and hold said plunger in one position, and the outer end of said locking bar being formed to provide a handle whereby the locking bar is lifted to release said plunger.

1,662,192. BACK-TURNING ATTACHMENT FOR LATHES. NATHANIEL KING, Fitchburg, Mass., assignor to Seneca Falls Machine Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed June 30, 1924. Serial No. 723,110. 11 Claims. (Cl. 82—25.)

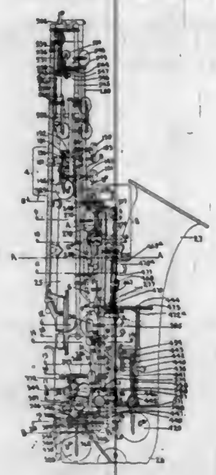


1. In a lathe, a tail stock, a tool carriage, an auxiliary tool, a tool support therefor mounted on said tail stock and movable longitudinally of the lathe and tail stock, and direct draw-bar connections from said tool carriage to said tool support for movement of said tool thereby axially of the lathe, said tool being advanced at the same speed and in the same direction as said tool carriage through said direct connection thereto.

1,662,193. METAL CAR END. MAURICE LACHMAN, New York, N. Y. Filed Mar. 12, 1926. Serial No. 94,121. 6 Claims. (Cl. 105—406.)

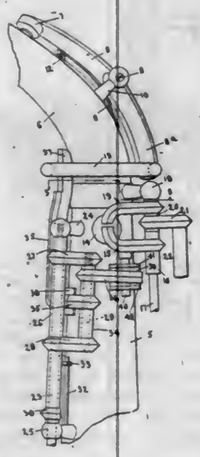
2. A metal car body end consisting of superposed metal channel members disposed transversely and secured together by their flanges, the ends of said members having their webs and flanges bent around at the corner of the car body for attachment to a suitable support, said bent web being secured directly to a plate forming a side or portion of the side of the car body.

1,662,194. PRINTING AND ADDRESSING MACHINE. JAMES H. LAWSON, Vincennes, Ind. Filed Apr. 14, 1925. Serial No. 23,034. 20 Claims. (Cl. 101—50.)



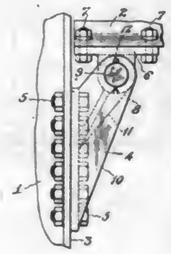
1. In a machine of the character described, a table, spools located at opposite sides thereof, a stencil strip wound upon one spool and adapted for movement transversely of the table to be wound upon the other spool, means for feeding paper and envelopes along the table beneath the stencil, an inking roller adapted to press upon the top of the stencil, means for moving the inking roller downwardly into engagement with the stencil, and means for moving said inking roller synchronously with the paper and envelope feeding means.

1,662,195. WOOD-WIND INSTRUMENT. ALLEN LOOMIS, Elkhart, Ind. Filed Nov. 2, 1925. Serial No. 66,186. 30 Claims. (Cl. 84—385.)



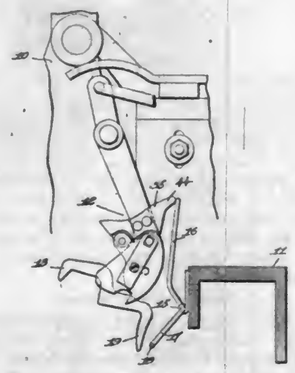
20. In a wood wind instrument having a tubular body with a lateral hole, a carrier lever pivoted to said body and having a cover for said hole, a floating lever pivoted

to said carrier lever on a different axis, a spring connected to one of said levers and reacting against the other tending to turn both of them about their respective axes, the movement of both levers being limited



by abutment against the instrument, imparting displacing movement to one arm of said floating lever and, while said arm remains so displaced, causing the other arm of the floating lever to be displaced.

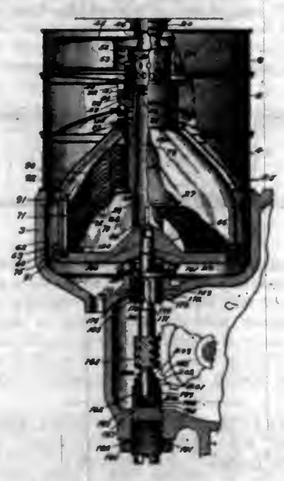
1,662,196. OCTAVE-KEY MECHANISM FOR WOODWIND INSTRUMENTS. ALLEN LOOMIS, Elkhart, Ind. Filed Apr. 9, 1926. Serial No. 100,794. 3 Claims. (Cl. 84—385.)



1. In an octave key mechanism of the character set forth, a floating lever consisting of a sleeve, a laterally extending slotted arm secured to said sleeve, and a second arm secured to said sleeve extending laterally therefrom and bent to extend longitudinally.

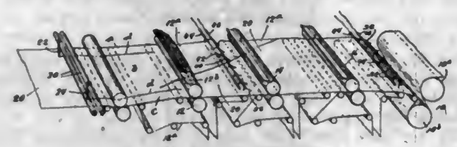
1,662,197. ROCKING STRUCTURAL BRACE. STANLEY MACOMBER, Massillon, Ohio, assignor to The Macomber Steel Company, Canton, Ohio, a Corporation of Ohio. Filed Aug. 13, 1926. Serial No. 128,953. 4 Claims. (Cl. 189—36.)

1. Connections for columns and beams comprising, in combination with a supporting column and a transverse beam; castings secured to said column and beam, respectively, and a pin connection for said castings, whereby the beam can deflect under load without subjecting said castings to stress.



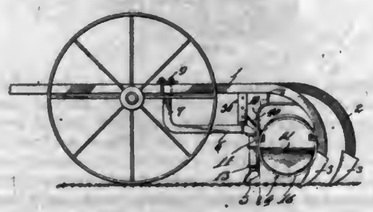
1,662,198. WEFT-REPLENISHING LOOM. JAMES T. MALLOY, Oakland, R. I., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 23, 1927. Serial No. 170,144. 4 Claims. (Cl. 139—264.)

1. A weft replenishing loom of the filling feeler type having, in combination, a shuttle feeler provided with a thread cutter and clamp, means for closing the cutter and clamp on the forward beat of the lay upon replenishment to cut and clamp the thread extending from the cutter and clamp to the selvage, and means for delivering a series of light blows to the shuttle feeler thread clamp to open it gradually after a few beats of the lay subsequent to replenishment.



1,662,199. CENTRIFUGAL SEPARATOR. HERBERT MCCORNACK, Glen Ridge, N. J. Filed Nov. 4, 1921. Serial No. 512,766. 64 Claims. (Cl. 233—29.)

1. A separator bowl having milk and cream outlets, primary and secondary separation chambers, a passage from the primary separation chamber to the cream outlet, a passage from the primary separation chamber to the secondary separation chamber and a passage from the sec-



ondary separation chamber to the cream outlet, said passages from the separation chambers to the cream outlet being distinct in the zone separation.

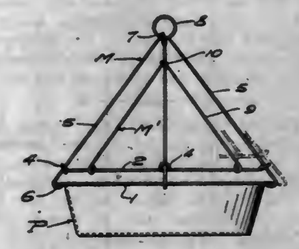
1,662,200. PAPER MAKING. CHARLES NEAL MERRILL, Millinocket, Me., assignor to Great Northern Paper Company, Millinocket, Me., a Corporation of Maine. Filed Sept. 23, 1925. Serial No. 58,168. 48 Claims. (Cl. 92—38.)

1. The method of preserving the continuity of the paper sheet in a paper making machine, which consists in directing streams of water downward on the paper making wire, when a break occurs in the sheet, so as to form longitudinal sections in the moving paper sheet, one containing the break and another being free of the break, and passing the break-containing section to waste while continuing to pass a free section through the machine.

1,662,201. CULTIVATOR FENDER. AUGUST H. NIEWALD, Freedom, Mo. Filed Nov. 12, 1926. Serial No. 148,041. 5 Claims. (Cl. 97—188.)

1. A fender of the class described, comprising a yoke, a ring pivotally supported by the yoke, and means for yieldably restraining the ring against swinging movement in one direction and holding the same in inclined position with respect to the yoke.

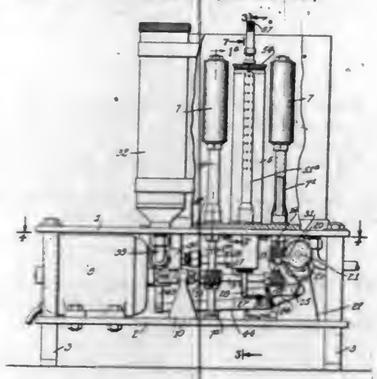
1,662,202. DOBBY LEVER. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Oct. 21, 1925. Serial No. 63,902. 2 Claims. (Cl. 139—74.)



2. A dobby lever for looms consisting of two plates touching each other from near one end to near the other end, the lever being provided near each end with a key in one plate and a key-hole in the other plate for uniting the plates of the lever together at their ends, and the ends and the ends of the plates being shaped to receive between them the ends of the dobby hooks.

1,662,203. BUTTON. EVALYN FISHER NULTY, Ocean City, N. J. Filed June 27, 1925. Serial No. 40,095. 1 Claim. (Cl. 24—90.)

A combination button comprising a solid one piece body 1 of relatively soft material such as bone or mother-of-pearl, having a formed front and a flat back with a central integral boss or hub 3 projecting therefrom and provided with a transverse opening 4 and a metal facing or cover plate 2 fitted upon and over the formed front of the body and having its edge 5 turned over the edge of the body and finished to form a smooth joint therewith leaving the back uncovered between said edge and the boss or hub 3, whereby thread for securing the button in place may pass through the transverse opening 4 and at all times during wear as well as in sewing will come in frictional contact with the soft material of the back only.



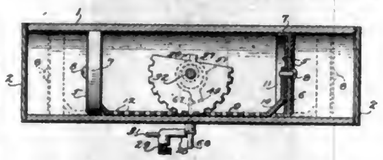
1,662,204. PROTECTOR FOR POULTRY FEEDERS. RAYMOND T. PARKHURST, Moscow, Idaho. Filed June 28, 1927. Serial No. 202,099. 3 Claims. (Cl. 119—61.)

3. A protector of the class described comprising an annular member, inwardly and upwardly disposed legs secured to said member, said annular member at points spaced circumferentially thereof being provided with open-

ings, upwardly converging legs slidably disposed through said openings and connected at their upper extremities, the lower extremities of the last named legs being provided with inwardly facing hook members, the first named legs being each positioned between adjacent second named legs.

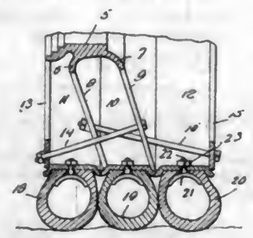
1,662,205. DRINKING-GLASS-WASHING APPARATUS. ROBERT R. PARRY, Elmhurst, N. Y., assignor of one-half to Carl H. Fowler, New York, N. Y. Filed Jan. 2, 1925. Serial No. 35. 10 Claims. (Cl. 15—75.)

1. In drinking glass washing apparatus, the combination of a stationary vertical support, a plurality of vertical cylindrical members rotatably mounted on stationary shafts adapted to frictionally engage the outer surface of a glass positioned on said support, to rotate the same, said support having a curved surface between which and said cylindrical members the glass is positioned, means for rotating said cylindrical members, and means for cleansing the glass while it is being rotated.



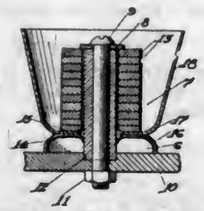
1,662,206. PROPELLING SYSTEM AND METHOD. CLIFFORD M. PAXTON, Brooklyn, N. Y., assignor to Paxton Corporation of America. Original application filed Apr. 7, 1923, Serial No. 630,463. Divided and this application filed May 25, 1925. Serial No. 32,531. 13 Claims. (Cl. 115—11.)

1. A marine vessel of the displacement type, having entrance, midship and run sections, in combination with a propelling system including a power driven propelling wheel and resistance reducing means including a power-driven, high pressure pumping means for discharging high velocity jets of water, designed and arranged to exert their useful water excavating action along the entrance section and beneath where the maximum bow waves tend to pile up when the vessel is driven at speed by the combined efforts of the wheel and the jets.



1,662,207. WINDSHIELD CLEANER. JOHN X. PHILLIPS, Jr., Washington, D. C., assignor, by mesne assignments, to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Original application filed Jan. 7, 1924, Serial No. 684,823. Divided and this application filed Aug. 5, 1925. Serial No. 48,420. 6 Claims. (Cl. 15—253.)

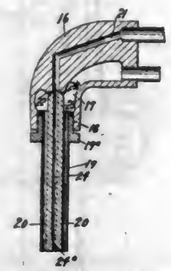
1. A windshield cleaner comprising a motor including a casing and a piston therein, one of said elements reciprocating relative to the other, a wiper means reciprocable by the movable element, cam means adjacent one extreme limit of movement of said wiper means and on which a part of said wiper means rides when moved thereover for relieving the wiping pressure of the wiper means on the windshield glass, automatic valve mechanism for reversing the application of operative fluid pressure at the end of each stroke of the movable element of said motor for operating the wiper means over a normal path of movement extending short of said cam means whereby said cam means will remain inoperative during



normal operation of the wiper means, and means for arresting the operation of the valve mechanism at one end of the stroke of said movable element whereby the operating fluid pressure will continue to act on said movable element and move it beyond its normal path into contact with and ride upon said cam means so that said wiper means will be spaced from the windshield glass.

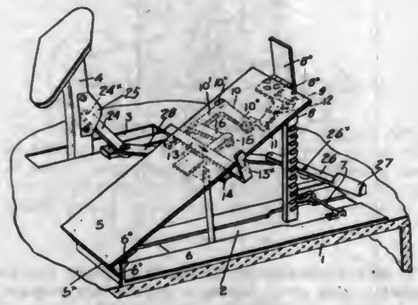
1,662,208. TRACTION WHEEL. HOYLE POUNDS, Winter Garden, Fla. Filed Nov. 1, 1927. Serial No. 230,297. 5 Claims. (Cl. 152—20.)

1. A wheel structure of the class described comprising a plurality of rims disposed in side by side relation concentric with each other, a plurality of tire casings, means for firmly clamping the tire casings on the rim, one on each rim, said casings being noninflated and empty.



1,662,209. THREAD-TENSIONING DEVICE. ARTHUR L. REMINGTON, Worcester, Mass., assignor to Warp Compressing Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 11, 1926. Serial No. 93,943. 1 Claim. (Cl. 242—150.)

In a thread tensioning device, a bolt, a porcelain sleeve surrounding said bolt, an inverted cup shaped member loosely surrounding said sleeve, said cup shaped member having its cylindrical surface and its base surface joined by a gently curving urface, a second cup shaped member with its base resting on the base of said first cup shaped member around a narrow annular zone, said second cup shaped member having an upwardly extending hollow portion of frusto-conical shape, said frusto-conical surface merging into the base of said second cup shaped member by a gently curved surface, and a plurality of weights located inside said second cup shaped member around the porcelain sleeve, the whole device being

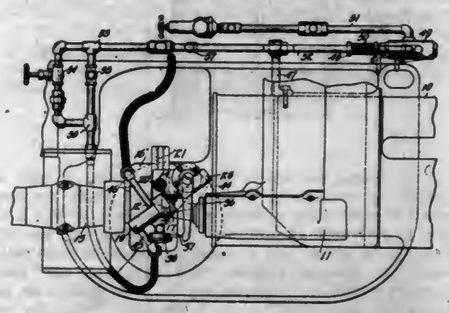


readily threaded and offering a resistance to the passage of thread that is determined by the number of weights in the second cup shaped member, the porcelain sleeve offering practically no resistance.

1,662,210. TORCH. JOHN J. SALM, Akron, Ohio. Filed Dec. 31, 1926. Serial No. 158,228. 7 Claims. (Cl. 158—27.4.)

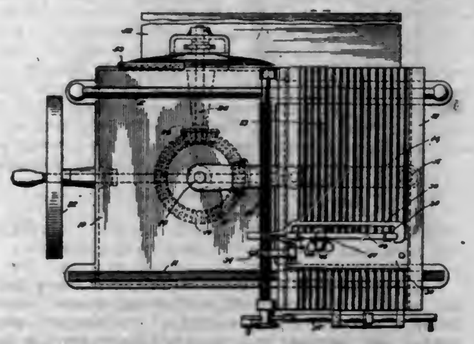
1. A torch comprising a nozzle, means for supplying a gaseous fuel thereto, and means for supplying oxygen thereto, said nozzle having a mixing chamber therein and provided with a seat portion on the inlet to said chamber for the oxygen, said nozzle having a threaded aperture therein in alignment with said seat, a tip extended through said aperture and having a reduced portion extending through the mixing chamber and seated on said seat and means threaded into said aperture to urge the tip against the seat, said tip having a circumferential series of longitudinal ducts through its body portion adapted to deliver a combustible mixture of gases from the mixing chamber to provide a flame, said tip also having a central duct through the body portion and reduced portion adapted to deliver free oxygen to the flame, the seat engaging end of the tip being formed with one or more spiral slots providing ducts for admitting oxygen to the mixing chamber with a whirling motion to thoroughly mix the gases in the chamber and evenly supply the mixed gases to all of the circumferential series of ducts, said central duct being restricted to create a back pressure on the oxygen for forcing a portion thereof into the mixing chamber.

1,662,211. ACCELERATOR-CONTROLLING DEVICE. JAMES CORNAIL SHIER, Toronto, Ontario, Canada. Filed Feb. 4, 1927. Serial No. 165,940. 7 Claims. (Cl. 74—81.)



1. In an accelerator, the combination with the accelerator pedal, of a rack bar hingedly connected to the pedal at its front edge and depending therefrom below the hinge point, a stationary member with which the rack bar is adapted to be engaged when the pedal is depressed, and means operated by the lateral movement of the foot upon the pedal for moving the rack bar in and out of engagement with such stationary member.

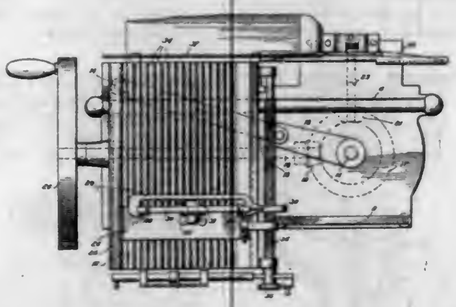
1,662,212. TUBE FRAME FOR AXMINSTER LOOMS. JOHN G. SODERBERG, GEORGE D. LOCKWOOD, and WILLIAM W. ROBERTSON, Worcester, Mass., assignors to Crompton & Knowles Loom Works, a Corporation of Massachusetts. Filed Aug. 21, 1922. Serial No. 583,137. 5 Claims. (Cl. 139—10.)



1. In a yarn tube frame, a hanger comprising an outer supporting member and an inner bearing member permanently secured together, and a spring clip, said clip having a recessed portion adapted to guide and position a spool gudgeon in said bearing member.

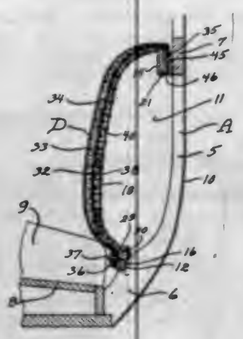
1,662,213. SIZING DEVICE FOR INTERNAL-GRINDING MACHINES. AMOS P. STEINER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1926. Serial No. 143,249. 10 Claims. (Cl. 33—172.)

1. The combination with a grinding machine having a work holding chuck, of a water guard around said chuck and a hydraulic sizing device carried by said water guard and means controlled by the movement of the grinding machine carriage for moving the sizing device into and out of operative position, substantially as set forth.



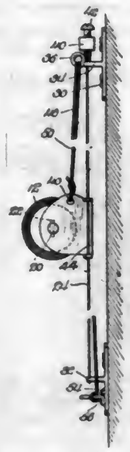
1,662,214. SLICING MACHINE. EDWARD M. STILES, Burlington, Iowa, assignor to U. S. Slicing Machine Company, a Corporation of Indiana. Filed June 25, 1025. Serial No. 39,400. 18 Claims. (Cl. 146—102.)

1. A slicing machine comprising a supporting base, having an operator's position arranged at one edge thereof, a slicing knife spaced away from the opposite



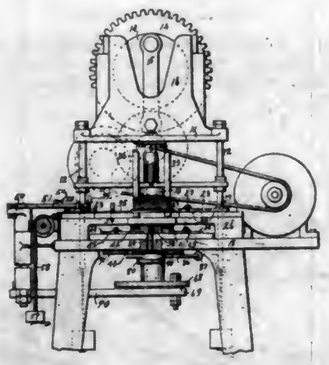
edge of said base and having its cutting plane substantially normal to said edges, a table mounted to reciprocate on said base and movable to a position towards said opposite edge beyond said slicing knife, to permit slices to be severed from material on said table as said table is moved towards said operator's position, and an abutment at the side of said table away from said operator's position, said abutment extending approximately to the cutting plane of the knife.

1,662,215. SLICING MACHINE. EDWARD M. STILES, Burlington, Iowa, assignor to U. S. Slicing Machine Company, a Corporation of Indiana. Filed June 25, 1925. Serial No. 39,402. 8 Claims. (Cl. 146—102.)



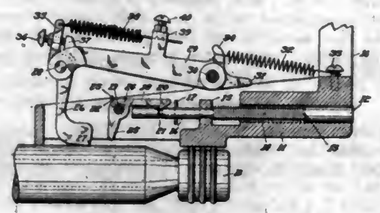
1. A slicing machine comprising a knife, a table arranged to reciprocate relative to said knife, an abutment on said table extending transversely to the direction of movement of said table for engaging one side of a piece to be sliced, and a guard arranged in registration with the opening between said abutment and knife, through which the material is fed from said table and extending substantially into registration with the cutting edge of said knife.

1,662,216. BACK CUSHION FOR VEHICLE SEATS. SAM SWITZER, Casper, Wyo. Filed Dec. 16, 1926. Serial No. 155,254. 7 Claims. (Cl. 155—181.)



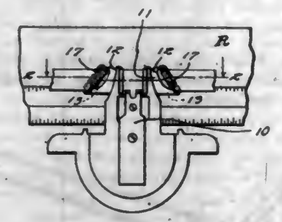
1. A back cushion for seats comprising a frame having uprights and rearwardly offset upper and lower portions, a resilient mat secured at its marginal portions to said uprights and upper and lower portions inwardly of the frame, and an upholstering arranged over the face of the mat and secured at its marginal portions to said frame.

1,662,217. SHADE MOUNTING. CHARLES H. TILTON, Chicago, Ill. Filed Nov. 20, 1922. Serial No. 601,982. 3 Claims. (Cl. 156—27.)



3. In a shade mounting, in combination, fittings for receiving the ends of a shade roller, flexible tension wire means slidably supporting each fitting, and rigid supports at spaced points on said tension wire means, the tension of said wire means being such as to permit displacement of said fitting when positioned intermediate said points, to separate the fittings from the roller.

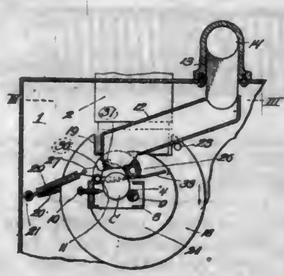
1,662,218. FEEDING DEVICE FOR SHAPING PRESSES. STEPHEN F. TOJEK, Milwaukee, Wis., assignor to Stephen F. Tojek and Philip Tojek, Copartners doing business under the firm name and style of Tojek Brothers, Milwaukee, Wis. Filed Aug. 2, 1926. Serial No. 126,430. 6 Claims. (Cl. 271—1.)



1. In a shaping press for blanks of paper and similar material, said press having a driven rotary shaft, the combination of a magazine for the blanks, means operated from said shaft for separating bundles of superposed blanks from those in the magazine, a reciprocatory feeding device for delivering the bundles of blanks successively to the press, compound lever mechanism for actuating said feeding device, and a cam on said rotary shaft adapted to actuate the power arm of said compound lever mechanism once during each turn of the shaft.

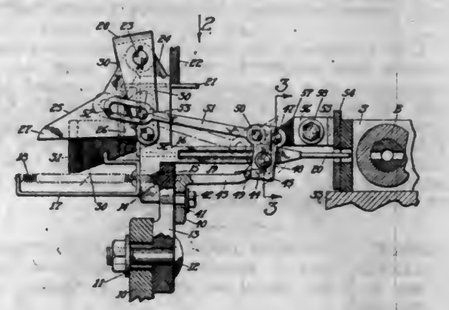
1,662,219. WEFT DETECTOR MOUNTED ON REGULARLY-MOVING TRANSFERRERS. RICHARD GREENLEAF TURNER, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1926. Serial No. 127,694. 1 Claim. (Cl. 139—271.)

In a weft detector mechanism for a loom having a transferrer arm moved toward and arrested in its motion toward the surface to be detached on detecting beats of the loom, a side slip weft detector, a carrier for the detector pivotally mounted on the transferrer arm and movable toward the surface to be detected when the transferrer is arrested in its movement towards the surface to be detected by reason of the inertia of said detector and carrier, yielding means to hold the carrier and detector in raised position, other yielding means to hold the detector in normal position relatively to the carrier, said first yielding means exerting a force considerably less than the inertia force of the detector and carrier and said second yielding means exerting a force only slightly less than the inertia force of the carrier.



1,662,220. RIBBON-GUIDING ATTACHMENT FOR TYPEWRITERS. MORRIS F. UMSTEAD, Aldan, Pa. Filed Apr. 30, 1927. Serial No. 188,022. 4 Claims. (Cl. 197—170.)

1. The combination with a vibratory typewriter ribbon carrier having guides fixed thereto through which the ribbon passes, of guides for the ribbon separable from the carrier and means for adjustably connecting the last named guides to the fixed guides of the carrier.



1,662,221. COIN-CONTROLLED MECHANISM FOR VENDING MACHINES. LESLIE A. VANDIVER, Kansas City, Mo. Filed June 28, 1926. Serial No. 119,009. 3 Claims. (Cl. 194—35.)

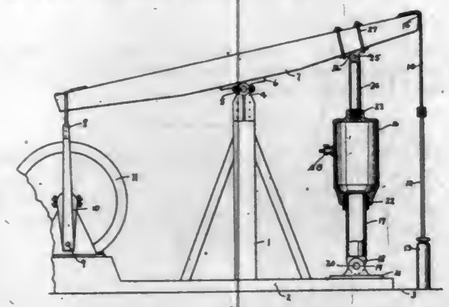
1. The combination with a rotary shaft, a package delivery device having a shoulder, a disk mounted to turn with the shaft, a coin chute and means cooperating with the perimeter of the shaft for intercepting and supporting a proper coin, of a slotted guide for the supported coin, a pair of arms pivoted to the disk, one having a pin to ride on the said guide and be pivotally raised by a coin when the same is supported by the shaft and said means, and the other a shoulder for engaging the shoulder of said delivery device when the shaft is

turned; the shaft having a notch to register with the coin to permit the same to drop before the turning movement of the shaft has ended.

1,662,222. MULTIPLE-NEEDLE DETECTOR. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Jan. 5, 1926. Serial No. 79,483. 3 Claims. (Cl. 139—276.)

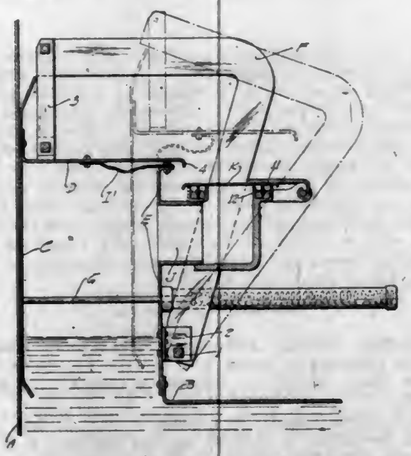
1. In a weft detector for looms, a yarn engaging detector member, weighted means to hold said member yieldingly in position to be engaged by a bobbin, means acting prior to engagement between the bobbin and the detector member to set the weighted means in motion and give the same a movement which retards more quickly than the retardation of the advancing bobbin, the rate of advance of the weighted means and detector member and also the bobbin being substantially the same when a full bobbin engages the detector member, and the relative rate of motion of the bobbin with respect to the weighted means and detector member increasing as the diameter of the bobbin diminishes.

1,662,223. SHOCK ABSORBER. HENRY F. WERNER and CLARENCE E. FABER, New Orleans, La. Filed Apr. 18, 1927. Serial No. 184,630. 3 Claims. (Cl. 64—96.)



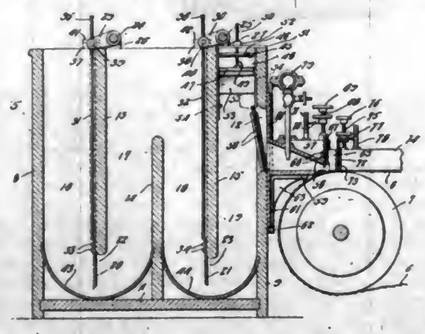
1. A shock absorber comprising a pair of body sections positioned in endwise opposed relation, a thrust bearing interposed between said body sections, a pair of spaced collars mounted on one of said sections and one fixed and the other normally loose with respect to said section, a collar fixed to the other sections, a sleeve

secured to said last mentioned collar and to said normally loose collar, means for connecting said normally loose collar to its body section, a coil spring surrounding



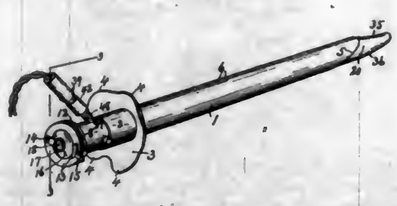
said body section and having one of its ends extending into said fixed collars and its other end into the other of said fixed collars.

1,662,224. SHOCK ABSORBER FOR WALKING BEAMS. WILLIAM WERNER, Mexia, Tex. Filed Mar. 23, 1926. Serial No. 96,820. 2 Claims. (Cl. 74—71.)



1. In a device of the character described including a walking beam adapted to reciprocate a pump rod, the combination of a shock absorbing device arranged adjacent the pump rod and adapted to cushion the down stroke of the rod, said device comprising a piston pivoted at its lower end, and a cylinder telescoping over said piston secured to said beam, said cylinder being of materially larger capacity than the volume of said piston and filled with air under pressure.

1,662,225. FLOATING DECK FOR LIQUID-STORAGE TANKS. JOHN H. WIGGINS, Bartlesville, Okla. Filed Mar. 26, 1923. Serial No. 627,835. 11 Claims. (Cl. 220—26.)

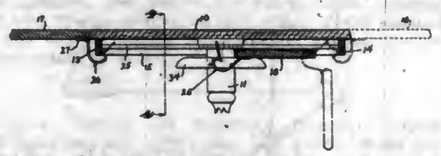


1. A floating deck for liquid storage tanks, comprising a central body portion that normally floats upon the liquid in the tank, a variable peripheral portion for closing the space between said central body portion and the side wall of the tank comprising segmental shoe members arranged with their lower edge portions submerged in the liquid in the tank and having no direct connection with said central body portion, substantially the entire area of said shoe members being disposed in parallel relationship with and in sliding engagement with the side wall of the tank, and means for sustaining or supporting said shoe members from said central body portion constructed so as to permit relative movement of said shoe members and body portion without destroying the parallel relationship between said shoe members and the side wall of the tank.

1,662,226. PAPER-MAKING MACHINE. GEORGE S. WITHAM, Jr., Hudson Falls, N. Y. Filed May 24, 1926. Serial No. 111,407. 10 Claims. (Cl. 92—46.)

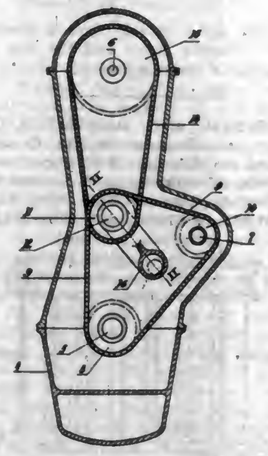
1. In a paper-making machine, the combination with the web-forming part, of a head-box for the liquid stock and having an opening in the front wall thereof, a nozzle apron and slice adjustably mounted as a unit on said wall over the opening therein, and a compartment in the head-box communicating with the latter and the nozzle, said compartment having walls extending upwardly above the nozzle and slice to provide a pond or storage space in which the level of the liquid stock may be maintained above the nozzle, slice, and web-forming part.

1,662,227. SURGICAL INSTRUMENT. WILLIAM NOAH ALLYN, Auburn, N. Y. Filed Feb. 25, 1925. Serial No. 11,495. 4 Claims. (Cl. 128—7.)



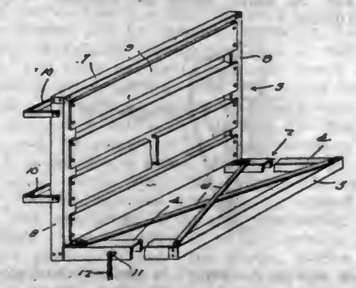
1. A surgical instrument of the character described, comprising a tubular section and an obturator section detachably interlocked with the distal end of the tubular section and provided with a smooth unbroken and continuous surface.

1,662,228. EXTENSION LEAF CONSTRUCTION FOR TABLES. DANIEL G. ANDERSON, Los Angeles, Calif., assignor to Anderson Company, Los Angeles, Calif., a Corporation of California. Filed Feb. 23, 1926. Serial No. 89,861. 5 Claims. (Cl. 45—113.)



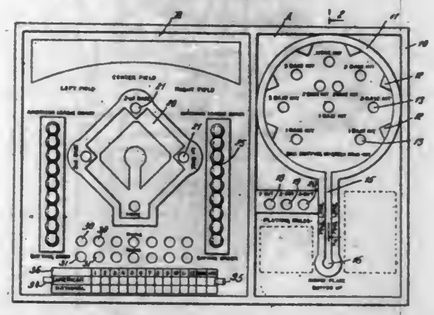
1. An extension table including a stationary table top, depending aprons around the edge of the table top, a leaf movable with relation to the table top and having an edge adapted to register with the table top edge.

guide rods secured to the table beneath the table top, hinges for the leaf including a hinge member slidably mounted on one of said rods and a second hinge member



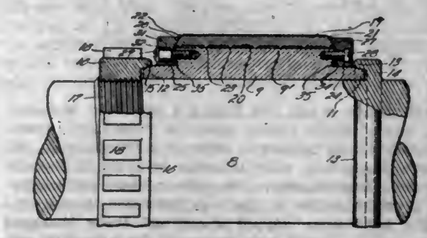
secured to the leaf near its said top meeting edge, the first mentioned hinge member adapted to extend under and around the depending apron of the table top.

1,662,229. APPARATUS FOR REGULATING THE TENSION OF CHAINS. ERNEST MAURICE BALLOT, Paris, France. Filed Nov. 30, 1926, Serial No. 151,791, and in France Jan. 29, 1926. 3 Claims. (Cl. 64—5.)



1. A device for regulating the tension of two chains comprising a stationary frame, journals formed in said frame, an axle carried by the journals and being eccentric with respect to said journals, a forked bracket loosely mounted upon the axle and adjustable for pivotal movement about the same, and a shaft carried by said bracket and having a pair of adjacent and interconnected pinions adapted to receive the chains whereby through rotation of the eccentric axle and the pivoted action of the forked bracket, said shaft with the pinions may be brought into a position in which the chains will be properly stretched one independently from the other.

1,662,230. BOTTLE-DISPENSING-MACHINE ATTACHMENT. JOHN D. BENCH, Okmulgee, Okla. Filed Oct. 11, 1926. Serial No. 140,867. 2 Claims. (Cl. 312—35.)

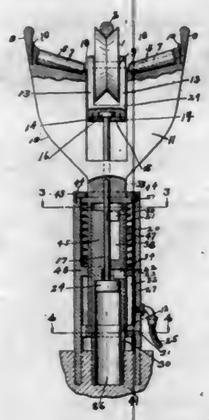


1. In a device of the class described, an attachment comprising a base adapted to rest upon the top of a bottle machine dispensing cabinet, an upright connected with said base and extending at right angles thereto and adapted for cooperation with bottle containing pockets in a bottle rack, and retaining means for said base and upright.

1,662,231. GAME. THOMAS BRADY, East Orange, N. J. Filed May 5, 1926. Serial No. 106,834. 7 Claims. (Cl. 273—88.)

1. A game board having a playing field, a raised border around said field, depressions scattered in said field and an elongated substantially straight runway leading to said field and alined with the center thereof, said runway having an enlargement at the end thereof remote from the field adapted to support a spherical member, and penalty spaces adjoining said runway.

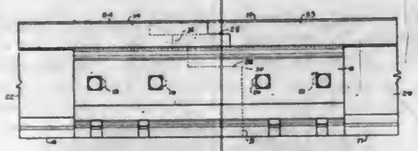
1,662,232. PRINTING-PLATE HOLDING MEANS. CHARLES M. BREMNER, Chicago, Ill. Filed Apr. 17, 1926. Serial No. 102,635. 8 Claims. (Cl. 101—374.)



8. In combination, a printing roller provided with an arcuate printing plate support having a shoulder on its lateral edge, a plate retaining member adapted to engage a plate, and a shoulder on said member adapted to co-act with the shoulder on the plate support to reinforce said member against outward strains.

5. The method of inserting a fudge plate between the retaining members of a printing roll at least one of which is resiliently mounted which consists in placing the plate on the circumference of the roll, slightly separating the retaining members and inserting said plate between said members by endwise circumferential sliding movement.

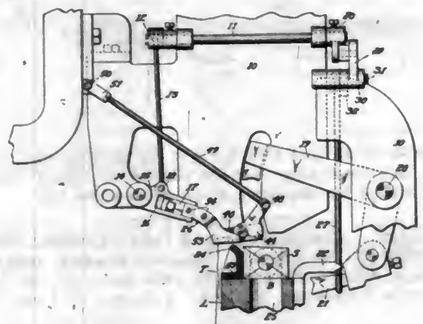
1,662,233. TROLLEY-WHEEL CARRIER. CLARENCE W. BROWN, Los Angeles, Calif. Filed Dec. 15, 1924. Serial No. 756,072. 12 Claims. (Cl. 191—60.)



1. In a device of the character described, the combination, with a trolley wheel, for cooperation with a trolley wire of a piston, connection between the piston and wheel for supporting the latter from the piston, a

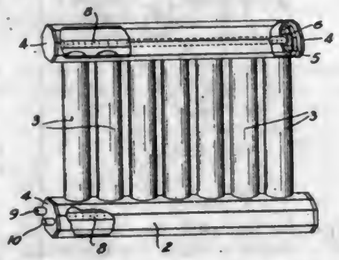
cylinder within which the piston operates, a source of fluid under pressure, a valve controlling the supply of pressure fluid to the cylinder, and means operated by

the trolley wire when it leaves the wheel for shifting the said valve to cause the wheel to be moved into position for again receiving the trolley wire.



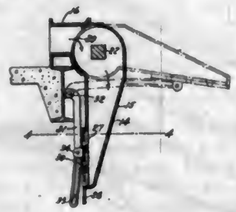
1,662,234. RAIL JOINT. GEORGES CHAGNON, Mitchell Station, Quebec, Canada. Filed Mar. 12, 1927, Serial No. 174,928, and in Canada Mar. 16, 1927. 1 Claim. (Cl. 238—235.)

In rail joints, a rail end having a rail head V-shaped tongue and a similar tongue undercut immediately therebelow and a web extension projecting from behind the rearmost tongue to a short distance from the end of the lower and rearmost tongue, the web and base end surface being at right angles to the web extension, a rail end having a head with stepped upper and lower V-shaped recesses and a slotted web receiving the aforesaid web extension and bringing all web end surfaces into contact, the vertical joints between rail ends being widely separated and brought under the heads by means of the web extension from one rail and joint plates securing said rail ends and bringing the major joint in a double Z-shape formed by the two heads and bridging the principal head joints across said web extension.



1,662,235. THREAD CUTTER FOR WEFT-REPLENISHING LOOMS. AUGUSTIN J. CHEVRETTE, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 6, 1926. Serial No. 127,695. 5 Claims. (Cl. 139—264.)

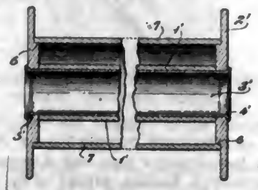
1. In a thread cutter for a weft replenishing loom having a lay, a shuttle feeler pivoted to the mechanism above and behind the lay when the latter is in its forward position and normally located above the shuttle as the lay moves back and forth, a thread cutter mounted on the forward end of the shuttle feeler and having a member pivotally mounted on the shuttle feeler, a link connected at one end to the pivoted cutter member and having the other end fixed, and means operated by the replenishing mechanism to lower the shuttle feeler, the



link opening the cutter as the feeler is lowered and the lay raising the shuttle feeler and the link closing the cutter as the shuttle feeler is raised.

1,662,236. STEAM AND HOT-WATER RADIATOR. ERNST COUPLAND, Toronto, Ontario, Canada, assignor of one-fourth to Edmund McGillivray, one-fourth to Henry Edwin Silverthorne, and one-fourth to Frank Osborne, Toronto, Canada. Filed Sept. 11, 1926. Serial No. 134,877. 1 Claim. (Cl. 257—154.)

A radiator section formed of sheet metal and comprising upper and lower tubular headers and tubes extending between the headers and welded thereto to form an integral unit, closures for the open ends of the headers, and a perforated tubular spacer extending longitudinally through each of the headers and slidably held at its ends in the closures to permit of the free expansion and contraction of the headers.

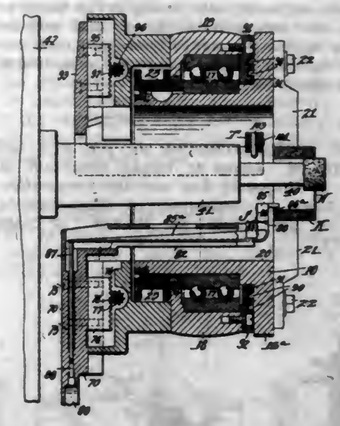


1,662,237. ASH-DISCHARGE MECHANISM FOR MECHANICAL STOKERS. FRED H. DANIELS, Worcester, Mass., assignor to Sanford Riley Stoker Company, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 26, 1922. Serial No. 556,653. 7 Claims. (Cl. 110—165.)

7. In a stoker, a support, a hollow ash-discharging member mounted on said support for movement from an upper ash-supporting position to a lower ash-discharging

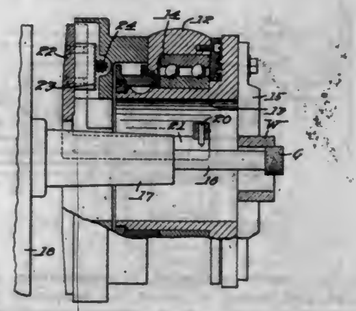
position and having grate openings in its upper face, means for supplying air to said member to eject refuse from within said member when said member is in lowered position, and means for automatically reducing the area of the opening through which air is supplied to said member during the raising of said member to upper operative position.

1,662,238. SPOOL OR BOBBIN. HOMER J. DAVIS, Wilmington, Del. Filed Mar. 23, 1927. Serial No. 177,721. 2 Claims. (Cl. 242—118.)



1. As an article of manufacture, a spool consisting of coaxially disposed barrel like bodies of different cross sectional sizes, the smaller of said barrels being arranged within the other and in relatively spaced relation to the same, heads adjacent the opposite extremities of said barrels having portions of their inner sides formed with shouldered parts adapted to snugly and bindingly receive the adjacent opposite ends of the larger barrel thereover, such barrels and heads being each formed of a hardened composite material, and a tubular metal element bindingly received in and extended through the innermost and smaller of said barrels, said elements being of a length greater than the length of either of the barrels and having its extremities extended for distances beyond the adjacent ends of that barrel receiving the same and having said heads engaged over the same and the extremities of the barrel being outwardly swaged upon themselves whereby to bindingly and clampingly engage adjacent portions of the barrel to bindingly and clampingly secure the same with respect to each of said barrels.

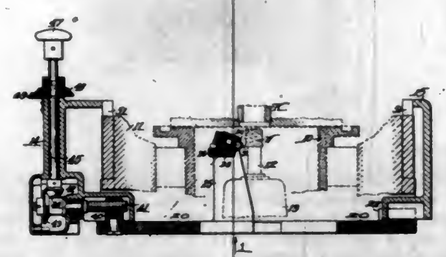
1,662,239. BOTTLE CLOSURE. HARRY DE WALLACE, Syracuse, N. Y., assignor to Kleen Kap Corporation, Syracuse, N. Y., a Corporation of New York. Filed Mar. 18, 1927. Serial No. 176,522. 1 Claim. (Cl. 215—38.)



In a bottle closure, a body having a plane disk-like central portion and an upwardly extending convex reinforcing rib defining the marginal edge of said central portion, said body having an upwardly facing annular V-shaped groove concentric with and spaced from said rib, said body having a second V-shaped groove formed in its under face and concentric with the first named groove, and the portion of the body extending beyond the last named groove being formed to provide a relatively broad convex apron having inwardly extending radially disposed grooves overlying the second named groove and connecting with and terminating at the first named annular groove, all of said grooves forming weakened portions whereby the central portion of the body may be forced into the bottle mouth and the apron portion of the body conformed to overlie the bead of the bottle.

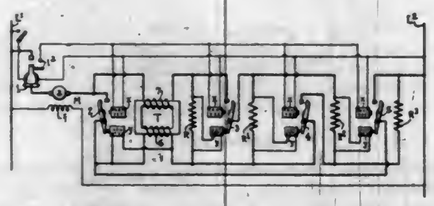
1,662,240. INTERNAL-GRINDING MACHINE. ALDEN M. DRAKE, Greenfield, Mass., assignor to Greenfield Tap & Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Feb. 27, 1926. Serial No. 91,208. 17 Claims. (Cl. 51—165.)

1. An internal grinding machine comprising a frame, a work supporting spindle having a relatively large axial opening therethrough, said spindle being adapted to receive and support a piece of work at the front end thereof having a cylindrical opening aligned with said spindle opening and of less internal diameter, a bearing support for said spindle, a grinding wheel, a wheel shaft, a wheel head mounted on said frame at the rear of said work spindle with said wheel shaft projecting into said axial opening and said wheel adapted to enter and leave the work from the rear side thereof, means to cause relative axial movement of the wheel and work, and a size indicating device also extending through said spindle into the work from the rear and effective to give an indication of the internal diameter of the work during the grinding operation, the axial opening through the spindle being of a size sufficiently large to freely receive said grinding wheel and indicating device.



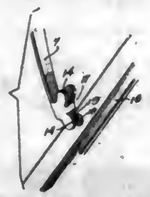
1,662,241. METHOD AND APPARATUS FOR GRINDING INTERNAL SURFACES. ALDEN M. DRAKE, Greenfield, Mass., assignor to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed May 8, 1926. Serial No. 107,749. 7 Claims. (Cl. 51—48.)

1. In an internal grinding machine, a frame, an annular work-supporting member, a bearing support therefor, means to secure the work to said member, a grind-



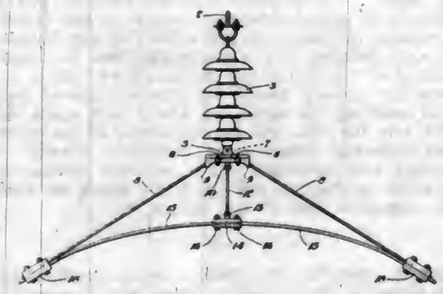
ing wheel, a wheel head positioned at the rear of said work-supporting member, a wheel shaft mounted in said head and projecting therefrom into said work-supporting member to present said wheel at the rear face of said work, a truing device for the wheel at the rear of the work, and means to cause relative axial travel between the wheel and work, said truing device being positioned between the work and the wheel head and being continuously spaced rearwardly from the rear face of the work a distance greater than the axial width of the grinding wheel face.

1,662,242. WHEEL-TRUING DEVICE FOR GRINDING MACHINES. ALDEN M. DRAKE, Greenfield, Mass., assignor to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Aug. 18, 1927. Serial No. 213,948. 10 Claims. (Cl. 125—11.)



1. In a grinding machine having a work head, a hollow work-supporting spindle rotatably mounted in a bearing therein and a grinding wheel mounted for axial withdrawal from the work within said hollow spindle, a cross slide mounted at the rear of said work head and having a slide bearing at both sides of the work spindle axis, said slide having a portion projecting forward within said hollow spindle, and a truing device supported on said forwardly projecting portion.

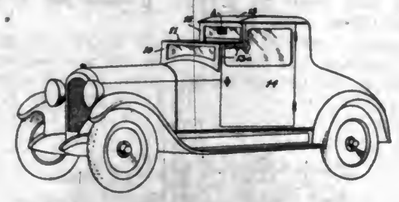
1,662,243. CONTROLLER FOR ELECTRIC MOTORS. CLARENCE T. EVANS, Milwaukee, Wis., assignor to The Cutler-Hammer Mfg. Co., Milwaukee, Wis., a Corporation of Wisconsin. Filed May 8, 1922, Serial No. 559,187. Renewed Aug. 4, 1924. 10 Claims. (Cl. 172—288.)



1. In a motor controller, in combination, accelerating means, and means to arrest for temporary periods the accelerating action of the former means in different stages thereof, the latter means including inductive windings and commutatable connections providing for inclusion of said windings in circuit alternately as acceleration progresses.

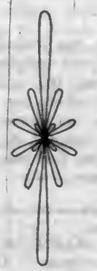
1,662,244. WINDSHIELD CLEANER. FREDERICK G. FOLBERTH and WILLIAM M. FOLBERTH, Cleveland, Ohio, assignors to Trico Products Corporation, Buffalo, N. Y., a Corporation of New York. Filed May 13, 1925. Serial No. 30,000. 6 Claims. (Cl. 15—253.)

5. A windshield wiper element for being readily connected to an operating arm having a part the cross section of which has a major axis and a minor axis, said element comprising a flexible wiping strip and a rigid backing strip, the latter having a part formed with a recess having a relatively narrowed entrance.



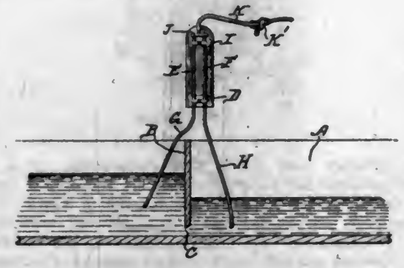
1,662,245. YIELDABLE CONNECTER FOR ELECTRIC CABLES. CHAUNCEY MARSH GOODRICH, Windsor, Ontario, Canada. Filed June 14, 1927. Serial No. 198,845. 4 Claims. (Cl. 173—251.)

3. A yieldable connecter for suspending electrical conductors from overhead supports, comprising an insulator string, a suspension cable slidably supported on said insulator string for movement in a direction parallel with the direction of the conductor, said cable being clamped to said conductor on the opposite sides of said insulator string at points materially beyond said string, and a suspension link secured to said insulator string and said conductor and adapted to break under abnormal loads such as caused by the breaking of the conductor between its points of suspension, and said cable being of such length that it will move relative to the insulator string sufficiently to permit the next unbroken span of the conductor to have such increased sag as may be desired, in order to reduce the tension in the cable to a predetermined amount.



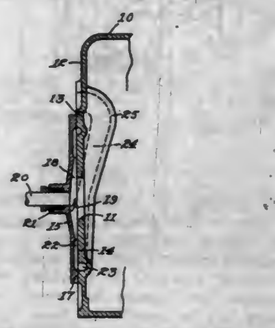
1,662,246. AUTOMOTIVE VEHICLE CONSTRUCTION. JACOB M. GOLDBERG, Brooklyn, N. Y. Filed Sept. 15, 1927. Serial No. 219,602. 3 Claims. (Cl. 296—84.)

1. In a closed-type automobile body having a roof, a forward structure of stepped form transverse to the body below said roof, said structure having a steering-wheel-hooding lower portion and a windshield superstructure joined at its top to said roof, in combination with a driver's seat in the body adapted to bring the eye of a driver on said seat into close proximity with a transparent element of said superstructure whereby the visual angle is hardly decreased from 180° (by side post obstruction) while the vision area of said element is



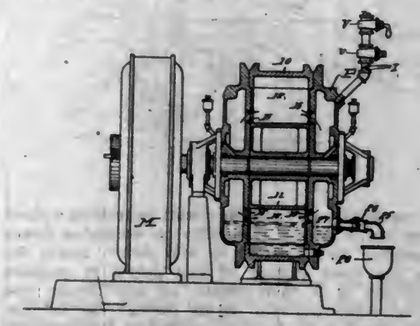
greatly decreased over that required in present day structures, said forward structure including L-shaped side frames.

1,662,247. METHOD AND ARRANGEMENT OF DIRECTIONAL WAVE RECEPTION AND EMISSION. WALTER HAHNEMANN, Kitzeberg, near Kiel, and HEINRICH HECHT and BERNHARD NIELSEN, Kiel, Germany, assignors to Signal Gesellschaft mit beschrankter Haftung, Kiel, Germany, a Firm. Filed Sept. 26, 1925, Serial No. 58,943, and in Germany Oct. 6, 1924. 6 Claims. (Cl. 181—05.)



2. A method of reducing the base length in binaural reception which consists in spacing receiving units at proper distances from each other, using as the left base a plurality of units commencing from the left end of the base, using as the right base an equal number of units commencing from the right base, said number of units being greater than half the whole number of units.

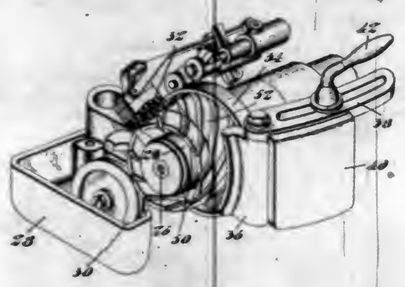
1,662,248. WEIR DIFFERENTIAL GAUGE. CLARENCE C. JACOB, Myton, Utah. Filed Aug. 25, 1920. Serial No. 405,982. 1 Claim. (Cl. 73—31.)



A gauge for measuring the volume of water flowing through an orifice in a dam or weir embodying a plurality of tubular members the intake ends of which are adapted for independent immersion in the water above and below said dam or weir, a plurality of observation tubes composed of transparent material, said observation tubes being connected with said tubular members respectively for communication therewith, a base to which the observation tubes are fixedly attached and to which said tubular members are connected at their ends adjacent to the observation tubes, a chart on the base the calibrations of which are readable through said transparent observation tubes, a connecting member uniting the upper ends of the observation tubes, and a valved exhaust connection in communication with the connecting member and with the observation tubes for exhausting air from said observation tubes concurrently and affording means for admitting air to said tubes.

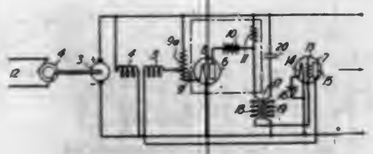
1,662,249. CASING FOR IMPELLER-TYPE WATER PUMPS. IRVING C. JENNINGS, South Norwalk, Conn. Filed Apr. 13, 1926. Serial No. 101,828. 5 Claims. (Cl. 103—1.)

1. A pump casing comprising a supporting wall with an inlet opening to the pump and an exhaust opening from the pump formed therethrough and an exhaust conduit formed thereon and having a flat finished surface around said inlet opening, said surface forming a bearing for the casing cover and also forming one side of the pump impeller chamber, and a cover plate, having an annular flat finished surface engaging the flat bearing surface of said side wall, said cover plate being recessed within said annular flat surface to form the outer side wall of the pump impeller chamber, said impeller being located substantially within the confines of said cover plate.



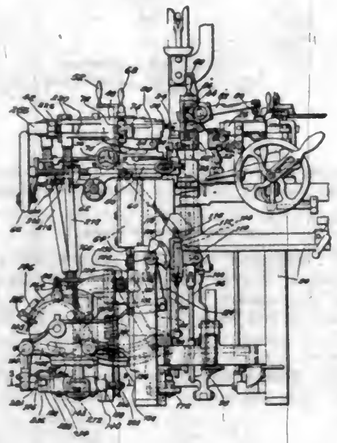
1,662,250. METHOD AND APPARATUS RELATING TO MOTOR-DRIVEN PUMPS. IRVING C. JENNINGS, South Norwalk, Conn. Filed June 11, 1926. Serial No. 115,873. 11 Claims. (Cl. 230—79.)

1. The method of operating a motor driven gas pump employing a liquid for its pumping action, which consists in unloading the pump by removing a substantial portion



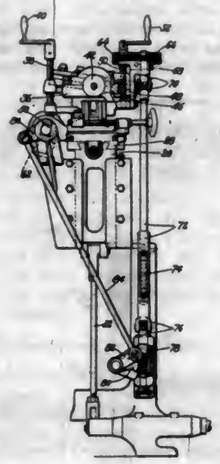
of pumping liquid when the pump is stopped, starting the pump with a greatly reduced supply of operating liquid therein, and thereafter gradually restoring the operating liquid as the pump attains normal operating speed.

1,662,251. FINISHING TOOL. FRANK A. E. MARSH, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 27, 1926. Serial No. 91,153. 11 Claims. (Cl. 12—79.5.)



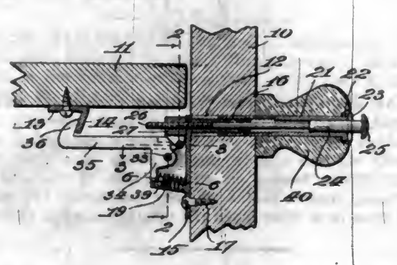
11. A finishing tool for the application of melted wax to the leather base section of a shoe to which a rubber top-lift section has been applied comprising sectional work-rubbing members having a generally conical contour, a wax guard arranged to overhang the larger end of said conical tool thereby to prevent scattering of wax from said tool by centrifugal force, the surface of said tool being divided into a restricted finishing area suitable for the application of wax to the heel base section of said shoe and a relieved area arranged to avoid the application of wax to the rubber heel toplift section, and means for spreading wax over the surface of said tool, said tool being constructed and arranged so that the relieved section of its surface merges gradually into the work-rubbing section of the surface whereby said spreading means is enabled to return to the work-contacting surface of the tool wax carried over into the relieved section of the tool.

1,662,252. ELECTRIC REGULATOR. EDMUND R. MORTON, New York, N. Y., assignor, by mesne assignments, to Western Electric Company, Incorporated, a Corporation of New York. Filed Mar. 12, 1925. Serial No. 14,930. 24 Claims. (Cl. 171—312.)



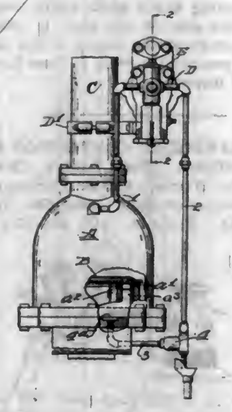
1. A regulator for an electric circuit comprising a space discharge device having a plurality of electrodes, means for supplying space current to said device, means for varying the space current of said device in response to variations in a characteristic of said circuit, and means for regulating said circuit through the intermediary of variations in the space current of said device to limit said variations in a characteristic of said circuit and for simultaneously varying the space current of said device to give a cumulative regulating effect.

1,662,253. MACHINE FOR SHAPING UPPERS OVER LASTS. ARTHUR F. PYM, Marblehead, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 16, 1923, Serial No. 625,592. Renewed Feb. 2, 1927. 120 Claims. (Cl. 12—14.)



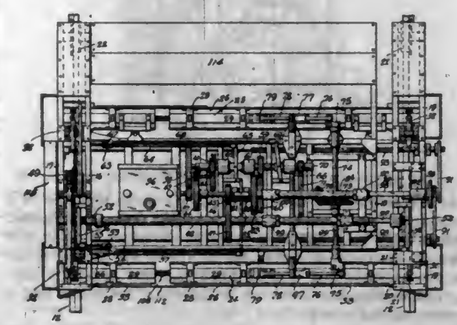
65. Wiper mechanism comprising, in combination, an adjustable support, a sleeve mounted in the support for angular adjustment about its longitudinal axis, wipers and wiper-carriers mounted on the sleeve, a wiper-closing rod mounted to slide in the sleeve, mechanism for moving the sleeve in the support to advance the wipers, and additional mechanism for independently moving the rod for closing the wipers.

1,662,254. LASTING MACHINE. ARTHUR F. PYM, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 3, 1926. Serial No. 85,680. 9 Claims. (Cl. 12—14.)



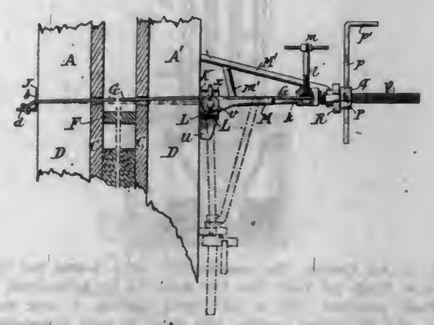
1. In a machine of the class described, the combination with last and shoe positioning means, toe-embracing wipers, and means for imparting to said wipers upwiping movement in a variably predetermined direction heightwise of the toe of the shoe, of mechanism for determining the direction of the upwiping movement of the wipers by the lateral slope of the bottom of the forepart of the last.

1,662,255. PUSH CATCH FOR DOORS. THOMAS F. STUART and HENRY A. MOORE, Los Angeles, Calif. Filed Oct. 20, 1926. Serial No. 142,843. 4 Claims. (Cl. 292—127.)



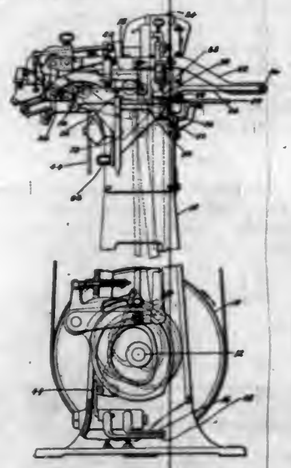
1. A door latch comprising a tubular housing that is adjustable in length, a knob removably mounted on the outer portion of said tubular housing, a plate at the inner end of said housing, which plate is adapted to be secured to the door to which the latch is applied, a latching hook pivotally mounted on said plate, a push rod passing through the tubular housing, a member adjustably mounted on the inner end of said push rod and bearing on the inner portion of the latching hook above its pivot and a spring bearing on the inner portion of said hook below its pivot.

1,662,256. ACCELERATOR FOR DRY-PIPE SPRINKLER SYSTEMS. EMIL TYDEN, Evanston, Ill. Filed Aug. 23, 1924. Serial No. 733,067. 7 Claims. (Cl. 169—2.)



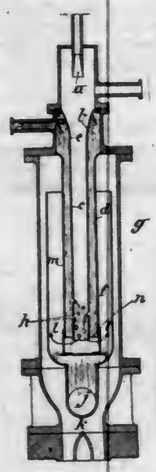
1. In combination with a dry pipe sprinkler system and main valve thereof constructed for exposing differential areas to the air pressures respectively and having for that purpose at the water inlet side a chamber in which the pressure is normally substantially atmospheric, a passage leading from the air pressure region of the system to said chamber; an expansible and reducible device; means transmitting air pressure from said region of the system to different areas of a movable wall of said device in opposition to each other for determining a movement of the movable wall by the dominance of the pressure on one of said areas over that on the other area, said means comprising two passages affording unequal access for said pressure to said areas, respectively; two valve seats at which respectively the access of pressure from the air pressure region of the system to the atmospheric pressure chamber and to said areas of the expansible and reducible device is controlled; valve means positioned for moving between said two seats and connections operated by the moving wall of said device for shifting said valve means from one to the other of said seats.

1,662,257. ADJUSTABLE WIDENING ATTACHMENT FOR CONCRETE-ROAD FINISHERS. FRANCESCO VALERIO, Stamford, Conn. Filed Mar. 16, 1927. Serial No. 175,799. 7 Claims. (Cl. 94—45.)



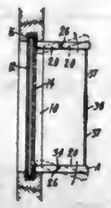
1. In a road finishing machine, a frame, wheels for carrying said frame mounted to run on rails at opposite sides of the road being finished, means for mounting one set of wheels so that they are shiftable laterally toward and from the other set to run on differently spaced rails, means for driving the wheels to advance the machine, and means operated by said driving means to shift said adjustable set of wheels laterally to permit the machine to run on differently spaced rails.

1,662,258. WIRE CLAMP FOR CONCRETE FORMS. ROWLAND T. WALES, New Rochelle, N. Y., assignor of one-half to Arthur C. Fraser, New York, N. Y. Filed May 12, 1923. Serial No. 638,585. 17 Claims. (Cl. 25—131.)



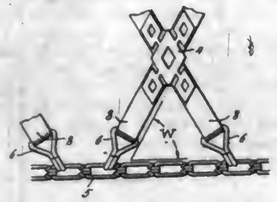
1. A wire clamp for concrete forms comprising anchors on opposite sides of the form, a wire attached to one anchor, and a tightener engaging the wire and the other anchor for tautening the wire, the latter anchor having an integral fixed portion adapted to grip the taut wire while held by said tightener.

1,662,259. HEEL-SEAT-FITTING MACHINE. ERNEST A. WILLIAMS, Cincinnati, Ohio, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Jan. 13, 1926. Serial No. 80,948. 18 Claims. (Cl. 12—17.)



1. A stock-cutting machine having a knife movable in a rectilinear path, and work-deforming means arranged positively to hold different parts of the stock on opposite sides of the path of movement of the knife, said deforming means including a hold-down member arranged during the cutting operation to lie between the knife and a portion of the stock.

1,662,260. STEAM EJECTOR WITH COOLED DIFFUSER. ALBERT DELAS, Paris, France. Filed Oct. 31, 1918, Serial No. 260,601½, and in France Sept. 6, 1918. 37 Claims. (Cl. 230—102.)



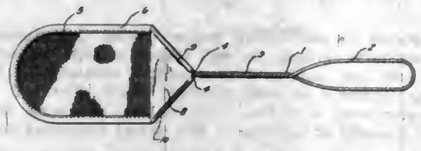
1. In an ejector, the combination of a nozzle for the motive fluid, an inlet for the fluid to be exhausted, a diffuser provided with a converging portion, a neck portion and an outlet portion, the inlet of said converging portion having a cross sectional area greater than that of any other portion of said diffuser and means comprising a cooling jacket surrounding all portions of said diffuser for condensing the motive fluid which is in excess of working conditions required in any portion of the diffuser.

1,662,261. AWNING STRUCTURE. WILLIAM G. DUNN, Clarinda, Iowa. Filed Aug. 1, 1927. Serial No. 209,833. 8 Claims. (Cl. 156—15.)

1. An awning structure including a sheet of awning material, a pair of supporting brackets pivotally connected to said sheet, tension means connecting said brackets together and tending to swing them upon their pivots, flanges formed on said brackets on the side opposite said tension means whereby the flanges are moved away from each other when the tension means is effective.

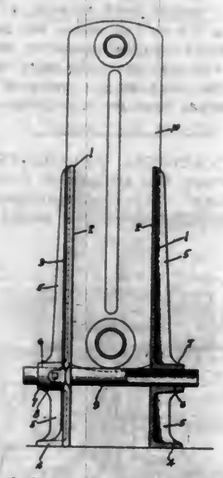
1,662,262. ANTISKID DEVICE. CHARLES C. GATES, Denver, Colo. Filed Aug. 5, 1927. Serial No. 210,875. 1 Claim. (Cl. 24—237.)

A device of the class described composed of a section of material formed into an eye between its ends, the parts being brought into contact beyond the eye to form a straight shank and bent into a hook beyond the shank, one of the contacting shank parts being longer than the other, so that one side of the hook is offset from the other in the direction of the length of the shank to give the hook parts a potential bearing in lines forming oblique angles with said direction.



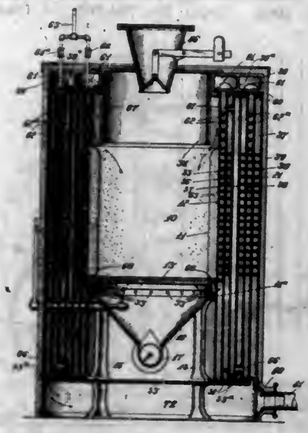
1,662,263. ANTIFREEZING CONNECTION FOR TANKS AND REGULATORS. JOHN HARRIS, Cleveland, Ohio, assignor to The Harris Calorific Company, Cleveland, Ohio, a Corporation of Ohio. Filed Dec. 29, 1921. Serial No. 525,618. 1 Claim. (Cl. 62—92.)

The combination with a gas tank having a valve controlled outlet, of a regulator, a relatively short rigid connection interposed between said outlet and regulator and



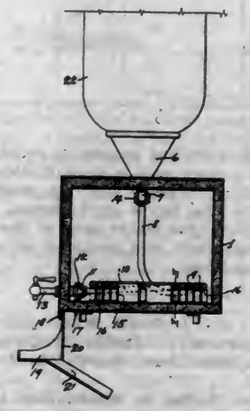
having sufficient rigidity to sustain the weight of the regulator and its associated parts, said connection comprising an annular member having an enlarged receiving portion and a restricted discharge portion, the receiving end of said connection being threaded for the reception of a gland nut for connecting the same with said gas tank, the opposite end of said connection being adapted for connection with said regulator, said connection having a plurality of temperature equalizing ribs projecting from the exterior surface thereof thereby to neutralize the cooling effect due to the expansion of the gas flowing through said connection.

1,662,264. FLY SWATTER. EDWIN L. HENDERSON, Wausau, Wis., assignor to Wilson-Hurd Company, Wausau, Wis., a Corporation of Wisconsin. Filed July 8, 1927. Serial No. 204,241. 2 Claims. (Cl. 43—187.)



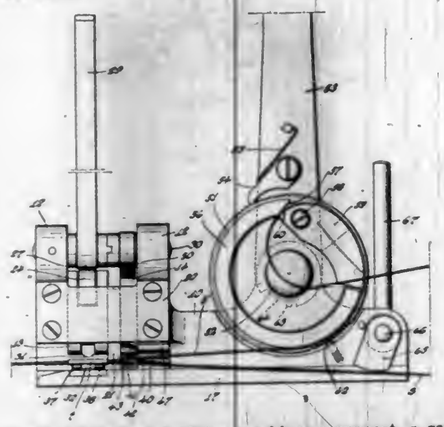
1. A fly swatter comprising a handle having arms, a striking member having portions engaged with the arms and a single piece sheet metal casing covering the arms and the lower end of the striking member, said casing having an intermediate bight portion of closed formation which embraces and secures a portion of the striking member to one of said arms and having a single set of overlapping ends for securing the striking member to the other arm.

1,662,265. RADIATOR STAND. EDWARD L. HESSEL, Minneapolis, Minn., assignor to American Plumbing & Heating Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Feb. 15, 1926. Serial No. 88,326. 2 Claims. (Cl. 248—41.)



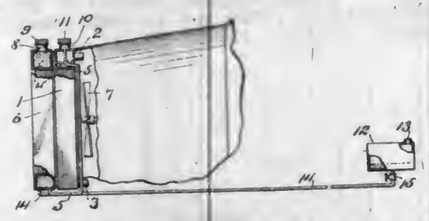
2. A device of the class described, a pair of elongated longitudinally reinforced radiator-supporting stand members, each having a foot, and each having a wedge-like radiator engaging portion above the foot, and a cross brace receiving opening intermediate the foot and wedge-like engaging portion, extending at a right angle to said portion, and each having a set screw adapted to enter said opening, and a cross brace traversing said openings for permitting adjustment of the members toward and away from one another, and said openings arranged below the level of the bottom of the units of the radiator supported by the device.

1,662,266. GAS-PRODUCING APPARATUS. VINCENT D. MCDONNELL, Chicago, Ill. Filed June 20, 1921. Serial No. 478,826. 12 Claims. (Cl. 48—64.)



10. A gas producer of the character described, the interior whereof is provided with a fuel magazine in the upper portion and with a gas generating chamber in the lower portion thereof, the producer being provided with longitudinally chambered walls constituting, respectively, a plurality of steam generating and a plurality of gas conveying passages, with the gas conveying passages being disposed about the steam generating passages, regulable means for introducing water at a selective point in certain of the steam generating passages, means for introducing the generated steam in minute jets into the interior of the gas generating chamber at a point beneath said chamber, and a gas receiving chamber in the lower part of the producer beneath the gas generating chamber and the steam generating passages and communicating with the final gas passage.

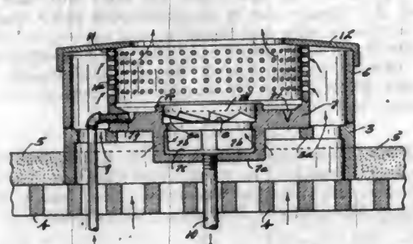
1,662,267. WATER COOLER. WILLIAM C. HORNER, Memphis, Tenn. Filed May 18, 1925. Serial No. 30,924. 2 Claims. (Cl. 62—147.)



2. A water cooler, comprising an ice chamber, a water pipe therewithin having a horizontally-coiled section disposed above the bottom, an ice support, and resilient means for supporting said coil substantially flush with the top of said ice support.

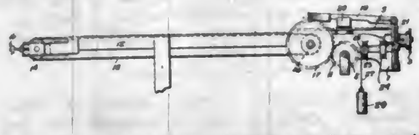
1,662,268. BOX-STRAP-APPLYING MACHINE. LEON S. HOWE, Hartford, and JOHN J. HOLLOWAY, New Britain, Conn., assignors to The Stanley Works, New Britain, Conn., a Corporation of Connecticut. Filed Aug. 28, 1924. Serial No. 734,701. 8 Claims. (Cl. 81—9.1.)

1. In a box-strap applying machine, a support, a sealing device thereon including a fixed die and a movable die between which the sealing member encircling the strap end is adapted to be interposed, severing mechanism on said support at the side of said dies and including a fixed knife and a movable knife between which one end of the strap is adapted to be interposed, a pair of cams journaled to rotate in unison and extending in opposite directions, one of said cams being above the movable die and adapted to engage the same, and the other of said cams being above said movable knife and adapted to engage the same, and a handle for rotating said cams.



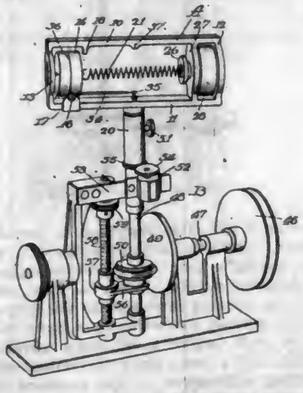
1,662,269. ENGINE-COOLING MEANS. PHILIP L. HOWE, Wilson, Tex. Filed Feb. 11, 1927. Serial No. 167,433. 5 Claims. (Cl. 123—174.)

1. In an engine cooling means, a liquid containing radiator having a vapor vent, a liquid containing condenser closed to the atmosphere and into which said vent discharges below the liquid level therein, and liquid receiving and containing means open to the atmosphere and communicating with said condenser below the liquid level in the condenser.



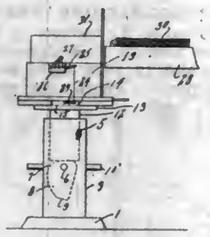
1,662,270. OIL BURNER WITH AIR-WHIRLING MEANS. ARTHUR R. JEPSON, Minneapolis, Minn. Filed Mar. 7, 1925. Serial No. 13,718. 1 Claim. (Cl. 158—91.)

An oil burner having in combination, a cylindrical shell adapted to rest on the grate bars of a furnace having a supporting means inward of its wall, a bottom fire pot section resting on said supporting means comprising a cup-shaped lower central portion having openings through its sides, said section having a central opening above said cup-shaped portion for the passage of air, means in said latter opening for giving said air a whirling motion, said section having an annular channel surrounding said last mentioned means adapted to receive oil, a pipe for supplying oil to said channel, a cylindrical shell forming the upper fire pot section



supported on said bottom section having a multiplicity of apertures through the wall thereof, a shell supported on said first mentioned shell and of substantially the same diameter as said first mentioned shell and an annular cover extending over said last mentioned shell and inwardly of the edge of said second mentioned shell.

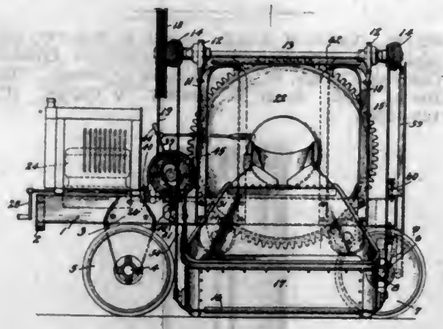
1,662,271. TRANSFERRING MACHINE FOR BOTTLE CLOSERS. JOHN A. JOHNSON, New York, N. Y. Filed Feb. 25, 1925. Serial No. 11,498. 1 Claim. (Cl. 198—31.)



A transferring machine comprising a frame, a table thereon, means for revolving said table, a stationary bracket over said table, a pusher bar slidably mounted in said bracket, a pusher head thereon, a latch pivoted on said bracket, a pin on the pusher bar adapted to engage the latch, means for reciprocating the pusher bar whereby the pin will pass under the latch on the forward stroke and over the latch on the rearward stroke thereby raising the pusher head on said stroke.

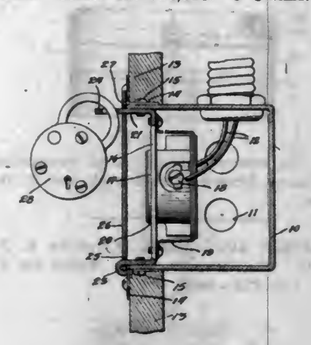
1,662,272. EDUCATIONAL APPARATUS. PAUL E. KLOPSTEG, Chicago, Ill., assignor to Central Scientific Company, Chicago, Ill., a Corporation of Illinois. Filed Feb. 20, 1926. Serial No. 89,651. 14 Claims. (Cl. 35—12.)

1. In a centrifugal instruction device, a rotating support, a mass of simple and regular geometric form rotating with the support and mounted to permit outward movement under the action of centrifugal force, means for establishing a definite radius of rotation indicating that the center of mass is located at a predetermined radius, centripetal force means opposing the outward movement of the mass with centripetal force increasing with the outward movement and means to establish measurable radius of rotation for the center of gravity of the mass of the rotating body.



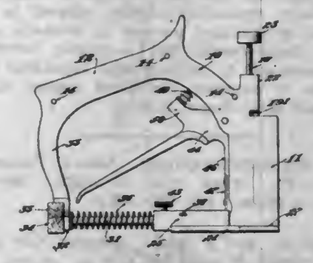
1,662,273. CARTON CHARGER. FRANK KNOEPPEL, Toledo, Ohio, assignor to The Champion No-Leak Paper Dish Company, Toledo, Ohio, a Corporation of Ohio. Filed June 11, 1927. Serial No. 198,151. 7 Claims. (Cl. 226—16.)

1. A base having a guide, a supplemental guide carried thereby and relatively reciprocable, and a support movable relatively to and carried by the supplemental guide.



7. A way, a shiftable receiver for a container, a counter actuator carried with the receiver to be actuated by container positioning in the receiver, and a mounting for the receiver permitting shifting of the receiver with the counter independently of actuating the counter.

1,662,274. WORM-DRIVE MIXING MACHINE. PHILIP A. KOEHRING, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Apr. 5, 1924, Serial No. 704,454. Renewed Jan. 27, 1928. 11 Claims. (Cl. 83—73.)

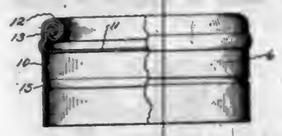


1. In a mixing machine, a portable supporting frame, a mixing drum mounted thereon for rotation, means for operating said mixing drum comprising a gear ring applied to the drum and an assembly unit including, a driving gear engaging said gear ring, a shaft supporting the driving gear, a worm gear on said shaft, a driving shaft, a worm on the driving shaft engaging said worm gear, combined with an engine for operating said driving shaft.

1,662,275. SWITCH BOX. JAMES LESLIE LANE, Chicago, Ill., assignor to Chicago Fuse Mfg. Company, Chicago, Ill., a Corporation of Illinois. Filed May 19, 1924. Serial No. 714,216. 5 Claims. (Cl. 247—15.)

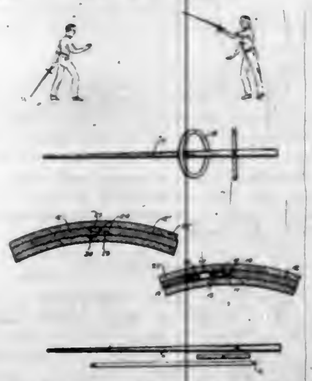
3. A switch box comprising, in combination, an apertured box, a support having outwardly bent ends fitting within the open end of said box, means for removably securing said support in place, a plug receptacle mounted on said support, an apertured lug formed on one of the bent ends of said support, a cover plate hinged to the other bent end of said support and adapted to fit next to said lug, and locking means engaging said lug to retain said cover in closed position.

1,662,276. MACHINE FOR SETTING GLAZIERS' POINTS. WILL S. MOWER, Windsor, Vt., assignor to Hubbard & McClary, Windsor, Vt., a Copartnership consisting of Andrew B. McClary and Horace P. McClary. Filed May 3, 1927. Serial No. 188,480. 1 Claim. (Cl. 1—44.)



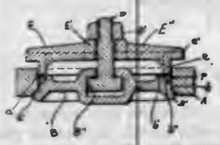
A machine for setting glaziers' points having a frame provided with a handle, a head having a point carrier, a follower supported upon the lower end of a follower rod, and a follower spring embracing the follower rod normally pressing the follower down upon the stack of points carried in the point carrier, the frame being provided with a notch at the upper end of the point carrier to permit turning the follower to one side for the purpose of loading the point carrier with a stack of points.

1,662,277. PAPER CONTAINER. ARLINGTON MOORE, Boston, Mass., assignor to Clarke-Moore Corporation, Wilmington, Del., a Corporation of Delaware. Filed July 31, 1920. Serial No. 400,461. 4 Claims. (Cl. 229—5.6.)



1. In a paper container, a side wall, top and bottom closures therefor, a portion of said side wall being reduced in diameter to form a neck and a ledge with the ledge located below the top closure, a removable cover having a wall constructed and arranged to frictionally

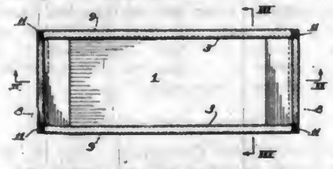
engage said neck, the end of said wall seating on said ledge and forming a continuation of the body portion of the side wall of the container, and interlocking means



for resisting the removal of said cover comprising complemental grooves formed in said neck and in the wall of said cover.

1,662,278. GAME APPLIANCE. CHARLES A. NELSON, Chicago, Ill. Filed May 19, 1926. Serial No. 110,048. 4 Claims. (Cl. 273—100.)

1. The combination with a split ring, of a spear-shaped member on one end thereof, a longitudinally slitted radially expansible member adapted to axially receive said spear-shaped member to normally effect a connection therebetween, and a pliable covering for said ring arranged to embrace said expansible member to maintain it normally contracted against axial removal of said spear-shaped member.

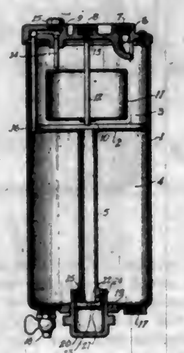


1,662,279. HANDHOLE COVER. JOHN C. PARKER, Philadelphia, Pa. Filed Sept. 2, 1922. Serial No. 586,004. 1 Claim. (Cl. 220—25.)

The combination with a sheet having a hand hole therein, of a cover forming with said sheet an internal continuous ground joint and an external channel, an elastic packing in said channel, and means for pressing said packing in its channel to form a tight continuous external joint.

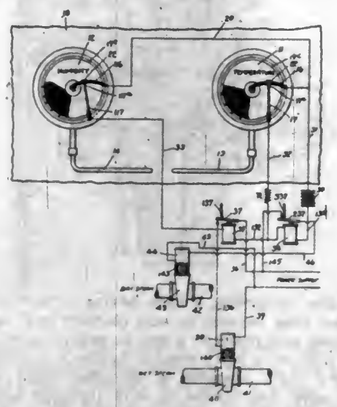
1,662,280. MORTAR BOX. ELLIOTT E. PERRITT, Pittsburgh, Pa. Filed Apr. 28, 1927. Serial No. 187,148. 3 Claims. (Cl. 220—1.)

3. A mortar box of sheet metal comprising a bottom sheet inclined upwardly at its ends to form the end walls of the box, and a pair of side plates, each secured rigidly at its bottom and end edges to the side edges of said bottom plate, and a reinforcing angle at the upper edge of each of said end walls and each of said side plates, around which angle irons said edges are bent and secured, the angle irons at the ends of the box having their outer flanges throughout the length of said ends at an angle of about ninety degrees to said end walls,



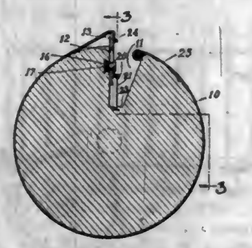
thus providing lifting handles for the box, and said bent upper edges extending past each other and overlapping at the corners of the box and being rigidly secured together.

1,662,281. KNITTING-MACHINE NEEDLE. ROBERT W. SCOTT, Babylon, N. Y., assignor to Scott and Williams, Inc., New York, N. Y., a Corporation of Massachusetts. Filed May 12, 1922, Serial No. 560,346. Renewed Nov. 24, 1923. 1 Claim. (Cl. 66—13.)



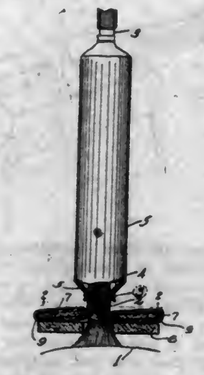
A knitting machine needle having a shank, having a groove on its inner face and carrying a hook at its outer end in combination with a latch slidingly mounted in said groove, the shank of the needle being reduced in thickness at the back at the point where the loop will be held, while the needle is elevated out of knitting action with the point of the latch within the loop.

1,662,282. VACUUM TANK. HARRY G. RITCHEY, Chicago, Ill., assignor to Simplex Automotive Products Company, Chicago, Ill., a Corporation of Oregon. Filed Dec. 1, 1922. Serial No. 604,437. 9 Claims. (Cl. 103—236.)



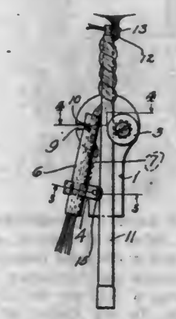
1. In a vacuum tank having a float control suction chamber operable by engine suction, fuel inlet means and suction conduit means and valve ports for said fuel inlet and suction means and means controlled by a float in said suction chamber for alternately opening and closing said ports, a supply chamber located below said suction chamber and having a communication to a carburetor, a well detachably secured to the bottom wall of said supply chamber, a valved tube connection between said suction chamber and said well and extending through said supply chamber, a normally open valve for said tube adapted to be closed by the influence of suction in said suction chamber.

1,662,283. AUTOMATIC AND REMOTE HUMIDITY CONTROL. FREDERICK W. RUBIN and HARRY E. RUBIN, Indianapolis, Ind.; said Harry E. Rubin assignor to said Frederick W. Rubin. Filed Oct. 30, 1922. Serial No. 597,909. 11 Claims. (Cl. 236—44.)



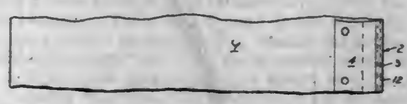
1. In a device for controlling the temperature and relative humidity in a compartment, the combination of dry and wet thermometer apparatus normally unexposed to the compartment but with independent extensions exposed therein, electrically operable means controlling the temperature and relative humidity in the compartment, and indicating means also normally unexposed to the compartment including a temperature responsive indicating arm and a bar co-operating therewith.

1,662,284. BLANKET HOLDER FOR PRINTING CYLINDERS. FRANK B. SHEA, Brooklyn, N. Y. Filed Mar. 17, 1927. Serial No. 175,951. 11 Claims. (Cl. 101—415.1.)



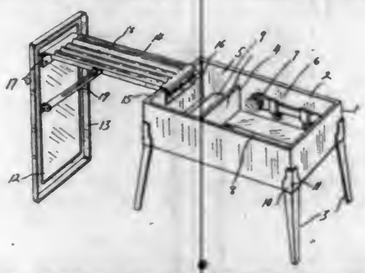
1. In combination with a printing cylinder having an axially disposed notch formed in the periphery thereof, attaching means within the notch to which one end of a blanket may be secured, means in the notch by which the opposite end of the blanket may be drawn taut, said attaching means being mounted to slide substantially radially without the notch, and means for locking said attaching means in depressed position.

1,662,285. HAIR-WAVING CLIP. WILLIAM G. SHELTON, St. Louis, Mo. Filed Aug. 15, 1927. Serial No. 212,942. 14 Claims. (Cl. 132—36.1.)



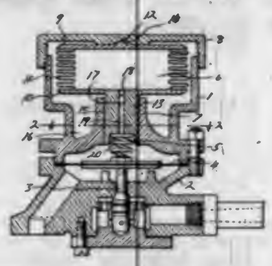
1. Hair waving equipment comprising a rigid annular member for compressing a strand of hair, and an absorbent element on the inner face of said member for contact with said strand.

1,662,286. HAIR WINDER. WILLIAM G. SHELTON, St. Louis, Mo. Filed Sept. 3, 1927. Serial No. 217,351. 10 Claims. (Cl. 132—33.)



1. In a hair wrapping device, a base, an upstanding shoulder thereon, a hair receiving container rotatably mounted in said base, means yieldingly moving said container toward said shoulder, there being space between said container and shoulder adapted to receive a curling rod about which the hair is wrapped.

1,662,287. WATERPROOFING INSERTION MEMBER. CHARLES H. WEITZ, Piedmont, Calif. Filed July 23, 1927. Serial No. 207,896. 5 Claims. (Cl. 72—98.)

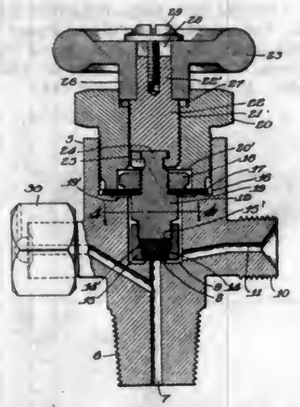


1. A waterproofing insertion member for covering the adjoining edges of a building frame structure comprising, a pliable and waterproofing strip and a clip in combination therewith to secure an edge of said strip to one of said adjoining frame members.

1,662,288. SHOE-BLACKING STAND. THOMAS C. WHITEHEAD, Detroit, Mich. Filed July 20, 1925. Serial No. 44,885. 5 Claims. (Cl. 15—265.)

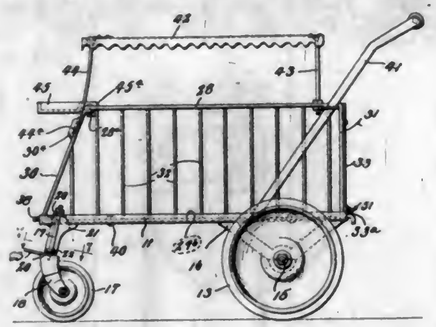
1. In a stand of the class described, the combination with an open top box, of a corrugated sheet metal shoe rest hingedly connected at one end to a wall of said box, said connection being at the upper edges of said wall whereby the shoe rest may rest on said wall when in open position, and a cover for said box carried by the outer end of said shoe rest and adapted when in open position to engage a suitable support outside of said box for supporting the outer end of said shoe rest when the latter rests on the wall aforesaid of said box.

1,662,289. EXPANSION VALVE. THOMAS C. WHITEHEAD, Detroit, Mich. Filed June 28, 1926. Serial No. 119,182. 6 Claims. (Cl. 236—79.)



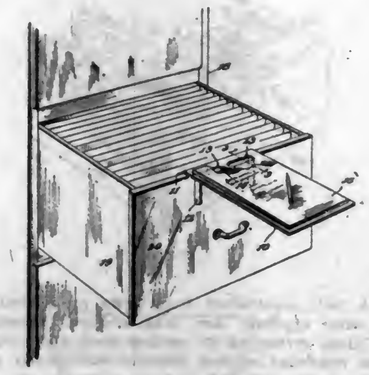
1. In an expansible valve, the combination with a sectional valve casing, a valve in the casing, a diaphragm for actuating the valve, and a yieldable element for actuating the diaphragm, of means for regulating the movements of said valve including a follower for the yieldable element slidably mounted in one section of the casing, an expansible chamber in said section, and a cover for said section adjustable to regulate the movement of said expansible chamber in one direction.

1,662,290. WIPING ELEMENT FOR WINDSHIELD CLEANERS. RALPH G. ABEY, Worcester, Mass., assignor to Worcester Biltrite Company, Worcester, Mass., a Corporation of Massachusetts. Filed Dec. 3, 1923. Serial No. 678,245. 3 Claims. (Cl. 15—255.)



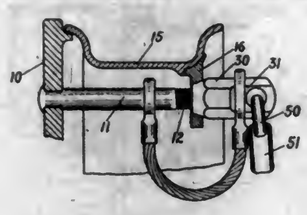
1. A windshield wiping element comprising substantially similar parts, each part having one side bounded by a straight line, and the other side comprising alternating projecting and recessed portions, the projecting portions having a dimension parallel to said straight line that is greater than the inside base of said projecting portions, whereby the projecting and recessed portions are interlockingly held together.

1,662,291. VALVE. CHARLES L. BASTIAN, Chicago, Ill., assignor to The Bastian-Blessing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 7, 1926. Serial No. 133,795. 8 Claims. (Cl. 251—49.)



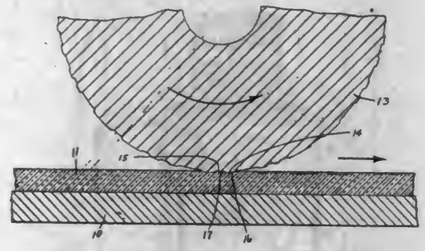
1. A valve comprising a body having a valve chamber therein, an inlet passage to said chamber and an outlet passage from said chamber, a seat in said chamber around the inlet passage, a valve member having a reduced upper end in the valve chamber, a threaded collar on said valve, a valve disk carried by said threaded collar and movable therewith to engage said seat, said seat being raised above the valve chamber wall around the inlet opening and said disk being larger than the seat so that the seat may be embedded in the disk, a diaphragm forming a gas tight closure for the upper end of the valve chamber, a nut on the reduced end of said valve for clamping the diaphragm to the valve member, and means for moving said valve member to open and to close the valve.

1,662,292. COMBINATION VEHICLE AND WALKER. ROBERT C. BENDER, St. Louis, Mo. Filed Jan. 21, 1926. Serial No. 82,712. 4 Claims. (Cl. 280—47.)



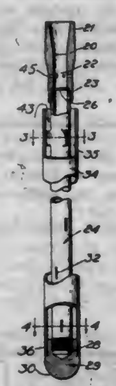
1. A child's vehicle comprising in combination a wheeled frame, a go-cart body detachably arranged thereon, said go-cart body being provided with a rear end portion pivotally mounted at its lower end and tiltable outwardly, a pair of longitudinally disposed rods removably arranged in the go-cart body one adjacent to each side thereof, a canvas bottom arranged in said go-cart body and provided along its side edges with loops for supporting engagement with said rods and a flap secured at one end to said canvas bottom intermediate the ends thereof and normally foldable thereagainst, the outer end of said flap being adapted to be detachably secured to said rear end portion of said go-cart body whereby said flap can be adjusted angularly relatively to said canvas body.

1,662,293. PORTABLE WRITING SHELF. WILLIAM C. BENNETT, Washington, D. C. Filed Oct. 7, 1925. Serial No. 61,041. 2 Claims. (Cl. 45—58.)



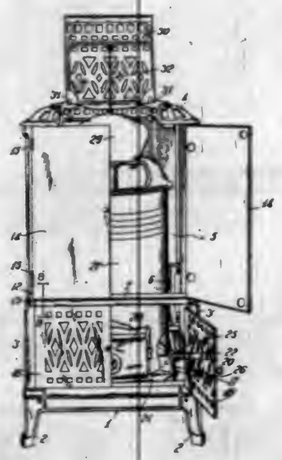
1. A device of the character described comprising a body plate having spaced openings therein and provided with means for detachably connecting the shelf with an object, and a pad support adapted to rest upon the body plate and provided with down-turned lugs to extend through said openings and anchor the pad support upon said plate.

1,662,294. TIRE LOCK. ROBERT BETTINARDI, Newark, N. J. Filed Apr. 18, 1927. Serial No. 184,662. 2 Claims. (Cl. 70—90.)



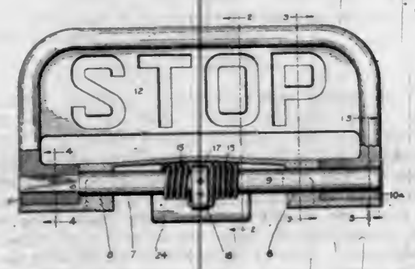
1. A tire lock in combination with a tire carrier provided with a screw threaded stud and a demountable rim to be carried thereon, a cap nut provided with a substantially rectangular cap extension provided with a transverse eye, said nut adapted to engage the screw threaded portion of the carrier stud, a flexible member provided on one end with a round eye adapted to go on the stud before the rim is placed on the carrier and on the opposite end with an elongated eye adapted to engage the substantially rectangular portion of the cap nut after it is assembled on the carrier stud in holding position, a lock adapted to engage the eye in cap nut after the flexible connection is in assembled position whereby the cap nut is prevented from turning on the stud.

1,662,295. PROCESS OF MAKING DECORATED GLASSWARE. MARTIN L. BURGESS, Indianapolis, Ind., assignor to Marietta Mfg. Co., Indianapolis, Ind., a Corporation. Filed Mar. 8, 1926. Serial No. 93,176. 1 Claim. (Cl. 49—77.)



The process of producing a two-tone color effect in glassware, which consists in subjecting a plate of glass of uniform color throughout and while hot to a roll having a pattern surface etched thereon.

1,662,296. GAS ANCHOR. CHARLES A. CARLSON, Long Beach, Calif. Filed Aug. 24, 1925. Serial No. 52,180. 4 Claims. (Cl. 103—220.)

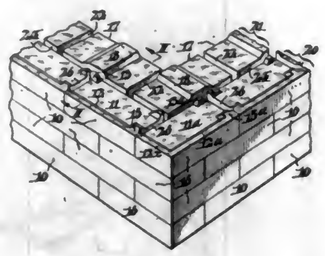


1. In a gas anchor, the combination of: a tubular connector body adapted to be attached to a supporting member; an inner barrel having its upper end secured to the lower end of said connector body, there being openings formed near the lower end of said inner barrel for connecting the exterior of said inner barrel with the interior thereof; a guide plug secured to the lower end of said inner barrel, said guide plug closing the lower end of said inner barrel; an outer barrel secured at its lower end to said guide plug, said outer barrel being concentrical around said inner barrel, there being an annular separating space formed between said inner and said outer barrels, the upper end of said outer barrel terminating below said connector body; and centralizing fins formed near the upper end of said inner barrel, said centralizing fins being arranged to engage an inner face of said outer barrel.

1,662,297. CABINET HEATER. EDWARD P. COLE, Chicago, Ill., assignor to Cole Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Filed Sept. 4, 1925. Serial No. 54,405. 13 Claims. (Cl. 126—67.)

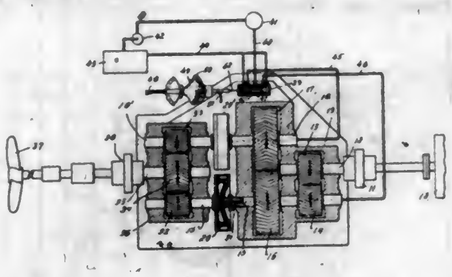
1. The combination with a heater cabinet of adjustable means carried by the upright walls of the cabinet whereby stoves of different sizes may be individually secured in optional positions in the cabinet, said cabinet being provided with openings at the top and bottom affording air circulation through the cabinet around the stove.

1,662,298. TRAFFIC SIGNAL. WILLIAM R. COREY, Cleveland, Ohio, assignor to Samuel J. Bialosky, Cleveland, Ohio. Filed May 16, 1927. Serial No. 191,831. 2 Claims. (Cl. 40—125.)



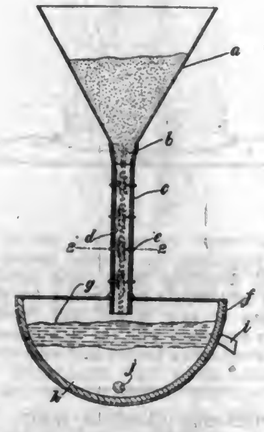
1. A traffic sign comprising a bed plate recessed on its under side, a rock shaft extending across said recess and provided with a lug, a sign plate fixed on the rock shaft, and springs engaging said lug and coiled around said shaft in said recess at opposite sides of said lug, the ends of the springs engaging under the bed plate and tending to swing the sign plate back to upright position when swung either way.

1,662,299. ROAD BINDER. MICHAEL F. COUGHLIN, Stoughton, Mass. Filed Feb. 24, 1922. Serial No. 539,032. 2 Claims. (Cl. 134—1.)



1. The road binder which comprises a basic bituminous substance, sulphite liquor, and lactic acid.

1,662,300. WALL CONSTRUCTION. EARL D. COVELL, Philadelphia, Pa. Filed Apr. 22, 1927. Serial No. 185,708. 7 Claims. (Cl. 72—37.)

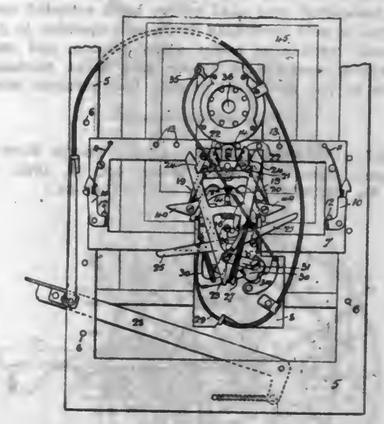


1. A wall constructed from units pre-determining a flush outer exposure face, each said unit embodying a ridge along certain of its vertical faces and projections at the remaining corners whereby continuously communicating horizontal and vertical intervals are formed that extend into close proximity to the wall face, said intervals being open from the rear for accessibility in subsequently introducing a bonding agent under pressure.

1,662,301. SYSTEM OF MARINE PROPULSION. THOMAS C. COYKENDALL, Kingston, N. Y. Filed Apr. 21, 1926. Serial No. 103,474. 6 Claims. (Cl. 115—34.)

2. In a system of marine propulsion, a propeller, an engine, a two-part ahead-motion shaft, a fluid pressure actuated power clutch arranged to either operatively connect or disengage the two parts of said ahead-motion shaft, a two-part astern-motion shaft, a fluid pressure actuated power clutch arranged to either operatively connect or disengage the two parts of said astern-motion shaft, permanently engaged gearing for operatively connecting said engine to said propeller through said ahead-motion shaft to effect ahead propulsion when the clutch in that shaft is actuated and the other clutch disengaged and for operatively connecting said engine to said propeller through said astern-motion shaft to effect astern propulsion when the clutch in the latter shaft is actuated and the other clutch disengaged, said two-part ahead-motion and astern-motion shafts and the engine and propeller shafts being in substantially the same horizontal plane, and control means for actuating one or the other of said clutches or simultaneously disengaging both of said clutches as desired.

1,662,302. MANUFACTURE OF STEEL AND ALLOYS FROM IRON SAND. DIRK CROESE, London, England. Filed Feb. 19, 1926, Serial No. 89,300, and in Great Britain Feb. 26, 1925. 2 Claims. (Cl. 89—300.)

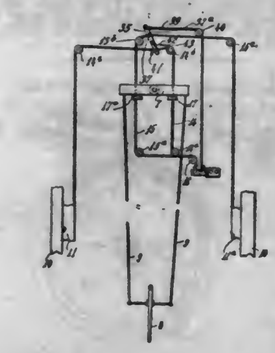


1. An electric arc furnace for the treating of iron sand having a vertical chamber and including a plurality of superposed electrodes arranged to provide an unobstructed path for the fall of the iron sand, and a crucible at the base of the furnace to receive molten metal and slag.

1,662,303. LOOSE-LEAF BINDER. JAMES C. DAWSON, Webster Groves, Mo., assignor to Elma N. Dawson, Webster Groves, Mo. Filed Sept. 8, 1925. Serial No. 54,940. 6 Claims. (Cl. 129—24.)

1. In a loose leaf binder, the combination of pairs of paper-holding prongs, a pair of toggle members articulated at their adjacent edges to form a toggle adapted to bend upwardly to separate the pairs of prongs and to bend downwardly to bring the prongs together, a base plate beneath the toggle members and having flanges in which the remote edges of the toggle members are pivoted, and an operating lever comprising an outer arm forming a thumb-piece, an inner arm projecting beneath the toggle, and an intermediate substantially upright portion connecting the two arms and having its side portions fulcrumed on the margins of the base plate adjacent to the flanges.

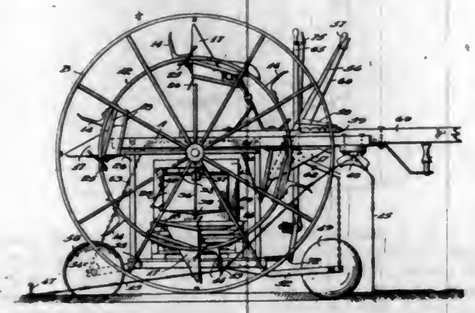
1,662,304. MULTIPICTURE CAMERA. LEONARD JOSEPH DOOGOOD and LEO PATRICK BRANAGAN, Melbourne, Victoria, Australia. Filed Apr. 13, 1927, Serial No. 183,531, and in Australia Feb. 18, 1927. 7 Claims. (Cl. 95—37.)



1. In a camera, a framework, rows of studs at each side the framework, a frame and a baseplate adapted to be moved across the frame carrying a lens and hung in said framework and latches on the frame that engage the studs and are released therefrom on a last movement of the baseplate across the frame.

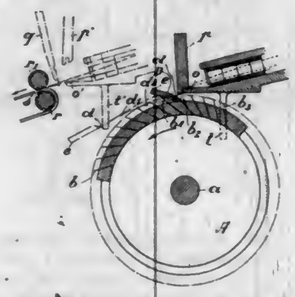
1,662,305. BROMINE RECOVERY. GRAHAM EDGAR, Dayton, Ohio, assignor to Ethyl Gasoline Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Oct. 13, 1925. Serial No. 62,812. 8 Claims. (Cl. 23—216.)

8. A process of recovering bromine from saline solutions which comprises chlorinating the solution, and forming with the bromine in the solution an insoluble bromine compound.



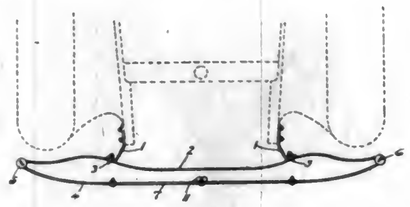
1,662,306. METHOD AND MEANS FOR CONTROLLING AIRCRAFT. ANTHONY H. G. FOKKER, Amsterdam, Netherlands, and PIERRE FRANK SONNEK, Woodhaven, N. Y.; said Sonnek assignor to said Fokker. Filed Mar. 13, 1926. Serial No. 94,368. 5 Claims. (Cl. 244—2.)

1. The combination with an airplane having a vertical rudder and a landing gear, of a braking mechanism associated with said landing gear, foot actuated means,



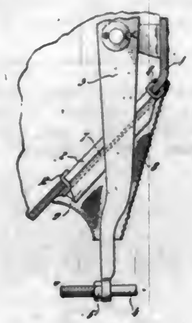
cables connecting said foot-actuated means to said rudder, whereby the latter may be actuated to change the head direction of the airplane, means independent of each foot actuated means for functioning said braking mechanism, said means including normally slack cables connected to said braking mechanism and a tensioning device associated with said cables, hand actuated means connected to said tensioning device and operable to place said brake mechanism cables under tension, and means concurrently operable to render said brake mechanism actuable by the movement of said foot actuated means.

1,662,307. CORN PLANTER. ALBERT EDWIN FORSYTH, Bellamy, Ontario, Canada. Filed Oct. 11, 1922. Serial No. 593,872. 2 Claims. (Cl. 111—34.)



1. A seed dispensing device comprising a frame, a seed box mounted on the frame, a shaft rotatably mounted in said frame, a pocket wheel carried by said shaft, a plurality of spaced gripping members on the pocket wheel, a cable adapted to engage individually with said members to rotate the pocket wheels, a plurality of said pockets at spaced intervals on said wheel, an opening in the base of said seed box, an apertured slide adapted to open and close the base, operating mechanism for said slide including a lever, and a tappet carried by each seed pocket adapted in the rotation of said pockets to first engage with the slide to open the seed box and then engage with said lever to clost said box, and means for opening the seed pockets simultaneously with the closing of the seed box.

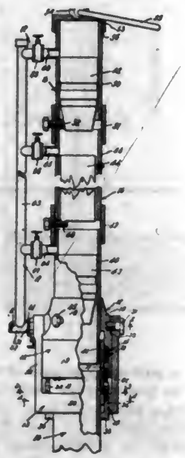
1,662,308. DABBER FOR COMBERS OF THE HEILMANN TYPE. CHARLES GÉGAUFF, Mulhouse, France, assignor to Societe Alsacienne de Constructions Mecaniques, Mulhouse, France. Filed Sept. 30, 1926, Serial No. 138,753, and in France Oct. 2, 1925. 3 Claims. (Cl. 19—121.)



1. In dabbing mechanism, in combination with a combing cylinder, a dabbing blade, and nipper elements, means on one of said nipper elements to retain the said blade in the position of rest, subsequent to a dabbing movement, during an active revolution of the said cylinder and during the succeeding inactive revolution of said cylinder.

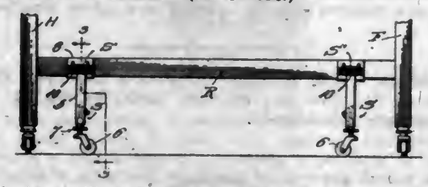
1,662,309. BUMPER WITH RUBBER BUFFER. ALBERT G. GEISTERT, Detroit, Mich., and JAMES M. SCHOONMAKER, Jr., Sewickley, Pa., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 20, 1926. Serial No. 130,445. 4 Claims. (Cl. 293—55.)

4. A vehicle bumper comprising a pair of spaced impact bars, a supporting bar therefor spaced rearwardly therefrom and extending in a plane opposite to the space between said impact bars, means for clamping the central portions of said impact bars together, and a resilient buffer associated with the clamp means in alignment with and extending toward said supporting bar.



1,662,310. FLEXIBLE CLOSURE BOOT. ALBERT G. GEISTERT, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Feb. 5, 1927. Serial No. 166,245. 4 Claims. (Cl. 74—81.)

1. A boot for closing an opening in a wall thru which a movable member extends, including a flexible cover formed from a single piece of fabric into substantially conical shape and adapted to surround the movable member, said conical shape cover having an inturned fold at the base thereof and a spring element located within the base fold and adapted to be sprung into engagement with the sides of the opening to position said cover over the opening.

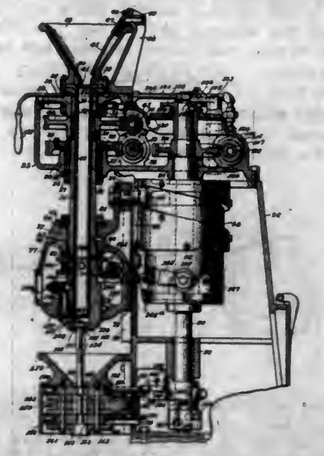


1,662,311. WELL-CAPPING DEVICE. LELAND S. HAMER, Fullerton, Calif. Filed Apr. 4, 1923. Serial No. 629,819. 14 Claims. (Cl. 166—14.)

1. A device adapted to be used in combination with a casing having a coupling on its end embodying, a cap adapted to be arranged in connection with the coupling, a structure adapted to be arranged around the casing under the coupling and including a yoke and a gate for closing

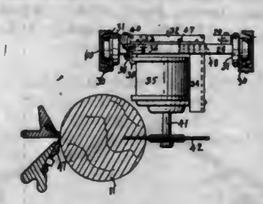
the yoke, and a pair of hinged arms connecting the yoke with the cap so that the cap is held in connection with the coupling by said structure.

1,662,312. AUXILIARY BED RAIL AND SLAT SUPPORT. WILLIAM C. HARTMANN and EDWARD A. WEISS, Cleveland, Ohio. Filed Dec. 13, 1926. Serial No. 154,529. 5 Claims. (Cl. 5—310.)



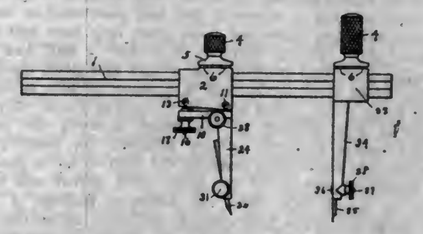
1. An auxiliary bed rail and slat support comprising a leg having a seat at its upper end for attachment to the rail, and a second seat rigid with the first named seat for supporting one end of a slat said second seat embodying means to abut the longitudinal edges of the slat to hold it against slippage from the seat.

1,662,313. PIPE-COUPLING TAPPING MACHINE. EMANUEL HENRIKSON, Stratford, Conn., assignor to The Bullard Machine Tool Co., Bridgeport, Conn., a Corporation of Connecticut. Filed Dec. 29, 1923. Serial No. 683,362. 23 Claims. (Cl. 10—133.)



4. In a tapping machine, a tap, a chuck for blanks to be tapped, tubular feed means for feeding blanks into relation with said chuck and about which said chuck is rotatable, gearing for rotating said chuck, a cam shaft, cam means on said shaft for opening and closing said chuck, cam means on said shaft for imparting longitudinal reciprocations to said chuck whereby said blank is threaded, and gearing between said first mentioned gearing and said cam shaft for rotating the latter.

13. In a tapping machine, a tap, a rotary chuck comprising a chuck head, a rotatable tubular shaft within said head, a plurality of radial fingers upon said shaft provided at one end with gripping means and at their other ends with yieldable contact means and fixed against longitudinal movement relatively to said shaft, cam means movable longitudinally of said shaft adapted to be engaged and disengaged with the contact ends of said fingers to move their gripping ends into and out of gripping relation with respect to the diameter of the bore of said shaft, means within the bore of said shaft for



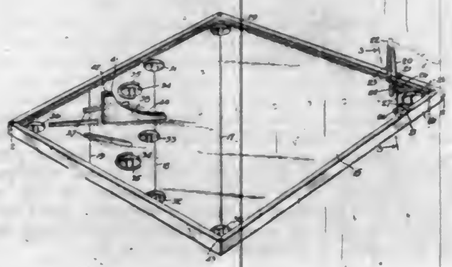
feeding blanks into relation with said chuck, and means for imparting relative longitudinal movement between said chuck and tap whereby said blank is threaded.

1,662,314. VENEER-CUTTING-MACHINE ATTACHMENT. JOHN F. HYLAND, Des Moines, Iowa. Filed July 10, 1926. Serial No. 121,697. 7 Claims. (Cl. 144—209.)

1. In a device of the class described, the combination with a rotary veneer lathe having means for holding the log in horizontal position and for cutting a veneer strip therefrom, with an attachment having a saw arranged in a horizontal plane, means for mounting the saw to travel toward and from the log in a horizontal plane, and means for moving the saw in a horizontal plane along the log for cutting a horizontal kerf in the log.

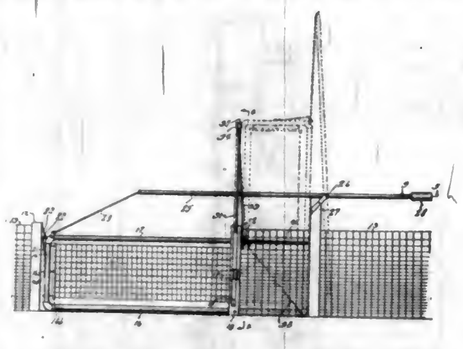
1,662,315. BEAM COMPASS. EMIL LAWRENZ, Detroit, Mich. Filed May 20, 1927. Serial No. 192,840. 5 Claims. (Cl. 33—160.)

1. In a beam compass, the combination of a beam and a tram head slidable thereon, means to secure the head to the beam, said head being formed with a groove in its



lower side, a pivot extending across one end of said groove, a tram-point carrier mounted on said pivot, a tram-point extending down from said carrier, a second pivot pin extending across the opposite end of said groove, a bolt mounted thereon, and a nut on said bolt engaging the adjacent end of the point carrier and adapted to move said carrier to swing said leg.

1,662,316. HANDLE. BENNO B. LEUSTIG and JOSEPH D. PETSCHE, Cleveland, Ohio. Filed Mar. 15, 1926. Serial No. 94,774. 3 Claims. (Cl. 16—114.)



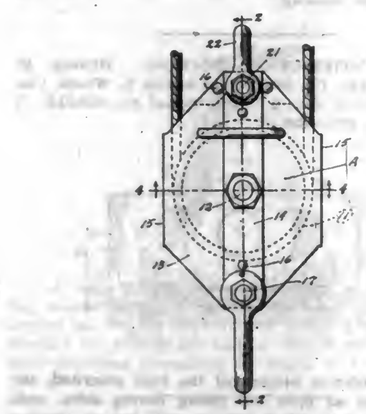
1. The combination with a vessel, a socket member having a plate portion secured to the exterior of the vessel, one edge of said plate portion being bent at an angle to said secured part and formed into a substantially cylindrical socket some distance from the secured portion, a handle member entering said socket and having a cavity at its inner end, a conical sliding device in said cavity and a rod extending lengthwise of the handle and serving to draw said sliding device into the handle to bind said handle member into the socket.

1,662,317. BASEBALL GAME APPARATUS. GILBERT R. LIVINGSTON, Ocean Park, Calif. Filed Dec. 29, 1926. Serial No. 157,748. 2 Claims. (Cl. 273—89.)

1. A game apparatus comprising a board having a surface in representation of a base ball field, with pockets therein adapted to receive a ball and positioned to correspond with the bases and home plate of a base ball diamond, other pockets adapted to receive a ball and for designating other positions on a base ball field, lines on the surface dividing the field into zones, pockets adjacent the home plate pocket adapted to receive a ball therein, guiding ribs secured to the board between the home plate pocket and the pockets adjacent the home plate pocket and converging towards the field so as to provide a restricted mouth for the home plate pocket and tending to direct balls into the adjacent pockets, a ball pitching device for projecting a ball over the surface toward the home plate pocket, and a ball batting device positioned in advance of the home plate pocket between the pockets adjacent thereto and operable to strike a ball projected by the pitching device.

1,662,318. FARM GATE. MERRITT G. MCCORKEL and FLOYD L. MCCORKEL, Washta, Iowa. Filed Oct. 25, 1926. Serial No. 143,989. 2 Claims. (Cl. 39—44.)

1. In a gate, a gateway, a gate proper pivoted at a lower corner in the gateway for swinging movement in a vertical plane from a horizontal to a vertical position, the weight of the gate tending to urge it toward either of said positions from an intermediate balanced position, a keeper on the gateway, a co-acting latch on the gate proper adapted to engage the keeper automatically upon downward movement of the gate proper to closed position, the upper member of the gate proper being tubular and provided with a laterally curved guide element at its end opposite the latch, a cable secured to the latch extending through said upper member, thence around said guide element, thence laterally around a guide element secured to the gateway adjacent said upper member, thence upwardly and outwardly and over a guide element supported at a distance from the gateway in a lateral direction.

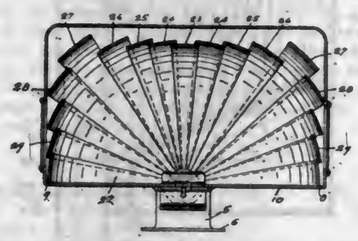


1,662,319. HAIR WAVER. MICHAEL J. MCGOWAN, Chicago, Ill. Filed May 28, 1927. Serial No. 195,112. 3 Claims. (Cl. 132—38.)

3. A hair waving device comprising spaced supporting members adapted to be secured to the head of the user, resilient comb attaching means carried by said members, a plurality of combs having one end detachably connected with said resilient attaching means, said combs being adapted to engage the hair of the user and to be shifted longitudinally to form waves therein, and means on said supporting members for engaging the opposite ends of said combs for retaining them in such shifted position.

1,662,320. SAFETY SHEAVE BLOCK. WILLIAM H. MCKISSICK, Tulsa, Okla. Filed May 16, 1927. Serial No. 191,636. 5 Claims. (Cl. 254—193.)

1. In a safety sheave block, a housing comprising two members each having inturned guard flanges on opposite sides of its longitudinal axis, the guard flanges of one member being normally alined and registered with the guard flanges of the other member, one of said members being centrally pivoted and rotatable with relation to the other member to move the flanges out of registration and

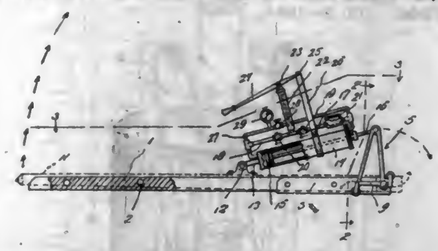


open the housing, a sheave journaled in the housing, and means for fastening the housing members in their closed position.

1,662,321. TIRE RIM. RUSSELL E. MCNAMARA, St. Marys, Ontario, Canada. Filed June 27, 1924. Serial No. 722,772. 4 Claims. (Cl. 152—21.)

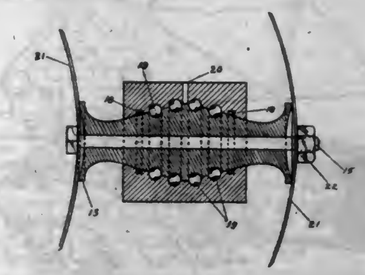
3. In combination, a channel felloe band, a plurality of blocks carried in said band, each of said blocks having a slot, a side ring carrying a plurality of lugs adapted to enter said slots, said blocks being formed each with a recess communicating with the slot and adapted to receive one of the lugs.

1,662,322. HEADLIGHT. BURTON E. MELTON, San Francisco, Calif. Filed June 1, 1926. Serial No. 112,949. 1 Claim. (Cl. 240—41.)



A headlight comprising a casing having a rectangularly-shaped opening, a source of light disposed in said casing, and a plurality of parabolic-shaped strips mounted in said casing, each strip extending from a point adjacent to the source of light to the open end of said casing, said strips being off-set to outline a substantially rectangular opening that coincides with the opening in said casing.

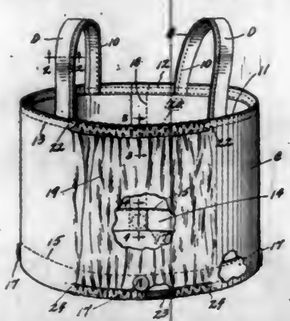
1,662,323. MOTOR FUEL. THOMAS MIDGLEY, JR., Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed May 16, 1925. Serial No. 30,876. 6 Claims. (Cl. 44—9.)



1. A motor fuel comprising a low compression fuel, and nickel carbonyl.

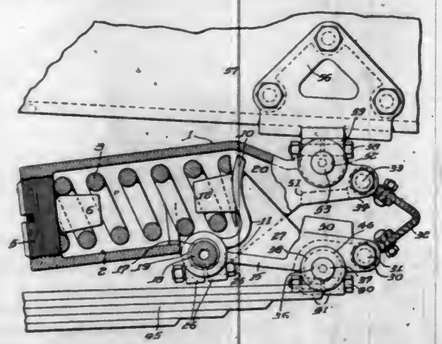
1,662,324. HOISTING APPARATUS. WILLIAM OBER and CLEMENS F. EAKINS, Brush, Colo. Filed Nov. 10, 1926. Serial No. 147,493. 5 Claims. (Cl. 214—3.)

5. In a hydraulic pole hoisting apparatus, a pole hoist supporting base adapted to be retained on the ground adjacent a hole which has been previously dug in the ground for reception of the lower end of the pole, a bail rockably mounted upon one end of said base, hooks extending laterally of said bail and adapted to engage the lower end portion of said pole at different longitudinal positions, one of said hooks opening upwardly and the other opening downwardly whereby to engage the opposite surfaces of the pole and arranged for rotating movement about a common axis, a fluid cylinder pivotally mounted upon said base, a piston slidable in said cylinder and including a stem connected to said bail, valved fluid circulating pipes connected with the end portions of said cylinder, and a hand pump connected with and circulating the fluid.



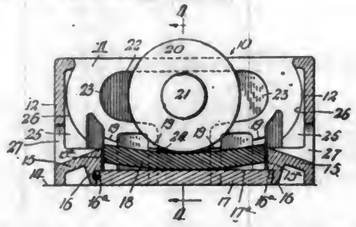
1,662,325. BEARING FOR DISK CULTIVATORS. ANTON W. OTOUPAL, Ulysses, Nebr., assignor to T. M. Otoupal, E. A. Otoupal, and G. F. Otoupal, Ulysses, Nebr. Filed May 11, 1926. Serial No. 108,350. 1 Claim. (Cl. 308—181.)

A bearing for a disk cultivator comprising a two-part journal box having in each part a longitudinal depression gradually increasing in depth from its ends to its middle portion, and having in the depression longitudinally spaced bearing grooves and washer grooves near the ends of the depression, a part of the journal box having an oil aperture therethrough leading to the deeper portion of the depression, a spindle of substantially spool shape of a length to extend through and beyond the journal box and having its intermediate portion gradually increasing in diameter from its ends to its central part to conform to the depressions in the journal box, said spindle having bearing grooves in its intermediate portion corresponding to the grooves in the de-



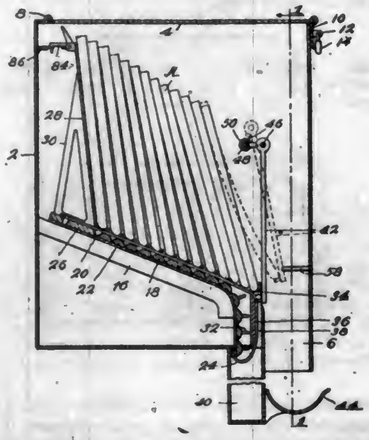
pressions, bearings in the corresponding intermediate grooves, packing washers in the corresponding end grooves, the flanges at the ends of the spindle having concave faces to receive cultivator disks thereagainst, and a bolt for engagement axially through the spindle and through the disks to clamp the latter directly on the spindle.

1,662,326. UNDERGARMENT. RUFA E. PAGE, Italy, Tex. Filed Jan. 11, 1927. Serial No. 160,839. 1 Claim. (Cl. 2—109.)



A waist comprising a continuous body with overturned edges to form pockets and having an integral gathered section extending of equal width from its top to its bottom edge at the front of the body, elastic strips extending transversely of the gathered sections and secured at their ends within the pockets at both the top and bottom edges, and opposite shoulder straps having their ends secured to the top of the body at the sides of the gathered front portion and the ends of the elastic strips.

1,662,327. SPRING SUSPENSION FOR AUTOMOBILES OR TRUCKS. CHARLES H. PATTEN, Allentown, Pa., assignor to The Traylor Engineering & Manufacturing Company, Allentown, Pa., a Corporation of Delaware. Filed Jan. 19, 1924. Serial No. 687,164. 3 Claims. (Cl. 267—17.)

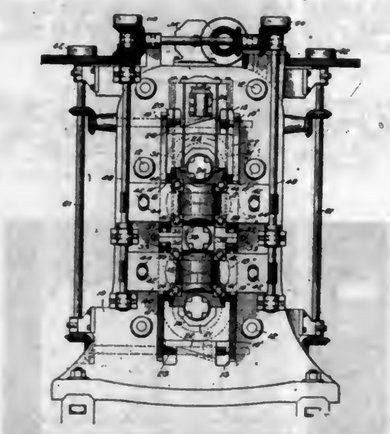


1. In a spring-suspension device for automobiles or trucks, the combination of a compression spring, a housing for the said spring, a bell crank lever pivoted to said housing at a point intermediate the opposite ends of the latter, one arm of said bell crank lever extending transversely of the said housing and against which one end of the said spring contacts, and the other arm of said lever extending away from the said spring and in general parallel relation to the axis thereof, means for pivotally connecting one end of the said housing to the body of an automobile or truck, means for pivotally connecting the outer end of the second named arm of said bell crank lever to the main supporting means for the said body, and a re-bound strap connecting the outer end of the last mentioned arm and the adjacent opposing end of the said housing.

1,662,328. ANTIFRICTION BEARING. HUBERT M. PERRY, Chicago, Ill., assignor to Sophie L. Woods, Chicago, Ill. Filed Jan. 2, 1924. Serial No. 688,913. 1 Claim. (Cl. 308—226.)

In an antifriction bearing of the kind described, the combination of an open top casing having sides, ends and a bottom wall which bottom wall has an opening therein, a filler block in said opening and having a flat top bearing surface, a longitudinally curved bearing plate engaged and capable of a longitudinal rocking movement upon said filler-block, each side wall of the casing having a longitudinally extending groove therein, there being shoulders provided on said side walls below said grooves which overhang the side margins of the bearing plate to be engaged thereby when said bearing plate is rocked upon the filler-block, and a roller in said casing capable of a rolling movement on said bearing plate from the center toward either end of the casing, said roller having end trunnions which extend into but are free from engagement with the top and bottom walls of said longitudinal grooves, there being parts of the casing extending above the filler block to be engaged by the end of the rocking plate and to arrest the endwise movement thereof upon the filler block.

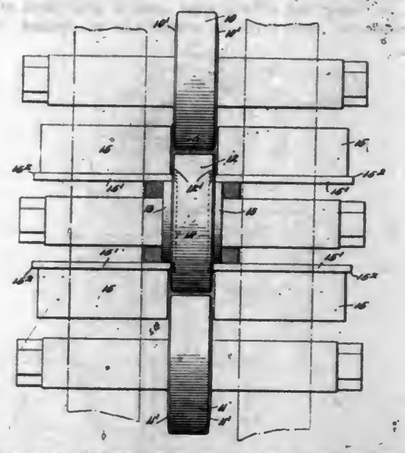
1,662,329. VENDING MACHINE. ERNEST W. PETERSON, Kansas City, Mo. Filed Feb. 5, 1927. Serial No. 166,161. 4 Claims. (Cl. 312—69.)



1. In a vending machine, a case having a delivery opening, a flexible inclined conveyer arranged to carry articles of merchandise downwardly towards said opening, and a pocket in the lower forward portion of the case for receiving the conveyer.

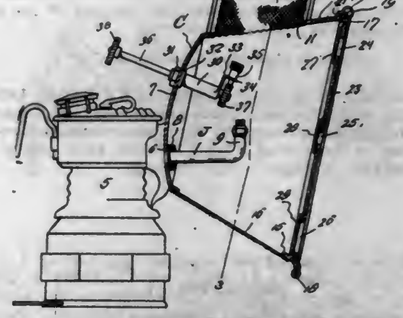
1,662,330. HAIR-WAVING DEVICE. NUNZIO PRIVITERA, Toronto, Ontario, Canada. Filed Nov. 19, 1927. Serial No. 234,455. 5 Claims. (Cl. 132—32.)

1. A hair waving device comprising a hair supporting member having a comb at the upper end adapted to engage the roots of the hair, and means in the supporting member for holding the hair so that it will lie in alternate directions throughout its length to form a wave.



1,662,331. ROLLING MILL. JOHN D. PUGH, Baltimore, Md. Filed Sept. 3, 1921. Serial No. 498,276. 14 Claims. (Cl. 80—56.)

1. In a rolling mill, in combination, a frame, side rolls adapted to be horizontally adjusted, horizontal rolls adapted to be vertically adjusted, and means for effecting the adjustment of said rolls including a motor mounted upon the top of the frame, two rotatable vertical rods operatively connected to the side rolls, two rotatable vertical rods operatively connected to the horizontal rolls, and means connecting each of said rods to the motor including an electro-magnetic clutch at the upper end of each rod.

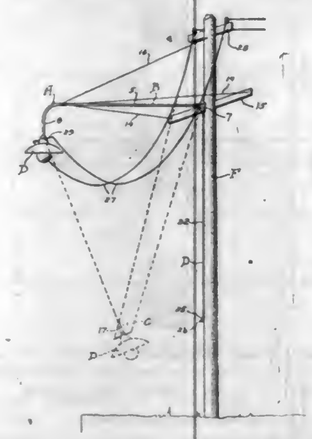


1,662,332. ROLLING MILL. JOHN D. PUGH, Baltimore, Md. Filed Nov. 17, 1924. Serial No. 750,454. 2 Claims. (Cl. 80—59.)

1. In a rolling mill for flanged sections, in combination, a roll having a cylindrical rolling surface for the web of a beam, an annular surface disposed transverse thereto for rolling the inside of a flange, and an annular groove concentric with the roll and formed in the end thereof within the annular rolling surface, of a second roll having a rolling surface transverse to the cylindrical surface of the first roll and an annular flange on said second roll which enters the groove in said first roll, the arrangement being such that the said annular flange of the second roll projects within the annular groove of the first roll and engages and extends beyond the edge

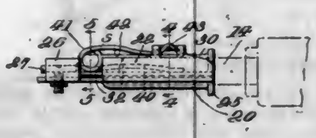
of the beam flange throughout a series of successive passes as the beam is being reduced, thereby preventing the formation of a bead during such passes.

1,662,333. SAFETY LAMP. EDWARD J. QUINN, CHARLES E. SPRAKE, and HUBERT J. GRITMAN, Kingston, Pa. Filed May 13, 1926, Serial No. 108,859. Renewed Oct. 11, 1927. 2 Claims. (Cl. 67—20.1.)



1. In a miner's safety lamp of the class described, an L-shaped jet including a horizontal portion and a vertical portion rising therefrom, a reflector casing including a rear concavo-convex wall having a pair of openings one above and one below the axis thereof, the horizontal portion of the jet being mounted in the lower opening, the inner terminal of said jet being alined with the axis of the casing, a bearing mounted in the upper opening, a bracket on the inner end of said bearing projecting upwardly and provided with a forward extension, a flint holder in said forward extension, a shaft journaled in said bearing, a corrugated steel wheel on the inner end of said shaft for cooperating with the flint holder, and an operating wheel on the outer end of said shaft.

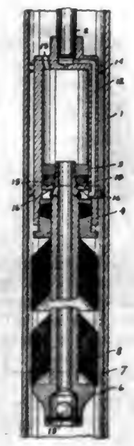
1,662,334. STREET-LIGHT FIXTURE. FRED B. REBERG, Casper, Wyo. Filed Nov. 24, 1924. Serial No. 752,061. 2 Claims. (Cl. 240—64.)



1. In a supporting fixture for lamps, the combination of a support, a tubular mast arm having a quadrantal

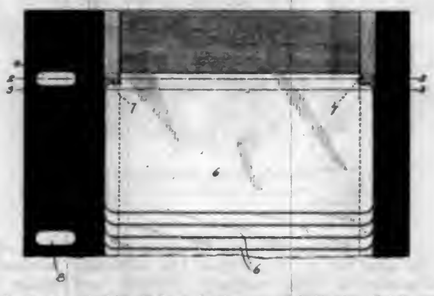
shaped downwardly turned portion formed at its inner end and having a downwardly opening socket at its outer end, a lamp support slidable upwardly into the socket at the outer end of the mast arm, a pole piece rigidly secured to said support, comprising a divided clamp

member provided with a downwardly opening arcuate way for receiving the downwardly turned inner end of the mast arm, and a hoisting rope connected at one end to the lamp support and slidably extending through the tubular mast arm for raising and lowering of the lamp with respect to the mast arm.



1,662,335. SPRING SOCKET TERMINAL. LUDWIG REICHOLD, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Nov. 26, 1926. Serial No. 150,832. 6 Claims. (Cl. 173—332.)

1. A socket terminal comprising a base having lateral upstanding walls and an inwardly bent guard in spaced relationship to the base, said guard having an aperture, a cooperating plate guided by said walls, interengaging means on said base and plate to prevent relative longitudinal movement, and a spring having its end engaged in said aperture and adapted to resiliently force said plate toward said base.

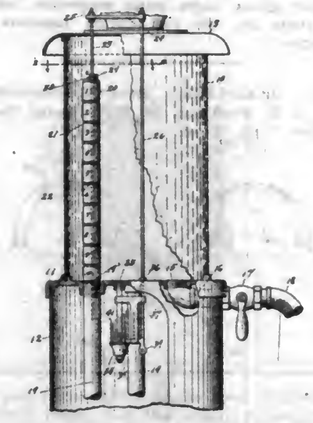


1,662,336. WELL PACKER. CHARLES H. REYNOLDS, Houston, Tex. Filed Apr. 30, 1926. Serial No. 105,824. 13 Claims. (Cl. 166—13.)

1. A tubular packer for wells including a packer support having a fluid passageway therethrough, an expansible packing element thereon, a fixed abutment against which one end of said element is adapted to abut, and means adapted to be actuated by fluid pressure and adapted to actuate said support to carry the packing

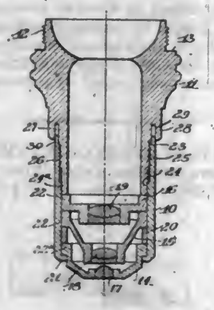
element against said abutment whereby said element is expanded and a downwardly opening valve in said support adapted to control said passageway.

1,662,337. VISIBLE INDEX. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to The Globe-Wernicke Co., a Corporation of Ohio. Filed Nov. 29, 1924. Serial No. 752,882. 5 Claims. (Cl. 129—84.)



3. In a visible index device, a relatively thick and rigid base sheet, a pair of similar transversely U-shaped spacer strips respectively closely embracing the opposite side edges of the base sheet, a pair of similar transversely U-shaped guide strips respectively closely embracing in nested relation the spacer strips and of greater width than the spacer strips so as to form opposed guideways for index elements on both sides of the base sheet, and means for securing all of said strips and the base sheet firmly together so that stiff inner and outer rounded marginal edge portions are provided on the base sheet.

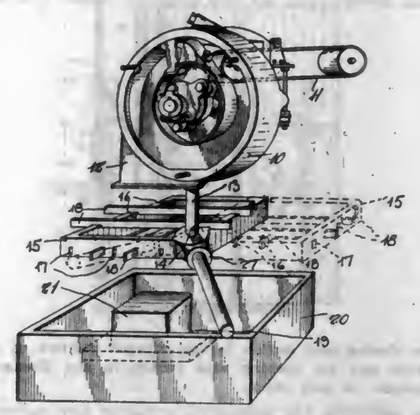
1,662,338. UNIT-MEASURING LIQUID DISPENSER. ROSS E. RISSER, Bonham, Tex., assignor to Catron Manufacturing Company, Bonham, Tex., a Corporation of Texas. Filed Nov. 13, 1925. Serial No. 68,766. 4 Claims. (Cl. 221—100.)



2. In a fluid dispenser, the combination with a measuring container and a discharge pipe therefrom, of a plurality of tubular valves in said container connected

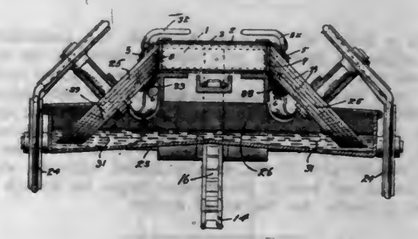
with said pipe, a rod depending from the top of the container and connected with the valves for successively lifting the same, a vertical staff outside the container

connected with the rod and carrying a finger, a rotatable member, and a plurality of stepped pins thereon adjustable into the path of the finger of the staff.



1,662,339. OPTICAL INSTRUMENT. JOHN CHARLES SABEL, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 15,450. 7 Claims. (Cl. 88—57.)

1. In optical instruments, an objective including a base and a lens tube threadedly connected with the base, said base having a smooth extended bearing portion projecting into the lens tube and closely fitting the bore of the latter in advance of the threaded portion of the bore, whereby to accurately center said tube upon the base when screwed thereon.

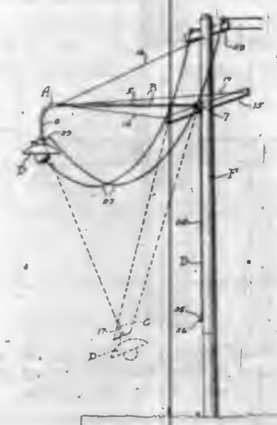


1,662,340. MOLDING DEVICE. VICTOR E. SCHMIDEKNECHT, Louisville, Ky., assignor of one-half to Gohmann Brothers and Kahler Company, New Albany, Ind., a Corporation. Filed Feb. 26, 1926. Serial No. 90,873. 9 Claims. (Cl. 22—9.)

8. In combination with a sandslinging machine, a baffle comprising a web with a series of spaced apart openings therethrough, means for moving said baffle relative to the sand discharge outlet of said sandslinging machine whereby when said baffle is in closed position the force of the sand is broken, causing the sand to be deflected and discharged upon the pattern mildly and

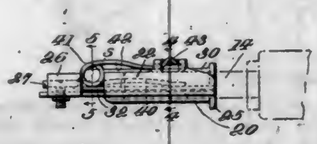
smoothly, and whereby said baffle may be withdrawn to open position to permit the remainder of the sand to be discharged with the usual force into the mold.

1,662,341. APPARATUS FOR SEALING PACKAGES. HUGO SCHWARZ, San Bruno, Calif. Filed Nov. 6, 1923. Serial No. 673,163. 2 Claims. (Cl. 91—51.)



1. A package sealing machine comprising an elongated guide, a traveling chain conveyor therealong adapted to convey the packages along the guide, a pair of gluing wheels rotatably mounted at an angle alongside the guide adapted to revolve in liquid adhesive at the lower edge and contact the passing packages at their vertical edges, and transmission elements for actuating the conveyor and gluing wheels simultaneously.

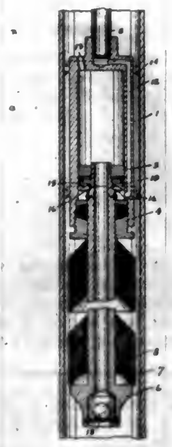
1,662,342. LOCK FOR ELEVATOR DOORS. JULIUS A. SCHWEIG, St. Louis, Mo. Filed Oct. 1, 1926. Serial No. 138,866. 11 Claims. (Cl. 187—31.)



5. An electric elevator, a shaft, a car working therein, doors for closing the door openings in said shaft, a spring projected latch bar for each door, a lock casing secured to said shaft opposite the end of said latch bar and provided with an opening adapted to receive said end of said bar, an arm pivoted in said casing for swinging movement towards and away from said end of said latch bar, a catch mounted on said arm and adapted to move into engagement with said latch bar when the arm moves rearwardly under pressure of said bar, a spring for swinging said arm forwardly in the direction of said latch bar in the retracted position

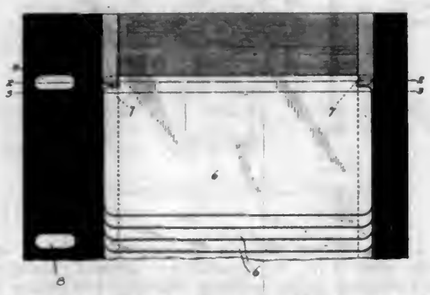
shaped downwardly turned portion formed at its inner end and having a downwardly opening socket at its outer end, a lamp support slidable upwardly into the socket at the outer end of the mast arm, a pole piece rigidly secured to said support, comprising a divided clamp

member provided with a downwardly opening arcuate way for receiving the downwardly turned inner end of the mast arm, and a hoisting rope connected at one end to the lamp support and slidably extending through the tubular mast arm for raising and lowering of the lamp with respect to the mast arm.



1,662,335. SPRING SOCKET TERMINAL. LUDWIG REICHOLD, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Nov. 26, 1926. Serial No. 150,832. 6 Claims. (Cl. 173—332.)

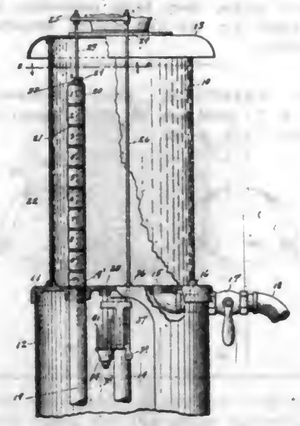
1. A socket terminal comprising a base having lateral upstanding walls and an inwardly bent guard in spaced relationship to the base, said guard having an aperture, a cooperating plate guided by said walls, interengaging means on said base and plate to prevent relative longitudinal movement, and a spring having its end engaged in said aperture and adapted to resiliently force said plate toward said base.



1,662,336. WELL PACKER. CHARLES H. REYNOLDS, Houston, Tex. Filed Apr. 30, 1926. Serial No. 105,824. 13 Claims. (Cl. 166—13.)

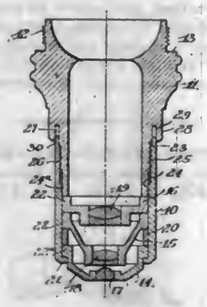
1. A tubular packer for wells including a packer support having a fluid passageway therethrough, an expansible packing element thereon, a fixed abutment against which one end of said element is adapted to abut, and means adapted to be actuated by fluid pressure and adapted to actuate said support to carry the packing

element against said abutment whereby said element is expanded and a downwardly opening valve in said support adapted to control said passageway.



1,662,337. VISIBLE INDEX. WILLIAM A. RINGLER, Philadelphia, Pa., assignor to The Globe-Wernicke Co., a Corporation of Ohio. Filed Nov. 29, 1924. Serial No. 752,882. 5 Claims. (Cl. 129—34.)

3. In a visible index device, a relatively thick and rigid base sheet, a pair of similar transversely U-shaped spacer strips respectively closely embracing the opposite side edges of the base sheet, a pair of similar transversely U-shaped guide strips respectively closely embracing in nested relation the spacer strips and of greater width than the spacer strips so as to form opposed guideways for index elements on both sides of the base sheet, and means for securing all of said strips and the base sheet firmly together so that stiff inner and outer rounded marginal edge portions are provided on the base sheet.

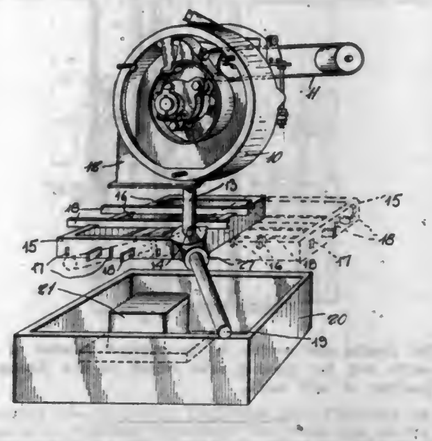


1,662,338. UNIT-MEASURING LIQUID DISPENSER. ROSS E. RISSER, Bonham, Tex., assignor to Catron Manufacturing Company, Bonham, Tex., a Corporation of Texas. Filed Nov. 13, 1925. Serial No. 68,766. 4 Claims. (Cl. 221—100.)

2. In a fluid dispenser, the combination with a measuring container and a discharge pipe therefrom, of a plurality of tubular valves in said container connected with said pipe, a rod depending from the top of the container and connected with the valves for successively lifting the same, a vertical staff outside the container

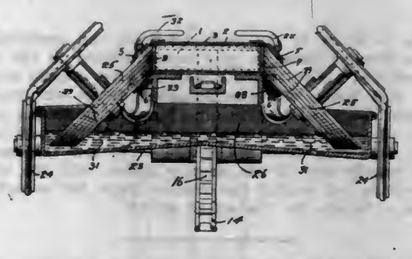
connected with the rod and carrying a finger, a rotatable member, and a plurality of stepped pins thereon adjustable into the path of the finger of the staff.

1,662,339. OPTICAL INSTRUMENT. JOHN CHARLES SABEL, Rochester, N. Y., assignor to Bausch & Lomb Optical Company, Rochester, N. Y., a Corporation of New York. Filed Mar. 14, 1925. Serial No. 15,450. 7 Claims. (Cl. 88—57.)



1. In optical instruments, an objective including a base and a lens tube threadedly connected with the base, said base having a smooth extended bearing portion projecting into the lens tube and closely fitting the bore of the latter in advance of the threaded portion of the bore, whereby to accurately center said tube upon the base when screwed thereon.

1,662,340. MOLDING DEVICE. VICTOR E. SCHMIEDEKNECHT, Louisville, Ky., assignor of one-half to Gohmann Brothers and Kahler Company, New Albany, Ind., a Corporation. Filed Feb. 26, 1926. Serial No. 90,878. 9 Claims. (Cl. 22—9.)

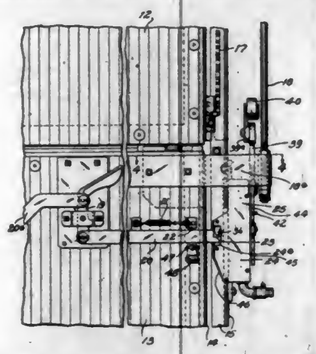


8. In combination with a sandslinging machine, a baffle comprising a web with a series of spaced apart openings therethrough, means for moving said baffle relative to the sand discharge outlet of said sandslinging

machine whereby when said baffle is in closed position the force of the sand is broken, causing the sand to be deflected and discharged upon the pattern mildly and

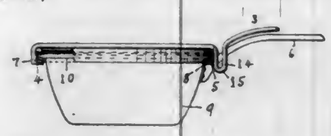
smoothly, and whereby said baffle may be withdrawn to open position to permit the remainder of the sand to be discharged with the usual force into the mold.

1,662,341. APPARATUS FOR SEALING PACKAGES. HUGO SCHWARZ, San Bruno, Calif. Filed Nov. 6, 1923. Serial No. 673,163. 2 Claims. (Cl. 91—51.)



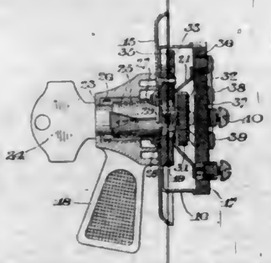
1. A package sealing machine comprising an elongated guide, a traveling chain conveyor therealong adapted to convey the packages along the guide, a pair of gluing wheels rotatably mounted at an angle alongside the guide adapted to revolve in liquid adhesive at the lower edge and contact the passing packages at their vertical edges, and transmission elements for actuating the conveyor and gluing wheels simultaneously.

1,662,342. LOCK FOR ELEVATOR DOORS. JULIUS A. SCHWEIG, St. Louis, Mo. Filed Oct. 1, 1926. Serial No. 138,866. 11 Claims. (Cl. 187—31.)



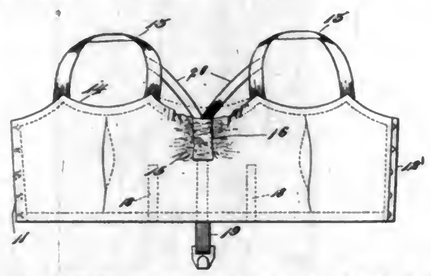
5. An electric elevator, a shaft, a car working therein, doors for closing the door openings in said shaft, a spring projected latch bar for each door, a lock casing secured to said shaft opposite the end of said latch bar and provided with an opening adapted to receive said end of said bar, an arm pivoted in said casing for swinging movement towards and away from said end of said latch bar, a catch mounted on said arm and adapted to move into engagement with said latch bar when the arm moves rearwardly under pressure of said bar, a spring for swinging said arm forwardly in the direction of said latch bar in the retracted position

thereof, a switch for making and breaking the electric circuit controlling the operation of the elevator car, and means controlled by the swinging movement of said arm



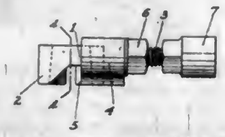
for closing said switch in the engaged position of said catch and for opening said switch in the disengaged position of said catch.

1,662,343. SAFETY DRAINER. NELLIE E. SHARPNECK and ELIEL L. SHARPNECK, East Bakersfield, Calif. Filed Mar. 12, 1927. Serial No. 174,938. 1 Claim. (Cl. 53—8.)



In a device of the class described, the combination of a circular frame, a wire screen secured to the said frame, and a wire handle of parallel wires secured across the said frame with the two ends of the wire handle turned down and back to form inwardly projecting lugs, and at a point diametrically opposite to the said lugs, two more projections are formed to fit into recesses in the outside part of the circular frame, with the wires extending out beyond the circular frame far enough to form a handle for the safety drainer.

1,662,344. LOCK SWITCH. EDGAR M. SORENG, Chicago, Ill., assignor, by mesne assignments, to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed May 2, 1923. Serial No. 636,164. 5 Claims. (Cl. 200—44.)

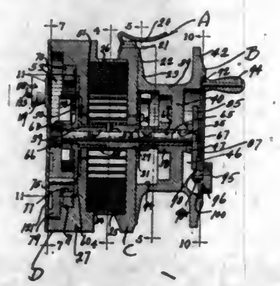


1. A combination switch comprising a front plate, a switch handle mounted thereon, a switch member behind the front plate connected with the handle to be turned thereby, a contact spider carried by the switch member, a lock barrel mounted to turn in the switch handle, a stationary lock sleeve engaged by the tumblers of the lock barrel, said lock barrel passing through the switch member, a spring-pressed switch member carried by the lock barrel and having contacts, a terminal head having contact studs engaged by said contacts and the contact spider, there being connection between the contact studs for the two switch members whereby they interlock.

1,662,345. BRASSIÈRE. EULA S. STANDISH, Providence, R. I. Filed Feb. 18, 1927. Serial No. 169,192. 2 Claims. (Cl. 2—42.)

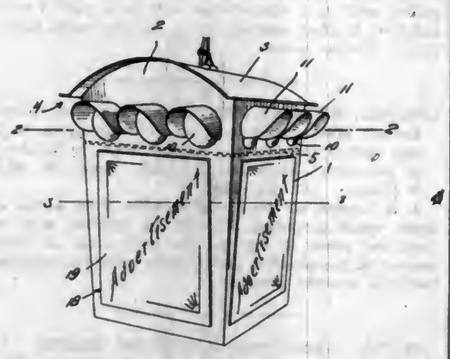
1. A brassière having a body portion adapted to be drawn tightly about the body of the wearer at and below the bust line, supporting shoulder straps attached to the upper edge of the garment, the front upper edge of the garment being cut downwardly on the bias from the point of the strap attachment to the middle of the garment, an elastic strip attached to said upper middle edge and extending downward a portion of the width of the garment and positioned therein to pucker the garment when not under tension, elastic stay straps connected at one end to said shoulder straps a substantial distance above the edge of the garment and extending down diagonally and connected to said central elastic strip, and a connector on the lower edge of the garment to be attached to another garment to cooperate with said stay straps to tension the front of the brassière and the elastic therein and simultaneously tighten the garment on the stay straps and draw it down into the valley between and about the breasts to support the same.

1,662,346. BATTERY TERMINAL CLAMP. ROMAINE B. STEWART, Crows Landing, Calif. Filed Nov. 19, 1925. Serial No. 70,009. 1 Claim. (Cl. 173—259.)



A battery terminal clamp comprising a sleeve, a stem slidable therethrough, a nut on one end of the stem, a jaw on the other end of the stem, and a cooperating jaw on the adjacent end of the sleeve; said jaws depending to a level below that of the lower edge of the sleeve whereby when the jaws are about a post with the lower edges resting adjacent the upper surface of the battery the sleeve will remain raised from such surface to permit of ready manipulation of the nut.

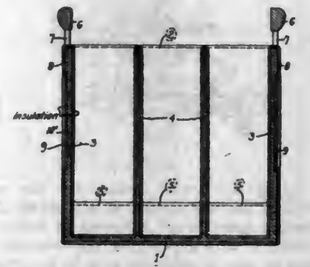
1,662,347. FISHING REEL. CARL E. STOCKING, Princeton, Ky. Filed Dec. 19, 1924. Serial No. 756,957. 5 Claims. (Cl. 242—84.5.)



1. In a combination reel a stationary frame, a spool rotatable with respect to the said stationary frame, a spring motor including a housing rotatable with respect

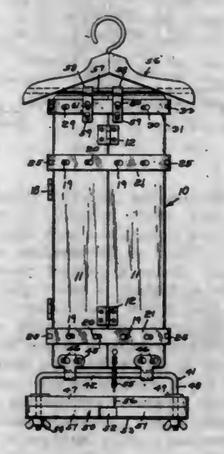
to the frame, gear means connecting the motor housing for rotation of the spool at an increased speed ratio with respect to rotation of the motor housing, pawl means for selective connection and disconnection of the spool with respect to said motor means, brake means for selective

connection and disconnection of the spool with respect to said stationary frame, and trip means cooperating with the gear means adapted to be manually set in engagement therewith to hold the motor spring inoperative until the motor spring tension is momentarily relieved.



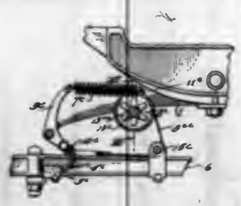
1,662,348. CHANGEABLE SIGN AND TRAFFIC SIGNAL. GEORGE W. STRICKER, Dallas, Tex. Filed Sept. 12, 1925. Serial No. 55,964. 2 Claims. (Cl. 40—132.)

2. In combination, a housing, comprising a plurality of lenses mounted in the housing, each lens being of a different color from the others, a plate member formed with indicia indicating perforations mounted on said housing over an opening formed therein, a plurality of colored illuminating means for said plate member corresponding in color to each of the colored lenses, and means independently operable for illuminating lenses of varying colors simultaneously with the corresponding colors for illuminating said perforated plate member, different colors being adapted for successive display in illuminating the lens and plate member in a predetermined manner.



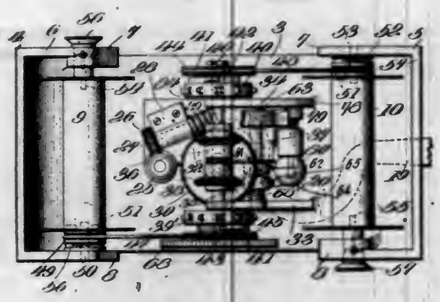
1,662,349. STORAGE BATTERY. GEORGE K. THOMPSON, Summit, N. J. Filed Aug. 31, 1923. Serial No. 660,268. 2 Claims. (Cl. 136—166.)

1. A storage battery container made of metal and having a partition formed integral therewith to provide a plurality of cells within said container, an insulating acid-resisting substance applied to the entire interior surface of said container, including said partition, as a liner therefor, handles located at opposite ends of the container and formed integrally with the walls thereof, and



reinforcing ribs extending heightwise and widthwise of the walls to distribute throughout the entire area of the wall tension that is imparted thereto in lifting the container by means of said handles.

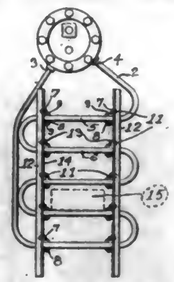
1,662,350. CLOTHES-TREATING APPLIANCE. THOMAS L. WANDS, Spencer, N. C. Filed Oct. 26, 1926. Serial No. 144,306. 1 Claim. (Cl. 223—18.)



In a clothes treating appliance, a trouser pressing device having a greater length than width, headed studs secured to the trouser pressing device at one end thereof, leaves provided with transverse keyhole openings to receive the headed studs and adapted to be separated from the studs upon being shifted transversely of the trouser pressing device, said leaves having eyes, a U-shaped support embodying a transverse element pivoted within said eyes and carrying arms, a stationary jaw mounted upon said arms, a co-acting jaw pivoted upon one arm and having a transverse slot to receive the other arm and clamping nuts carried by the arms to engage with the co-acting jaw.

1,662,351. SUPPLEMENTAL SPRING SNUBBING SUSPENSION FOR VEHICLES. FRANK L. O. WADSWORTH, Pittsburgh, Pa. Filed Jan. 30, 1926. Serial No. 84,993. 45 Claims. (Cl. 267—10.)

1. In a spring suspension system for two relatively movable members the combination of a plurality of elastic support elements operatively connected in series between the said members, with means for concurrently shifting opposing ends of one of said elements in the direction in which it is flexed by a relative bodily movement of the said members.



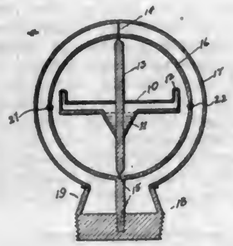
1,662,352. ROUTE INDICATOR FOR PROPELLED VEHICLES. RALPH M. WEEKS, Groton, Conn. Filed Jan. 5, 1924. Serial No. 684,582. 5 Claims. (Cl. 40—42.)

1. A route indicator for propelled vehicles comprising a casing, two map spools mounted in spaced relation therein and adapted to receive a map strip running from one spool to the other, an intermediate shaft arranged parallel with said spools, a pair of reversely arranged gears slidable on said shaft, a power gear between said reverse gears, said power gear being driven in synchronism with the travel of the vehicle, means to shift said reversely arranged gears to change the driving relation, a pulley loose on each end of said intermediate shaft, an overrunning clutch adapted to drive one of said pulleys clockwise only, a second overrunning clutch adapted to drive the other pulley counter-clockwise only, a friction drive between each pulley and one of said spools, a sprocket fast on said intermediate shaft, said sprocket being adapted to engage in perforated holes in the map strip to control the rate of feed of said map due to the rotation of a spool.

1,662,353. REFRIGERATING APPARATUS. FRANK E WILLIAMS, St. Louis, Mo., assignor to Polar Electric Refrigerator Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 6, 1925. Serial No. 48,513. 4 Claims. (Cl. 62—95.)

1. In a refrigerating apparatus, a header, a plurality of depending tubes having their opposite ends connected to the respective opposite sides of said header, one branch of said tubes being convoluted in side by side spaced relation to form in series of superposed shelves, the other branch of said tubes extending from the lower

most convolution to the opposite side of said header and means for maintaining at least the several convoluted branches in spaced relation.



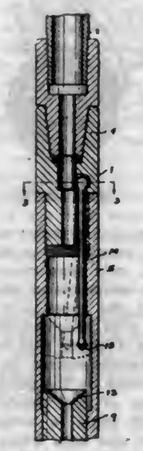
1,662,354. PROCESS OF COATING MOLDS AND PRODUCT THEREOF. HARRY M. WILLIAMS, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Jan. 10, 1925. Serial No. 1,580. 6 Claims. (Cl. 22—192.)

1. A process of preparing metallic molds for receiving molten metal which consists in applying to the molding surface a coating of finely divided refractory material comprising a substantial proportion of the refractory reduced to an impalpable powder, and then heating the coated mold at a temperature and for a period of time sufficient to effect aggregation of the impalpable particles into a coherent mass.

1,662,355. BROMINE RECOVERY. JAMES P. ANDREW, Detroit, Mich., assignor, by mesne assignments, to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Oct. 22, 1925. Serial No. 64,208. 9 Claims. (Cl. 23—216.)

1. A process of recovering bromine from saline solutions, which comprises treating the solution with more than one atom of chlorine for each atom of bromine present in the solution, and forming with the bromine an insoluble bromine compound.

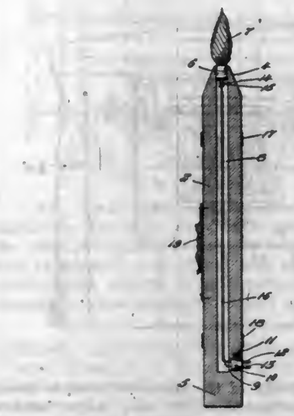
1,662,356. VIBRATION-INDICATING MEANS. JOHN P. BALL, Chicago, Ill. Filed Jan. 5, 1927. Serial No. 159,225. 5 Claims. (Cl. 116—114.)



4. Vibration indicating means, comprising a housing closed against ingress of air currents, a balanced hollow member rotatably mounted in said housing, the outer

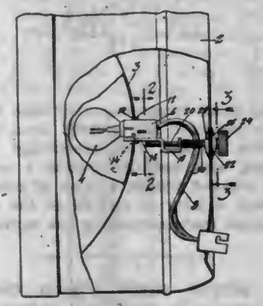
perimeter of said member being transparent, while the hub of said member is formed to provide a chamber, and a predetermined quantity of fluid in said chamber adapted to flow toward the perimeter of the member when the latter rotates.

1,662,357. ABRASIVE-RESISTING METAL AND PROCESS FOR MAKING SAME. LARRY J. BARTON, McGill, Nev. Filed Sept. 1, 1926. Serial No. 133,081. 10 Claims. (Cl. 75—45.)



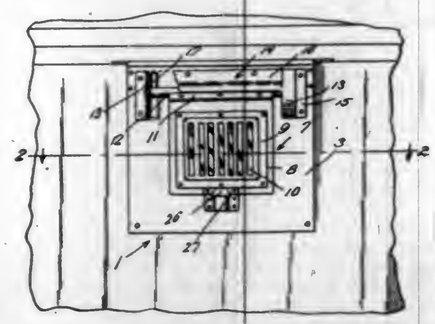
1. The process of making an alloy composed, in combination with the iron, of carbon from 0.80 to 1.30 per cent, of silicon from 0.30 to 0.60 per cent, of manganese from 0.60 to 1.00 per cent, and of sulphur and phosphorus not exceeding 0.08 per cent, which consists in melting steel scrap in an acid-lined electric furnace; in adding carbonaceous material in the desired percentage; in adding sand or other siliceous material to form a coating of slag from one-quarter to one-half inch; in adding lime to make said slag fluid; in adding lime, siliceous material, cast iron, pig iron, ferro-manganese or manganese steel scrap in small quantities until said slag becomes a yellowish-green in color, whereby gases are eliminated from and silicon is absorbed by said alloy; in adding ferro-manganese in quantity from 0.80 to 1.50 per cent, whereby oxygen is absorbed from said metal; in adding from 0.30 to 0.60 per cent crushed ferro-silicon; and in adding small pieces of aluminum as said alloy is being poured into molds whereby gases present in said molds are absorbed.

1,662,358. DRILL STEM. JOHN F. BOZEMAN, West Columbia, and JAUDON D. COLE, Orange, Tex. Filed July 13, 1925. Serial No. 43,175. 4 Claims. (Cl. 255—1.)



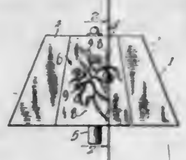
1. In combination: a string of rotary drill pipe comprising an upper and a lower section; means for supporting said upper section; a device secured at the lower end of said lower section, said device supporting the weight of said lower section; means for attaching said upper and lower sections together, said means comprising an outer member secured to one of said sections having a cavity, an inner member secured to the other of said sections, said inner member having a stem which extends into said cavity, said stem being movable in an axial direction in said cavity, and means for preventing said stem from removing entirely from said cavity; and valve means for obstructing the fluid passage in said pipe when said upper section is supported by said device.

1,662,359. ORNAMENTAL LIGHTING STRUCTURE. JAMES S. BRENNAN, Attleboro, Mass. Filed July 7, 1926. Serial No. 120,934. 1 Claim. (Cl. 240—52.)



In an ornamental lighting structure, a support formed to simulate the appearance of a taper and provided with a central longitudinal bore extending throughout a portion only of its length, a lamp base secured to said support adjacent to one end of said bore, an electric lamp carried by said base, ornamental bands surrounding said support and secured thereto, a lateral opening formed in the wall of said support intermediate the ends thereof and communicating with the central bore, a plug removably secured in said lateral opening and serving as a closure therefor, said plug being provided with electric terminals, means within the bore for connecting the terminals of said plug with the lamp base, and a removable connection for connecting said terminals with an electric circuit.

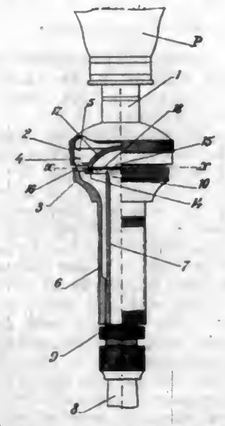
1,662,360. FOCUSING DEVICE FOR AUTOMOBILE HEADLIGHTS. SUMNER E. BROWN, Dedham, Mass. Filed May 1, 1925. Serial No. 27,225. 2 Claims. (Cl. 240—44.)



1. The combination of a casing having an aperture therein, a reflector in the casing, a light support mounted in the reflector for tilting or rectilinear movement comprising a socket and a member secured to the socket having a return bend at one end provided with aligned apertures, a member having threaded engagement with one of said apertures and having a manipulative part projecting outwardly through the aperture in said casing to effect adjustment of the lamp and friction means mounted on said part and adapted to yieldingly hold the member in adjusted position.

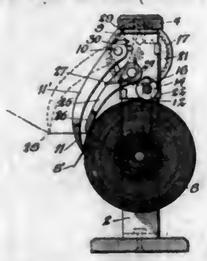
1,662,361. CLOSURE STRUCTURE. JOHN E. CARLSON and WALTER G. NORDMAN, Elkhart, Ind. Filed Aug. 10, 1926. Serial No. 128,422. 2 Claims. (Cl. 268—74.)

1. In a window closure of the class described, a casing of hollow form constructed to fit in a cellar window opening, said casing being provided with an entrance opening, a closure for said entrance opening, an oscillatory rock shaft with which said closure is rigidly connected for upward swinging motion, bearings on the casing in which said rock shaft is journaled for oscillation, a latch pivotally mounted in the casing for holding the closure in closed position, crank arms connected with said rock shaft and confined in said casing, and counter balanced weights connected with and depending from said crank arm, whereby when the latch is released the closure will be automatically swung to open position through the action of the counterbalanced weight.



1,662,362. LAMP SHADE. JOHN CHITRA, Chicago, Ill. Filed June 20, 1927. Serial No. 199,951. 3 Claims. (Cl. 41—21.)

3. A lamp shade comprising a suitable frame of wire, a silk cover stretched and secured upon the frame, an ornamentation on the silk, comprising a coating of enamel mixed with medium covering a certain area to represent a selected picture, a layer of colored oil paints on the enamel, a layer of varnish on the oil paints and a layer of glass beads secured by the varnish.

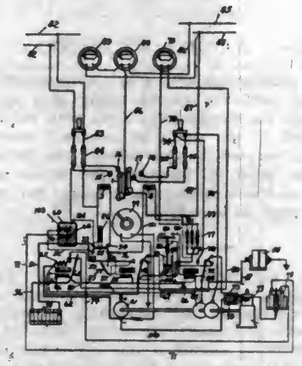


1,662,363. MOTOR HORN. LOUIS CHOLLET, Paris, France, assignor to Compagnie Industrielle et Commerciale du Cycle et de l'Automobile, Paris, France. Filed Feb. 7, 1925, Serial No. 7,566, and in France Feb. 8, 1924. 6 Claims. (Cl. 116—142.)

3. In a horn, a tubular casing with an open upper end, a horn piece extension tube extending up into the casing, a membrane carrying ring mounted in the open end of the casing so that its rim is in spaced relation to the wall of the casing, a membraneous strip extending across the ring in proximity with the upper end of the extension tube and its width being less than the internal diameter of the ring, a sound dome mounted on the ring, a cover extending over the open end of the casing, and means on the interior of the cover engaging the sound dome for securing it, the membrane supporting ring and the membraneous strip in position, compressed

air supplying means and means for directing the air from the compressed air supplying means onto both faces of the membraneous strip whereby such strip is vibrated.

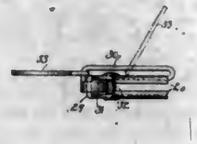
1,662,364. CUTTING AND MEASURING DEVICE FOR PAPER ROLLERS. WILLIAM COHEN, Atlantic City, N. J. Filed June 14, 1926. Serial No. 115,930. 3 Claims. (Cl. 33—134.)



1. A measuring device for paper rolls from which the paper is to be torn, comprising a support in which is mounted a paper roll, said support consisting of a base, longitudinally slotted standards at the ends of the base and a bar connecting the upper ends of the standards, a shaft having its ends mounted in the slot of the standards and having a single gear tooth at one end, a plurality of rollers fixedly secured to the shaft between the standards and resting on the paper roll, a plate slidably mounted on one of the standards and to which one end of the said shaft is secured, a gear wheel mounted on the plate and with which the tooth of said shaft meshes, a dial in front of the gear wheel, and a pointer on the shaft of the gear wheel and working over the face of the dial.

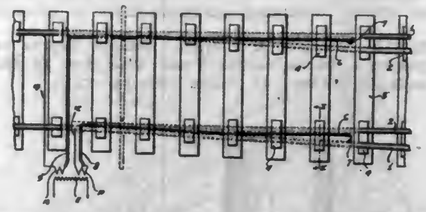
1,662,365. METHOD OF TREATING RUBBER MOLDS. JACKSON D. COMSTOCK, Chester, W. Va. Filed Mar. 3, 1923. Serial No. 622,677. 4 Claims. (Cl. 91—71.)

1. The method of treating rubber molds, which includes the steps of treating the surfaces of the mold cavities of a metallic mold with a caustic cleaning solution, drying said mold, rubbing the surfaces thereof to remove dry foreign matter, spraying a thin solution of enamel upon said surfaces whereby the solution may fill the interstices and pores of the molding surfaces thereof, subjecting said mold to a baking temperature sufficient to harden the enamel, removing the mold from the heat influence, cooling the mold, treating the mold surfaces with a second coating of enamel, and rebaking the mold to cause said second coating to combine with the first coating.



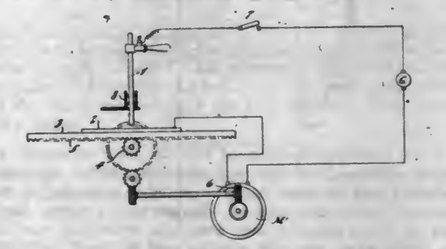
1,662,366. AUTOMATIC ELECTRIC SERVICE SYSTEM. MARK C. COSGRAY, Sandusky, Ohio, assignor, by mesne assignments, to Myer Prussian, Detroit, Mich. Filed Apr. 23, 1923. Serial No. 633,870. 17 Claims. (Cl. 290—30.)

1. In an electric system, a consuming circuit, a supply circuit, a main line switch for connecting the consuming circuit with the supply circuit, an internal combustion engine driven dynamo, a storage battery connected to the dynamo, an alternating current generator connected to the engine, a controlling switch controlled by the potential difference of the current of the main supply circuit for operating the main line switch and for starting the engine, an electro-magnetic switch located in the circuit of the generator for completing the circuit of the generator to the main line switch when the potential of the dynamo has been substantially raised by the operation of the engine to a predetermined degree.



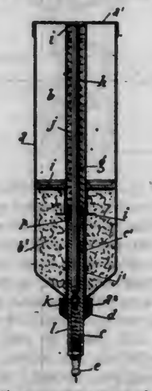
9. In an electric system, a consuming circuit, an internal combustion engine driven dynamo, a source of current supply connected to the dynamo, a switch located in the circuit of the dynamo for starting the engine, and means controlled by the said switch for intermittently operating the choke valve of the engine to supply intermittently starting charges to the engine until the engine is started.

1,662,367. SEPARABLE FASTENER. JOHN DRAHER and ADOLPH J. KRIEGER, Waterbury, Conn., assignors to The Sterling Novelty Mfg. Co., Waterbury, Conn., a Corporation. Filed Jan. 6, 1927. Serial No. 159,382. 1 Claim. (Cl. 24—205.)



A separable fastener, comprising interlocking members attached to the edges of parts to be connected, a slide comprising two plates connected together at their upper edges by a neck, said plates formed with side-flanges, one of said plate formed with an integral strap having a T-end, the said strap turned upward over the face of the said plate, and the ends of the T folded around the said neck, and a finger-piece coupled with said strap and adapted to move from end to end thereof.

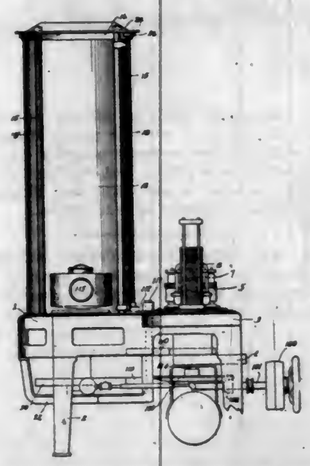
1,662,368. SWITCH-HEATING APPARATUS. MORGAN J. GRIFFITH, Chicago, Ill. Filed May 10, 1926. Serial No. 107,913. 4 Claims. (Cl. 246—428.)



1. The combination with a railroad switch and ties supporting the same, of metallic plates engaged between the rails and said ties, recesses laterally traversing said ties underneath, said plates, and electric heating means substantially parallel to said rails and disposed in said recesses in close proximity to said plates.

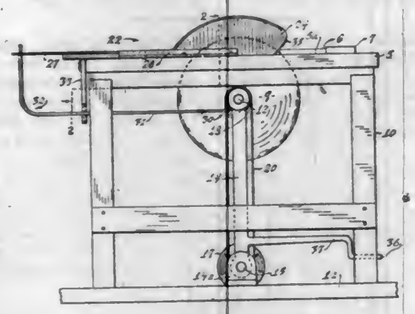
1,662,369. ARC WELDING SYSTEM. JOHANNES KJEKSTAD, Brooklyn, N. Y., assignor of one-half to William Schenstrom, Brooklyn, N. Y. Filed Aug. 1, 1918. Serial No. 247,734. 3 Claims. (Cl. 219—8.)

1. An electric arc welding system comprising the combination with the work and an electrode arranged to have an arc established between them, of an electric motor operative to translate the electrode relative to the work and so arranged in the electric circuit that it will accelerate on a decrease in the length of the arc and decelerate on an increase in the length of the arc.



1,662,370. HIGH-PRESSURE LUBRICATING COMPRESSOR. LOUIS GASTON TRINQUART, Paris, France, assignor to The Bassick Manufacturing Company, Chicago, Ill., a Corporation of Delaware. Filed May 7, 1924, Serial No. 711,540, and in France Jan. 18, 1924. Renewed Jan. 26, 1928. 3 Claims. (Cl. 221—47.4.)

1. In a lubricating apparatus, the combination of a reservoir containing lubricant, means for separating successive fractions of said lubricant and distributing the

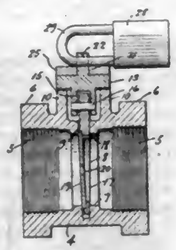


same, and a movable partition engaging the body of lubricant and having a flange rigid with and substantially parallel to said partition and embedded in the body of lubricant.

1,662,371. DRYING MACHINE. NELSON TROYER and MERTON L. DODGE, Seattle, Wash. Filed Sept. 24, 1925. Serial No. 58,430. 43 Claims. (Cl. 34—11.)

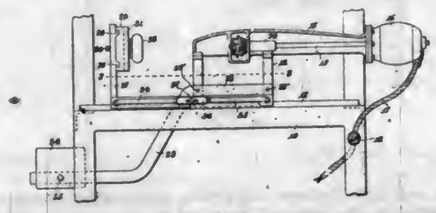
1. In a drying machine of the character described, a drying chamber and can end advancing means whereby each can end delivered into the chamber is caused to be revolved about the axis of the advancing means and also to rotate about its own axes, and means for causing air to be drawn into the chamber and delivered laterally through the stacks.

1,662,372. SAW GUARD. ABRAHAM D. WARD, Los Angeles, Calif. Filed Apr. 26, 1926. Serial No. 104,681. 2 Claims. (Cl. 143—159.)



1. In a machine of the class described, a table provided with a slot, a saw carrying member arranged to travel under said table, a saw carried by saw carrying member with a portion of said saw projecting through said slot and above said table, guides on said table; one to either side of and paralleling said slot, a guard slidable over the surface of said table between said guides; said guard of U shape cross section and inverted over the said portion of the saw, a tail piece to said guard projecting horizontally rearwardly of the table, a horizontal rod pivoted to said saw carrying member and projecting rearwardly of said table; said rod and said tail piece being connected to each other at a point rearwardly of said table.

1,662,373. HAIR-CUTTING COMB. ANNA M. WIDDOWS, Akron, Ohio. Filed Dec. 28, 1926. Serial No. 157,478. 2 Claims. (Cl. 132—45.)



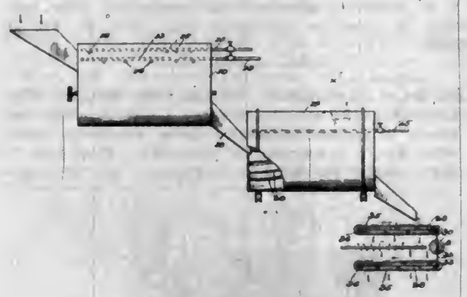
1. The combination with a hair cutting comb having a shank and blade-like gaging teeth, of a slotted plate hinged onto the shank of the comb with the slot extending parallel to the teeth, an auxiliary comb arranged with teeth adapted to pass between the blade-like teeth of the first comb and having a pin thereon slidably engaged in said slotted plate, and means for securing the auxiliary comb to the shank.

1,662,374. ORIFICE VALVE. CLAY G. WOODMANSEE, Los Angeles, Calif. Filed Dec. 21, 1925. Serial No. 76,658. 2 Claims. (Cl. 137—75.)

1. A meter orifice disk valve comprising a chambered body having a slot for insertion in said body and removal therefrom of an orifice cage, an orifice cage pivotally mounted on said body so as to be swung through said slot into position within said body or outside thereof, and means to lock said cage in said body.

1,662,375. CUTTER HEAD FOR LAST-TURNING LATHES AND SUPPORTS THEREFOR. JOHN B. COVILLE, Swampscott, Mass., assignor of one-third to Theodore W. McNichol and one-third to Thomas T. McNichol, Swampscott, Mass. Filed Apr. 8, 1926. Serial No. 100,729. 1 Claim. (Cl. 142—15.)

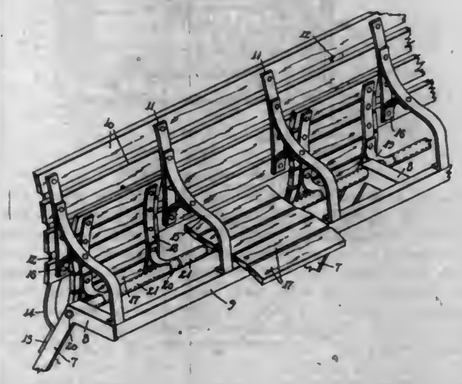
In a lathe for shaping lasts and the like having a supporting bed provided with a pair of upwardly extending guide ribs, a slidable frame resting on and movable endwise of said ribs and having uprights at the opposite ends thereof, a long arm secured to said uprights and projecting a considerable distance beyond one end of the slidable frame, said arm having a flat vertical face at



the outer end thereof; a motor secured to the flat face at outer end of said arm; a rotary shaft centrally disposed in said motor with a bearing on said arm and driven directly by said motor; a cutter secured directly to the end of said shaft between said uprights; a bar secured at one end to the uprights of said slidable frame and extending downwardly and outwardly from the opposite end of said slidable frame beneath said supporting bed; and a weight adjustably secured to the end of said bar and adapted to counterbalance the weight of said arm and motor and prevent said slidable frame being tilted.

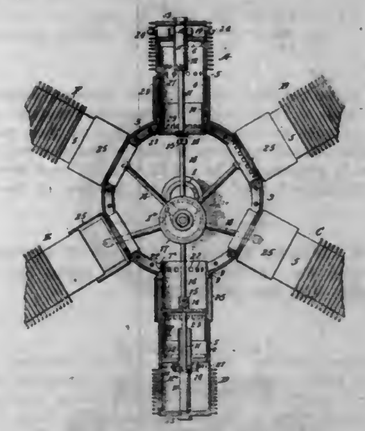
1,662,376. TRANSPORTING VEHICLE. JOSÉ LUIS DELPINI, Buenos Aires, Argentina. Filed July 23, 1924, Serial No. 727,796, and in Argentina Dec. 23, 1923. 2 Claims. (Cl. 280—33.2.)

1. A vehicle comprising a car having two sets of wheels; a plurality of trailers each having a single set of wheels; universal joints for connecting the trailers to each other and to the car; a passage provided for the entire train of trailers and the car so that they shall be inter-communicating; and means provided for displacing the bodies of the trailers relative to its set of wheels in order to change the distribution of the load and the adhesive power.



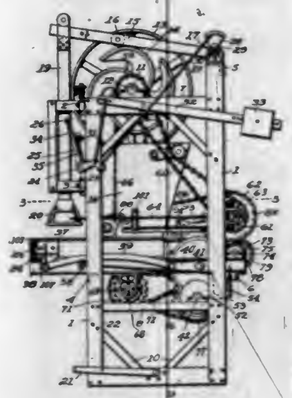
1,662,377. PROCESS FOR PRODUCING ASPHALT-PAVING MIXTURES. JAMES SHELBY DOWNARD, Dallas, Tex. Filed Aug. 11, 1923. Serial No. 656,806. 6 Claims. (Cl. 94—23.)

1. A process for preparing adhesive and cementitious asphalt paving mixtures which consists in separately preparing a granulated mixture of mineral matter and blown asphalt of high melting point, and a granulated mixture of mineral matter and asphalt of low melting point, and mixing the separately prepared mixtures while cold and in heating the final mixture at the point of use whereby the two mixtures commingle and temper each other to produce in the final paving mixture a pre-determined compound of standard asphalt content.



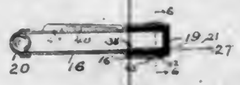
1,662,378. SEAT. CHARLES ANDRE DUKE, New York, N. Y. Filed Oct. 27, 1926. Serial No. 144,580. 3 Claims. (Cl. 155—86.)

1. A seat structure comprising standards having forwardly extending arms, a rail secured to said arms, a shaft carried by said standards in rear of said rail, seats mounted on said shaft for turning movement and adapted to rest on said rail, with one or more seats disposed above the corresponding standards, the rear portions of those seats which are located above the standards being arranged to swing downwardly behind said



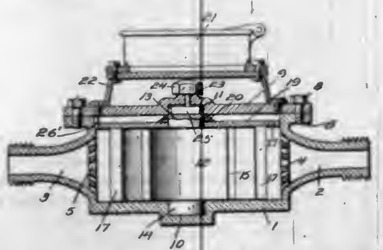
standards, a back for said seats, and bars secured to said back and having their lower ends secured to said standards below said shaft with the bars spaced rearwardly to provide clearances between the bars and upper ends of the standards in which the rear portions of the seats may swing.

1,662,379. INTERNAL-COMBUSTION ENGINE. BYRD L. EDDS, Sherman, Tex. Filed June 4, 1926. Serial No. 113,653. 17 Claims. (Cl. 123—44.)



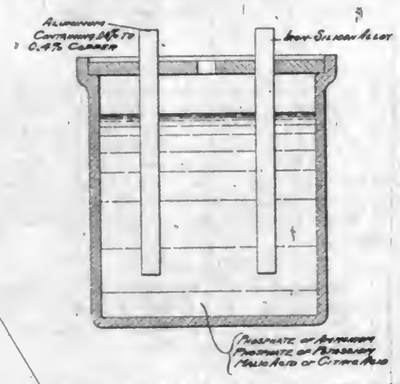
12. In a rotating cylinder engine, the combination of a fixed crank shaft, a crank case rotatable about the shaft, a plurality of radially arranged main hollow pistons fixedly mounted at their open ends on the crank case in communication therewith, reciprocating cylinders slidably mounted on said pistons, auxiliary hollow pump pistons slidable in the inner end portions of the main pistons, means connecting each cylinder and one of the auxiliary pump pistons for movement together and with the crank shaft, exhaust ports for the cylinder, means for controlling the same, means for admitting explosive mixture for the hollow pistons, and valve controlled passages between the hollow pistons and the cylinders.

1,662,380. TAMPING MACHINE. CHARLES S. EMERT, Peoria, Ill. Filed Jan. 27, 1926. Serial No. 84,034. 9 Claims. (Cl. 25—41.)



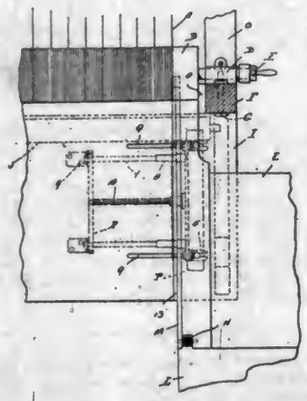
1. In a tamping machine the combination of tamping members, means for operating the tamping members, a hopper, means for delivering material from the hopper, and means for distributing the material to be operated upon the tamping members during the operation of the latter.

1,662,381. DETECTOR FOR FLAT TIRES. THOMAS M. EYNON, Philadelphia, Pa., assignor to Margaret Y. Eynon, Philadelphia, Pa. Filed Sept. 16, 1919. Serial No. 324,059. 2 Claims. (Cl. 200—34.)



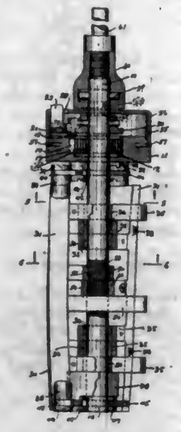
1. A contact maker for a flat tire detector, comprising a tube and a gravity-operated movable contact maker within the tube in combination with a face upon the contact maker adapted to lie in horizontal position and when the tube is properly set by leveling to act as a means of ready determination of the correct position of the tube.

1,662,382. WATER METER. MATTHEW Y. FIELDHOUSE, Maysville, Ky. Filed Feb. 7, 1925. Serial No. 7,668. 1 Claim. (Cl. 73—37.)



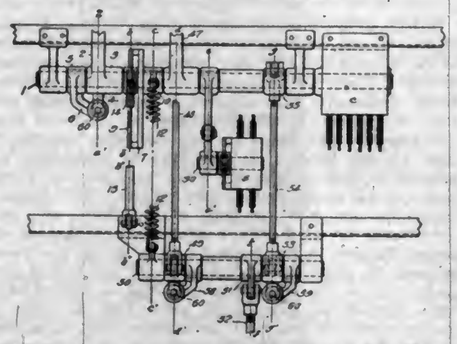
In combination with a register having an operating stem, of a casing open at its top, said casing being provided with diametrically opposed inlet and outlet pipes, a cover plate for the open top of the casing, means for supporting the register on the cover plate, a rotor provided with radial slots arranged in the casing, journals at the top and bottom of the central portion of the rotor, the bottom of the casing and the aforementioned cover plate being provided with eccentrically arranged aligning bearings for the respective journals, said operating stem extending downwardly through the cover plate and being operatively connected to the upper journal of the rotor, blades arranged for slidable movement in the slots of the rotor for engagement with the inner wall of the casing, a balance plate adapted for vertical slidable movement on the upper journal of the rotor, and a coil spring encircling the upper journal and disposed between the cover plate and the upper face of the balance plate for normally urging the latter downwardly into engagement with the upper face of the rotor.

1,662,383. ELECTROLYTIC RECTIFIER. WILLIAM H. GRIMDITCH and JOHNSON N. HUNSBERGER, Jr., Philadelphia, Pa., assignors to Philadelphia Storage Battery Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 18, 1927. Serial No. 169,274. 6 Claims. (Cl. 175—318.)



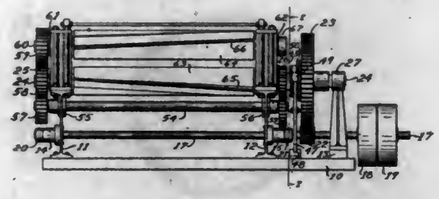
1. A rectifying electrode for asymmetric cells consisting of aluminum containing from .04% to .4% of copper.

1,662,384. ADJUSTABLE GUIDE FOR RULING MACHINES. ELWOOD J. HARPER, Louisville, Ky., assignor to Harper Adjustable Guide Company, Louisville, Ky., a Corporation of Kentucky. Filed Feb. 7, 1927. Serial No. 166,448. 5 Claims. (Cl. 271—49.)



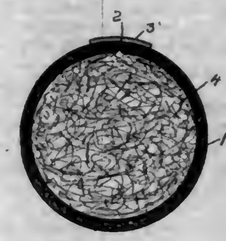
1. In a structure of the class described, in combination, a ruling machine embodying, among other parts, a feed board, a guide board associated therewith, and a supplemental manually adjustable guide and straight edge device, movable toward and from said guide board and across the top of said feed board, and manually adjustable means for said supplemental guide being supported from the underside of said feed board.

1,662,385. GRINDING TOOL. WALTER V. HOUCK, Snyder, N. Y. Filed June 20, 1925. Serial No. 38,579. 7 Claims. (Cl. 51—206.)



1. A grinding tool comprising a shaft, a plurality of abrasive stones arranged symmetrically about the shaft, resilient means for yieldably forcing the stones outwardly, and rack and pinion means for moving the stones so that a tangential line drawn through the curved working surface of each stone will always be at right angles with a radial line drawn through the center of the shaft.

1,662,386. CONTROLLER FOR ELECTRIC VEHICLES. ALFONSO M. LEONI, Philadelphia, Pa., and AXEL HJ. ASPAOOTH, Baltimore, Md., assignors to Electro-Motive Devices, Inc., Philadelphia, Pa., a Corporation of New Jersey. Filed June 27, 1925. Serial No. 40,077. 47 Claims. (Cl. 192—2.)



24. In an intercontrol system for electrically driven vehicles, a speed control shaft operative to different speed positions, a counter shaft, a manually operative element free on said shaft, means whereby movement of said element in one direction will operate the counter shaft, brake operating means operated in the movement of the countershaft, and a connection between said countershaft and the speed control shaft to compel a movement of the speed control shaft in the brake operating movement of the counter shaft.

1,662,387. CUTTING MACHINE. WILLIAM MAIER, St. Louis, Mo. Filed Feb. 12, 1923. Serial No. 618,600. 1 Claim. (Cl. 164—66.)

A stock cutting machine comprising a frame, spaced rolls journaled thereon, blades mounted upon the rolls and disposed longitudinally thereof and helically thereon, said blades being arranged to present unobstructed surfaces upon the peripheries of the rolls which have portions extending in straight lines from end to end of the rolls, means for rotating the rolls in opposite directions and at the same rate of speed whereby the blades upon the rolls may overlap each other and the unobstructed surface areas of the rolls occur opposite each other at intervals, means for gradually increasing the rate of speed of rotation of the rolls as the ends of the blades approach each other and for rotating the rolls at a constant rate of speed during the period that the blades are overlapping each other and for gradually decreasing the rate of speed of rotation of the rolls as the ends of the blades leave each other.

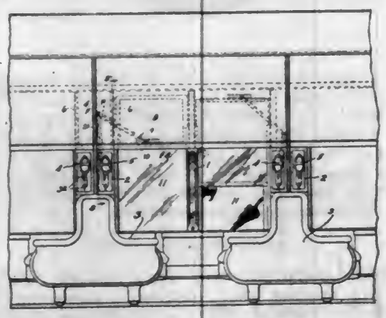
1,662,388. PADDING FOR SEAT BACKS. JOHN R. MILLAR, Oakland, Calif., assignor to California Cotton Mills Co., Oakland, Calif., a Corporation of California. Original application filed Dec. 26, 1923, Serial No. 682,839, Patent No. 1,650,086, dated Nov. 22, 1927. Divided and this application filed Oct. 19, 1925. Serial No. 63,291. 3 Claims. (Cl. 154—54.)

3. A padding material made for endwise introduction into an elongated pocket and comprising a sheet of flexible material of considerable tensile strength coiled to form a sleeve with abutting edges, a strip of stiffening material overlying the abutting edges on the outside of the sleeve for joining the same, and a filler of comparatively short fibre pressed into the sleeve so as to force the latter into cylindrical form.

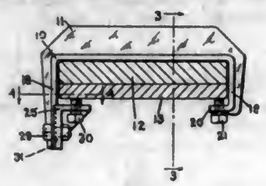
1,662,389. PADDING FOR SEAT BACKS. JOHN R. MILLAR, Oakland, Calif., assignor to California Cotton Mills Co., Oakland, Calif., a Corporation of California. Original application filed Dec. 26, 1923, Serial No. 682,839, Patent No. 1,650,086, dated Nov. 22, 1927. Divided and this application filed Oct. 19, 1925. Serial No. 63,292. 4 Claims. (Cl. 154—54.)

1. A padding material made for endwise introduction into an elongated pocket and comprising a sleeve made

of flexible material of considerable tensile strength, a filler of comparatively short fibre pressed into the sleeve so as to force the latter into cylindrical form and a stiffening member within the sleeve extending lengthwise thereof, said stiffening member to be spaced from said sleeve.

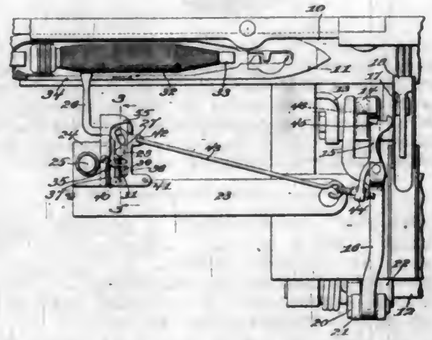


1,662,390. MILK AND CREAM COOLER AND AERATOR. OSCAR O. NEWHOUSE, Brandon, Minn. Filed June 10, 1926. Serial No. 115,066. 11 Claims. (Cl. 257—188.)



1. In a cooler of the class described the combination of an elongated receptacle having a passageway therealong for receiving a flowing cooling medium, a trough supported in the passageway of said casing being open at the top thereof, means for feeding milk or other liquid into one end of the trough for flow therealong, and means for receiving the milk or other liquid at the opposite end of the trough and causing it to flow through the cooling medium in said passageway counter to the flow which said liquid takes along said trough.

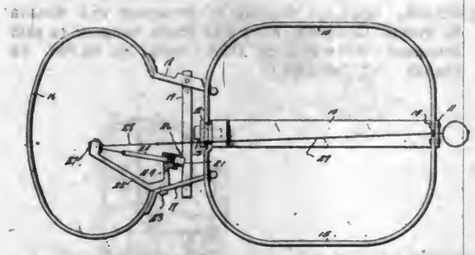
1,662,391. WINDOW REGULATOR. STANLEY W. NICHOLSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Mar. 8, 1926. Serial No. 93,251. 22 Claims. (Cl. 20—52.1.)



1. The combination with a vehicle having a window-opening and chambers above and at one side of the opening and a window for the opening movable into the chamber above the opening, of a regulator for operating said windows having portions within said chambers.

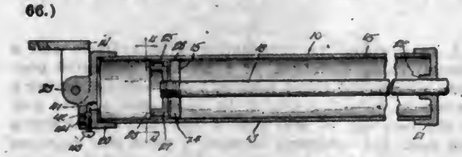
1,662,392. TRACTION DEVICE FOR MOTOR VEHICLES. CARL O. NORBERG, Worcester, Mass. Filed Aug. 6, 1925. Serial No. 48,633. 2 Claims. (Cl. 301—44.)

2. A traction device for a vehicle wheel comprising a T-shaped body portion having a flat plate engaging the wheel tire, a flange projecting outwardly from the plate and two arms extending inwardly past the sides of the wheel rim, a screw-threaded member mounted on one arm and arranged to adjustably engage the inner surface of the wheel rim, an angle iron adjustably and removably attached to the other arm to project over the wheel rim and a clamping screw threaded through the angle iron to engage said rim.



1,662,393. FILLING-FEELER MECHANISM FOR LOOMS. JONAS NORTHROP, Hopedale, Mass., assignor, by mesne assignments, to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Feb. 8, 1927. Serial No. 166,700. 4 Claims. (Cl. 139—286.)

1. Filling feeler mechanism for looms having, in combination, a feeler frame provided with a slot, a feeler having a body and an offset filling feeler end, the body having a pivot pin engaging a slot provided with the feeler frame and being adapted to be moved back and forth in the slot by the engagement of the feeler with the filling on the feeler carrier, and being adapted to turn on the pivot when the yarn is sufficiently exhausted to cease to hold the feeler from turning, a trip lever pivoted on the feeler frame with one side normally in engagement with the body of the feeler, said trip lever being provided with a spring seat projection entering the slot in the feeler frame, a spring interposed between the pivot of the feeler and the spring seat projection of the trip lever normally acting to hold the trip lever against the body of the feeler and the feeler in its rearward position, weft replenishing mechanism, and connections between the trip lever and the weft replenishing mechanism.



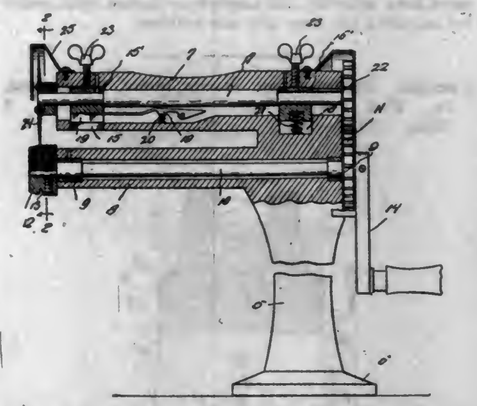
1,662,394. ANIMAL TRAP. ANDRO NYLUND, Alameda, Calif. Filed May 14, 1927. Serial No. 191,441. 1 Claim. (Cl. 43—88.)

A trap of the character described including a base, opposed jaws pivoted upon the base, bracket members extending from the jaws in spaced relation to each other and a partially elliptical spring engaged at its ends with said bracket members and urged to a contracted position to thereby close the jaws, a trigger pivoted upon one of said bracket members, passing through the other bracket member and having a notch,

a latch mounted upon the last named bracket member and resiliently urged into engagement with the notch, a flexible cord attached to the rear end of the latch, a pulley over which the cord passes, the cord extending through the trap above the base thereof, and having means whereby the bait may be attached thereto.

1,662,395. SCREEN-DOOR CLOSER. LEWIS C. NORTON, Chicago, Ill., assignor, by mesne assignments, to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed May 15, 1926. Serial No. 109,251. 5 Claims. (Cl. 16—66.)

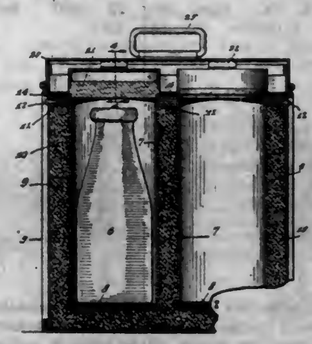
1. A door check and closer comprising a cylinder, a closer mounted on each end of said cylinder, a hinge member having means whereby it may be secured to a door construction and having a pivotal connection with one of said closures, said pivotal connection being in axial alignment with said cylinder, a piston within said cylinder for retarding the movement of said door, a piston rod secured to said piston and extending through the other closure, a bracket having means whereby it may be secured to a door construction and having a pivotal connection with said piston rod and spring actuating means acting between said bracket and piston rod for exerting a swinging action on said rod for closing the door.



1,662,396. PRODUCTION OF BETA-NAPHTHOL-1-SULPHONIC ACID. ALFRED E. PARMELEE, Carneys Point, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 4, 1924. Serial No. 696,899. 7 Claims. (Cl. 260—155.)

1. The process of making beta-naphthol-1-sulphonic acid which comprises acting upon beta naphthol, suspended in an essentially inert liquid substance, with a solution of sulphur trioxide, at a temperature below 16° C.

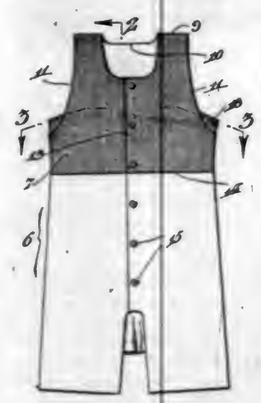
1,662,397. PREPARATION OF TRIARYLGUANIDINES. ALFRED E. PARMELEE, Carneys Point, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Apr. 9, 1924. Serial No. 705,210. 5 Claims. (Cl. 260—125.)



1. The process of making a triarylguanidine, which comprises treating a diaryl thiourea with an aryl amine and a desulfurizing agent in the presence of a chlorobenzene.

1,662,398. LEATHER CUTTER. HARVEY PEPIN, Willimansett, Mass. Filed Dec. 23, 1926. Serial No. 156,638. 1 Claim. (Cl. 164—60.)

In a cutting machine of the class described, a vertical standard, a pair of elongated hollow guide arms arranged horizontally in superposed relation on the standard, the bore of the upper guide arm being greater than the bore of the lower guide arm, bearings arranged in the bores of the arms at the ends thereof, the bearings associated with the upper guide arm being adapted for vertical slidable movement therein, a shaft extending longitudinally through each bore and journaled for rotation in the respective pairs of bearings, means for rotating the shaft simultaneously, a feed roller upon the outer end of the lower shaft, a cutter on the outer end of the upper shaft, resilient means cooperating with the slidable bearings for normally urging the outer carrying shaft away from the feed roller carrying shaft, said resilient means including an elongated leved pivoted at its inner end within the bore of the upper arm below the shaft, the bearing in the upper arm adjacent the outer end thereof being formed with a slot in the lower portion thereof, the outer end of said lever being disposed in said slot and engaging said bearing, an expansible coil spring interposed between the intermediate portion of the lever and the lower portion of the upper guide arm, and manually operable means for moving the upper shaft downwardly toward the lower shaft whereby the space between the cutter and the feed roller may be adjusted.

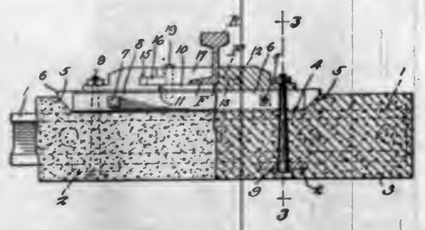


1,662,399. SANITARY MILK-BOTTLE CONTAINER. JOHN M. ROOD and WILLIAM DRIVER, Racine, Wis. Filed May 21, 1926. Serial No. 110,612. 1 Claim. (Cl. 232—41.)

In a milk bottle container, a body portion, a compartment therein, insulating material surrounding said compartment, a keeper for retaining said insulating material

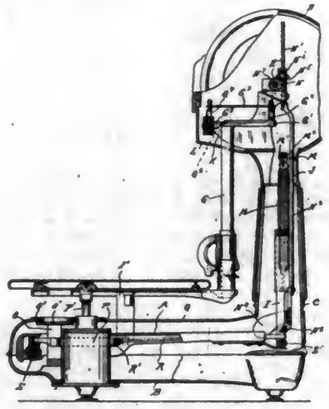
in said body, a gasket over the upper end of said compartment, means for securing said gasket in position, a lid for said container, and a yieldingly mounted closure carried by said lid and adapted to engage said gasket for excluding air from said compartment.

1,662,400. UNDERWEAR. LOUIS RUBIN, Philadelphia, Pa. Filed Feb. 18, 1927. Serial No. 169,214. 1 Claim. (Cl. 2—78.)



A union suit including a sleeveless main garment made of woven material and having arm holes; a vest of knitted material, having arm holes larger than those in the main garment, secured to the upper part of the main garment; and an elastic band secured in the lower part of each armhole in the main garment.

1,662,401. PROCESS FOR PRESERVING RICE POLISH. JOHN HOWARD SASSEEN, New Braunfels, Tex. Filed Feb. 1, 1927. Serial No. 165,241. 1 Claim. (Cl. 99—11.)



A process for preserving rice polish comprising the subjecting of such polish to the action of heat of a temperature and for a period of time sufficient to cause the oil and fat within the polish to melt and encapsulate the other ingredients contained within the polish.

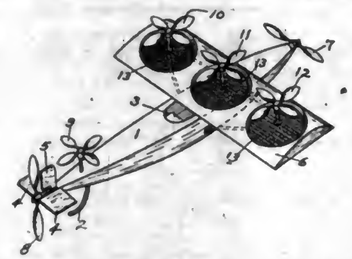
1,662,402. RAILWAY TIE. RICHARD W. SCHULTZ, Richmond, Va. Filed May 25, 1927. Serial No. 194,127. 2 Claims. (Cl. 238—89.)

1. The combination with a reinforced concrete tie including spaced beams therein and bolts extending outwardly between the beams, there being a recess in the top of the tie through which the bolts extend, of cushioning blocks removably mounted in the recess and insertible laterally thereinto against the bolts and against each other, means extending transversely through the blocks for tying them together, and rail engaging and fastening means mounted on the blocks engaged by the bolts.

1,662,403. SCALE. WALTER F. STIMPSON and WILLIS E. FINCH, Louisville, Ky.; said Finch assignor to said Stimpson. Filed Jan. 25, 1926. Serial No. 83,704. 16 Claims. (Cl. 265—62.)

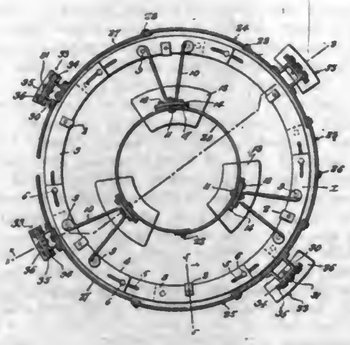
1. In a scale, the combination with a frame and a pedestal rising therefrom, of a pivotally supported platform, a check rod rising from said platform and having a rearwardly extending arm at its upper end, a pivot post at the rear end of said arm, a link pivotally engaging said post, and extending forward, a pivot post engaging the forward end of said link, and means for detachably securing said pivot post to said pedestal whereby said entire check rod assembly may be attached or detached as a unit.

1,662,404. PROCESS FOR INCREASING THE AFFINITY OF ANIMAL FIBERS FOR DYESTUFFS. ERNST STOCKER, Basel, Switzerland, assignor to The Firm Chemical Works formerly Sandoz, Basel, Switzerland. Filed Oct. 27, 1927, Serial No. 229,272, and in Germany Nov. 20, 1926. 2 Claims. (Cl. 8—13.)



1. A process for increasing the affinity of animal fibers for dyestuffs, consisting in treating animal fibers with sulphuryl chloride.

1,662,405. KNIFE HANDLE. ARTHUR H. SWANK, Fremont, Ohio. Filed Nov. 19, 1926. Serial No. 149,412. 1 Claim. (Cl. 30—9.)

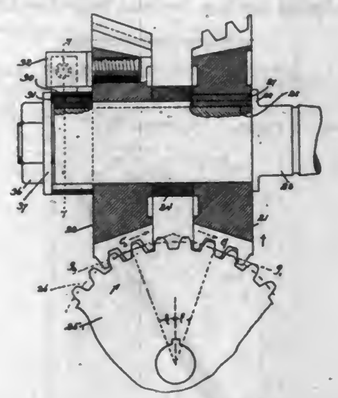


The combination with a knife blade having an integral shank, of a U-shaped frame formed from a single length of material and having a continuous channel therein for receiving the edges of the shank, panels for advertisement engaged with the sides of the shank, and received in said channel, said frame being pressed to firmly hold the panels engaged against the shank and shank confined within the frame.

1,662,406. AIRPLANE. ELMER H. THOMPSON, Medimont, Idaho. Filed Jan. 10, 1928. Serial No. 245,691. 4 Claims. (Cl. 244—15.)

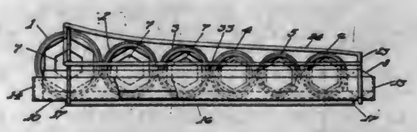
1. The combination with an airplane having a plurality of wells and open frame work therein, of swinging gates supported on the frame-work adapted to close when the airplane is under way, helicopter propellers normally housed within said wells, means for operating said propellers, and means whereby the propellers are initially projected for operation.

1,662,407. SKIRT MARKER. OLIVIA V. TOLBERT, Frys Mill, Ark. Filed Jan. 7, 1927. Serial No. 159,632. 4 Claims. (Cl. 33—9.)



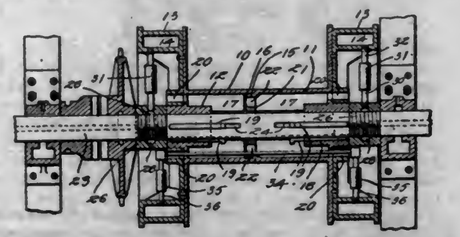
1. A device of the class described comprising a pair of rings forming a chalk holder, each ring consisting of a pair of annular sections, resilient means secured to said rings and normally retaining the same in contact, each of said rings being adapted to have the sections adjusted relative to one another for varying the size of the holder, means for adjustably supporting said chalk holder above a suitable supporting surface, and means adapted for cooperation with said chalk holder to engage a garment for marking purposes.

1,662,408. METHOD AND MEANS FOR HOBBING SPUR GEARS. NIKOLA TESLA, Detroit, Mich., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Mar. 24, 1924. Serial No. 701,527. 17 Claims. (Cl. 90—4.)



1. A method of hobbing spur gears which consists in mounting two tapered hobs upon a common arbor in such a manner as to simultaneously contact with a gear blank, each of said hobs having the cutting portion helically arranged on the tapered portion thereof in more than one convolution, and in rotating said hobs and blank in timed relation to simultaneously generate opposite sides of the teeth with the respective hobs.

17. A tool for generating spur gears comprising an arbor, a pair of frusto-conical hobs on said arbor having their smaller ends facing each other, said hobs having generating elements helically arranged on the conical surfaces thereof and forming in axial section racks of constant pitch, the smaller ends of said hobs being



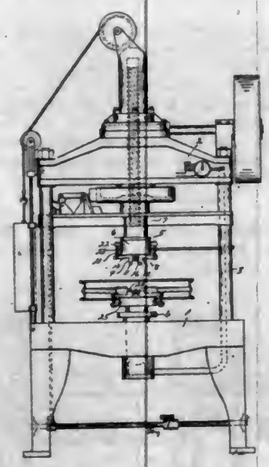
spaced axially of said arbor and said generating elements being arranged in predetermined relationship such as to be capable of simultaneously generating the opposite sides of the teeth of a spur gear.

1,662,409. SOCKET WRENCH SET. CLARENCE E. WAKEFIELD, Worcester, Mass., assignor to Wakefield All-Steel Wrench Company, Inc., Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 1, 1927. Serial No. 180,256. 4 Claims. (Cl. 206—16.)

1. A tray or container for the reception on its bottom of the interchangeable socket members and the common handle member of a socket wrench set, in combination with longitudinally slidable means for retaining all of said parts against said bottom, said retaining means comprising wire loops encircling the tray and its contents at opposite ends, and connected to each other by a wire in overlying relation to the intermediate contents of the tray.

1,662,410. DRUM ASSEMBLY. LEE J. BLACK, Beaumont, Tex. Filed May 12, 1927. Serial No. 190,949. 12 Claims. (Cl. 242—117.)

1. In a drum mounting for draw works and in combination, a shaft, a drum formed in two sections each including a hub, said sections assembled by relative

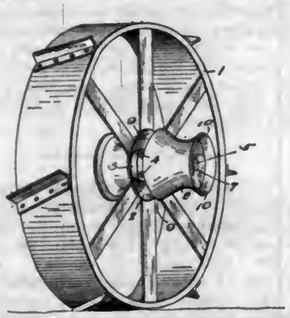


movement thereof longitudinally of the shaft, coacting keyways in the shaft and said hub portions, keys therein, the keyways of the shaft having their outer ends inwardly of the ends of the drum when the sections thereof are in assembled relation upon the shaft and openings permitting driving access to the inner ends of said keys.

1,662,411. SPINDLE FOR PERMANENT HAIR-WAVING MACHINES. SAMUEL BONAT and HARRY BONAT, New York, N. Y. Filed Sept. 25, 1926. Serial No. 137,650. 2 Claims. (Cl. 132—33.)

1. A spindle for permanent hair-waving machines comprising a mandrel, spaced plates with notches therein mounted on and permanently secured to the mandrel and forming a head therefor, a locking bar pivoted between the plates at one side of the notches and means at the other side of the notches to hold the locking bar in closed position.

1,662,412. MACHINE FOR ASSEMBLING SPOKED WHEELS. WILLIAM N. BOOTH, Detroit, Mich. Original application filed May 10, 1922, Serial No. 559,701. Divided and this application filed Nov. 15, 1926. Serial No. 148,538. 4 Claims. (Cl. 157—1.)

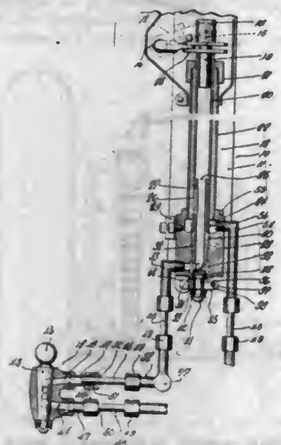


1. In a machine for assembling spoked wheels, the combination with angularly movable means engageable with the inner ends of the spokes over an extended area when the spokes are in angular relation to each other and during their movement to permanent position to radially force the spokes outwardly into engagement with the rim, of means engageable with the sides of the spokes to laterally force the same into permanent position and means for actuating said spoke end and side engaging means.

1,662,413. WRENCH. DAVID MUSSEN BRIGHT, Winnipeg, Manitoba, Canada. Filed July 5, 1923, Serial No. 649,741. Renewed Nov. 28, 1927. 1 Claim. (Cl. 81—67.)

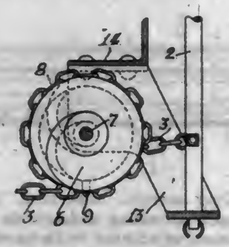
A wrench comprising a handle having a circular or segmental head formed at one end thereof, master links pivoted at one end centrally to the opposite sides of the head, the peripheral portion of the head lying between the said links being provided with a series of teeth arranged concentric to the head, and a chain formed from a plurality of lengthwise extending staggered pivotally connected alternated rows of similar links having one of the terminal rows of links pivotally attached to the free extremities of the master link, each link of said chain having the ends thereof semicircular and being provided on the inner sides with spaced gripping projections and at the outer sides with a cross channel, the side walls of which are curved continuous with and concentric with the ends of the link, the said cross channels of the assembled links being adapted to receive and make rolling contact with the teeth of the head.

1,662,414. TRACTOR-OPERATED WINCH. RUDOLPH BUSCH, Sr., Shelltown, Md. Filed Aug. 11, 1927. Serial No. 212,342. 2 Claims. (Cl. 242—95.)



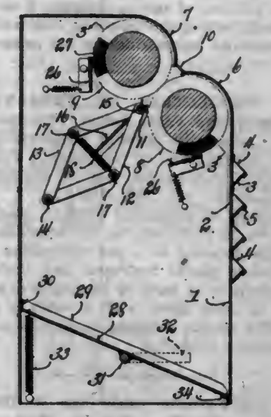
1. In a device of the class described, the combination of a winch, the winch having opposite expanding flange edge portions, a threaded shaft extending through the center of the winch and on which it is mounted, a flat block affixed to the end of said shaft, said block having a plurality of apertures, and means for affixing said block securely to the hub of a tractor wheel.

1,662,415. DYESTUFFS AND PROCESS OF MAKING SAME. ANDRÉ CATINEAU, St. Fons, France, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Apr. 19, 1927, Serial No. 185,083, and in Switzerland Apr. 30, 1926. 20 Claims. (Cl. 260—19.)



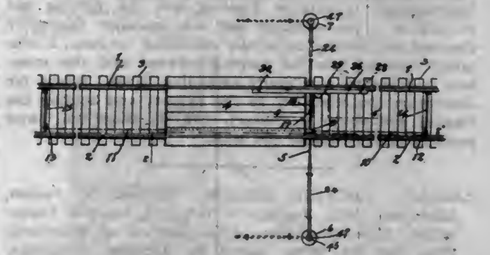
1. The process of making dyestuffs containing sulfur, which consists in heating the leuco-derivatives of the indophenols, which are obtained by condensation of nitrosophenols with carbazoles, with sulfur in presence of aliphatic compounds containing nitrogen in the proportion of at least one nitrogen atom for two carbon atoms.

1,662,416. OVEN-HEAT REGULATORS. EMIL L. CLAUS, Milwaukee, Wis., assignor to Claus Manufacturing Co., Milwaukee, Wis., a Corporation of Wisconsin. Original application filed Nov. 10, 1923, Serial No. 673,953. Divided and this application filed Oct. 14, 1926. Serial No. 141,542. 11 Claims. (Cl. 236—15.)



1. In an appliance of the character described, a base member, a normally stationary valve member adjustably mounted in the base member and having one end extended upwardly and its other end projected outwardly of the base member, a second valve member cooperating with the first valve member to govern the passage of fuel therepast, a collar member mounted on the projected end of the first valve member, a screw shaft engageable with the collar member and adapted, upon rotation, to adjust the first valve member, and dial means carried by the screw shaft to display the adjustment of said first valve member.

1,662,417. BRAKE-POWER-MULTIPLYING DEVICE. BYRON L. COOK, San Mateo, and EDWARD O. HERRMANN, Mill Valley, Calif. Filed Sept. 7, 1926. Serial No. 133,960. 1 Claim. (Cl. 254—149.)



In braking mechanism the combination of a stirrup member; a helically grooved oppositely tapering drum rotatably mounted in said stirrup member; a rotatable brake-shaft stepped in said stirrup member at a level below the lower level of the larger diameter of the drum; a brake-applying instrumentality; and a line-connection secured to said brake shaft at the level of the bottom of the smaller diameter of the drum and thence winding about said drum and connected with the brake-applying instrumentality.

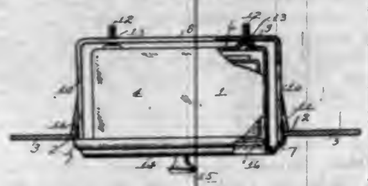
1,662,418. COMB CLEANER. JOHN GRASSER, Manitowoc, Wis. Filed Mar. 28, 1927. Serial No. 179,012. 2 Claims. (Cl. 15—39.)

1. A comb cleaning machine comprising a casing provided with a comb receiving slot, a pair of revoluble brushes for cleaning an inserted comb, a trough-like member for the reception of an edge of the comb while it is being cleaned, said trough-like member being located directly behind the brushes and in alignment with the comb receiving slot and spring urged toggle link mechanism for urging said trough-like member outwardly towards said slot.

1,662,419. RAILWAY-SIGNALING DEVICE. LOUIS HANIFORD, Hanna, Alberta, Canada. Filed May 17, 1926, Serial No. 109,772, and in Canada Mar. 30, 1926. 5 Claims. (Cl. 246—293.)

1. A railway signaling device for use on high crossings comprising a rotatably mounted shaft located at the crossing and extending transversely of the crossing and there beyond, upright rotatably mounted spindles located at the ends of the shaft, intermeshing gears and pinions connecting the shaft to the spindles, a signal carried by each spindle and extending normally parallel with the highway but clear of the tracks, a depressible member located at each side of the crossing and at some distance therefrom and adjacent one of the rails and adapted to be depressed by an oncoming train, means connecting said members to the shaft whereby in the depression of either member the shaft is rotated in a direction to swing the signals transversely of the highway, means for automatically locking the signals in such latter positions,

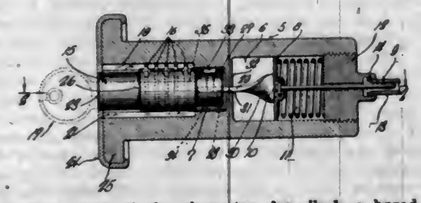
depressible unlocking means located at the crossing, said unlocking means being adapted upon depression to release the locking means and free the signals and means for returning the freed signals to their initial position.



1,662,420. METHOD FOR PREPARATION OF WASHABLE ANILINE DYES. PAUL HARTMANN, New York, N. Y., assignor to Karl Schenzer, New York, N. Y. Filed Nov. 26, 1926, Serial No. 151,026. Renewed Jan. 25, 1928. 2 Claims. (Cl. 8—5.)

1. The process of making a permanent dye consisting of mixing a solution of aniline crystals, a second solution of boracic acid, mixing the solutions intimately, evaporating to dryness and pulverizing the dry mass so obtained.

1,662,421. PRODUCTION OF PRIMARY AMINES. PAUL HEROLD and PAUL KOPPE, Neurossen, Germany, assignors to Grasselli Dyestuff Corporation, New York, N. Y., a Corporation of Delaware. Filed Aug. 20, 1927, Serial No. 214,444, and in Germany Aug. 21, 1926. 3 Claims. (Cl. 260—130.5.)

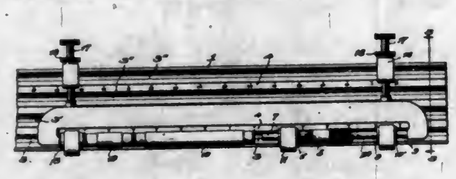


1. The process of producing primary aromatic amines, which consists in reducing the corresponding nitro compounds in the presence of a gas comprising at least one of the reducing agents hydrogen and carbon monoxid, under a pressure of at least 20 atmospheres and at a temperature of at least about 100° C. with a solution containing readily soluble sulphids in an amount insufficient for the complete reduction.

1,662,422. CONTAINER. SYLVANUS W. HODGES, Grand Rapids Township, Kent County, Mich., assignor to Grand Rapids Metalcraft Corporation, Grand Rapids, Mich., a Corporation of Michigan. Filed Sept. 1, 1926. Serial No. 132,917. 2 Claims. (Cl. 224—29.)

1. In combination with a wall having an opening therethrough: a support inserted into the opening and comprising a rear member and side members oppositely disposed and having outwardly extending tongues; a container inserted into the opening between said side members and having a laterally extending flange; means for connecting the container to the support and holding the tongues and flange in contact with the inner and outer surfaces respectively of the wall.

1,662,423. LOCKING DEVICE. EDWARD N. JACOBI, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Wisconsin. Filed Dec. 18, 1926. Serial No. 155,628. 7 Claims. (Cl. 70—46.)

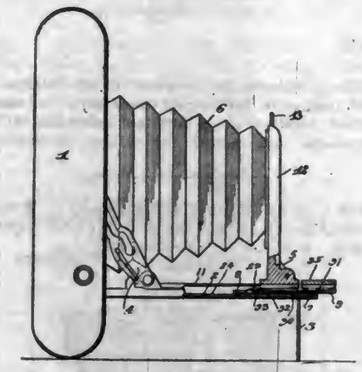


1. In a lock of the character described, a bored stationary shell, a key actuated cylinder rotatably and slidably mounted in the shell bore, tumblers carried by the cylinder and engageable in a locking recess in the shell to normally lock the same in the bore, the cylinder being rotatable upon disengagement of the tumblers from their locking recess by a proper key inserted in the cylinder, a helical member, means securing the helical member to the cylinder, said helical member working in a slot in the shell whereby actuation of the tumblers by a key inserted in the cylinder and the rotation of the cylinder causes said helical member to impart longitudinal movement to the cylinder.

1,662,424. MULTIPLE TOOL. JOSEPH J. JUDGE, Rochester, N. Y. Filed Dec. 26, 1922. Serial No. 608,815. 5 Claims. (Cl. 81—177.)

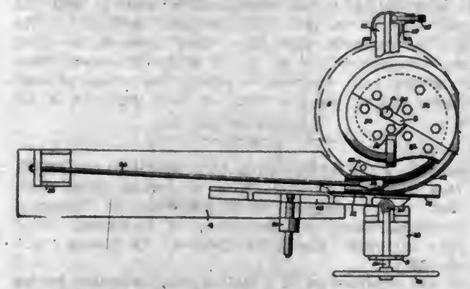
1. A multiple wrench comprising a brace having an elongated shank rod provided at its end with means for engaging and rotating a wrench socket and arranged to receive a plurality of wrench sockets having openings therethrough and adapted to be strung together on said shank rod when not in use and to be associated individually and interchangeably with said socket engaging means in use and a detachable retaining device for the unused sockets forming a stop for the socket mounted in operating position upon the shank.

1,662,425. MEASURING MACHINE. ALBERT KINGSBURY, Greenwich, Conn., assignor to Kingsbury Machine Works, Inc., Philadelphia, Pa., a Corporation of Delaware. Filed Oct. 14, 1922. Serial No. 594,574. 22 Claims. (Cl. 33—165.)



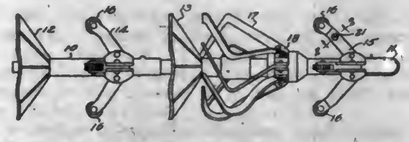
1. A measuring machine comprising, in combination, a supporting member having a groove in the upper face thereof, a micrometer adapted to lie in said groove, and means whereby said micrometer may be secured in said groove, the latter being adapted to receive a member to be measured.

1,662,426. DUST MOP. ARTHUR C. KOOTZ, Milwaukee, Wis., assignor to Gem Hammock & Fly Net Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed July 12, 1926. Serial No. 121,883. 4 Claims. (Cl. 15—227.)



1. In a mitten type dust mop, a hand-receiving casing having a mop element forming one side thereof and formed of woven mop fabric having the original warp threads of the fabric itself depending therefrom at spaced intervals to form mop strands.

1,662,427. CAMERA FOCUSING MECHANISM. ROBERT KROEDEL and CHARLES F. SPEIDEL, Rochester, N. Y., assignor to Eastman Kodak Company, Rochester, N. Y., a Corporation of New York. Filed Sept. 8, 1922. Serial No. 586,990. 6 Claims. (Cl. 95—45.)

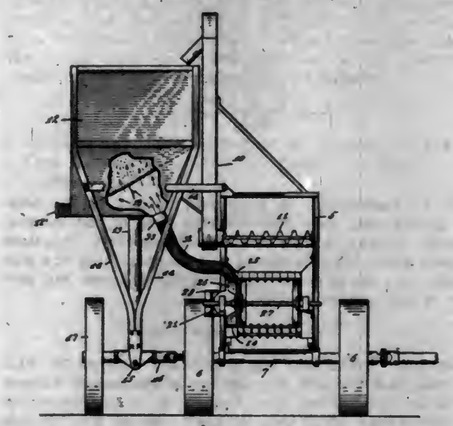


1. In a photographic camera, the combination with a main bed and an extension bed guided thereon, of a pair of indicators on one of said elements having the form of shouldered lugs, two scales on the other element graduated in different units of linear measurement and with which the indicators respectively cooperate, and a projection on said last mentioned element adapted to cooperate with the indicators as stops to limit the relative movement of the beds in both directions.

1,662,428. MACHINE FOR MAKING MANDRELS. CLYDE E. LOWE, East Cleveland, Ohio. Filed July 31, 1924. Serial No. 729,242. 11 Claims. (Cl. 153—40.)

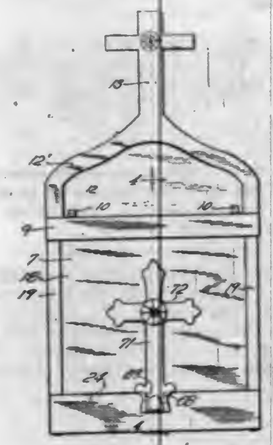
1. A die for drawing tire mandrels comprising a segmental metal block formed with a peripheral groove, the block being split upon a plane which intersects said groove and the different segments constituting arcs about different centers, said block having an elongated slot which contains said centers.

1,662,429. PROCESS OF AND APPARATUS FOR LOCATING OBSTRUCTIONS IN PIPE LINES CARRYING FLUIDS. ALEXANDER LOWY, Pittsburgh, Pa. Filed Apr. 18, 1925. Serial No. 24,295. 13 Claims. (Cl. 250—84.)



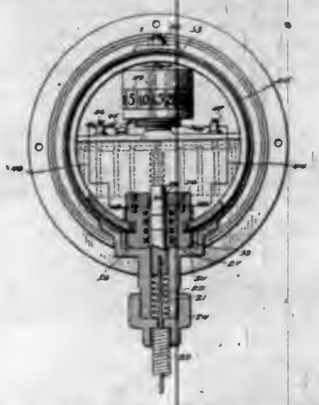
1. For use with a radium emanation detector, an apparatus consisting of a tool adapted to be used within a pipe line and including a radio-active substance adapted to activate said detector.

1,662,430. ART OF INCRUSTING GALVANOPLASTY AND THE OBJECT PRODUCED THEREBY. FREDERICK MAAS, New York, N. Y., assignor, by mesne assignments, to Natural Flower Metalizing Co., Inc., New York, N. Y., a Corporation of New York. Filed Aug. 26, 1925. Serial No. 52,540. 6 Claims. (Cl. 204—8.)



1. The art of galvanoplasty comprising first coating an object with stiffening material, then coating said object with a base containing phosphorus, rubber, asphaltum, carbon bisulphide and binding material, coating with silver nitrate on said base whereby said base reacts with the silver nitrate to render the surface conductive, and then electroplating said object.

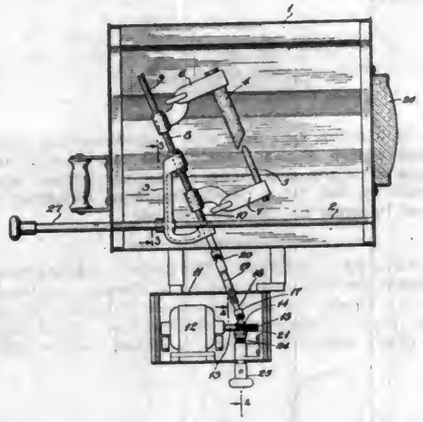
1,662,431. COMBINATION HARVESTER THRASHER. WALLACE F. MACGAZOON, Racine, Wis., assignor to J. I. Case Threshing Machine Company, Racine, Wis., a Corporation. Filed May 21, 1926. Serial No. 110,627. 10 Claims. (Cl. 130—27.)



1. The combination, with a thrashing machine, of a bin for receiving thrashed grain therefrom, a fan communicating with said bin, and means associated with the thrashing machine for actuating said fan to discharge an air blast through the grain in said bin.

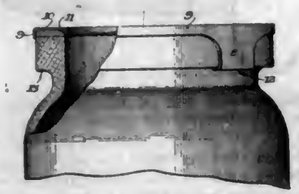
1,662,432. COLLECTION BOX. VICTOR G. MATRE, Chicago, Ill. Filed Jan. 31, 1925. Serial No. 6,142. 9 Claims. (Cl. 232—12.)

1. In a coin box, the combination of a supporting casing, a coin receptacle removable from the top of said casing, a cover for said coin receptacle, and lock mechanism housed below said coin receptacle for locking said receptacle and said cover to said supporting casing.



1,662,433. ELECTRIC SPEEDOMETER. HOWARD J. MURRAY, New York, N. Y. Filed June 20, 1922. Serial No. 569,759. 10 Claims. (Cl. 171—209.)

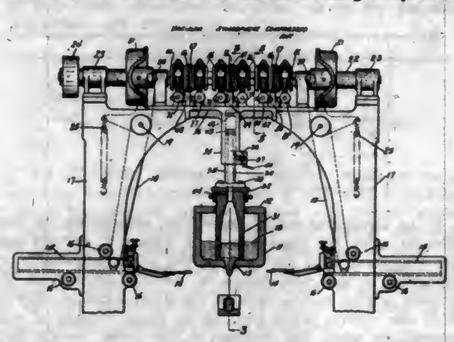
7. In combination, a permanent magnet in the form of a split ring, pole pieces at the ends of the magnet, means forming an electric circuit including inductors wound about the pole pieces, a yoke connecting the pole pieces and an armature reciprocating between the pole pieces and guided in the yoke.



1,662,434. CONTROL MECHANISM. MERVYN W. PALMER, New York, N. Y., assignor to Paramount Famous Lasky Corporation, New York, N. Y., a Corporation of New York. Filed Jan. 4, 1927. Serial No. 159,010. 4 Claims. (Cl. 176—74.)

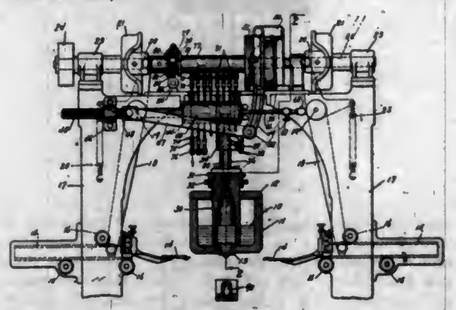
1. In combination, a pair of co-operating electrodes, two branch circuits, said electrodes being in series with one of said circuits, a reversible electric motor having its armature connected across said branch circuits, a field for said motor connected across said electrodes, and means for mechanically connecting said electrodes to

said motor, whereby a variation in the voltage of the current flowing in the circuit containing the electrodes will effect rotation of the motor armature to actuate the electrodes and restore the voltage to normal.



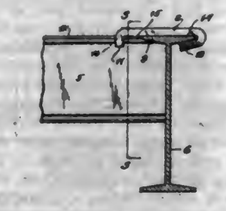
1,662,435. VACUUM-SEALING CAP. WILLIS J. PEELLE, Chicago, Ill. Filed Feb. 17, 1927. Serial No. 168,933. 3 Claims. (Cl. 215—56.)

1. A vacuum sealing jar cap having, in combination, a disk with a plurality of lugs formed at the edge of the disk and spaced a substantial distance apart, said lugs being adapted to engage the jar at spaced points in its periphery so as to secure the cap to the jar at such points, and a sealing gasket of nonvulcanized substantially nonresilient material adhesively secured to the disk so as to be interposed between it and the upper edge of the jar, the unsecured portions of the disks intermediate said lugs being adapted to yield under pressure within the jar in a direction away from the sealing seat, whereby to permit the escape of such pressure during the processing of food products in the jar.



1,662,436. APPARATUS FOR AND METHOD OF FEEDING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed July 17, 1920. Serial No. 396,934. 39 Claims. (Cl. 49—55.)

3. The combination of a molten glass container having a submerged outlet, means to periodically apply pneumatic pressure on the surface of the glass to exert an extruding force thereon, means to periodically reduce the pressure on the surface of the glass to a point below atmospheric pressure to exert an intruding force on the glass at the outlet, means for periodically exposing the surface of the glass to atmospheric pressure for a definite period of time whereby glass is extruded by the action of gravity alone,

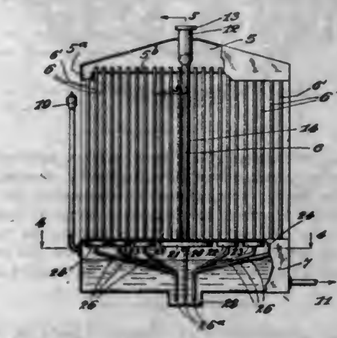


and means operating in timed relation with said pressure applying means to periodically sever the glass adjacent to the outlet.

1,662,437. APPARATUS FOR FEEDING MOLTEN GLASS. KARL E. PEILER, West Hartford, Conn., assignor to Hartford-Empire Company, Hartford, Conn., a Corporation of Delaware. Filed July 28, 1920, Serial No. 399,595. Renewed Sept. 2, 1926. 31 Claims. (Cl. 49—55.)

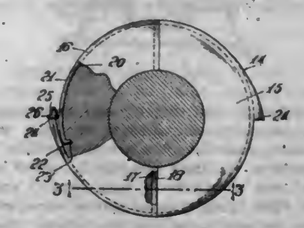
1. The combination with apparatus for separating molten glass into mold charges, of a glass container having a submerged outlet, a pump for supplying abnormal air pressure to the surface of the glass to control its movement in the outlet, and means independent of the pump for variably regulating the air pressure.

1,662,438. CLIP FOR TEMPORARILY SUPPORTING STRUCTURAL MEMBERS. WILLIAM F. REINHOLD, Buffalo, N. Y. Filed Oct. 21, 1927. Serial No. 227,702. 8 Claims. (Cl. 189—35.)



1. A clip of the character described, comprising a body portion adapted to rest on the upper side of the supporting beam, a finger at one end of said body extending laterally outward therefrom parallel with said supporting beam and adapted to engage an under surface of the supported beam and means coacting with said supporting beam for preventing downward movement of said finger.

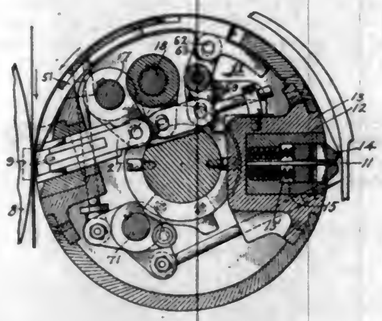
1,662,439. PROCESS OF PURIFYING METALLIC ANTIMONY. CHARLES A. ROSE, Cranford, and CHESTER L. READ, Rahway, N. J., assignors to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 24, 1926. Serial No. 131,306. 12 Claims. (Cl. 75—17.)



1. A method of purifying antimony which consists in heating the impure antimony to a temperature slightly above its melting point, passing a regulated stream of chlorine gas into the said molten metal until the impurity metals have been converted to chlorides, then ceasing the flow of said chlorine gas, removing the metal chlorides from the antimony, collecting said metal chlorides, separating each from the other and converting them into other forms.

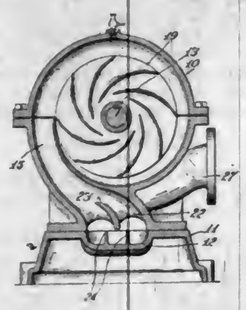
1,662,440. CONDENSER FOR MOTOR-COOLING SYSTEMS. SAMUEL W. RUSHMORE, Plainfield, N. J. Filed June 19, 1925. Serial No. 38,133. 13 Claims. (Cl. 257—25.)

1. In a circulatory cooling system for internal combustion engines adapted to operate by the boiling and condensing cycle, a serially included radiator-condenser having separate steam distributing and condensate collecting chambers with a suitable number of condenser tubes or passages receiving steam from said distributing chamber and draining condensate into said collecting chamber through the drainage outlets submerged below the normal level of the body of water in the collecting chamber and near the center of said chamber.



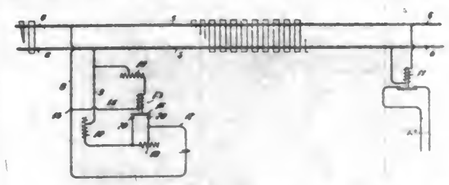
1,662,441. HUB LINER. JOHN R. SEXTON, La Junta, Colo. Filed July 2, 1926. Serial No. 120,123. 5 Claims. (Cl. 85—51.)

5. A hub liner of the character described, comprising a plurality of flat-sided segmental sections, the radial edges of the sections having interlocking relation with



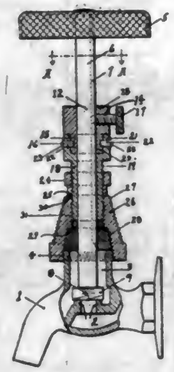
each other, the circumferential edges being grooved, at least one of said sections having a radially disposed projection disposed on each side of the groove, and a socket on its outer perimeter, an encircling band adapted to fit into said groove, one end of the rod being of hook-form to engage in said socket while the other end is threaded and is disposed between said projections, and means threaded onto the threaded end of the band and engaging said projections.

1,662,442. STAPLING MECHANISM. EDWARD P. SHELDON, Brooklyn, N. Y., assignor to R. Hoe & Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 28, 1926. Serial No. 84,264. 16 Claims. (Cl. 1—7.)



1. The combination of a rotary carrier, staple forming and inserting mechanisms carried thereby, means for operating the staple forming mechanism, means for operating the staple inserting mechanism, a support, and means controlled by the staple inserting mechanism for positioning the support between the roduct and the inserting mechanism while the staple is being inserted in a product.

1,662,443. CENTRIFUGAL PUMP. JOHN B. SPERRY, Aurora, Ill., assignor to The American Well Works, Aurora, Ill., a Corporation of Illinois. Filed Feb. 18, 1924. Serial No. 693,553. 11 Claims. (Cl. 103—108.)

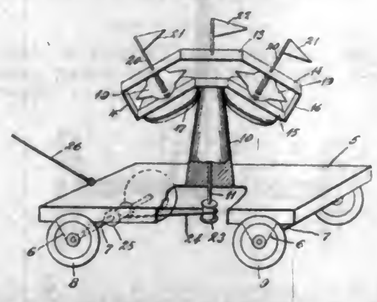


1. A multi-stage centrifugal pump comprising in combination a plurality of impellers, separate volute passages in which said impellers are respectively located, a pressure chamber of large capacity to which one volute passage delivers at relatively high velocity and through which the fluid being pumped passes at relatively low velocity to the suction of the next volute passage, and oppositely disposed vanes in offset relation to each other extending along said pressure chamber between consecutive passages for causing the fluid to pass smoothly from one stage of the pump to the next succeeding stage.

1,662,444. AUTOMATIC VOLTAGE REGULATOR. FREDERICK A. TROBLER, St. Joseph, Mo. Filed Nov. 6, 1925. Serial No. 67,388. 5 Claims. (Cl. 246—41.)

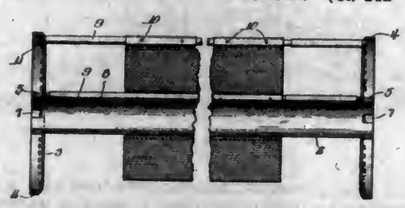
1. An automatic voltage regulator, comprising, in combination with the track circuit, a source of current supply connected with the rails of the track, adjustable resistances in the connections or control wires from the current source to the rails, a relay arranged in parallel with the control wires adapted to shunt certain of said resistances when the voltage in the track circuit falls below a predetermined point and to introduce the resistance when the voltage of the track circuit increases above said point.

1,662,445. VALVE-RESEATING TOOL. JOSEPH W. TROHA, Cleveland, Ohio. Filed May 11, 1927. Serial No. 190,580. 7 Claims. (Cl. 90—12.5.)



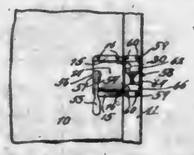
6. In a valve reseating tool of the class described, the combination of a conical centering element externally and internally threaded having an axial threaded bore and also internal and external stop faces, said centering element being adapted to be attached to a valve-casing, a feeding device in threaded engagement with the centering element and a lock ring, and provided with an axial bore and also with an integral socket wall at its upper end adapted to hold a clamping means, said socket wall also having perforations adapted to retain securing pins, a tool-stem clamping means having an axial smooth aperture, also an integral reduced portion with an annular intermediate groove and a threaded bore at right angles to the axial aperture for securing a tool-stem locking means, said clamping means being rotatably mounted in the socket and secured therein by the terminal ends of the securing pins which pass through the socket wall and engage in the annular intermediate groove, a lock ring screw-threadedly engaging the feeding device and coacting with the external stop face to limit movement, a tool-stem slidably and rotatably mounted in the clamping means and feeding device, adapted at its lower end to threadedly engage a cutter having a plurality of cutting edges and at its upper end a rotating means to operate the said tool-stem with its cutter, and a lock screw in the clamping means to engage the tool-stem to lock said tool-stem in the clamping means so as to hold the cutter against the valve seat.

1,662,446. METAL-FOIL ELECTRODE. REINHOLD H. WAPPLER, Yonkers, N. Y., assignor to Wappler Electric Company, Inc., Long Island City, N. Y., a Corporation of New York. Filed Jan. 14, 1924. Serial No. 686,288. 2 Claims. (Cl. 174—89.)



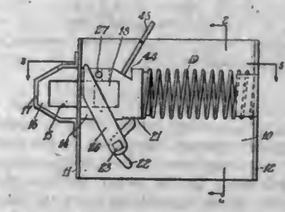
1. An electrode, comprising a flexible sheet of non-conducting material provided with a slot, and a coating of metal foil secured flatwise against said flexible sheet of material, said coating of metal foil being provided with a portion extending through said slot in order to facilitate making an electrical connection with said coating of metal foil, said flexible sheet of non-conducting material and said coating of metal foil being as a whole flexible, substantially as described.

1,662,447. WHEELED TOY DEVICE. EDWARD P. WATSON, Floral Park, N. Y. Filed Nov. 26, 1926. Serial No. 150,783. 6 Claims. (Cl. 46—45.)



6. A wheeled toy comprising a frame, wheels for supporting and moving said frame over a surface, a horizontally arranged body mounted in spaced relation to and arranged over said frame, a vertical axis on said body and extending through and supported in said frame and in operative connection with said wheels, whereby in the movement of the toy said body is rotated, members arranged at the opposite sides of said body and carried by and movable therewith, said members having vertical shafts rotatable in said body and arranged angularly with reference to the axis of said body and means whereby said members may be rotated in different directions in said body in the rotation of said body.

1,662,448. GELATIN PAD ROLL AND SPINDLE THEREFOR. WILLIAM ERASTUS WILLIAMS, Wilmette, Ill., assignor to Ditto, Incorporated, Chicago, Ill., a Corporation of West Virginia. Filed Apr. 9, 1926. Serial No. 101,007. 15 Claims. (Cl. 242—74.)

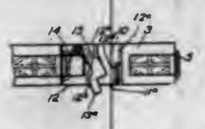


1. A gelatinized sheet having secured at the end thereof a secondary spindle adapted to be sprung as relates to its length for varying the length in fastening the spindle to hold the gelatin pad roll in form.

1,662,449. REFRIGERATOR LATCH. WILLIAM ZUBOW, Chicago, Ill. Filed Mar. 22, 1927. Serial No. 177,291. 3 Claims. (Cl. 292—335.)

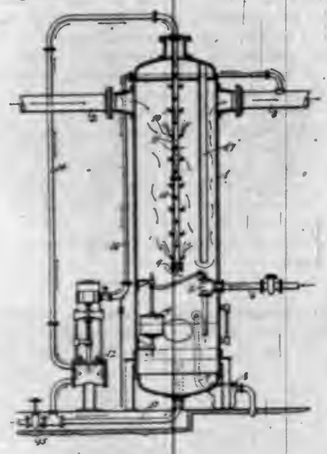
1. In a latch for refrigerator doors or the like, a casing adapted to be mounted on the door, a bolt slidable in the casing and having a roller on its free end, a spring for projecting the bolt, a pivoted tripping member mounted in the casing and having a projection extending from the casing, means for moving the tripping device into engagement with the bolt to hold the bolt retracted and to limit the projection thereof, a bell crank pivoted in the casing and operatively connected with the bolt, a lever pivoted on the casing and having an arm to engage the bell crank for retracting the bolt when the lever is moved on its pivot to open the door, a keeper adapted to be mounted on the door frame and having a beveled portion to engage the bolt roller when the bolt is projected to hold the door closed, and a plate portion to engage the projection of the tripping device when the door is moved to closed position for releasing the tripping device from the bolt to permit automatic projection thereof behind the keeper whereby the door is held closed.

1,662,450. VEHICLE DOOR LATCH. CLARENCE G. ANDERSON, Los Angeles, Calif. Filed Oct. 8, 1925. Serial No. 61,192. 2 Claims. (Cl. 292—168.)



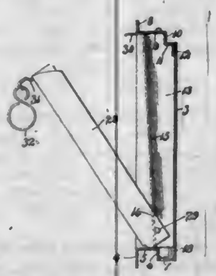
1. A latch comprising a casing, a lever retracted sliding bolt, a keeper having a pair of aligned recesses adapted to alternately receive the sliding bolt when the latter is in extended position, said sliding bolt having a triangular recess on one side, a spring behind said sliding bolt yieldably extending the latter, a bar pivoted intermediate its ends on said latch, one end of said bar engageable in the recess of the sliding bolt to retain the latter in retracted position, a spring connected to said bar normally urging the latter into engagement in the recess of the sliding bolt, and means for tilting said bar out of engagement with the sliding bolt.

1,662,451. CHAIN BRACELET AND CLASP. CHARLES H. BATCHELDER, North Attleboro, Mass., assignor to Wallace G. Franklin, Clarence W. Fisher, and Elton B. Fisher, Copartners doing business under name of E. I. Franklin & Co., North Attleboro, Mass. Filed Mar. 28, 1925. Serial No. 19,150. 1 Claim. (Cl. 24—230.)



In a chain bracelet or the like, a clasp made up of two box members, having front, back and end walls, one box having also a slot in the free end wall of the box and carrying within the box a spring detent, swinging transversely in the plane of the front and back walls of the box and having a finger piece projecting without

the box, the other box member carrying a flat transverse hook at its free end, lying in the plane of the front and back walls, the hook having a detent notch

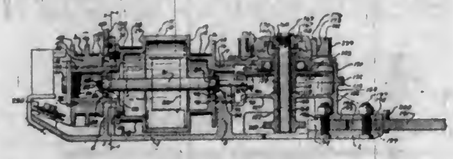


in its forward side to cooperate with the spring detent and a hook forming recess at its rear side to receive a portion of the end wall of the other box member.

1,662,452. DESUPERHEATER. FALCONER M. BIRKS, London, England. Filed Apr. 5, 1927, Serial No. 181,120, and in Great Britain Feb. 9, 1926. 5 Claims. (Cl. 122—459.)

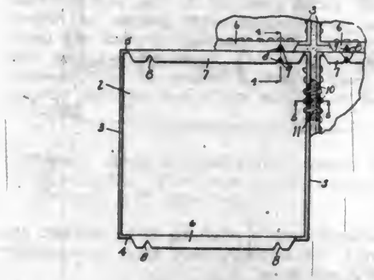
1. A de-superheater comprising a container having a steam inlet and a steam outlet in the upper portion thereof, means for causing the steam to reverse in direction between the inlet and outlet, means for maintaining a body of water in the lower portion of said container, a water spraying device in said container between the steam inlet and steam outlet, and means for transferring the water in the vessel to the spraying device.

1,662,453. METAL WINDOW. PETER M. BOECK, Grand Haven, Mich., assignor, by mesne assignments, to Joachim R. M. Knudsen, Muskegon, Mich. Filed Oct. 4, 1926. Serial No. 139,249. 2 Claims. (Cl. 189—69.)



1. In a window, an outer casing of metal having vertical ends, guides at each end of the casing inclined slightly to the vertical, each of said guides including a laterally extending flange having a portion thereof cut away near its lower end to form an opening or recess, a window sash mounted within said casing, said sash at each end having a part extending back of the adjacent guide, and a member attached to the lower end of each of said mentioned parts located back of its adjacent guide so that the sash may be tilted or bodily moved upward on said guides or removed from the casing when said members are brought into position to pass through the openings or recesses in the guides.

1,662,454. CARRIER FOR BRAIDING MACHINES. WILLIAM E. COOK, New York, N. Y. Filed May 29, 1926. Serial No. 112,424. 8 Claims. (Cl. 96—18.)

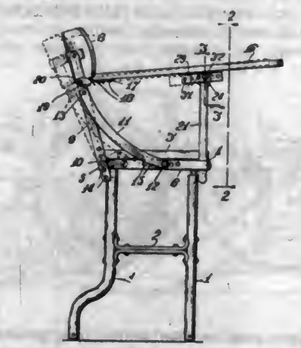


1. A carrier for braiding machines embodying therein a base, a spindle for a bobbin or cop, a stem, a traveller slidably mounted on said stem, a spring acting to normally force said traveller towards said base, a stop member unconnected with said traveller, and slidably mounted adjacent said base, and a latch member engageable with said stop member, and positioned in operable relation to said traveller, whereby excessive movement of said traveller by said spring will actuate said latch to release said stop member.

1,662,455. MINING MACHINE. KENNETH DAVIS, Ebensburg, Pa., assignor to Rembrandt Peale, St. Benedict, Pa.; W. Sanders Davies, New York, N. Y.; and William S. Wallace, Philadelphia, Pa., trustees. Filed Mar. 4, 1926. Serial No. 92,154. 37 Claims. (Cl. 262—30.)

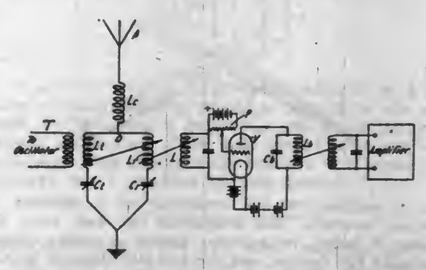
1. A mining machine including in combination a motor having a rotatable field and a rotatable armature, a kerf cutter, means for driving the kerf cutter from one of said rotatable motor elements, and means driven from the other of said rotatable motor elements for progressing the machine during the kerf cutting.

1,662,456. METAL TILE. JAMES C. DE VOL, Battle Creek, Mich. Original application filed Aug. 11, 1926, Serial No. 128,559. Divided and this application filed Apr. 13, 1927. Serial No. 183,364. 3 Claims. (Cl. 72—19.)



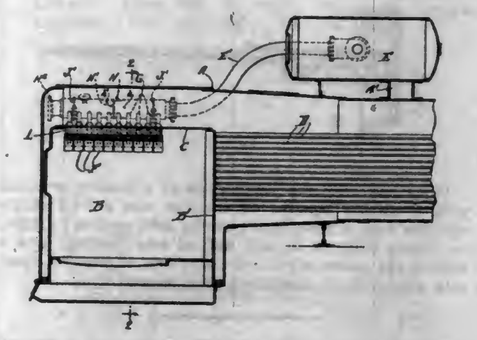
1. A metal tile comprising a face plate and integral side walls connected at their ends, one of said side walls having an inwardly projecting extension at its edge, the face of said extension being in the plane of the edges of the side walls, the extension being notched for engagement with an attaching stud.

1,662,457. FURNITURE CONSTRUCTION. WILLIAM S. FERRIS, Elkhart, Ind. Filed Jan. 8, 1924. Serial No. 685,006. 7 Claims. (Cl. 155—194.)



1. An article of furniture embodying therein a plurality of leg members, a hollow brace extending between a pair of said legs, each brace comprising transversely separated parts of a length equal to the distance between said leg members, a plurality of tubular reinforcing members arranged within the parts of said brace, and extending longitudinally thereof, and means securing said brace parts together at a plurality of points.

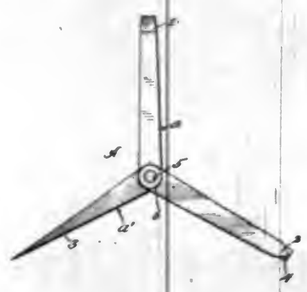
1,662,458. CHAIR. WILLIAM S. FERRIS, Elkhart, Ind. Filed Jan. 25, 1924. Serial No. 688,415. 6 Claims. (Cl. 155—125.)



1. A chair embodying therein a frame, a back rest supporting frame secured to the first mentioned frame, said securing means being formed to permit vertical adjustment and forward and rearward swinging movement, a tablet arm, means connected to the back rest supporting frame for supporting the rear part of the tablet arm, a support for the forward part of the tablet arm, and means adjustably connecting the tablet arm to the last mentioned support whereby relative forward or rearward adjustment may be had.

1,662,459. WIRELESS SIGNALING. CHARLES SAMUEL FRANKLIN, Buckhurst Hill, and PETER PENDLETON ECKERSLEY, Witham, England, assignors to Radio Corporation of America, a Corporation of Delaware. Filed May 17, 1922, Serial No. 561,558, and in Great Britain May 25, 1921. 9 Claims. (Cl. 250—9.)

1. In signaling systems, a transmitting-receiving circuit comprising a common portion and a pair of mutually coupled branches connected to said common portion, said common portion and one of said branches being adjusted to be resonantly responsive to oscillations of a predetermined frequency, and said common portion and the other branch being adjusted to be resonantly responsive to oscillations of a different frequency, and a circuit coupled to one of said branches and comprising a portion resonantly responsive to oscillations of a frequency equal to the difference between said first two frequencies.



1,662,460. RADIANT-HEAT SUPERHEATER FOR BOILERS OF THE LOCOMOTIVE TYPE. WALTER F. KEENAN, Jr., Pelham, N. Y., assignor to Foster Wheeler Corporation, New York, N. Y., a Corporation of New York. Filed May 19, 1924. Serial No. 714,309. 6 Claims. (Cl. 122—481.)

1. In a boiler comprising an internal combustion chamber with a crown sheet roof and flues leading away from the combustion chamber, the improvement which consists

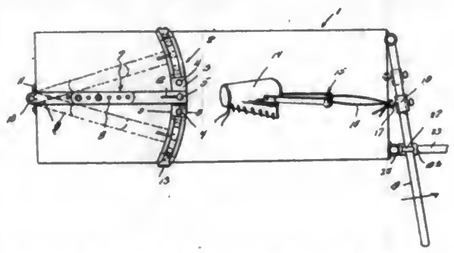
in a radiant heat superheater comprising a plurality of conduit elements arranged side by side in the combustion chamber immediately beneath the crown sheet.

1,662,461. COMBINATION TOOL. RALPH KLABOE, Chicago, Ill. Filed Mar. 7, 1927. Serial No. 173,407. 2 Claims. (Cl. 7—16.)

1. A combination tool consisting of a plurality of separate members, each comprising two unit tools, the shanks of which, respectively, diverge at angles of substantially 120 degrees, and the separate elements of said tool being pivotally connected at the juncture of the unit tools thereof, respectively.

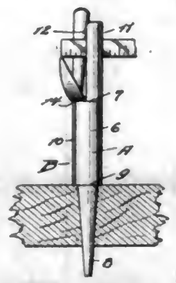
1,662,462. FUNGICIDE. HUGO L. KLEINHANS, Newark, N. J., assignor to Charles Cooper & Company, Inc., Newark, N. J., a Corporation of New Jersey. Filed Nov. 1, 1924. Serial No. 747,381. 1 Claim. (Cl. 167—6.)

A fungicide comprising: a mixture of sulphur and carbonate of copper as reciprocal diluents whereby the said admixture is rendered miscible in water, and said carbonate of copper acting, while each of the ingredients retains its own fungicidal properties, to neutralize in the soil the acid compounds formed by the sulphur.



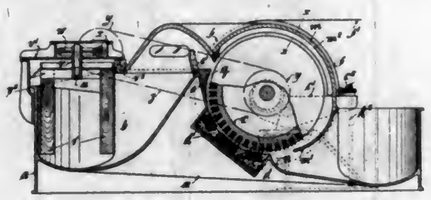
1,662,463. INDICATOR. NEWELL CHANDLER MCCONAHY, Tyrone, Pa. Filed Oct. 19, 1925. Serial No. 63,453. 1 Claim. (Cl. 116—129.)

In an indicator, the combination of a housing provided with a circular opening on one side and a wall on its opposite side; a glass face covering said opening; a tubular casing mounted in said wall of said housing; and a flexible dial mounted on said casing and adapted to clamp said glass face in position in the housing.



1,662,464. FRACTURE DEVICE. LEX GLIN MCCUTCHEN, St. Louis, Mo. Filed Feb. 15, 1927, Serial No. 168,342. Renewed Jan. 5, 1928. 6 Claims. (Cl. 128—84.)

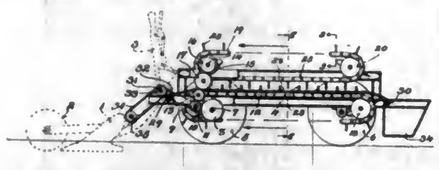
1. In a fracture device of the class described, in combination, a table, a transverse arcuate track attached to said table, a swingably mounted support for the patient having one end adjustably connected with said track, a



swingably mounted lever, a retaining device therefor, and means whereby the fractured part may be detachably connected with said lever.

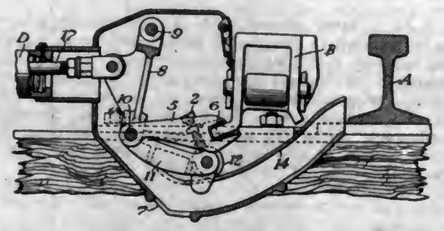
1,662,465. GOLF-CLUB GAUGE AND TRUING TOOL. WILLIAM H. MCGEE, Los Angeles, Calif. Filed July 15, 1926. Serial No. 122,608. 3 Claims. (Cl. 33—174.)

1. In a device of the class described, an element having a substantially cylindrical body and an aligned coniform extension the small end of which is directed away from said body, and a second element to cooperate therewith having a substantially cylindrical tubular body adapted closely to fit around the tubular body of the first named element and an aligned extension of substantially semicircular section which is adapted to cooperate with said coniform extension when said elements are in telescopic relation to each other to detect distortion in the hosel of a golf club.



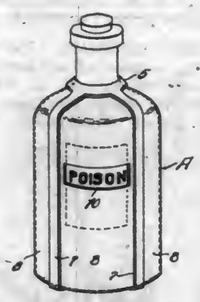
1,662,466. PAPER PULP AND LIKE BEATING ENGINE. SAMUEL MILNE, Edinburgh, Scotland. Filed Nov. 3, 1926, Serial No. 145,981, and in Great Britain Nov. 23, 1925. 3 Claims. (Cl. 92—24.)

1. A paper pulp or like beating engine comprising a tank and a longitudinal mid-feather in said tank, a beater roll between said mid-feather and one side of the tank, bearings for said roll, levers carrying said bearings, and worm and worm wheel mechanism for adjusting said levers, and regulatable balance weights for said



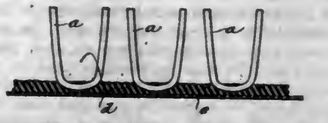
levers and roll, a backfall lying close to said roll and extending at a slight angle above the level of the roll axis, a bedplate for said roll extending towards the backfall through an arc of about 75° and a cover closely fitting and covering in the roll and also covering in the backfall, that part of the cover fitting the roll having angled or sloping faces opposite the space between itself and the roll ends and on the side next the backfall having filling strips, and on that side of the roll furthest from the backfall said cover extending down to a point near the floor of the tank, as set forth.

1,662,467. ROOT ERADICATOR. GEORGE T. MINSHALL, Elkhorn, Wis. Filed Sept. 6, 1923. Serial No. 661,212. 1 Claim. (Cl. 209—308.)



A root eradicator comprising an upper frame member and a lower frame member, spacing members holding said frame members apart, supporting wheels having shafts journalled in the lower frame member, drums carried by said lower frame member and spaced apart and positioned adjacent the front and rear of the machine, drums carried by the upper frame member and spaced apart and positioned adjacent the ends of the machine, means for driving the drums from said wheels, a lower endless belt carried by said first mentioned drums, an upper endless belt carried by said second mentioned drums, said belts having horizontal stretches positioned between said frame members and having teeth arranged in staggered relation, said means for driving the belts imparting different speeds to said belts, said lower frame member extending forwardly and rearwardly beyond said first mentioned drums, guiding rods carried by said lower frame member and projecting beyond said belts, a hopper carried by the rear projecting portion of said lower frame member, said rods extending into said hopper, and means for elevating soil and roots and depositing such soil and roots upon said guiding rods, whereby said soil and roots may be picked up by said belts, and the roots broken by the fingers carried by said belts and deposited in said hopper.

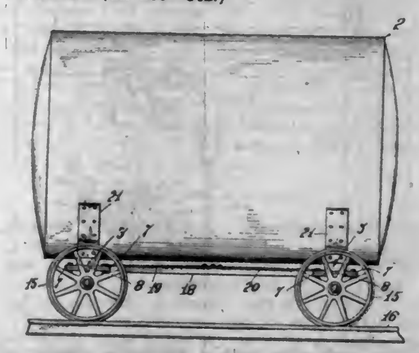
1,662,468. RAILWAY SKATE-OPERATING APPARATUS. GEORGE F. MURPHY, Swissvale, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed July 21, 1927. Serial No. 207,438. 5 Claims. (Cl. 104—257.)



1. A railway skate operating mechanism comprising a cradle, two arms pivotally connected with said cradle and normally resting thereon, said arms having aligned yokes for detachably engaging a skate, and means for moving said cradle to shift the skate to and from its active position on the track rail.

1,662,469. SAFETY HARNESS FOR POISON BOTTLES. ELI J. PALMER, Los Angeles, Calif. Filed Mar. 7, 1927. Serial No. 173,293. 4 Claims. (Cl. 215—9.)

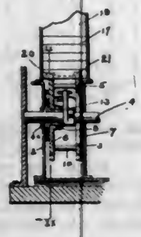
2. A safety harness for bottles, constructed as a tubiform of elastic material having an opening in one of its ends for encircling a bottle top and a slit within its length spaced away from said opening, said slit being sufficiently long to permit the insertion of a bottle therethrough, and a reinforce for said opening.



1,662,470. IMITATION FUR AND PROCESS OF MAKING THE SAME. CARLOS T. PASTOR, Port Washington, N. Y. Filed Mar. 20, 1926, Serial No. 96,344, and in Germany Nov. 26, 1925. 8 Claims. (Cl. 154—2.)

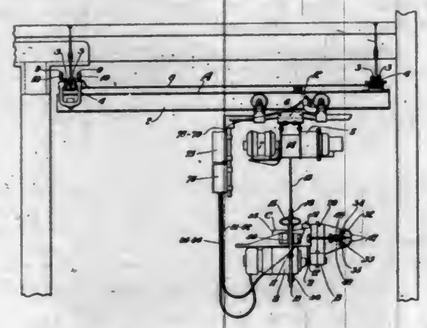
1. The process of making a fabric of the character described which comprises making a pile fabric having warp and filling, applying to the back of the fabric a permanent backing adhering to and fixing the inner ends of the pile, and removing the warp and filling.

6. As a new article of manufacture, a pile fabric comprising a soft, pliable and elastic skin-like body of homogeneous material and a regularly distributed pile of loose fibres fixed therein and bound together solely thereby.



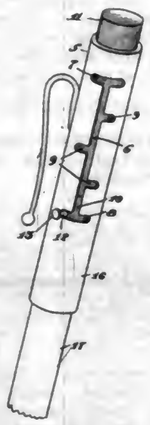
1,662,471. TANK-CAR CONSTRUCTION. HARRY W. PROTZELLER, East Chicago, Ind., assignor to O. F. Jordan Company, East Chicago, Ind., a Corporation of Indiana. Filed Feb. 23, 1927. Serial No. 170,299. 6 Claims. (Cl. 105—362.)

1. A tank car construction embodying therein a running gear comprising a pair of bolsters, supporting wheels and axles for each bolster, a reach bar connecting



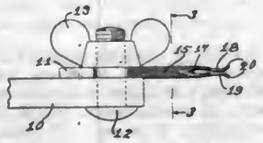
said bolsters together, bracing means extending from the end of one bolster to the opposite end of the other bolster, and a container engaged upon and secured to both bolsters.

1,662,472. VENDING MACHINE. HENRY H. PULVER, Rochester, N. Y., assignor of one-fourth to Joseph G. Biehler, one-fourth to Edward A. Pulver, and one-fourth to Libbie H. Pulver, Rochester, N. Y. Filed Oct. 28, 1922. Serial No. 597,526. 7 Claims. (Cl. 194—85.)



2. In a vending machine, the combination of a magazine, a wheel comprising a pair of flanges mounted to rotate below said magazine, means provided on said flanges for supporting and carrying articles delivered from said magazine, said flanges being connected together by horizontal ribs, each of said ribs having a slot formed therein, a pair of pins mounted between said flanges above each of said ribs one on each side of the slots therein and forming supports parallel to the sides of the slots, the slots in said ribs being located below said pins and adapted to support a coin and hold it to project between said flanges to form a shoulder, a dog mounted to rotate independently within said wheel and between said flanges said dog being adapted to engage the coin carried by said wheel and rotate said wheel on the rotation of said dog.

1,662,473. SHEAR. HARLEY C. RALSTON, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Mar. 5, 1927. Serial No. 173,101. 10 Claims. (Cl. 164—74.)

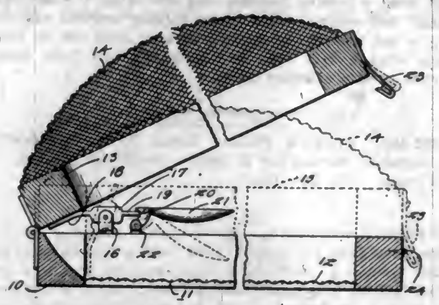


1. The combination with a suspension member, of a circular track member suspended therefrom, and a shear member mounted in said track member and rotatable therein.

1,662,474. ADJUSTABLE ERASER HOLDER. FRANK E. RANDALL, Los Angeles, Calif., assignor of two-thirds to Theodore Holmes and J. Edward Glenn, Los Angeles, Calif. Filed Feb. 16, 1926. Serial No. 88,539. 1 Claim. (Cl. 120—38.)

An eraser holder comprising a tubiform body having a longitudinal slot, a ring-shaped eraser carrier fitted slidably within said tubiform body, a cylindrical eraser fitting slidably within said tubiform body, said eraser having a diametrically reduced inner end portion which fits within said ring-shaped carrier, said carrier being provided with a screw-threaded hole, and a stud slidable along the aforementioned slot, said stud being screwed into said hole in the eraser carrier and at its inner end projecting into said eraser to secure said eraser and carrier together.

1,662,475. THREAD-SPOOLER GUIDE. CHARLES F. ROYCE, Watertown, Conn., assignor to Heminway & Bartlett Silk Company, Watertown, Conn., a Corporation of Connecticut. Filed June 1, 1927. Serial No. 195,642. 5 Claims. (Cl. 242—157.)



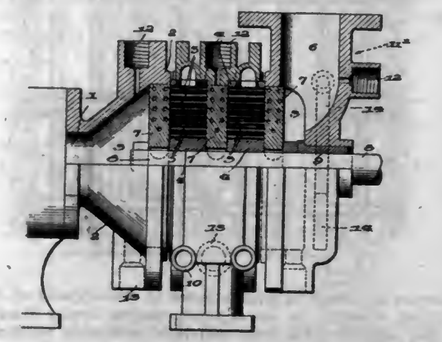
1. In a thread spooler guide, a body member adapted to be attached to the pivoted carrier member of a spooling machine, said body member having a curved guiding groove in its forward part, and a pair of finger plates integral with said body member and extending forwardly of said guiding groove for maintaining the thread in said guide while the spools are being changed, the overall width of said fingers not exceeding the width of the body member of the standard form of guide.

1,662,476. TRAP. SYLVESTER S. SADOSKY, Staples, Minn. Filed Dec. 8, 1926, Serial No. 153,352. Renewed Jan. 13, 1928. 1 Claim. (Cl. 43—62.)

An animal trap including a base having a frame member and a transverse strip intersecting the latter, a member pivoted on the strip and having a bent end, a cover hinged to the frame member and arranged to be

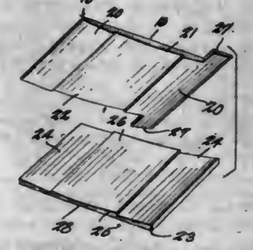
engaged by said bent end whereby to support the cover in elevated position, the other end of the pivoted member being formed with a lug, and a pivoted bait pan

mounted on the said strip and provided with a notch receiving the said lug whereby to releasably hold the pivoted member in cover supporting position.



1,662,477. FORM FOR DISPLAYING NECKWEAR. SAMUEL L. SAMTER, San Francisco, Calif., assignor to L. Samter & Sons, San Francisco, Calif., a Corporation of California. Filed Jan. 29, 1927. Serial No. 164,443. 3 Claims. (Cl. 35—17.)

1. In a display folder, the combination of an illustrated portion representative of a garment and collar in their proper relation, said illustrated portion having an aperture conforming to the neck opening of said garment and in which aperture the article to be displayed will be positioned, side wing members integral with said illustrated portion of the folder and adapted to be folded to the rear and against the back of said illustrated portion, struck-out portions on one of said wing members for securing the article to be displayed thereto, whereby the folding back of the article-carrying member will place the article in the desired position to cooperate with the garment and collar to illustrate the actual appearance of the article when in use, and means for holding said wing members in folded relation.



1,662,478. APPARATUS FOR THE MANUFACTURE OF ARTIFICIAL SILK. FRIEDRICH WILHELM SCHUBERT, Apperley Bridge, near Bradford, England, assignor to Brysilka, Limited, Apperley Bridge, near Bradford, England. Original application filed June 21, 1926, Serial No. 117,532, and in Great Britain July 2, 1925. Divided and this application filed July 7, 1927. Serial No. 204,079. 8 Claims. (Cl. 18—18.)

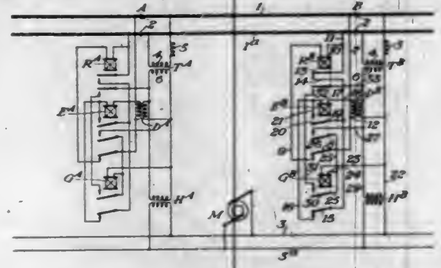
1. In an apparatus for the purpose described, the combination of a casing provided with an inlet and an outlet and interiorly divided into a plurality of chambers by transverse partitions, a series of tubes extending in the direction of the line of flow between the inlet and outlet across one of said chambers and having their ends opening through the partitions forming opposite walls of that

chamber, a rotary blade in each chamber on both sides of that containing said tubes adapted to travel in a path close to the adjacent ends of the tubes, and means for causing a viscous liquid or solution for use in the manufacture of artificial silk to flow through the casing.

1,662,479. TAKE-UP FOR BEARINGS. JOHN A. SMITH, Canonsburg, Pa. Filed Aug. 5, 1926. Serial No. 127,430. 1 Claim. (Cl. 308—72.)

A take-up for bearings, comprising a pair of superposed plate-like members, one of said members being provided on its inner surface with a recess which extends but partway through that member, the outer member having a rib, received in the recess, the recess being large enough so that the rib may have limited movement therein, the said members having contacting surfaces on opposite sides of the rib and the groove, the rib and the groove having contacting surfaces, all of said surfaces on one of said members being correspondingly convexed, and all of said surfaces on the other of said members being concaved to fit upon the convexed surfaces.

1,662,480. CONSTRUCTION OF FIREPROOF BUILDINGS. HENRY SORENSEN, San Francisco, Calif. Original application filed Dec. 7, 1925, Serial No. 73,717. Divided and this application filed Apr. 10, 1926. Serial No. 101,223. 2 Claims. (Cl. 72—71.)

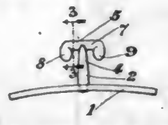


1. In reinforcements embedded in the infilling of fireproof floors, main pairs of vertically extending spaced bands in combination with lateral pairs of vertically extending spaced bands intermediate said main pairs of bands, said pairs of bands extending from the bottom of said floor, the individual bands of said pairs of bands

sloping towards each other, openings between the edges of said pairs of bands accessible for said infilling, and

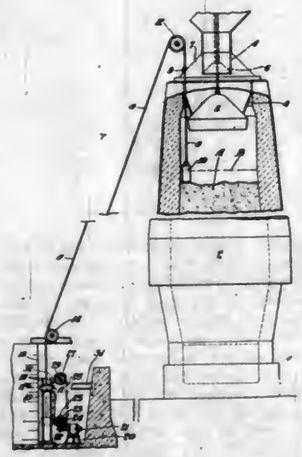
means to attach said main bands to the supports of said floors, whereby the rectangularly shaped sloping sides of said pairs of bands form individual preferably reinforced wedge shaped slabs when said infilling is poured.

1,662,481. RAILWAY-TRAFFIC-CONTROLLING APPARATUS. HERBERT A. WALLACE, Edgewood Borough, Pa., assignor to The Union Switch & Signal Company, Swissvale, Pa., a Corporation of Pennsylvania. Filed Aug. 20, 1923. Serial No. 658,196. 15 Claims. (Cl. 246—34.)



1. In combination, a section of railway track, a source of alternating train governing energy constantly connected across the rails of said section, a second source of alternating train governing energy, and means for connecting said second source across the rails only when such section is occupied by a train.

1,662,482. LOCKING MECHANISM FOR FILLING-TUBE CAPS. ROBERT K. WARD, Kansas City, Mo. Filed May 26, 1926, Serial No. 111,786. Renewed Jan. 25, 1928. 2 Claims. (Cl. 220—55.)

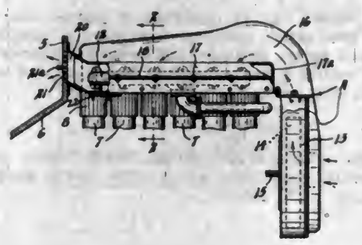


1. In a locking mechanism for filling tube caps, the combination with a filling tube having an annular inwardly extending portion having at inner edge a notch, of a cap having on its under side an annular flange provided with an outwardly extending arm adapted to pass through said notch and, when the cap is turned from the entering position of said arm, to engage the under side of said portion, and a lock having a casing fitted in said annular flange, and a bolt movable in said casing to and from a locking position and extending through said flange, and adapted when in the locking position and the cap is not in said entering position of said arm to lockingly engage said tube and hold the cap from being turned to said entering position.

1,662,483. COLLAR STUD. BASIL WOOD, Manchester, England. Filed June 6, 1927. Serial No. 196,849. 3 Claims. (Cl. 24—101.)

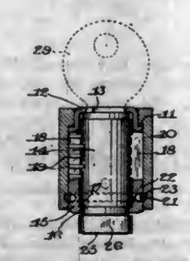
1. A collar stud comprising a base, a shank part of cylindrical unvarying cross-section provided thereon; a tapered shank part provided on the top of the cylindrical shank part and having its smallest cross-section at its upper end; straight, horizontal head parts provided on the top of the tapered shank part of the same thickness as the smallest end of the tapered shank part and flattened globular lugs of substantially the same thickness as the head parts provided on and depending only from the undersides of the said head parts and projecting from the said head parts at right angles thereto, for the hereinbefore specified purpose.

1,662,484. STOCK-LEVEL INDICATOR. PAUL D. WRIGHT, Edgewood Borough, Pa. Filed Oct. 7, 1927. Serial No. 224,643. 3 Claims. (Cl. 116—114.)



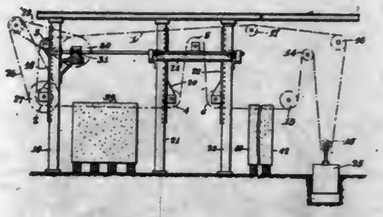
2. The combination with a furnace, of a stock level indicator comprising, a weight within the furnace, an indicator block, a flexible connection between the block and weight, guide-rods on which the block is mounted for vertical reciprocatory movement, a pair of said guide-rods, a chain trained over the sprockets, a motor connected to and adapted to rotate one of said sprockets, and means carried by said chain adapted to engage with and pull the block downwardly along the guide-rods so as to raise the weight within the furnace, and to automatically release the block at a predetermined point and thereby permit the weight to descend in the furnace and to elevate the block on said guide-rods.

1,662,485. REVERSIBLE LATCH CONTROL. THOMAS P. ARCHER and FRANK M. EDGAR, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed July 29, 1925. Serial No. 46,829. 12 Claims. (Cl. 292—164.)



1. In a remote control latch for automobile doors of the class having a latch unit, a remotely positioned control unit and connections therebetween, a control unit provided with an actuating handle and a reversibly operable single acting actuator arm to permit of a right or left hand assembly of said control unit.

1,662,486. AUTOMOBILE HEATER. ENOS ASHLEY, Minneapolis, Minn. Filed Dec. 10, 1925. Serial No. 74,510. 5 Claims. (Cl. 237—12.3.)

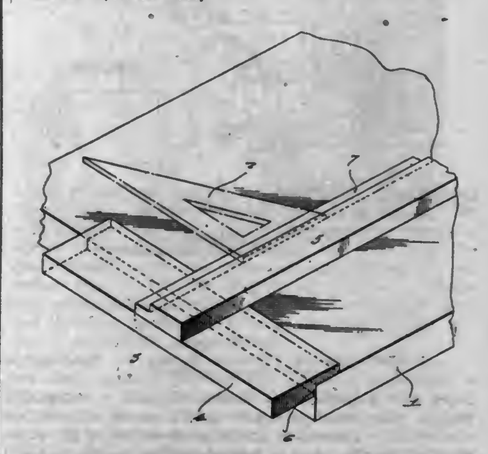


1. The combination with an automobile and the blower casing of an air cooled engine, said casing having lateral apertures therethrough for the passage of exhaust pipes of said engine, of a casing extending along the side of said first mentioned casing and enclosing the apertures and extending rearwardly to have communication with the body of the automobile whereby air will pass out of said apertures from said first mentioned casing into said second mentioned casing and into the automobile body.

1,662,487. LOCK. STEPHEN F. BRIGGS, Milwaukee, Wis., assignor to Briggs & Stratton Corporation, Milwaukee, Wis., a Corporation of Delaware. Filed Dec. 23, 1925. Serial No. 77,296. 7 Claims. (Cl. 70—46.)

2. In a lock, a lock-case having a bore, a cap member engaged within the bore, a lock barrel fitting in the cap member, and a cover bushing fitting between the lock barrel and the lock-case and having a flange engaging the end of the lock barrel, said cover bushing being provided with openings to receive the tumblers of the lock barrel.

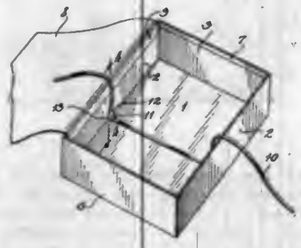
1,662,488. STONE SAW. OTTO BURKHARDT, Bayreuth, Germany. Filed July 13, 1923, Serial No. 651,424, and in Germany May 26, 1923. 1 Claim. (Cl. 125—21.)



A stone saw comprising in combination several wire ropes arranged the one at the side of the others, a supporting frame for these wire ropes said supporting frame comprising a number of successive working points for each rope, a set of guide pulleys in front of each working point, and a set of guide pulleys behind each working point, the lower pulley of each set of pulleys serving to guide the cutting side of the wire rope with regard to the work and the upper guide pulley of each set of puleys serving to conduct the wire rope from the one cutting plane into the next following cutting plane, and means for stretching each wire rope independently of the other wire ropes.

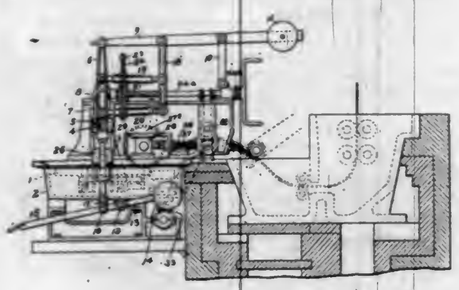
1,662,489. PHOSPHORUS MATERIAL. HARRY WILLIAMS CHARLTON, New York, N. Y., assignor to American Cyanamid Company, New York, N. Y., a Corporation of Maine. Filed Aug. 2, 1923. Serial No. 655,209. 3 Claims. (Cl. 71—9.)

1. A method of producing compounds of phosphorus which comprises mixing phosphoric anhydride, and calcium cyanamid; substantially as described.



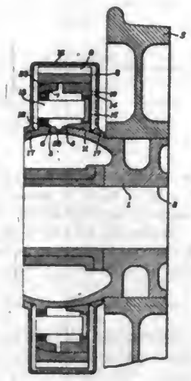
1,662,490. T SQUARE. NOBLE O. COCHRAN, Morrisville, Pa. Filed Feb. 16, 1927. Serial No. 168,682. 1 Claim. (Cl. 33—75.)

As a new article of manufacture, a T-square having a head and a stem extending at an angle to the head; the



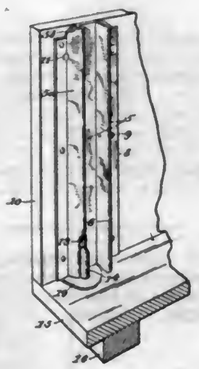
head having the lower corner of its edge for use in opposed relation to a drawing board, rabbeted to seat one corner of an edge of the board, and the stem having one of its upper longitudinal edges similarly rabbeted.

1,662,491. PAPER BOX. ALFRED H. CRANKSHAW, Lyndhurst, N. J., assignor to Owens Manufacturing Co., Hoboken, N. J., a Corporation of New Jersey. Filed May 21, 1927. Serial No. 193,209. 13 Claims. (Cl. 229—6.)



1. A box part blank including a body and side and end flaps, and having integral holding tabs formed from material of the box and connected thereto along a straight line to facilitate bending of the tabs laterally from the plane of the material, said tabs being arranged in pairs transversely of the box, and the tape or ribbon being held beneath the tabs with the tabs in the plane of the blank.

1,662,492. FEEDING SHEETS. SAMUEL E. DIESCHER and AUGUST P. DIESCHER, Pittsburgh, Pa., assignors to S. Diescher & Sons, Pittsburgh, Pa., a Partnership consisting of Samuel E. Diescher and August P. Diescher. Filed July 16, 1923. Serial No. 651,980. 14 Claims. (Cl. 271—27.)



1. A sheet feeding machine having in combination a support, a rotatable and laterally moving drum provided with a plurality of devices adapted to engage the first or outer sheet of a pile resting on the support, an abutment for preventing edgewise movement of the outer sheet of the pile when in normal position on the pile and yielding means for holding the drum in normal position laterally.

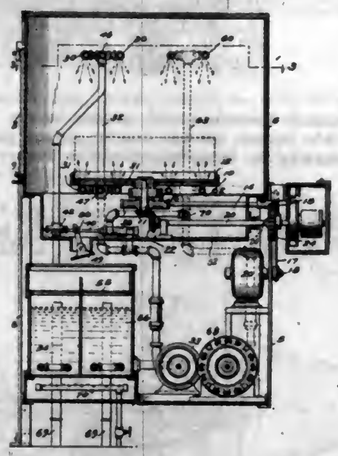
1,662,493. FLEXIBLE GEAR. GEORGE M. EATON, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 24, 1924. Serial No. 701,353. 11 Claims. (Cl. 74—28.)

1. A flexible element comprising a hub portion, a rim portion and spring elements co-operatively engaging the same, said spring elements comprising a cylindrical base having spring leaves extending therefrom and axially disposed with respect to said hub portion.

1,662,494. WAGON-END-GATE SEAT. MILO ELSON, Toddville, Iowa. Filed Apr. 1, 1926. Serial No. 99,043. 1 Claim. (Cl. 296—52.)

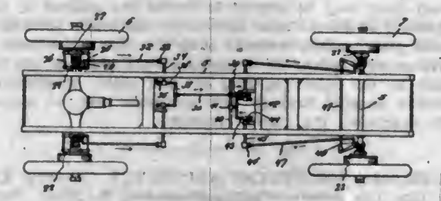
A wagon-box end-gate seat formed of sheet metal folded endwise, with outer, lateral flanges, the folds forming end-gate-retaining ribs braced outwardly and closed at the upper ends, one of the ribs having a reentrant depression to partially admit a bolt, and pierced for the hook of said bolt, and a hook-bolt secured therein.

1,662,495. WELTING FOR BOOTS AND SHOES. WILLIAM J. FALLON, Jr., Boston, Mass. Filed Apr. 7, 1927. Serial No. 181,856. 7 Claims. (Cl. 36—78.)



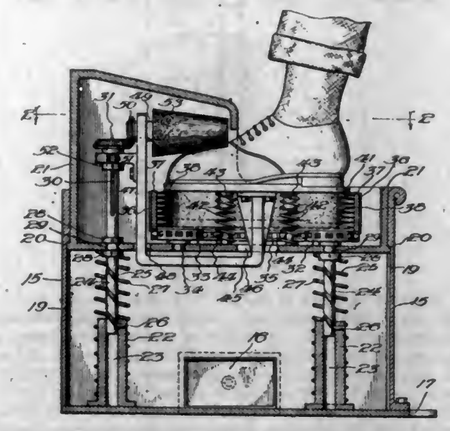
1. As an article of manufacture, a strip of welting for use in making boots and shoes having a joint therein comprising two separate pieces of welt each of which is

scarfed to form a feather edge at the hair side of the welt and having the scarfed portions superimposed in



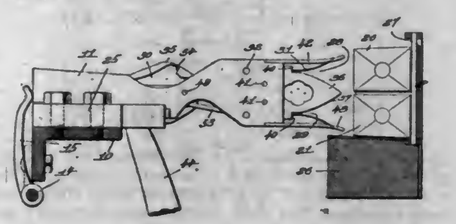
overlapping relation and secured together by cementing the scarfed face of one to the hair side of the other, and having a filler strip secured across the joint.

1,662,496. DISHWASHING MACHINE. EDWARD F. FORSGARD, Waco, Tex. Filed Aug. 16, 1926. Serial No. 129,572. 14 Claims. (Cl. 141—9.)



1. A dishwashing machine comprising a plurality of fluid discharge members having connection with sources of supply, pumping units for pumping the fluid from certain of the sources of supply to said discharge members, and means whereby the flow of fluid through one of the discharge members is controlled by a flow of fluid through the other discharge members.

1,662,497. BRAKE. ALFRED F. FRASCA, ALBERT FRASCA, and ARNOLD A. FRASCA, Sandy Ridge, Pa. Filed Dec. 29, 1926. Serial No. 157,727. 1 Claim. (Cl. 188—72.)



A brake structure of the class described including a stationary drum, a rotatable drum disposed about the stationary drum, discs on both the drums in alternate arrangement, a pressure annulus, a plurality of levers pivotally mounted on the stationary drum and having their outer ends engaged with the annulus to force the annulus against the discs to cause them to frictionally engage with one another for braking the movable drum in relation to the stationary drum, a slidable sleeve having a flange engaging the other ends of the levers, a clamp, a link pivoted to one end of the clamp, arms pivoted to the link and engaged with the sleeve, a bell crank on the other end of clamp having one end engaged with a link engaged with the other end of the arm, means for rocking the bell crank, and spring means positioned between the slidable sleeve and the clamp.

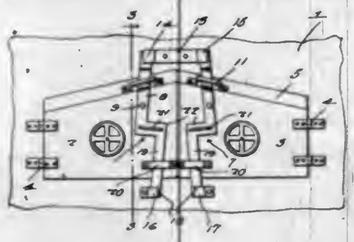
1,662,498. SHOE-BRUSHING MACHINE. CHARLES H. GILL and THOMAS M. THOMSON, Chicago, Ill. Filed Sept. 16, 1925. Serial No. 56,659. 4 Claims. (Cl. 15—36.)

1. In shoe polishing mechanism, the combination of a flexible belt provided with a continuous polishing surface and adapted to encircle a shoe with the said polishing surface in contact therewith, a conically shaped rotary brush adapted to contact with the shoe, and spirally threaded means actuated by foot-power for causing travel of said belt and rotation of said brush.

1,662,499. WEFT STOP MECHANISM FOR LOOMS. EDMOND GUILBERT, Jr., Woonsocket, R. I. Filed Mar. 26, 1927. Serial No. 178,586. 12 Claims. (Cl. 139—377.)

1. A plush loom having, in combination, a lay having two shuttles for simultaneous picking movement, two weft detectors on one side of the loom, one detector having a down-feeling fork to feel the weft from the upper shuttle, and the other detector having an up-feeling fork to feel the weft from the lower shuttle, stop mechanism, and connections between each detector and the stop mechanism to stop the loom on the failure of weft from either shuttle.

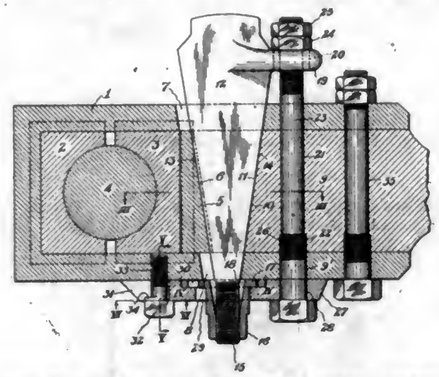
1,662,500. TOOL-HANDLE FASTENING. CONRAD HENNECK, Frisco, Colo. Filed Sept. 25, 1926. Serial No. 137,698. 1 Claim. (Cl. 306—28.)



In a tool handle fastening of the class described, wherein the tool is provided with a reduced externally threaded extension on the outer end of its shank, an

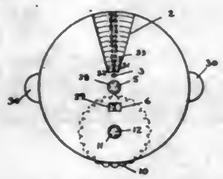
elongated sleeve constructed for slidable engagement over the tool end of the handle, a transverse wall formed in the sleeve adjacent its outer end for abutting engagement with the inner end of the tool handle, a screw extending centrally through the wall into the adjacent end of the tool handle, the outer end of the sleeve

being internally threaded for receiving the externally threaded reduced extension formed on the shank of the tool, the outer end of said reduced extension abutting the inner side of said transverse wall, and a bolt extending transversely through the inner end of the sleeve and the adjacent portion of the handle.



1,662,501. CLOSURE FASTENER. CHARLES E. JONES and DONALD A. WHOOLERY, Outcrop, Pa. Filed June 3, 1927. Serial No. 196,305. 2 Claims. (Cl. 292—238.)

1. In a closure fastener for the vertically swinging closure of a boiler, a double L-shaped latch pivoted adjacent its upper end on the closure, a pair of oppositely disposed keepers secured on the boiler above and below the closure, the weight of the lower end of the latch tending to normally hold the extremities of the double L-shaped latch in engagement with the respective keepers.

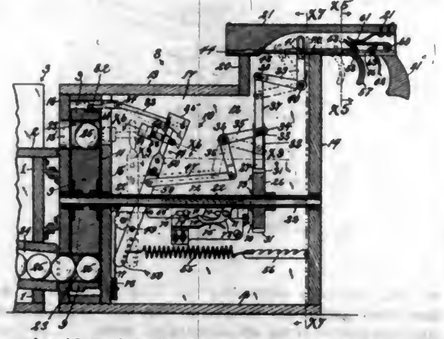


1,662,502. PITMAN CONNECTION. JAMES C. KAHLE, Erie, Pa. Filed Dec. 3, 1924. Serial No. 753,647. 3 Claims. (Cl. 308—68.)

2. In a device of the character described, the combination of a pitman; a pitman-strap fixed in relation to the latter; bearing blocks mounted in said strap; a wrist-pin journaled in said blocks; a wedge passing through said strap and between the pitman end and one of said blocks; a nut on one end of said wedge mounted so as to be capable of moving said wedge in both its

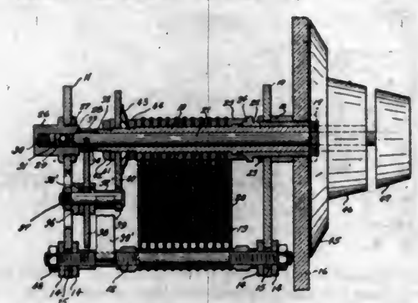
longitudinal directions; and locking means consisting of a bolt passing through said strap and pitman end and engaging the other end of said wedge.

1,662,503. APPLIANCE FOR TEACHING ARITHMETIC. KATHRYN G. KRIEGER, Baltimore, Md. Filed Apr. 15, 1927. Serial No. 184,080. 4 Claims. (Cl. 35—2.)



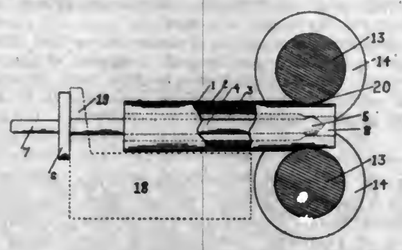
1. An arithmetic instruction appliance, having a circular front plate with two differently shaped openings therein, centrally and diametrically disposed in the upper and lower portions thereof, a chart whose diameter is less than the radius of said plate and on which are numerals printed in regular sequence from left to right in an annular line near its edge, a circular disc on which are equally spaced annular and radial series of numerals printed in regular sequence ranging along the radii from left to right and circles equally spaced passing through said annular series of numerals, means whereby the said chart may be secured beneath said plate, and the said disc may be secured beneath both plate and chart and overlap said chart, means whereby said chart may be rotated to expose any addend or subtrahend of the problem thereon in the lower opening of said plate, means whereby said disc may be rotated to expose any addend or minuend of the problem and circles in the upper opening of said plate, whereby the circles passing through said numerals may be counted to determine the correct answer.

1,662,504. AMUSEMENT APPARATUS. ADOLPH KUDLER, Los Angeles, Calif. Filed July 8, 1924. Serial No. 724,774. 5 Claims. (Cl. 273—122.)



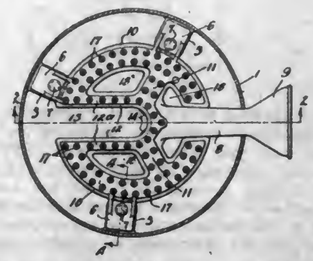
1. The amusement apparatus set forth comprising an elevated ball course having front and rear ends; a return ball runway under said course; balls adapted to be driven over said course; a main housing secured to the forward end of said course; a stationary auxiliary housing on said main housing; said auxiliary housing having the appearance of a gun, a shaft in said main housing; a wheel on said shaft for elevating said balls from said runway to the upper surface of and in position to be driven over said course; a hammer for driving

said balls over said course; a spring for driving said hammer against said balls; a draw bar in said auxiliary housing, links connecting said draw bar and said hammer whereby said hammer may be set against the ten-



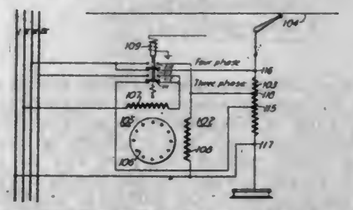
sion of said spring, locking means for said draw bar, a trigger in said auxiliary housing adapted to release said locking means; and means for locking said wheel against rotation after a number of balls have been driven over said course.

1,662,505. VARIABLE CONDENSER. GIOVANNI LOMBARDI, Derby, Conn. Filed Dec. 10, 1924. Serial No. 754,968. 11 Claims. (Cl. 74—7.)



1. In a device of the character described, a pair of concentric shafts, independent means for operating said shafts, spaced supports, cooperating tapered thrust bearings carried by the outer shaft and one of said said supports, means carried by the other support having a chamber receiving the end of the inner shaft, and a reducing driving connection between the shafts.

1,662,506. METHOD OF ROLLING STAYBOLT IRON. GEORGE HENRY MANSFIELD, Cuyahoga Falls, Ohio. Filed Nov. 25, 1925. Serial No. 71,364. 2 Claims. (Cl. 80—62.)

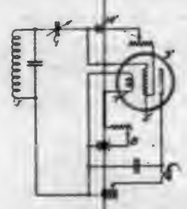


1. The method of making hollow staybolts which consists in assembling metal pieces to form a hollow pile, heating said pile, welding said pieces together and reducing the cross sectional diameter of said pile in successive stages, controlling the diameter of hole in the pile with mandrels during the first stages of reduction and controlling the diameter of hole by a core in the last stages of said reduction, said core being inserted in said pile while said pile is still hot.

1,662,507. BURNER. CLARENCE H. MORROW, Cleveland, Ohio, assignor to The Hotstream Heater Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 22, 1925. Serial No. 32,101. 4 Claims. (Cl. 158—99.)

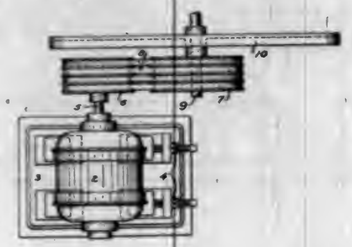
1. A side gas burner for heaters of the type including a substantially vertical pipe, comprising outer oppositely disposed substantially semi-circular chambered portions, and a substantially U-shaped chambered portion spaced therefrom and connected thereto, said substantially U-shaped portion having its arms spaced to form an open ended slot extending from one side of the burner to the central axis thereof for lateral assembly of the burner with the vertical pipe, and a mixture feeding portion having a passage in communication with the chambers of said semi-circular and U-shaped portions.

1,662,508. ALTERNATING-CURRENT MOTOR. STANLEY G. NOTTAGE, Murraysville, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Mar. 13, 1924. Serial No. 698,881. 2 Claims. (Cl. 172—274.)



2. The combination with an energizing winding supplying single phase currents, of a phase-balancer comprising two quarter-phase windings, means for supplying one of said phase-balancer windings from said energizing winding, the voltage across said phase-balancer windings being approximately $\frac{1}{2}\sqrt{3}$ of the voltage of said energizing winding, means for connecting, at times, the other of said phase-balancer windings in T-relation to a midpoint of said energizing winding to provide a source of balanced three-phase currents and means for connecting at other times said last-mentioned phase-balancer windings and a portion of said energizing winding to provide a source of balanced quarter-phase currents.

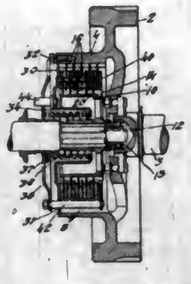
1,662,509. SAFETY PAPER. WILLIAM R. ORNDORFF, Ithaca, N. Y., assignor to The Todd Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Jan. 8, 1925. Serial No. 1,211. 7 Claims. (Cl. 91—67.05.)



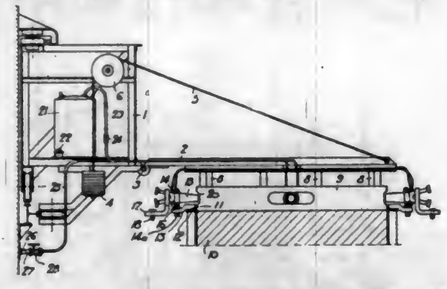
1. A safety paper containing 1,3-dimethyl ether of pyrogallol.

1,662,510. CONTROLLABLE GRID LEAK. ABRAHAM PRESS, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 25, 1920. Serial No. 391,648. 2 Claims. (Cl. 250—27.)

2. In combination with the grid, a plate, and a filament of a hard triode, means for producing an electronic stream between said filament and said plate, said grid lying in the path taken by said stream, and additional means including a patential source for heating said grid, whereby an electronic stream may be controllably produced in the reverse direction between said filament and said grid and the action of a soft triode may be simulated.



1,662,511. POWER-TRANSMITTING MECHANISM. WALTER GEIST, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Jan. 24, 1925. Serial No. 4,412. 9 Claims. (Cl. 74—21.)

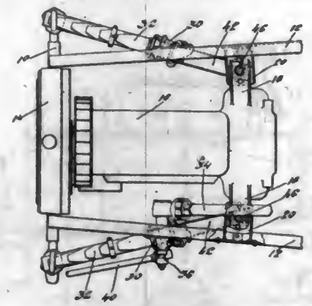


1. In combination, driving and driven sheaves rotatable about substantially parallel axes and providing a plurality of sets of alined V-grooves, and a plurality of independent V-belts each having opposite continuous side driving surface portions cooperable with the side surfaces of a set of said grooves, said grooves and said belts being relatively elastic and resilient to automatically establish equal driving ratios for all of said belts during rotation of said sheaves.

1,662,512. CLUTCH WITH TOOTH PLATES. HARRY S. GOLDEN, Flint, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 28, 1925. Serial No. 53,137. 2 Claims. (Cl. 192—69.)

1. The combination of a driving member provided on one side thereof with an annular flange having a plurality of internal teeth, a driven member extending in alignment with the said driving member and having a plurality of external teeth, driving and driven friction disks housed within said flange and having teeth for engagement with said internal and external teeth, respectively, a member secured to said flange and closing the outer end of the drum formed thereby, said member being provided with an inwardly extending socket, a spring housed in said socket and bearing at one end against the inner end of the socket, a plate against which the outer end of the spring bears, and means connected to said plate for moving the disks into engagement with each other, said last-named means including a plate lying between the innermost disk and the driving member and members connecting the said plate to the first-mentioned plate, said members lying substantially in line with the outer circle of interfitting teeth.

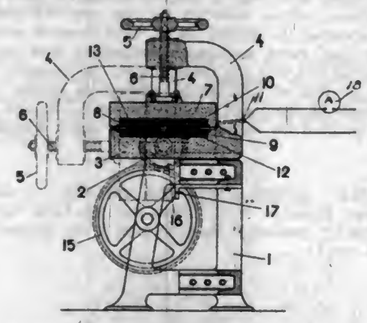
1,662,513. IGNITING APPARATUS FOR SINTERING PANS. ANDERS HOLMBERG, Stockholm, Sweden, assignor to Helge Gustaf Torulf, Stockholm, Sweden. Filed Nov. 23, 1925, Serial No. 71,004, and in Sweden Dec. 1, 1924. 1 Claim. (Cl. 266—21.)



An apparatus for igniting the charge of circular sintering pans for fine ores and the like, comprising a ring-shaped frame adapted to be placed above the pan to be ignited, a plurality of burners rotatably journalled in said frame, and an operating ring connected to the burners and adapted to rotate the latter simultaneously to and fro so as to cause the flames from the burners to sweep a large portion of the surface of the charge.

1,662,514. PROCESS FOR DYEING CELLULOSE ESTERS AND ETHERS. RONALD SMITH HORSFALL, LESLIE GORDON LAWRIE, and JAMES HILL, Blackley, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Mar. 2, 1927, Serial No. 172,195, and in Great Britain June 11, 1926. 6 Claims. (Cl. 8—5.)

1. The process of dyeing cellulose esters and ethers, comprising applying azo dyestuffs prepared by coupling diazotized amino-arylsulphonarylamides with unsulphonated arylamines to the cellulose derivative to be dyed in the presence of water.

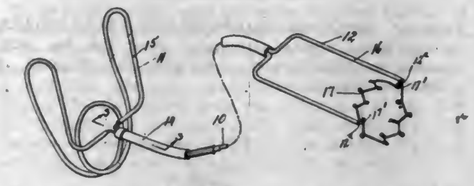


1,662,515. AUTOMOBILE CHASSIS. ORMOND E. HUNT and ALBERT G. GEISTERT, Detroit, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Aug. 8, 1924. Serial No. 730,859. 5 Claims. (Cl. 280—106.5.)

1. A chassis comprising, in combination, an axle, a frame having spaced side members, above the axle, a cross member connecting the side members, a bracket depending from each side member between the axle and the cross member, a pair of quarter-elliptic springs extending from the brackets to the axle, a pair of channel members,

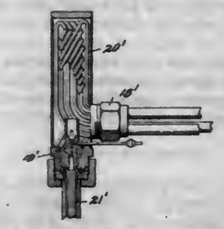
each embracing the end of one of the springs and connected to the cross member inside of the corresponding side member, and means for clamping each bracket and its spring and channel member together.

1,662,516. MACHINE FOR TEMPERING SAW BLADES, PLANE KNIVES, AND SIMILAR TOOLS. PAUL HUSTADT and KARL HUSTADT, Remscheid-Hasten, Germany. Filed July 10, 1923. Serial No. 650,694. 6 Claims. (Cl. 266—5.)



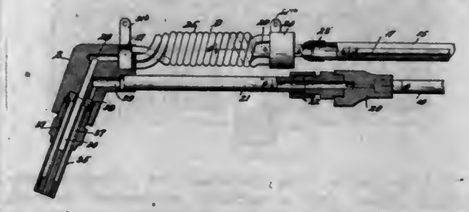
1. A machine for tempering saw blades and similar tools comprising in combination, a lower stationary frame part, an upper frame part pivotally mounted on said lower frame part, said upper frame part including inverted L-shaped members having joined upper horizontal portions, means for tilting said upper part through an arc of 90°, a stationary lower press plate in said oscillatable upper frame part, a screw spindle threaded through the junction of said L-shaped members of said oscillatable frame part, an upper press plate adapted to be moved toward and from said lower press plate by said screw spindle, a heating plate in each of said press plates adapted to hold the work to be placed between the same and transmit heat thereto, a heating coil in each of said press plates, and means for supplying electric current to said heating coils.

1,662,517. METHOD OF TEMPERING SAW BLADES, PLANE KNIVES, AND SIMILAR TOOLS. PAUL HUSTADT and KARL HUSTADT, Remscheid-Hasten, Germany. Original application filed July 10, 1923, Serial No. 650,694, and in Germany Aug. 31, 1922. Divided and this application filed Feb. 17, 1927. Serial No. 169,125. 9 Claims. (Cl. 148—12.)



8. The method of tempering previously-hardened saw blades, knives, cutters and other thin articles which consists in slowly subjecting said articles to heat uniformly diffused throughout their mass simultaneously with the gradual application of pressure to said articles to remove irregularities of shape and of molecular structure which have resulted from hardening, followed by substantially instantaneous cessation of heat and pressure treatment on all parts of both faces of said articles simultaneously.

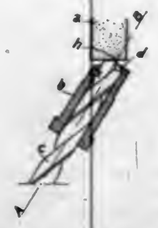
1,662,518. HOLDER FOR NURSING BOTTLES OR OTHER VESSELS. MAURICE J. JAFFE, New Haven, Conn., and JOSEPH CHANKIN, New York, N. Y. Filed Oct. 21, 1926. Serial No. 143,108. 4 Claims. (Cl. 248—65.)



2. A holder for a nursing bottle or the like comprising a flexible arm having a bifurcated portion at one end and at its opposite end resilient means for its removable attachment to a stationary support, a lattice shaped annular resilient member serving to frictionally engage said bottle, said resilient member being pivotally supported on said bifurcated member above its center of gravity so that when released said bottle will tend to tilt into upright position preventing the dripping of the contents thereof.

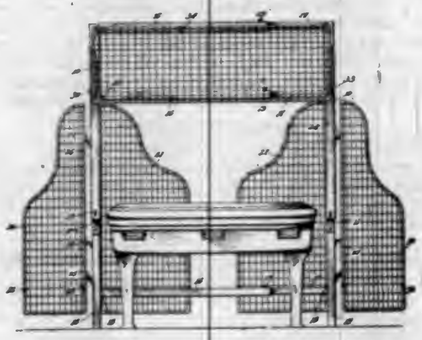
1,662,519. CUTTING AND WELDING TORCH. ALEXANDER F. JENKINS, Baltimore, Md. Filed May 28, 1926. Serial No. 112,354. 2 Claims. (Cl. 158—27.4.)

1. A torch head comprising a block provided with inlet ducts, a block provided with outlet ducts, a plurality of small tubes connecting said inlet ducts with said outlet ducts, said tubes being disposed to form a substantially cylindrical cage, a burner adapted to project a flame within said cage, and an envelope surrounding said cage of tubes, said envelope being perforated to provide means of egress for products of combustion.



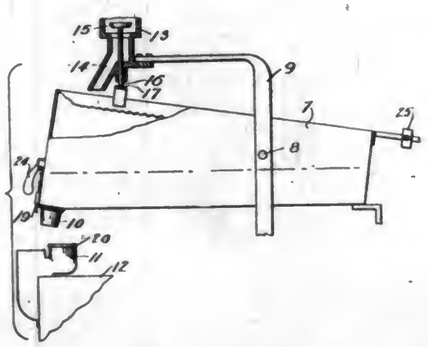
1,662,520. CUTTING AND WELDING TORCH. ALEXANDER F. JENKINS, Baltimore, Md. Filed Jan. 20, 1927. Serial No. 162,375. 3 Claims. (Cl. 158—27.4.)

1. In a torch, in combination, spaced handle and head portions, conduits for gases connecting said portions, and a heating means disposed along the conduits adja-



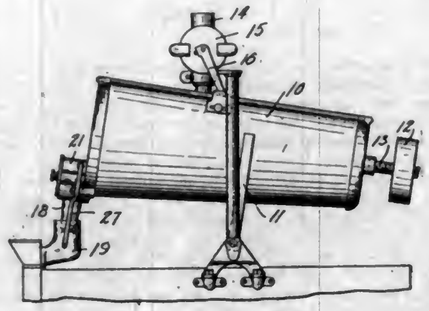
cent the head portion of the torch for heating at least a portion of the gases passing through the conduits, said heating means comprising a series of small spirally arranged tubes branching from one or more of the conduits, all of said small tubes being arranged in one group in the form of a hollow cylinder which is in alignment with said conduits, a manifold at each end of the cylinder for connecting the small tubes directly to the conduits and head portion respectively, and a gas burner arranged within the hollow interior of said cylinder and in alignment therewith.

1,662,521. GRINDING MACHINE FOR TWIST DRILLS. CARL KOBIS, Berlin, Germany. Filed Feb. 14, 1927, Serial No. 168,144, and in Germany Feb. 9, 1926. 4 Claims. (Cl. 51—219.)



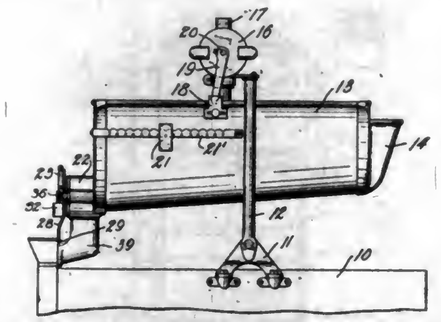
1. In a twist drill grinding machine, the combination with a grinding surface and a drill guide casing mounted oblique to the grinding plane, a gage-stop arranged to engage the end of the drill lip opposite to the one being ground and a screw spindle for adjusting said guide casing to and from said grinding surface, a second adjusting member adapted to adjust said guide casing to and from said grinding surface and having a predetermined "throw" or range of action, so that its reverse action repositions the gage stop to determine on a later grinding of one lip an amount of reduction equal to that produced by a previous grinding of the other lip, thereby bringing the point of the drill accurately into the center.

1,662,522. COMBINED FUNERAL CANOPY AND STAND. WALTER O. LAUBE, Chicago, Ill., assignor to Olga Laube, Chicago, Ill. Filed Nov. 19, 1926. Serial No. 149,418. 9 Claims. (Cl. 211—180.)



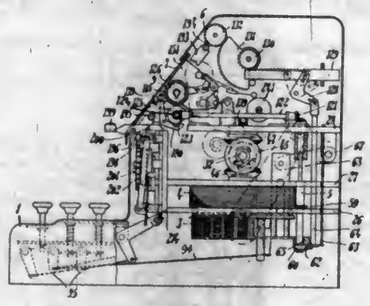
1. A decorative form comprising an adjustable supporting frame, and a sectional ornamental receiving canopy at one side of the frame detachably connected at its top thereto and having a depending portion engaging the frame to bracingly sustain the canopy in operative position.

1,662,523. MEASURING APPARATUS. ALBERT T. LIGHT, New York, N. Y. Filed Oct. 5, 1921. Serial No. 505,514. 5 Claims. (Cl. 249—54.)



1. Cream measuring apparatus for ice cream freezers comprising in combination with a freezer having an inlet, a source of supply having a supply valve above the freezer, a measuring pan pivoted to swing between the supply valve and the inlet of the freezer and balanced to swing upward when empty and to automatically lower itself upon receiving a desired measured quantity of the cream, means actuated by the pan for automatically opening the supply valve upon upward movement of the pan, valve mechanism controlling flow from the measuring pan into the freezer inlet, and coupling means under control of said valve mechanism during closing movement of the valve mechanism, said coupling means being adapted for holding the pan in lowered position.

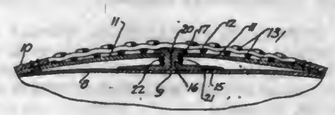
1,662,524. BATCH-WEIGHING DEVICE. ALBERT T. LIGHT, Brooklyn, N. Y. Filed Nov. 10, 1923, Serial No. 673,914. Renewed May 6, 1927. 10 Claims. (Cl. 249—54.)



1. In a batch weighing device, a receptacle having a pivotal support and adapted to normally assume a certain angular position with relation to the support, a supply valve and means connecting the receptacle and the valve for positively moving the valve to open position when the receptacle occupies said position, said receptacle acting to tilt to discharging position when a predetermined weight of material has been received therein, said connecting means operating to positively move the supply valve to closed position when the receptacle is in discharging position, a discharge valve, and means under control of the operator for locking the receptacle and opening the discharge valve when the receptacle is in discharging position.

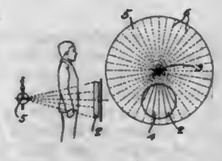
1,662,525. BATCH-MEASURING DEVICE. ALBERT T. LIGHT, Brooklyn, N. Y. Filed Sept. 24, 1924. Serial No. 739,745. 14 Claims. (Cl. 249—54.)

1. In a batch weighing device, a receptacle arranged to tilt to discharging position when a predetermined weight of material has been received therein, a discharge valve, means for operating the valve, and means cooperating with the valve operating means for locking the valve in closed position when the receptacle is in charge receiving position.



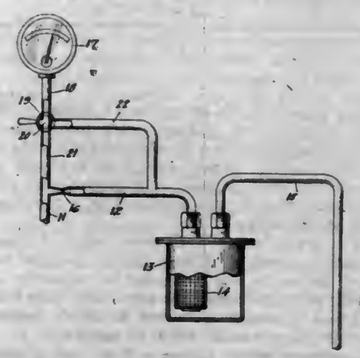
1,662,526. CALCULATING MACHINE. CONRAD LUTTROPP, Stockholm, Sweden, assignor of one-half to Anders Lindahl, Stockholm, Sweden. Filed Aug. 13, 1923, Serial No. 657,148, and in Sweden Aug. 14, 1922. 15 Claims. (Cl. 235—63.)

1. A calculating machine, comprising ten digit keys, a rotatable selector having groups of adjustable stops, means for actuating said stops by pressing the digit keys, a rotatable counting drum journalled coaxially with the selector and having series of teeth corresponding to the digit numerals, counting spindles adapted to be set into operative positions under the control of the stops of the selector and to be rotated by said counting drum, and a main counting register adapted to be operated by the rotation of said spindles.



1,662,527. SPORT BALL. WILLIAM W. MACDONALD, Chicopee, Mass. Filed May 18, 1927. Serial No. 192,442. 3 Claims. (Cl. 273—65.)

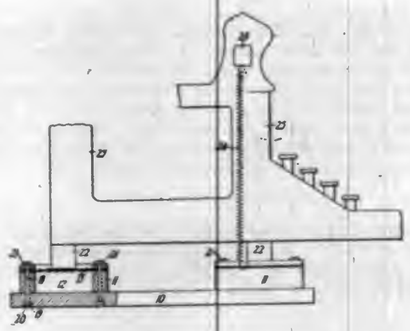
1. A valve for inflatable sport balls comprising, a filling tube extending outwardly a relatively short distance from the bladder of the ball, and a substantially U-shaped spring, the legs of which are disposed transversely to the axis of the filling tube and act to press the walls of the latter together to close the filling opening.



2. The combination with the cover, flap and bladder of a sport ball, of a body of rubber or the like having a flange attached to the bladder, a neck upstanding from the flange and terminating with a button adapted to fasten to said flap, said body having a normally closed filling opening therein leading from the outer face of the button through said neck and flange into the bladder, the entrance to said opening being accessible through the laced opening of said cover without unlacing the same.

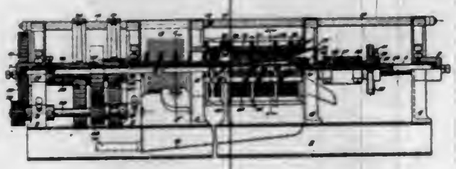
1,662,528. X-RAY SCREEN FOR TAKING SKIAGRAMS. RUDOLF MANNL, Karlsbad, Czechoslovakia. Filed Dec. 12, 1924, Serial No. 755,427, and in Czechoslovakia Dec. 24, 1923. 2 Claims. (Cl. 250—34.)

1. An X-ray screen adapted to prevent lateral secondary radiation, having plates extending across the screen and all converging toward a common intersection point disposed outside the screen and in the plane of its working surface.



1,662,529. MEANS FOR TESTING FILTERS. CHARLES W. MCKINLEY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Corporation of Michigan. Filed Oct. 27, 1926. Serial No. 144,497. 9 Claims. (Cl. 73—51.)

1. Means for testing filters, including in combination, a supply conduit for fluid under pressure leading to a filter to be tested, the clogging of which filter offers resistance

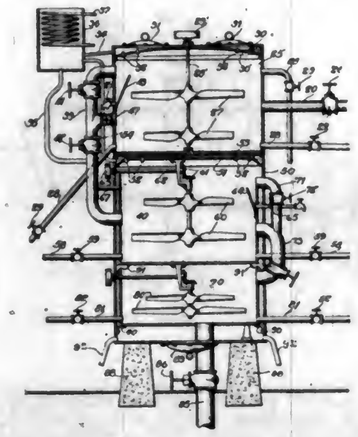


to the flow of fluid, means to restrict the flow of fluid to the filter, and thereby offer resistance to such flow, and means to gage the respective resistances to determine filter activity.

1,662,530. TYPEWRITING MACHINE. THOMAS J. MCMAHON, Albany, N. Y., assignor to Underwood Elliott Fisher Company, New York, N. Y., a Corporation of Delaware. Filed Jan. 4, 1923. Serial No. 610,560. 5 Claims. (Cl. 45—137.)

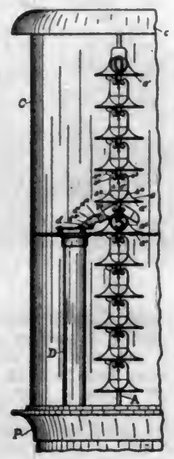
2. As a new article of manufacture, a sound deadening base block to be used as a support for the foot of a typewriter or like apparatus, said block being hollowed out and covered with a meshwork of wire strands superposed on the block, a cap on the meshwork and extending around the hollowed portion of the block for preventing displacement of a typewriter foot and for holding the meshwork to the block.

1,662,531. CONTINUOUS PRESS. EDGAR T. MEAKIN, Berkeley, Calif. Filed Feb. 18, 1924. Serial No. 693,580. 6 Claims. (Cl. 100—48.)



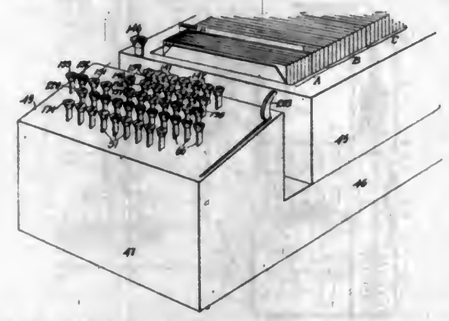
3. In a press for the extraction of liquids, a plurality of bars, in cylindrical assembly, each bar having a flat side and a longitudinally extending rabbet in said flat side at the inner edge thereof and a transversely grooved flange on the opposite side, said longitudinal rabbet in one bar providing a side entrance into the transverse grooves of the adjacent bar.

5. In a press having a pressure screw, a feed wheel comprising a plurality of teeth formed to mesh with the flight of the screw, and journaled to rotate in a plane coincident with the axis of the screw and lying below and to that side of the screw toward which the lowest point of the periphery of the flight is moving.



6. A pressure screw having a body and a continuous spiral flight thereon, and spiral vanes each of less length than the circumference of the flight on said body adjacent one end of the flight, the spiral of the vanes differing from the spiral of the flight.

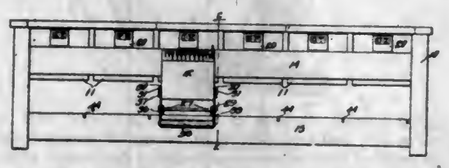
1,662,532. PROCESS FOR COOKING AND CONDENSATING SEMILIQUID FOODS. FRANCESCO MENNILLO, Washington, D. C. Filed Jan. 30, 1925, Serial No. 5,859. Renewed Jan. 19, 1928. 6 Claims. (Cl. 99—11.)



1. That step in the process of cooking semi-liquid material which consists in forcing it through a coil and simultaneously heating the coil and introducing into the coil of material hot air to dry the material and assist in forcing it through the coil.

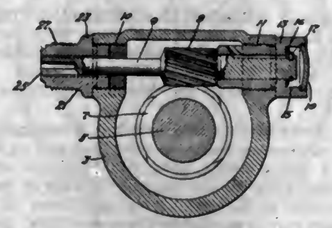
1,662,533. MEASURING SCALE FOR TRANSPARENT LIQUID CONTAINERS. CARROLL L. MERRIMAN, Fort Wayne, Ind., assignor to Wayne Company, Fort Wayne, Ind., a Corporation of Indiana. Filed Mar. 8, 1926. Serial No. 93,182. 4 Claims. (Cl. 73—165.)

1. A scale for transparent liquid containers, comprising a setting bar fixed in a vertical position within said container, an adjustable tab mounted on said bar, means for fixing the position of said tab on said bar, there being a suitable numeral on the front side of said tab, means for normally keeping said numeral covered and mechanical means within said container for temporarily adjusting said covering means so as to expose said numeral to view.



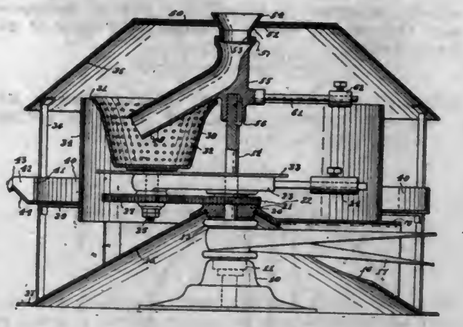
1,662,534. CARD-INDEXING DEVICE. DONALD A. NEVIN, Waynesboro, Pa., assignor to Autodex Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1925. Serial No. 10,712. 56 Claims. (Cl. 129—16.1.)

1. A card-indexing device comprising a container, cards in the container divided into groups and sub-groups, means for selecting a group, means for selecting a subgroup in said group, means to isolate a plurality of cards from the sub-group, and means to reject certain of the cards so isolated, substantially as set forth.



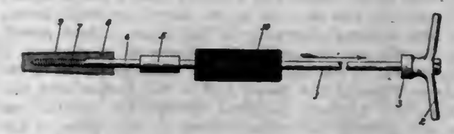
31. In a card index, a row of keys for making a preliminary selection, a row of keys for making a secondary selection, and means operable by any key in the second row to lock in place all keys in the first row, substantially as set forth.

1,662,535. CARD-INDEXING MACHINE. DONALD A. NEVIN, Waynesboro, Pa., assignor to Autodex Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed July 13, 1926. Serial No. 122,233. 7 Claims. (Cl. 129—16.1.)



7. A device of the class described including a cabinet, a series of card-holding trays in said cabinet, a selecting device, means for supporting said selecting device for movement beneath said trays, means for alining the selecting device beneath one of said trays, and means for raising the selecting device into operative engagement with said trays, substantially as set forth.

1,662,536. SPEEDOMETER DRIVE. FRANK N. NUTT, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Mar. 26, 1926. Serial No. 97,069. 3 Claims. (Cl. 74—7.)

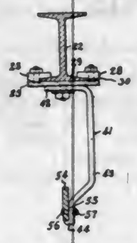


1. In means for driving a speedometer or the like, a housing having a transmission shaft extending therethrough, a driven shaft arranged transversely thereof and driven thereby, two aligned openings through which said shaft passes, two sleeves, one in each opening, one sleeve having an elongated bearing opening in which the transverse shaft is journalled, and the other sleeve having an opening through which the transverse shaft freely passes.

1,662,537. MACHINE AND PROCESS FOR REMOVING EXCESS MOLTEN MATERIAL. HENRY W. PLEISTER, Westfield, N. J., assignor, by mesne assignments, to Henry B. Newhall Corporation, Garwood, N. J., a Corporation of New Jersey. Filed Sept. 3, 1926. Serial No. 133,446. 12 Claims. (Cl. 210—63.)

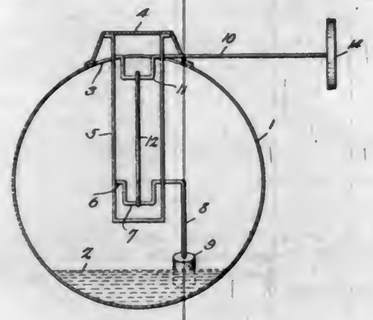
1. A process for removing excess molten metal from articles, said process comprising violently jarring the articles; and immediately subjecting the articles to planetary motion.

1,662,538. AUTO TOP SOCKET BOW PULLER. REXFORD B. RICHMOND and RICHARD H. DODD, Stockton, Calif. Filed Aug. 20, 1923. Serial No. 658,284. 1 Claim. (Cl. 81—3.)



A device for use in removing wooden elements from metal sockets, comprising the combination of a rod having a screw-thread at one terminal for entry into the wood within the socket, a handle at the opposite terminal of the rod for use in screwing the threaded terminal into the wood, an abutment on the rod adjacent the handle terminal, and a sliding hammer weight on the rod between the screw-threads and the abutment whereby when the screw-threads have been embedded in the wood the hammer weight may be operated against the abutment to cause the rod to pull the wood from the socket.

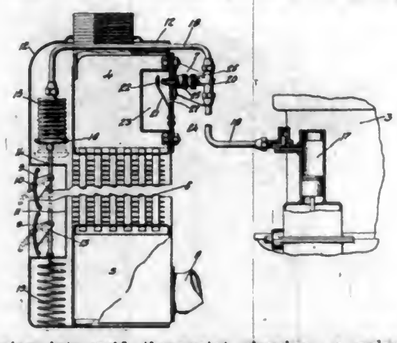
1,662,539. SUPPORTING MEANS FOR OVERHEAD TRACKS. OSCAR C. SCHMIDT, Cincinnati, Ohio, assignor to The Cincinnati Butchers Supply Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Aug. 15, 1927. Serial No. 213,159. 10 Claims. (Cl. 104—111.)



1. A hanger-plate of the character described, provided with apertures in substantially elliptical arrangement

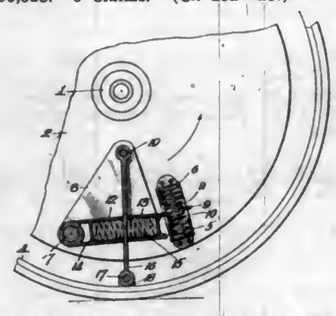
about a common center, opposite apertures arranged in pairs, the opposite apertures of each pair being at a different distance from said common center than the

opposite apertures of an adjacent pair to correspond with the different widths of flanges of I-beams of different heights.



1,662,540. GASOLINE GAUGE. JOSEPH SCHWAN, Milwaukee, Wis. Filed June 2, 1926. Serial No. 113,245. 1 Claim. (Cl. 73—82.)

In a device of the class described, a tank having an opening, a closure for the opening and mounted on the tank, a depending U-shaped bearing frame extended downwardly into the tank through the opening and carried by the closure, a lower shaft journaled in the side portions of the frame and provided with a crank located between the side portions of the frame, the shaft having an arm disposed externally of the frame, a float mounted directly on the arm and responsive to changes of liquid level in the tank, an upper shaft journaled in the side portions of the frame and in the closure and provided with a crank operating through the opening and located between the side portions of the frame, a pitman having its extreme ends mounted upon the cranks, and an indicating hand mounted directly upon the upper shaft.

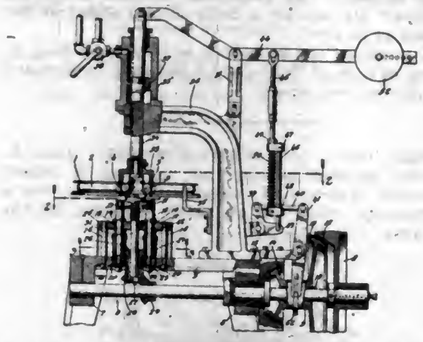


1,662,541. THERMOSTATICALLY-CONTROLLED DAMPER MECHANISM FOR RADIATORS. ERNEST W. SEAHOLM, Detroit, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 28, 1922. Serial No. 609,434. 1 Claim. (Cl. 123—174.)

In a device of the class described and in combination with an internal combustion engine, an air pump separate and independent of the engine and operated thereby, a radiator having an upper water chamber and a cellular structure below said chamber, and means for controlling the flow of air past or through said cellular structure; an air operated member operatively connected with said air flow controlling means; a conduit connecting said pump with said air operated member; a thermostat chamber located within said upper water chamber, and which thermostat chamber is open at one side; a cover for closing the open side of said thermostat chamber, and which cover is provided with an opening through which said chamber is placed in communication with the external atmosphere; a by-pass passage leading from said conduit through said cover and dis-

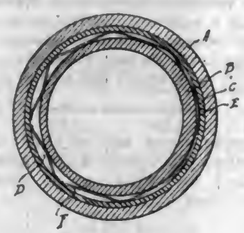
charging into said thermostat chamber; a valve for controlling the flow through said by-pass passage; and a thermostat carried by said cover and located within said thermostat chamber, and which thermostat is operatively connected with said valve.

1,662,542. SPRING WHEEL. JEFFERSON D. SHORT, Albuquerque, N. Mex. Filed June 20, 1927. Serial No. 200,023. 6 Claims. (Cl. 152—28.)



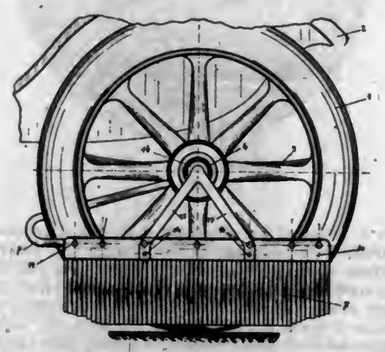
1. A cushion wheel comprising a hub, a disk secured thereto, a rim surrounding the disk, a plurality of castings pivoted to the disk and each provided with an arm extending transversely of a radial plane of the wheel, means carried by said disk and adapted for yieldingly applying inward and outward force on each of said arms, spokes extending in a direction generally radial of the wheel and each pivoted at its outer end to the rim and at its inner end to a casing, and means carried by the casings and adapted to apply yielding force on the spokes tending to oscillate the same in opposite directions in a plane transverse with respect to the axis of the wheel.

1,662,543. WHEEL-HUB-ASSEMBLING DEVICE. WESTON R. SMITH and RICHARD FRED WIENEKE, Jackson, Mich., assignors to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 22, 1926. Serial No. 96,545. 10 Claims. (Cl. 81—57.)



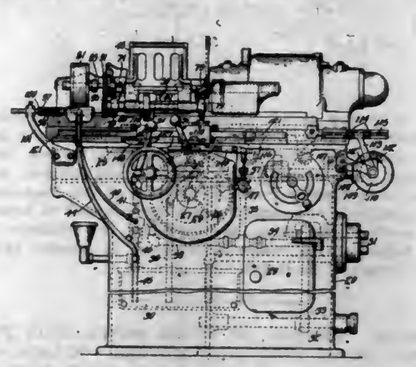
1. In a device of the class described, a vertically movable head adapted to receive a wheel hub and to support a wheel; a spring acting upon said head and arranged to hold the same in its normal uppermost position, and to return it thereinto after said head has been moved downward; a plurality of vertically arranged rotatable spindles the upper ends of which are disposed about said head, and each of which has a nut holding and driving chuck at its upper extremity; means for driving said several spindles in unison; yieldable friction

driving devices associated one with each of said spindles and through which said spindles and chucks are normally driven; and means engaging a wheel supported



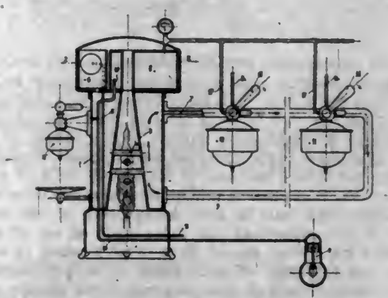
by said head to move the wheel and head downward against the resistance of said spring and cause the threaded ends of bolts carried by the wheel to engage nuts carried by the chucks aforesaid.

1,662,544. PISTON RING. DEAN M. SOLENBERGER, Kansas City, Mo., assignor to Simplex Piston Ring Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 1, 1926. Serial No. 91,601. 3 Claims. (Cl. 74—109.)



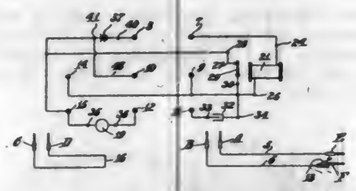
1. The combination with a cylinder and a piston loosely fitting the same, of a ring engaging the groove in said piston and a ribbon expander located between the ring and the bottom of the groove having a corrugated portion for exerting a preponderance of pressure against said ring on one side of the axis of the cylinder.

1,662,545. SPRAY SCREEN. EGIDIO SPELTA, Turin, Italy. Filed Feb. 23, 1926, Serial No. 90,044, and in Italy Feb. 26, 1925. 3 Claims. (Cl. 280—157.)



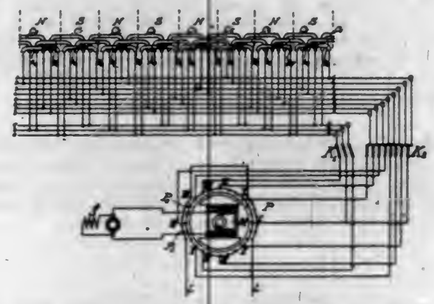
1. The combination with a vehicle wheel, of a spray screen comprising a support arranged parallel to the wheel, a screen composed of a plurality of independent juxtaposed flexible tubes freely suspended from said support, each tube having a resilient metallic core, and means for holding said support in fixed relation to the wheel.

1,662,546. GRINDING MACHINE. AMOS P. STEINER, Waynesboro, Pa., assignor to Landis Tool Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed June 20, 1924. Serial No. 721,292. 24 Claims. (Cl. 51—215.)



1. In a grinding machine, abrading means, work-holding means, a carriage for one of said means having traversing movement relatively to the other, a workholding magazine, means for successively feeding unfinished articles from the magazine to the workholding means, a fluid motor for operating said feeding means, and connections whereby the traversing carriage sets the motor in operation at predetermined times, substantially as set forth.

1,662,547. APPARATUS FOR PREPARING COFFEE AND OTHER INFUSIONS. CESARE UERTIS, Turin, Italy, assignor to Giovanni Sartorio, Turin, Italy. Filed Dec. 10, 1926, Serial No. 153,900, and in Austria Nov. 22, 1926. 4 Claims. (Cl. 53—3.)



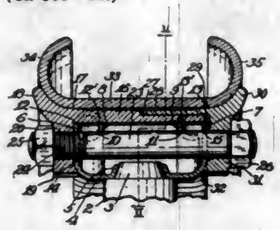
1. Apparatus for the rapid preparation of infusions comprising a vessel connected with the atmosphere and adapted to heat water to a temperature below 100° C., a constant level tank communicating with said vessel, a source adapted to contain pressure air, a pipe connecting the upper and lower portion of the vessel, so as to obtain an automatic continuous circulation of the heated water, a plurality of infusion generators branched from said pipe, a three-way cock on each of said branch pipes, a pipe connecting the source of pressure air with each of said cock so as to connect said infusion generator first with the hot water pipe and successively with the pressure air source.

1,662,548. TESTING DEVICE. HARRY R. VAN DEVENTER, New York, N. Y., assignor to Dubilier Condenser Corporation, a Corporation of Delaware. Filed Feb. 14, 1924. Serial No. 692,784. 6 Claims. (Cl. 175—183.)

4. A testing device comprising a casing, a telephone receiver, a buzzer, a condenser, a voltmeter, and a battery carried by said casing, connections between said receiver, buzzer, condenser, voltmeter and battery, and terminals accessible from the exterior of the condenser, said terminals and connections being arranged to permit the receiver, the buzzer, the condenser, the voltmeter or the battery to be connected singly or in selected pairs, to a circuit to be tested.

1,662,549. METHOD OF SPEED REGULATION FOR POLYPHASE INDUCTION MOTORS. KALMAN VON KANDO, Budapest, Hungary, assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Feb. 28, 1922, Serial No. 540,034, and in Hungary Mar. 2, 1921. 5 Claims. (Cl. 172—274.)

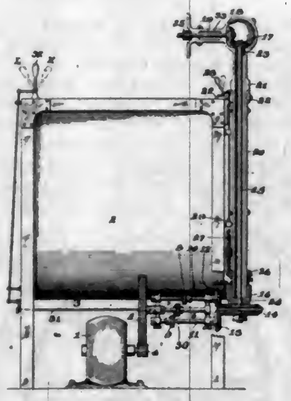
1. The combination with an induction motor having a three-phase winding with $n\times 8$ poles, where n is an integer, with one coil in each phase for each pole, and each coil overlapping two coils of each of the other phases; of a source of three-phase current and a source of so-called eight-phase current; means including switch mechanism for connecting one end of all of said coils in $n\times 3$ groups to the respective terminals of said three-phase current source, the coils in each group being of the same phase, or for connecting the other ends of all of said coils in $n\times 8$ groups spaced $60/n$ degrees apart to each of the two terminals of each phase of said eight-phase current source, each of said last mentioned groups consisting of $n\times 3$ coils of different phases spaced apart $120/n$ degrees.



4. A polyphase induction motor having a three-range winding comprising $n\times 24$ coils, n being an integer, each coil overlapping two coils of the other two ranges, the coils being arranged in eight groups, each group containing three coils spaced apart $120/n$ degrees, the coils of the respective groups being united at one end and connected to separate current leads, current leads the number of which is a multiple of three connected to the other ends of the coils, said last mentioned current leads each being connected to the same number of coils belonging to the same range of the winding.

1,662,550. SULPHUR FUNGICIDE AND INSECTICIDE. CORNELIUS D. VREELAND, Vineland, N. J. Filed Nov. 24, 1925. Serial No. 71,203. 9 Claims. (Cl. 167—6.)

1. A fungicidal and insecticidal material comprising an intimate dry mixture of finely divided elemental sulphur and an acetate.

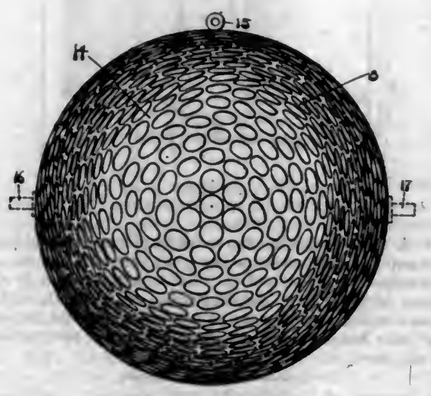


4. A fungicidal and insecticidal material comprising an intimate mixture of finely divided elemental sulphur and crude pyroligneous acetate.

1,662,551. METALLIC VEHICLE WHEEL. JOHN R. WELCH, deceased, Muncie, Ind., by Viola M. Welch, executrix, Muncie, Ind., assignor to Viola M. Welch individually. Filed Dec. 14, 1923. Serial No. 680,640. 3 Claims. (Cl. 301—11.)

1. A vehicle wheel felly having two side members provided with tread ribs respectively, each rib having a plurality of recesses therein, a plurality of bridge bars secured in the recesses respectively of the two tread ribs, each bar having a guide channel therein and also a head, and a plurality of keys removably arranged in the channels and having heads thereon respectively, the keys being adjustable in the channels and having securing means.

1,662,552. REVERSIBLE MECHANISM FOR OPERATING WASHING-MACHINE WRINGERS. DAVID M. WENGER, Leola, Pa. Filed June 19, 1926. Serial No. 117,114. 2 Claims. (Cl. 74—58.)

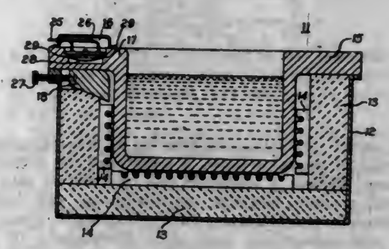


1. In a device of the character described, a support, a vertical shaft thereon, means for driving and reversing the motion of the vertical shaft comprising a two tooth faced element fixed to the vertical shaft, a driving shaft, auxiliary shafts spaced parallel to the driving shaft, suitably formed gears on the auxiliary shafts for meshing with the two tooth faced element, a sliding gear mounted on the driving shaft, gears mounted on the auxiliary shaft for cooperating with the sliding gear, and means for operating the sliding gear in such a manner that it will function to mesh with either one of the cooperating gears on the auxiliary shafts as may be desired, thereby providing means for reversing direction of motion of the vertical shaft.

1,662,553. INTERNAL-COMBUSTION ENGINE. ALPHONSE P. M. WILKINO, Belmont, Mass. Filed Nov. 8, 1926. Serial No. 146,941. 4 Claims. (Cl. 123—32.)

1. In an oil burning engine of the type in which liquid fuel is ignited through contact with compressed air, the combination of a cylinder, a piston operable within the cylinder, a fuel injection valve having a plurality of orifices, and a plurality of separate combustion pockets for said orifices extending radially from the valve and each approximating the shape of the spray emitted from its orifice.

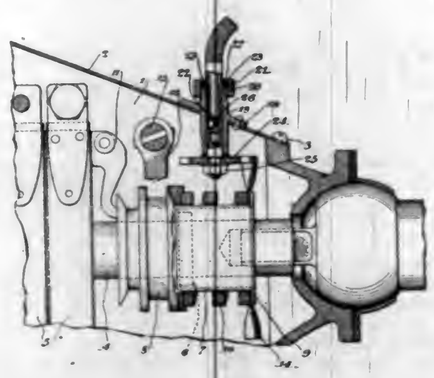
1,662,554. MYRIAD REFLECTOR. LOUIS BERNARD WORSTE, Cincinnati, Ohio, assignor of one-half to William A. Stephens, Cincinnati, Ohio. Filed Nov. 24, 1924. Serial No. 751,854. 1 Claim. (Cl. 88—1.)



A myriad reflector of any geometrical form adapted to be rotated upon a substantially vertical axis, consisting of a base of desired shape, a series of facet holding plates fastened to the base and a light reflecting facet secured to each plate, each plate consisting of a piece of metal of substantially rectangular shape having diagonally opposite corners secured to the base, each facet being of substantially circular shape and having the diagonally opposite free corners of its mounting plate bent over into retaining relation to its face, and a cementitious non-reflecting material occupying the spaces between adjacent mounted facets on the base to cover the assembly with the exception of facet faces and turned over corners of the mounting plates.

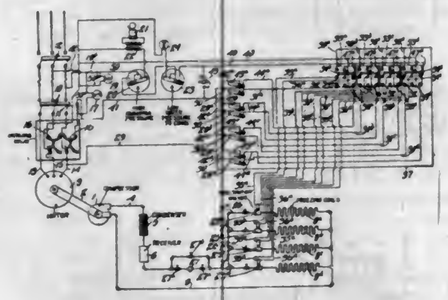
1,662,555. UNIVERSAL BOTTLE HEATER. EDWARD WOJCIECHOWSKI, Aberdeen, Wash. Filed Dec. 18, 1926. Serial No. 155,716. 4 Claims. (Cl. 219—41.)

1. An electrical heater comprising a member provided with a central opening, an insulating base fixed within the lower end of said opening and having a pair of spaced contact strips projecting upwardly therefrom within said opening, a resistance carrying casing attached to the lower end of said member and having the terminal wires of its resistance connected to the respective contact strips, and a plug member removably fitted in said opening above the insulating base and provided with a pair of internal longitudinal contact strips respectively engageable with said first named contact strips and adapted to have conductors connected to the upper ends thereof.



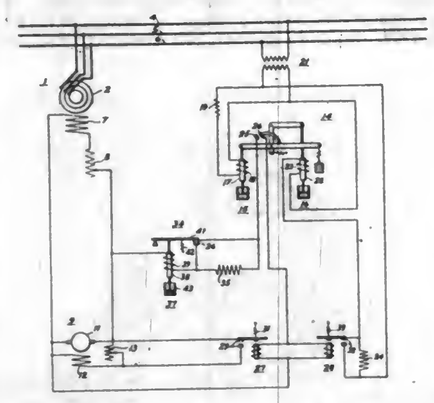
1,662,556. THERMOSTATIC CONTROL DEVICE. JAMES C. WOODSON, East Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed June 23, 1926. Serial No. 117,924. 7 Claims. (Cl. 219—44.)

1. In an electric heating device, the combination with a vessel for containing a body of material to be heated, electric heating means disposed in thermal conductive



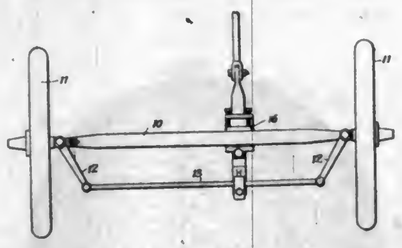
relation thereto, a thermostat for controlling the energization of said heating means, of means for varying the amount of heat conveyed to said thermostat from the material to be heated in accordance with a predetermined temperature to be maintained in said material.

1,662,557. SPEEDOMETER DRIVE ON PROPELLER SHAFTS. JOSEPH ZUBATY, Flint, Mich., assignor to A C Spark Plug Company, Flint, Mich., a Company of Michigan. Filed Jan. 29, 1926. Serial No. 84,790. 4 Claims. (Cl. 74—7.)



1. A gear composed of a plurality of adjoining parts, crimped teeth on the outer periphery thereof, the end teeth of the parts interengaging to make a complete gear.

1,662,558. REFRIGERATING SYSTEM WITH AUTOMATIC CONTROL. FRANK R. ZUMBRO, Waynesboro, Pa., assignor to Frick Company, Waynesboro, Pa., a Corporation of Pennsylvania. Filed May 13, 1925. Serial No. 30,061. 3 Claims. (Cl. 62—8.)

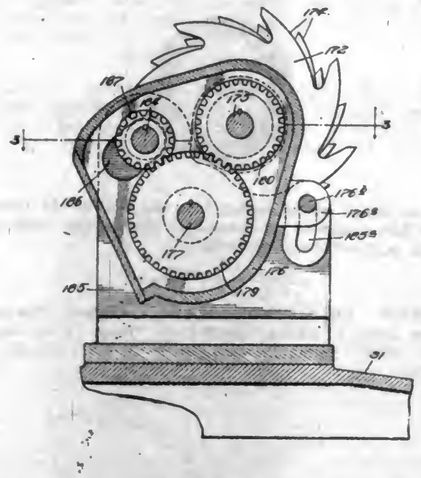


1. A direct expansion refrigerating system comprising a plurality of rooms or tanks, a compressor for supplying refrigerant thereto, a condenser and receiver for said refrigerant, a motor operating the compressor, two double-pole snap-action thermostats in the respective rooms or tanks, and connections from such thermostats to the motor whereby the motor will be stopped when all the thermostats are in off position, audible means for indicating high refrigerant pressure and visible means for indicating low water pressure to the condenser in circuit with said thermostats, substantially as set forth.

1,662,559. REGULATOR SYSTEM. JOHN H. ASHBAUGH, Pittsburgh, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Dec. 4, 1924. Serial No. 753,866. 3 Claims. (Cl. 171—229.)

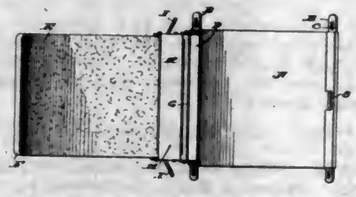
1. In a regulator system, a dynamo-electric machine, a regulator for controlling the excitation of said dynamo-electric machine, a plurality of relays controlled by said regulator, and a constant-current regulator in series-circuit relation with said relays.

1,662,560. STEERING DEVICE. JAMES OTIS BOLT, Leeds, Ala. Filed June 14, 1927. Serial No. 198,851. 5 Claims. (Cl. 280—33.55.)



1. A steering device for a trailing vehicle comprising a clamp for attachment to the front axle, a clamp for attachment to the tie rod, a draft tongue pivoted to the clamp on the front axle rearwardly of said axle and a pivotal connection between the clamp on the tie rod and the draft tongue forwardly of said tie rod, substantially as set forth.

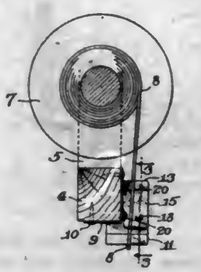
1,662,561. LATHE. STANLEY E. BOYNTON, Oak Park, Ill., assignor to Charles E. Reed, McHenry Township, Ill. Filed July 7, 1923. Serial No. 650,170. 1 Claim. (Cl. 142—15.)



A detachable unitary mount for a cutter head for lathes mounted on the lathe tool carriage and comprising a fixed housing, a drive gear mounted therein, spaced bearings therein in fixed relation to the drive gear, a finishing cutter shaft mounted in said spaced bearings, a gear on said shaft in mesh with the drive gear, a member on said housing disposed at right angles to said drive gear and provided with an arcuate slot, a movable roughing cutter gear housing mounted between said spaced bearings provided with an ear having a hole in register

with said slot, clamping means extending through said slot and ear, arcuate openings in the side walls of said movable housing through which the finishing cutter

shaft extends, a roughing cutter shaft mounted in said movable housing, and a gear on said roughing cutter shaft continually in mesh with the drive gear in all positions of adjustment of said movable housing.



1,662,562. NECKTIE PRESS. HARRISON D. BRANDT, Sharon Hill, Pa. Filed Nov. 2, 1926. Serial No. 145,827. 3 Claims. (Cl. 100—57.)

1. A tie press comprising a supporting member, a hanger and presser leaf pivotally mounted thereon, and a presser leaf mounted to cooperate with said hanger and presser leaf and to have movement with relation thereto, in combination with interengaging locking means carried by said supporting member and said hanger and presser leaf to lock the latter parallel to, and adjacent to, said supporting member, and releasable movable means for holding said presser leaf and said presser leaf and holder in tight contact, said releasable means being formed with portions adapted to pry said hanger and presser leaf away from said supporting element to disengage said locking means during the movement of said movable means to release said presser leaf and said holder and presser leaf therefrom.

1,662,563. TUBE FRAME FOR TUFTED-PILE-FABRIC LOOMS. EUGENE F. CLARK, Leaksville, N. C., assignor to Marshall Field Mills Corporation, Philadelphia, Pa., a Corporation of Pennsylvania. Filed July 9, 1925. Serial No. 42,393. 15 Claims. (Cl. 139—10.)

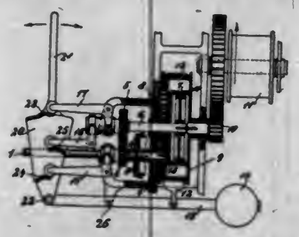
1. In a tuft yarn frame a body bar, a row of spaced walls projecting therefrom and forming yarn strand passages between them, each passage having an entrance opening and an exit opening connected by a front opening through which a yarn strand may be threaded, and a yielding barrier in each passage permitting a yarn

strand to be threaded into the same through its front opening and preventing a yarn strand from accidentally leaving the passage through its front opening.

1,662,564. METHOD OF MAKING MIRRORS. GEORGE F. COLBERT and WILLIAM H. COLBERT, Pittsburgh, Pa. Original application filed Apr. 30, 1926, Serial No. 105,884, now Patent No. 1,603,936, granted Oct. 19, 1926. Divided and this application filed July 30, 1926. Serial No. 126,086. 6 Claims. (Cl. 91—70.)

1. The method of making a non-glaring mirror, which consists in preparing a mixture of solutions of a lead salt, sodium hydroxide, and thiourea, pouring such mixture immediately after its preparation upon the upper surface of a glass plate, while such plate is maintained with such upper surface in a horizontal position, and allowing the plate to stand until a dense opaque coating of lead sulphide is precipitated upon the plate.

1,662,565. NONGLARE MIRROR. GEORGE FIELDING COLBERT and WILLIAM HARRY COLBERT, Pittsburgh, Pa. Filed May 3, 1927. Serial No. 188,433. 6 Claims. (Cl. 91—68.)

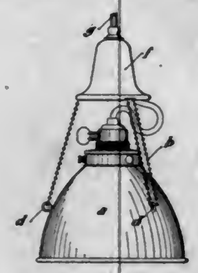


1. The herein described operation of producing a light absorbing non-glare mirror, which consists in subjecting one surface of a glass sheet to a treatment adapted to remove all grease and other foreign matter therefrom, and then exposing the said treated surface to the action of a mixed solution of a metallic salt, an alkali thiourea, and ethyl alcohol, to thereby deposit thereon a dense uniform lustrous coat of metallic sulphide.

1,662,566. TRANSMISSION MECHANISM. FRITZ DÖHLE, Wilmersdorf, near Berlin, Germany. Filed Apr. 4, 1922, Serial No. 549,580, and in Germany Apr. 5, 1921. 6 Claims. (Cl. 192—17.)

4. Transmission mechanism comprising a clutch including driving and driven elements constructed so as to be coupled together, a brake upon said driven element arranged to be normally applied whenever said elements are uncoupled, and means for sequentially coupling said elements and releasing said brake, said brake including a brake lever, said operating member including a plate supported by said brake lever, cams on the plate for actuating said clutch means, the cams being positioned so that the brake is released only after the clutch means is brought into active position by pressure on the brake

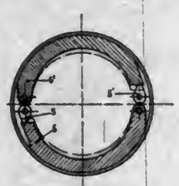
lever, the plate being pivoted to the brake lever, clutch operating arms engaging said cams, whereby movement of the plate, in either direction about its pivot first



actuates a clutch operating arm, and then actuates the brake lever to release the brake, and vice versa upon return movement of the plate.

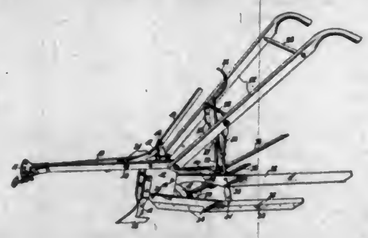
1,662,567. EXPANSION JOINT. ALBERT C. FISCHER, Chicago, Ill. Filed May 25, 1921. Serial No. 472,819. Renewed Dec. 19, 1924. 7 Claims. (Cl. 94—18.)

1. Constructional material comprising a waterproofed, flexible, preformed strip, embodying in its structure interrupted and substantially parallel mats of fibrous material irregularly overlapping one another.



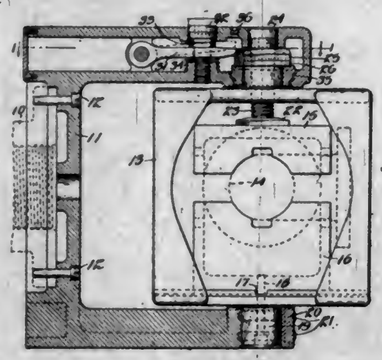
1,662,568. LAMP SUSPENSION. JOSEF FOELL, Dusseldorf, Germany. Filed May 26, 1926, Serial No. 111,794, and in Germany May 28, 1925. 1 Claim. (Cl. 240—88.)

The combination with an electric lamp and its reflector, of a bell carried by the lamp wire, said bell being formed with a tubular rim divided by slots into segments, a plurality of eyelets connected to the reflector, and a flexible suspending element threaded through said eyelets and through different segments of the bell rim so that it can be adjusted therein for holding the reflector and the lamp suspended from the bell in different angular positions.



1,662,569. BRAKE OF THE EXPANDING-SHOE TYPE. GUIDO FORNACA, Turin, Italy. Filed Dec. 8, 1926, Serial No. 153,382, and in Italy Dec. 12, 1925. 2 Claims. (Cl. 188—194.)

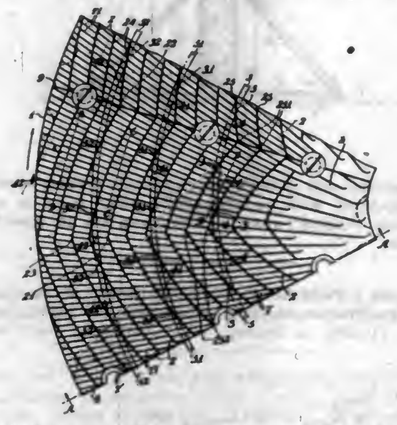
1. A brake mechanism comprising in combination a steering swivel, oppositely extending parallel arms fixed to the latter, a bush having end walls mounted in the free ends of each pair of arms, a pin concentrically journalled in the end walls of each bush, a cylindrical member mounted on each pin and having a cam surface, a lever connected with each cylindrical member extending through a slot in the bush, a pair of brake shoes, each shoe having one end pivoted on one of the bushes



and its other end extending into the slot of the other bush, and means to simultaneously operate the levers to rotate said cylindrical members.

1,662,570. CULTIVATOR BLADE. EDWARD FOWLER and JOHN V. LEWIS, Chattanooga, Tenn. Filed Aug. 27, 1925. Serial No. 52,794. 4 Claims. (Cl. 97—183.)

1. In a cultivator including horizontally spaced frame elements for supporting a blade, the combination of means for attaching the blade, said means comprising a stud on one of said elements, the other of said elements having a notched portion, said blade having an oblique slot in one of its edges, said stud being engageable in said slot, and clamping means in connection with said blade and selectively engageable with the notches of said notched element.



1,662,571. WORK-HOLDING CHUCK FOR HEADSTOCKS. FREDERICK FRICK, Waynesboro, Pa. Filed Sept. 22, 1924. Serial No. 739,191. 2 Claims. (Cl. 279—5.)

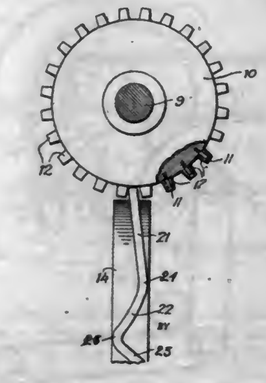
1. In a chuck, a frame, a yoke pivotally mounted in the frame for indexing movement, said yoke having a plurality of flat faces in fixed relation about the axis

of the yoke, rigid pivoted locking means on the frame having a flat face adapted to engage the entire length of one of said faces on the yoke, a screw for forcing the locking means positively into engagement with said face, and resilient means for disengaging the locking plate from said face when the screw is backed off, substantially as set forth.

1,662,572. REDUCING OR REFINING APPARATUS FOR CHOCOLATE, COCOA, AND THE LIKE. FREDERICK GEORGE FRYER, York, England. Filed July 19, 1926. Serial No. 123,471. 19 Claims. (Cl. 83—3.)

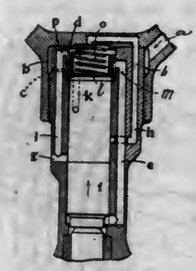
1. Reducing or refining apparatus for chocolate, cocoa or the like, comprising a pair of relatively rotatable discs having operative faces pressed together into a single plane under yielding pressure, each disc having a surface made up of elemental annular disc-areas and having reducing walls forming reducing surfaces, the total area of all those elements of said reducing surfaces which lie in an elemental annular disc-area increasing substantially proportionately with the radius of the elemental annular disc-area.

1,662,573. JOINT BINDER. EDOUARD CHARLES GLARDON, Lausanne, Switzerland. Filed June 22, 1927, Serial No. 200,712, and in Germany May 28, 1925. 3 Claims. (Cl. 20—92.)



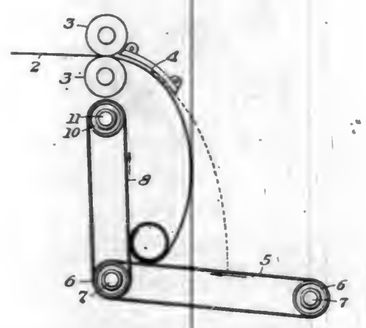
1. A joint binder comprising a U-shaped clamp, the two shanks of which are perforated and adapted to enter the two members to be secured together, a flat barbed nail adapted to be driven into the said two members and through the perforations of the shanks, and a re-inforcement for the edge portions of the perforations in the shanks adapted to prevent the head of the flat barbed nail being driven through the edge portions.

1,662,574. PROCESS OF COLORING FOIL. WILLIAM G. GOLDEN, Louisville, Ky., assignor to United States Foil Co., Louisville, Ky., a Corporation of Kentucky. Filed Oct. 26, 1925. Serial No. 65,052. 7 Claims. (Cl. 41—18.)



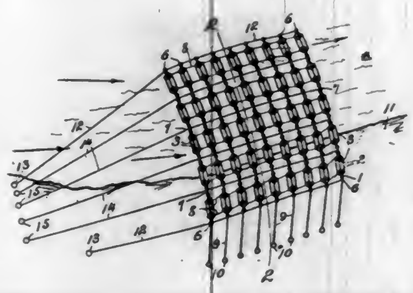
1. A process of converting tin foil of a silver color into a gold colored foil by the application of heat thereto for a predetermined period of time.

1,662,575. CONVEYER. CHARLES HAYES, Paris, France, assignor to Coal Carbonization Company, a Corporation of Delaware. Filed Nov. 30, 1926. Serial No. 151,804. 4 Claims. (Cl. 198—203.)



1. In combination with a screw conveyer, means for rotating the shaft of the conveyer a predetermined number of turns in a direction to advance the material acted on, reversing the direction of rotation of the conveyer for a less number of turns and again rotating the conveyer in a direction to advance the material.

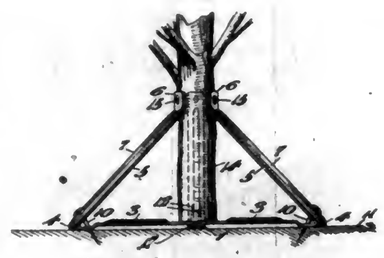
1,662,576. VALVE FOR PNEUMATIC TOOLS. HERBERT JESCHKE, Duisburg, Germany, assignor to Demag Aktiengesellschaft, Duisburg, Germany. Filed Nov. 6, 1926, Serial No. 146,733, and in Germany Sept. 15, 1925. 1 Claim. (Cl. 121—19.)



In a percussive tool the combination of a cylinder, a valve chest having communication with opposite ends of said cylinder and having a port adjacent one end communicating with a source of operating fluid and an exhaust port communicating with the opposite end, a cylindrical valve slidably mounted in said valve chest and adapted to control communication between said source of compressed fluid and opposite ends of said cylinder, a spring operatively engaging one side of said valve and serving to normally hold said valve in position to close communication to one end of said cylinder, said cylinder having a piston controlled relief port and a piston controlled pressure equalizing port each normally communicating with said valve chest on the spring pressed side of said valve, whereby fluid pressure is equalized on opposite sides of said valve during the major portion of the travel of said piston toward the end of said cylinder normally closed by said valve under the action of said spring, until said pressure equalizing port is covered by said piston, permitting sufficient fluid pressure to be built up under said valve to cause said valve to move in said valve chest to reverse the direction of flow of said operating fluid.

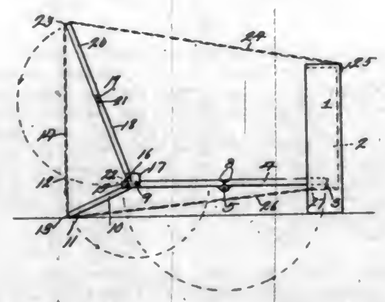
1,662,577. METHOD OF COILING MATERIAL AND APPARATUS THEREFOR. LANE JOHNSON, Ingram, Pa., assignor to United Engineering & Foundry Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed May 29, 1926. Serial No. 112,630. 23 Claims. (Cl. 242—78.)

11. A coiling apparatus, comprising a pair of belts extending at substantially right angles to each other, and means for driving said belts.



1,662,578. JETTY. HENRY F. KELLNER, Silver Lake, Kans. Filed Aug. 23, 1926. Serial No. 130,927. 3 Claims. (Cl. 61—3.)

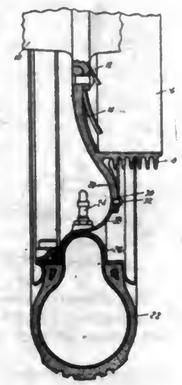
1. In a jetty, a jetty mat comprising collecting jetty units arranged in longitudinal and transverse rows, spacing connectors connecting the units of each transverse row with each other, spacing connectors connecting the units in the longitudinal rows with each other, spaced anchoring transverse cables respectively connecting with the adjacent units of the transverse rows, and longitudinal anchoring-cables fastened to the lowermost transverse row of units and having longitudinal slidable connection with the other transverse rows of units.



1,662,579. CHRISTMAS-TREE SUPPORT. ABRAHAM KIRSHNER, Philadelphia, Pa. Filed Apr. 13, 1927. Serial No. 183,266. 3 Claims. (Cl. 248—38.)

1. In a device of the character stated, a tripod construction consisting of base members pivotally connected together at their innermost ends and having their outer ends bent upwardly and inwardly at an acute angle to form arms, the extremity of each of which is bent upwardly to form vertical extensions, the end of one of said base members being provided with four holes and

the coacting ends of the other two members being bevelled and provided with two holes, the outer holes in said members aligning, when said members are in operative position.

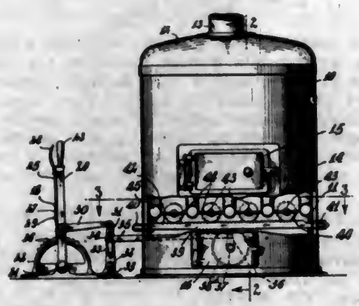


1,662,580. FOLDABLE TOURIST BED. ANTHONY E. KUHN, Mishawaka, Ind. Filed June 14, 1926. Serial No. 115,886. 6 Claims. (Cl. 5—119.)

1. A foldable bed comprising a casing, a foldable bed frame hingedly mounted within said casing and extending outwardly therefrom, a tent connected to the upper end of the casing, said tent extending outwardly, downwardly and inwardly over the bed frame and anchored to the casing below the bed frame, supporting legs from said frame, said supporting legs inclining downwardly and outwardly and engaging the inner side of the tent a substantial distance from the bed frame and a tent engaging frame hingedly connected to the outer end of the bed frame and inclining upwardly and outwardly and terminating above the leg engaging points and in combination with the legs and tent forming a compartment beyond the end of the frame in which a person can stand with his feet on the tent adjacent the legs.

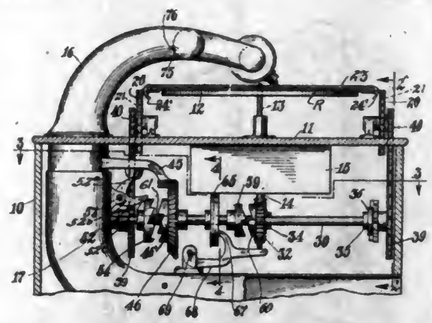
1,662,581. TWO-PART WHEEL. LUDGER ELIZE LA BRIE, South Bend, Ind., assignor to Motor Industries, Inc., a Corporation of Illinois. Original application filed Oct. 15, 1923, Serial No. 668,709. Divided and this application filed Sept. 21, 1925. Serial No. 57,555. 7 Claims. (Cl. 301—6.)

1. A wheel comprising a relatively heavy midsection formed with a brake drum and flared inwardly from the midplane of the wheel at its outer edge, in combination with a relatively light annular part secured thereto and carrying a rim and tire and flaring back across the mid-



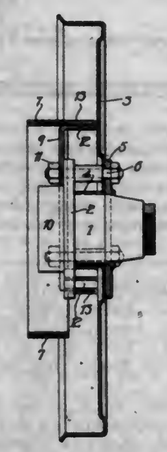
plane of the wheel, with the valve of the tire projecting through the annular part and accessible from the front of the wheel.

1,662,582. CLEANSING AND POLISHING COMPOUND. CHARLES H. MCALEER, Detroit, Mich. Filed Dec. 12, 1924. Serial No. 755,368. 2 Claims. (Cl. 87—5.)



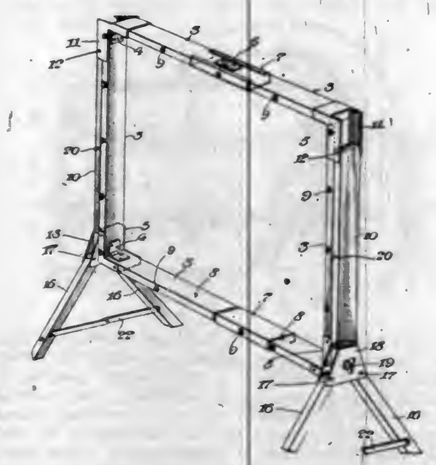
1. A cleansing and polishing compound consisting of the following ingredients—namely, 30 pounds double ground cream tripoli, 10 pounds powdered rottenstone, 3½ pounds Kitigumi Japan wax, 2½ pounds double pressed stearic acid, 9 pounds kerosene and 2 pounds light rubbing oil.

1,662,583. FURNACE. DAVID MARTIN, Milwaukee, Wis. Filed Nov. 27, 1926. Serial No. 151,059. 2 Claims. (Cl. 126—160.)



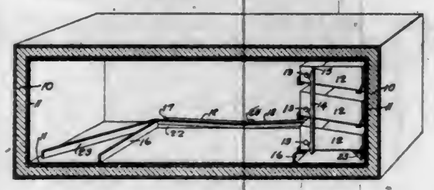
1. In a furnace of the class described, spaced apart rotatively mounted grate sections having gear segments attached thereto, a rod disposed within said furnace and slidably mounted at its extremities in the walls thereof, teeth on the upper edge of said rod engaged with the teeth of said gear segments, a standard mounted in the floor of said furnace having an aperture therein, a shaft journaled in said aperture, a gear attached to said shaft, teeth on the lower edge of said slidably mounted rod meshed with the teeth of said gear and actuating mechanism operatively connected with said gear and mounted externally of said furnace for oscillating the same to reciprocate said rod for rotating said grate section.

1,662,584. TALKING MACHINE. COSTANTINO MOCCIA, Lynch Mines, Ky. Filed Jan. 2, 1924, Serial No. 683,865. Renewed Aug. 13, 1927. 2 Claims. (Cl. 274—10.)



1. In a talking machine of the class described, a tone arm having a bevel gear segment projecting therefrom, a shaft rotatably mounted in said talking machine, a bevel gear loosely engaged on said shaft, and meshing with said bevel gear segment, said bevel gear being formed on one side with a clutch face, a collar slidable on said shaft, and formed with a complementary clutch face, means for normally urging said clutch faces into disengagement, said shaft being formed with a central bore, and provided with elongated slots communicating with said central bore, a rod slidable in said central bore, a cross pin fixed to one end of said rod, and projecting through said elongated slots, engaging said collar, a clutch element slidable on said shaft, another cross pin fixed to the other end of said rod, and projecting through said elongated slots, engaging said clutch element, a driven gear loosely mounted on said shaft, and provided with a complementary integral clutch element, and means for pressing forward said collar to cause engagement of said clutches, when the tone arm is in record playing finished position, and releasing said collar to cause disengagement of said clutches, when the tone arm is in record playing starting position.

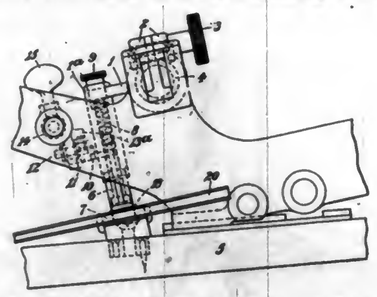
1,662,585. BRAKE DRUM. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Mar. 11, 1924. Serial No. 698,398. 1 Claim. (Cl. 188—218.)



The combination with a wheel having a hub with a flange 2, of a brake drum 7 having butt welded to one edge fastening members with portions 9 extending radially inward and fastened against said flange 2.

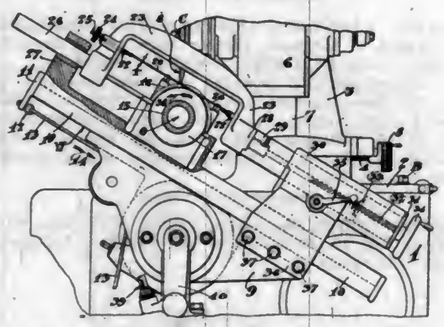
1,662,586. FOLDABLE SUPPORTING FRAME FOR SCREENS. HUGO NEWMAN, New York, N. Y. Filed Nov. 7, 1925. Serial No. 67,557. 17 Claims. (Cl. 88—24.)

1. An upright reversible projection screen supporting frame comprising a top and bottom and a pair of side bars, and supporting legs at the outside of and hinged nearer to one end than to the other of said side bars, each of said legs having a length at least substantially equal to the distance between said hinge and the farther end of said side bars thereby to support the frame at one height and foldable in the direction of the plane of the frame to support it at a different height on the reversal of the top and bottom of said frame.



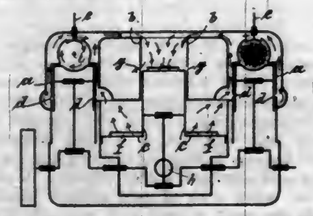
1,662,587. REFRIGERATOR. FAY T. RODGERS, Memphis, Tenn. Filed July 24, 1926. Serial No. 124,648. 4 Claims. (Cl. 62—37.)

1. In a refrigerator, a plurality of individual refrigerant containers, a common drip pipe therefrom, means connecting each of said containers with said drip pipe, said pipe being removable independently of said containers and said containers being individually removable from the refrigerator, and a drip pan into which said pipe discharges.



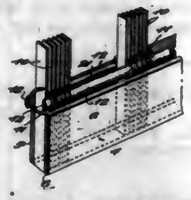
1,662,588. SIDE-REGISTER DEVICE FOR PRINTING MACHINES. JOHN SHUTTLEWORTH, Altrincham, England, assignor to Linotype and Machinery Limited, London, England. Filed Nov. 6, 1925, Serial No. 67,226, and in Great Britain Nov. 24, 1924. 5 Claims. (Cl. 271—59.)

1. In a side register device of the type described for printing machines, the combination with upper and lower side-register feet adapted to grip between them the sheets to be registered, and means for reciprocating in rectilinear direction said feet inwards and outwards transversely of a feed board, of a guide for the upper side-register foot constantly perpendicular to the plane of the sheet to be gripped, by which, movement of said foot relatively to the other foot is restricted to recilinear direcion perpendicular to the plane of the sheet, and a cam adapted to move the upper side-register foot rectilinearly away from the lower one during the mutual



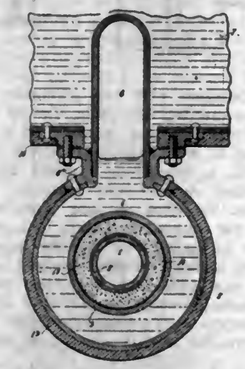
travel of the feet in one direction over the feed board and to allow the said upper foot to travel in the reverse direction over the feed board without moving relatively to the lower one.

1,662,589. MEANS FOR CONTROLLING MOVEMENTS OF WORK-CARRYING SPINDLE WITH RESPECT TO A CUTTING ELEMENT IN GEAR-GRINDING MACHINES AND THE LIKE. OLIVER G. SIMMONS, Lakewood, Ohio. Filed Nov. 26, 1926. Serial No. 150,865. 5 Claims. (Cl. 51—52.)



1. In a machine of the character set forth, a slide, a guideway for the slide, a work spindle on the slide, a disc fixed to the spindle, a yoke partially surrounding said work spindle, oppositely disposed tapes secured to the periphery of the disc and to the yoke at opposite sides of the spindle, means for oscillating said spindle, and means for moving the yoke along the guideway and for securing the same in adjusted positions with respect thereto.

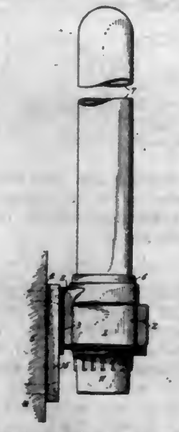
1,662,590. INTERNAL-COMBUSTION ENGINE. HANS THORMEYER, Berlin, Germany. Filed June 16, 1926, Serial No. 116,265, and in Germany May 28, 1925. 2 Claims. (Cl. 60—15.)



1. A compound internal combustion engine comprising two high pressure engines and an intermediate low pressure engine, said low pressure engine including a stepped piston comprising a cylindrical portion and a disk shaped portion, cylinders for said portions, a conduit connecting the said cylinders, an air intake port in the cylinder containing the disk shaped portion, an exhaust port in the cylinder containing said cylindrical portion, and a valve in the cylinder of each high pressure engine receiving compressed air from, and exhausting products of combustion to, said conduit.

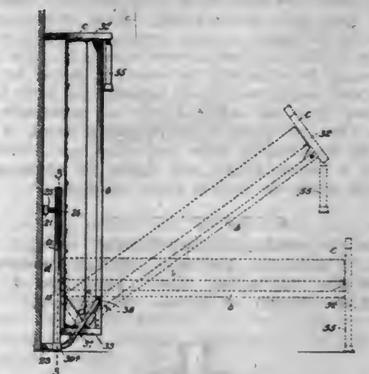
1,662,591. TEXTILE REED OR COMB. HARRY TITMAS, Pawtucket, R. I. Filed Feb. 3, 1926. Serial No. 85,705. 6 Claims. (Cl. 139—192.)

1. A reed or comb comprising a frame having separate groups of dents permanently fixed therein at spaced intervals therealong and provided with openings between the groups of fixed dents for the insertion of other dent elements to adapte them to be withdrawn for repair or replacement.



1,662,592. ROTARY CASTING. WILLIAM W. WEITLING, College Point, and AUGUSTUS M. HENRY, Brooklyn, N. Y., assignors to William W. Weitling, College Point, Long Island, N. Y., trustee for himself; Augustus M. Henry, and Roberto M. Peake. Filed Sept. 5, 1924. Serial No. 736,098. 7 Claims. (Cl. 22—212.)

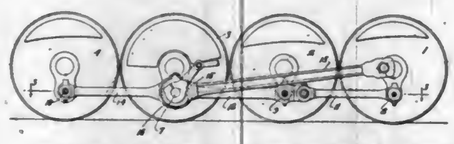
1. In the art of rotary casting, the method of controlling the rate of heat-conduction from the molten-metal pour through the mold, which involves rotating the mold while maintaining the mold in heat-transfer relation to a connection of linseed oil, and confining such collection of oil adjacent to the mold to vaporize a portion of said liquid.



1,662,593. DISPENSING DEVICE. EDWIN G. WESSMAN, Easton, Pa., assignor, by mesne assignments, to Individual Drinking Cup Company, Inc., Easton, Pa., a Corporation of Pennsylvania. Original application filed July 20, 1921, Serial No. 486,071. Divided and this application filed Jan. 9, 1922. Serial No. 527,900. 26 Claims. (Cl. 312—44.)

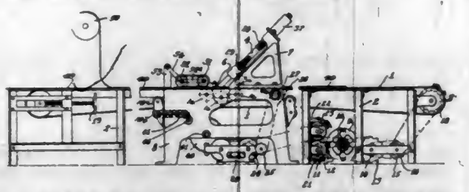
1. In an apparatus of the class described, a casing having a delivery opening, a casing part extending along one side of the casing, a door to close the delivery opening, having a sliding pivotal connection at one end with the casing part, said door being adapted to be positioned within said casing part when opened and to be moved

therefrom to closed position over the delivery opening, and means in the casing part for holding the door in open and closed positions.



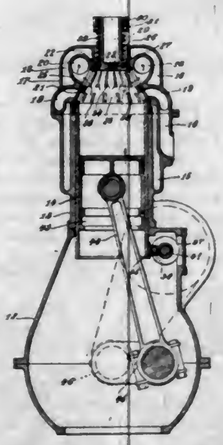
1,662,594. DISAPPEARING BED. CHARLES C. WHITE, Chicago, Ill. Filed Sept. 23, 1921. Serial No. 502,699. 8 Claims. (Cl. 5—140.)

1. In a disappearing bed, the combination of a fixed head-frame comprising corner posts and cross bars between the posts, means to support the head-frame from a wall or door, a bed-frame, pivots fixed on the sides of the bed-frame, rectilinear guides in the posts for said pivots forming a sliding connection between the bed-frame and the head-frame, the pivots extending outward from the bed and into the inner sides of and being transversely aligned with the corner posts, and fulcrum links having their lower ends pivoted in the head-frame close to the plane of movement of the pivots and their upper ends pivoted to the bed-frame at a point disposed away from said plane.



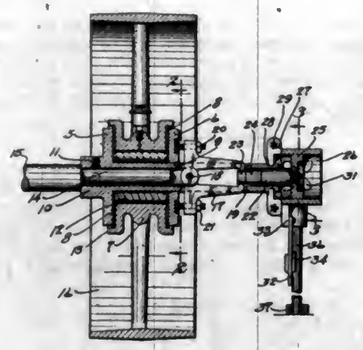
7. In a disappearing bed, the combination of a fixed head-frame, means to support the head-frame from a wall or door comprising corner posts and cross-bars, a bed-frame having a pivot and slidably connected to and supported by the head-frame, and counterbalancing means transversely aligned with and between the corner posts of the head-frame, comprising casings mounted on the inner sides of the corner posts of the head-frame, drums in the casings, convolute springs between the casings and the drum, and metallic tapes between the drums and the bed-frame.

1,662,595. LOCOMOTIVE ROD MECHANISM. WILLIAM E. WOODARD, Forest Hills, N. Y. Filed May 2, 1925, Serial No. 27,432. Renewed Jan. 26, 1928. 12 Claims. (Cl. 105—84.)



1. A multi-part driving rod for locomotive driving wheels having adjacent parts articulated together as an operative unit for unitary application to and removable from a driving wheel pin.

1,662,596. APPARATUS FOR CUTTING SINGLE OR PLIED-UP STOCK. ADRIAN O. ABBOTT, Jr., Detroit, Mich., assignor to Morgan & Wright, Detroit, Mich., a Corporation of Michigan. Filed July 30, 1926. Serial No. 125,931. 12 Claims. (Cl. 164—48.)

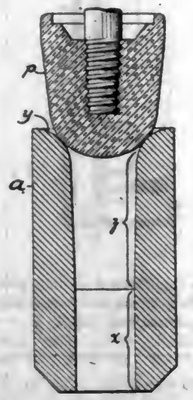


1. An apparatus for cutting sheet material comprising a knife, supporting means rigidly affixed thereto, means for guiding the same in reciprocating movement, a conveyor for conducting sheet material across the path of the knife, means for actuating the conveyor, means for moving the knife supporting means whereby the knife is carried away from the conveyor and for maintaining the same in this position for a predetermined length of time, means for thrusting the knife supporting means forwardly to effect a cutting stroke, and means for adjusting the force with which the knife is thrust forward.

1,662,597. INTERNAL-COMBUSTION MOTOR. ARTHUR S. BALDWIN, Baltimore, Md., and EVERETT E. RICHMOND, Huntington, Mass. Filed Dec. 9, 1926. Serial No. 153,500. 3 Claims. (Cl. 123—81.)

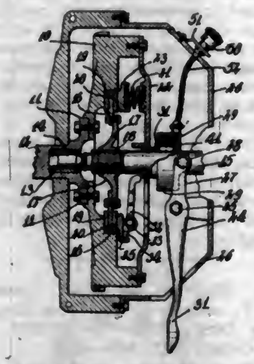
1. In an internal combustion motor the combination with a cylinder having a conical end with intake and exhaust ports arranged in said conical end with one set of ports in a plane above the other, of a head having annular intake and exhaust passages which passages are arranged in the head also in a plane one above another, a liner in said head and provided with a conical chamber to receive the conical end of the cylinder said liner having a series of intake ports in its conical wall in one plane and another series of exhaust ports in its conical wall in another plane said two series of ports in the liner being always open respectively to the two annular passages in the head, the ports in one of said parts being staggered while those in the other part are in radial alinement, a piston for the cylinder and means for oscillating one of the parts that carry the ports with respect to the other whereby the two sets of intake ports will register while the two sets of exhaust ports are out of register.

1,662,598. CLUTCH AND CLUTCH-ACTUATING MECHANISM. FRANK H. BIERMAN, Minneapolis, Minn. Filed Jan. 15, 1927. Serial No. 161,318. 3 Claims. (Cl. 192—68.)



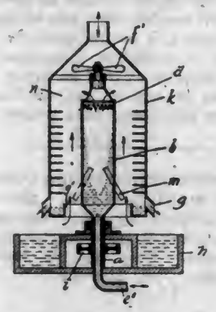
3. The combination with two revoluble members and a clutch for connecting the same, one of said members having an axially extended support, of a pair of bell-cranks pivoted to said extended support and operative on said clutch, a cam-acting member axially movable in said extended support and operative on said bell-cranks, a head swivelled on said extended support so that it will not rotate therewith, a lever pivoted to said head for movements in a plane approximately at right angles to the axis of said members, and a connection between said lever and cam-acting member including a cam device reacting against said head and operative to transform the pivotal movement of said lever into axial movement in said cam-acting member.

1,662,599. TIRE. LE ADAM BROWN, Alto, Mich., assignor to Corduroy Tire Company, Grand Rapids, Mich., a Corporation of Delaware. Filed May 14, 1924. Serial No. 718,243. 1 Claim. (Cl. 152—14.)



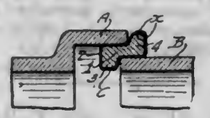
In a low pressure tire having a carcass of greater flexibility than the carcass of a high pressure tire for the same load and adapted to carry a predetermined load at an inflation pressure substantially reduced below that of a high pressure tire for the same load, said tire being substantially increased in cross sectional area and decreased in ratio of wall thickness to cross sectional area with respect to a high pressure tire for the same load, the combination of a relatively thick tread sub-divided by grooves proportioned with respect to the increased flexibility of the carcass and the thickness of the tread to be closed by the greater flexing of the carcass under normal loading to present a substantially solid tread surface to the road under normal load and without detrimental friction to the carcass.

1,662,600. NOZZLE FOR LADLES. JOHN L. COX, Philadelphia, and RADCLYFFE FURNESS, Jenkintown, Pa. Filed Dec. 21, 1923. Serial No. 681,937. 3 Claims. (Cl. 22—85.)



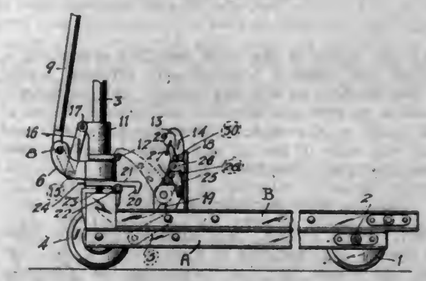
1. A nozzle for a ladle having a passageway which in its lower portion is of cylindrical shape and which above its lower portion is of frusto-conical form and of substantially greater length than diameter, the mouth of the nozzle above its frusto-conical portion being convexly rounded and adapted to be engaged by a plug.

1,662,601. CLUTCH BEARING FOR VEHICLES. PETER DEMCHUK, Brooklyn, N. Y. Filed Apr. 21, 1927. Serial No. 185,480. 4 Claims. (Cl. 308—236.)



1. In a device of the class described, the combination with a clutch release bearing, of a clutch release collar holding the bearing, and formed with a circular groove, a split retaining ring engaged in the groove and adapted to hold the bearing in place, and adjustable means comprising cam levers supported by said collar and disposed in the split of said retaining ring adapted to spread the end portions thereof for securing the ring against displacement.

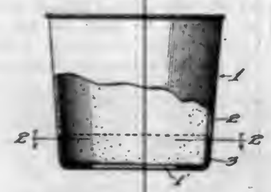
1,662,602. APPARATUS FOR COOLING WATER. KARL DÜNKELBERG, Gelsenkirchen, Germany. Filed Oct. 28, 1924, Serial No. 746,271, and in Germany Nov. 5, 1923. 14 Claims. (Cl. 261—83.)



1. In an apparatus for cooling liquids, a rotary receptacle having at one end an inlet for the liquid to be cooled, said receptacle being open at its opposite end and adapted to eject the liquid laterally therefrom when rotated, means to produce a current of air through said rotary receptacle upon rotation, a casing surrounding the said receptacle, and means to produce a current of air through said casing transversely of the liquid ejected from the receptacle.

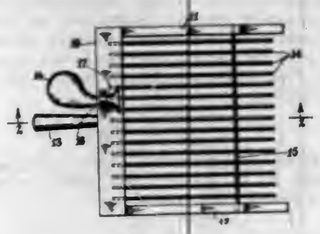
1,662,603. PIPE-JOINTING ELEMENT. WILLIAM C. FERGUSON, St. Louis, Mo. Filed Oct. 22, 1926. Serial No. 143,386. 7 Claims. (Cl. 154—45.5.)

1. A jointing element for bell and spigot pipe consisting of a fabric casing filled with a plastic substance of such consistency that the element can be rolled into a pipe bell and packed tightly between the bell and the co-operating spigot by longitudinal pressure exerted on the inner side of the element, and means for preventing said element from slipping relatively to the bell when it is being installed.



1,662,604. ELEVATING TRUCK. HENRY S. GERMOND, Jr., Bayonne, N. J. Filed May 5, 1926. Serial No. 106,858. 6 Claims. (Cl. 254—10.)

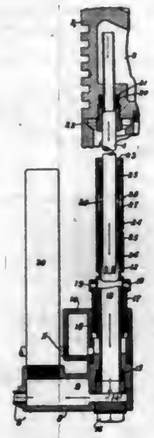
1. An elevating truck comprising a main frame mounted on wheels at its rear end, a steering swivel carrying wheels journaled in the front end of said frame, a rotat-



able member movable vertically in substantially the line of axis of said steering swivel and having a horizontal coaxial arcuate flange, an elevating platform mounted on said frame for vertical movement, means operatively connecting said flange of said member and said platform so that vertical movement of said member elevates said platform and said member may rotate independently of said connecting means, a handle pivotally mounted upon said swivel, and an operative connection between said handle and said member so that swinging of said handle in vertical planes in any of the steering positions of said handle raises and lowers said member.

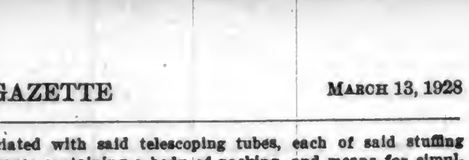
1,662,605. REENFORCED FIBROUS CONTAINER AND METHOD OF MANUFACTURE. RICHARD E. HALL, Olean, N. Y., assignor, by mesne assignments, to The Arvey Manufacturing Co., Wilmington, Del., a Corporation of Delaware. Filed Apr. 8, 1925. Serial No. 21,463. 3 Claims. (Cl. 229—3.5.)

1. A seamless fibrous container formed of felted, interlocked fibres, having integral base and side walls, and reenforcing wire mesh imbedded in the base and side walls, said fibres passing through the spaces between the wire mesh and interlocking therewith and with each other on both sides of the wire mesh to provide a compacted unitary structure.



1,662,606. ASH SIFTER. JOHN F. HARGADON, South Boston, Mass. Filed Nov. 7, 1927. Serial No. 231,506. 2 Claims. (Cl. 209—419.)

1. An ash sifter of the class described comprising a transverse end member, longitudinally extended spaced apart side members on said end member, tapered forward end portion on said side members, and adjacent series of spaced apart rods extending forwardly from said end member, the rods of one of said series being in closer together than the rods of the other series.

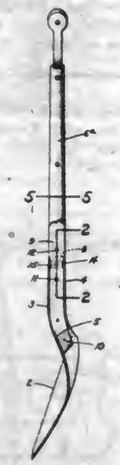


1,662,607. PIPE JOINT. REINHARD HILDEBRAND, Webster Groves, Mo., assignor to Fulton Iron Works Company, St. Louis, Mo., a Corporation of Delaware. Filed Nov. 27, 1922. Serial No. 603,617. 1 Claim. (Cl. 285—162.)

A packing device for an extensible conduit composed of telescoping tubes, comprising stuffing boxes associated with said telescoping tubes, each of said stuffing boxes containing a body of packing, and means for simultaneously tightening the packing in the respective stuffing

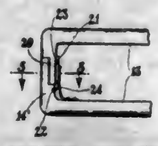
boxes, said means including a double gland extending into both of said stuffing boxes and provided with a drainage outlet between said stuffing boxes.

1,662,608. WORKBENCH. JABE HILL, Phoenix, Ariz. Filed Mar. 21, 1927. Serial No. 177,149. 1 Claim. (Cl. 144—1.)



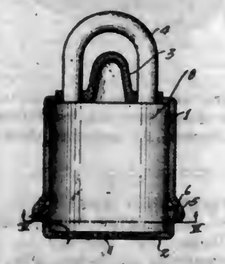
A machine of the character described, comprising a lower deck and an upper deck, a portion of the upper deck being hinged transversely of the machine to adapt it to tilt in the direction of the length of the machine, and a circular saw supported from the lower deck and projecting through the tilting portion of the upper deck through an opening which extends longitudinally of the machine, a pair of guide-ways carried by the tilting portion of the machine, one upon each side of the saw, a miter box mounted to slide upon said guideways, lying partly upon one side of the saw and partly upon the other side of the saw, a goose-neck connecting said portions of the miter box, and means thrusting between the lower deck and the tilting top for adjusting the same to varying heights.

1,662,609. ELASTIC WEBBING. JOSEPH HIRSCH, Yonkers, N. Y., assignor to Kops Bros. Inc., a Corporation of New York. Filed Feb. 1, 1927. Serial No. 165,058. 5 Claims. (Cl. 139—421.)



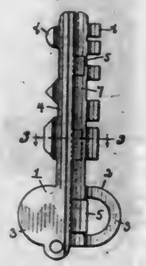
1. An elastic strand comprising a core, and a cover thread having knots therein at relatively close intervals.

1,662,610. TOOL HANDLE. MARTIN HOKANSON, Duluth, Minn., assignor to Marshall-Wells Company, Duluth, Minn., a Corporation of New Jersey. Filed May 5, 1924. Serial No. 711,115. 10 Claims. (Cl. 294—57.)



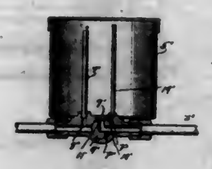
1. A hollow back shovel comprising a blade having an extension at one end, folded to form a tubular handle socket with abutting edges of the socket wall longitudinally disposed and arranged at the rear of the blade, a handle having an end fitting in the socket, a reinforcing blade within said handle arranged opposite the opening and a sleeve upon the handle adapted to prevent separation of the edges of the socket wall and deformation of the socket wall during use.

1,662,611. STAIR-RISER PROTECTOR. ELIAS HYMAN, Brooklyn, N. Y. Filed May 4, 1927. Serial No. 188,850. 3 Claims. (Cl. 20—79.)



1. A stair riser protector, comprising a frame having substantially vertical and horizontal sides, the frame being adapted to support protector material and the said vertical sides being adjustable in height.

1,662,612. CUSHIONING CASING FOR LOCKS. JOHN JUNKUNC, Chicago, Ill. Filed Dec. 17, 1924. Serial No. 756,431. 3 Claims. (Cl. 150—52.)



1. A cover for a padlock comprising a cushioning casing, through which the shackle of the lock protrudes, an extension on the casing adjacent the lock, a removable lower portion and a means for securing said portion on the lock.

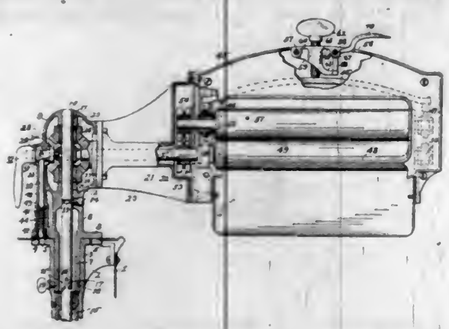
1,662,613. SECTIONAL KEY. ROGER C. LAYNOR, Elkridge, Md. Filed Apr. 18, 1927. Serial No. 184,582. 4 Claims. (Cl. 70—9.)

1. A key comprising sections having spine portions, one of the sections having outstanding lugs adapted to receive the spine portion of the other section between them, said sections adapted to move longitudinally with relation to each other to engage the spine portions and the spine portions being provided with outstanding blades.

1,662,614. FUEL SYSTEM. CAESAR A. MANDOLINI, New York, N. Y., assignor to Remington Automotive Corporation, New York, N. Y., a Corporation of New York. Filed May 18, 1923. Serial No. 639,770. 10 Claims. (Cl. 158—46.5.)

1. An auxiliary tank adapted for use in a fuel system provided with a discharge port and an inlet port, a discharge tube at said discharge port extending vertically in said auxiliary tank, an air vent tube in said auxiliary tank extending above the level of said discharge tube and means for closing the inlet port and establishing communication between said air vent tube and the atmosphere when fuel is to be discharge from the auxiliary tank through said discharge tube.

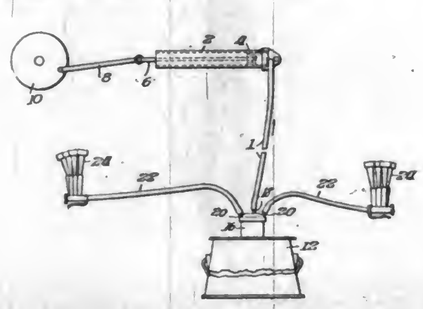
1,662,615. HEATER OR COOLER. DANIEL RAYMOND MCNEAL, Palmyra, N. J., assignor to Andale Engineering Company, a Corporation of Pennsylvania. Filed Nov. 22, 1923, Serial No. 676,296. Renewed Aug. 12, 1927. 2 Claims. (Cl. 257—222.)



1. A heater or cooler comprising in combination, a casing having an open end, a plurality of tubes, a tube sheet for the tubes seated in the open end of the casing, a duct on the casing wall having an opening adjacent to and facing in the same direction as said open casing end, a detachable cover, a U-shaped conduit in

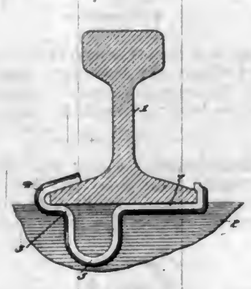
the cover establishing communication between the duct opening and the tubes, packing between the tube sheet

and said cover, at one end of said cover conduit, packing around the duct opening at the other end of said cover conduit, and a vent between said packings.



1,662,616. WRINGER MECHANISM. HARRY W. MITCHELL, Cleveland, Ohio, assignor to G. F. Mitchell & Son, a Partnership of George F. Mitchell, George R. Mitchell, and Harry W. Mitchell, Cleveland, Ohio. Filed Apr. 2, 1923. Serial No. 629,276. 5 Claims. (Cl. 68—32.)

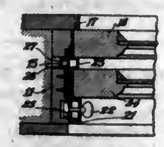
1. In a wringer mechanism, the combination with a support having a cylindrical vertically disposed socket, of a wringer supporting standard rotatably supported in said socket, and a vertically disposed drive shaft having a section carried by the fixed support and a section carried by the standard, said shaft sections having one a substantially flat tongue and the other a groove in the end thereof in which the tongue is adapted to fit whereby said standard together with the shaft section carried thereby can be bodily removed from the socket, said groove having a flared outer portion to facilitate the insertion of the tongue therein.



5. In a wringer mechanism, a support, a supporting standard rotatably mounted on said support, a wringer carried by said standard, means including a movable locking element for releasably locking said standard against turning movement on said support, wringer driving means having a movable controlling member by which the wringer may be started and stopped, and a manually operable lever having means for moving said controlling member to start and stop the wringer, said lever having a part engageable with the locking element for actuating the same to lock the standard to the support simultaneously with the starting of the wringer and a part engageable with the locking element after the standard is locked to hold said locking element in locking position while the lever is actuated to move said controlling member to start or stop the wringer.

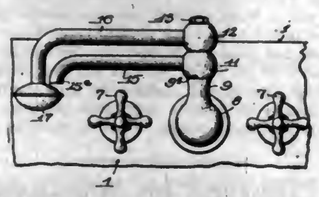
1,662,617. VALVE FOR MILKING MACHINES. DAVID W. MYERS, Winnetka, and RALPH L. SHERMAN, Oak Park, Ill. Filed Jan. 5, 1925. Serial No. 481. 2 Claims. (Cl. 251—114.)

1. A valve chamber having a floor concave on the under side, the floor having a port for the downward passage of fluid, a shouldered pin at the center of the floor on the under side, and a rubber valve disc having an aperture at the center slightly less than the diameter of the shoulder on the pin whereby the disc may be secured to the pin in contact with the under surface of the floor by stretching the aperture in the disc sufficiently to enable it to pass over the shoulder.



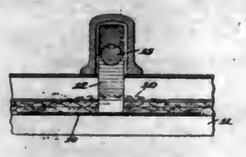
1,662,618. RAILWAY-RAIL ANCHOR. HARRY G. NORWOOD, Baltimore, Md., assignor to Continental Railway Supply Corporation, New York, N. Y., a Corporation of Delaware. Filed Sept. 29, 1927. Serial No. 222,764. 6 Claims. (Cl. 238—330.)

1. A single piece rail anchor comprising a bar of spring steel corrugated throughout its length and having an off-set clamping member at each end thereof.



1,662,619. WINDOW-SASH MOUNTING. HUBERT PALLADA, New York, N. Y. Filed Feb. 7, 1927. Serial No. 166,326. 1 Claim. (Cl. 20—12.)

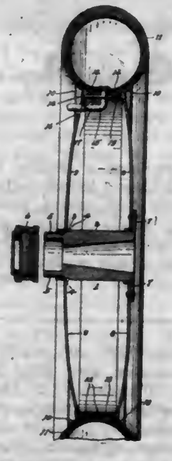
A window comprising a frame, side rails in said frame, double-hung sashes slidable in said frame, each side rail having a longitudinal groove therein, a parting strip in each groove and adapted to separate the sashes, and inner stop beads pivoted at their lower ends to the side rails, the parting strips being adapted to be



retracted into the grooves when the stop beads are moved outwardly on their pivots to permit removal of the sashes without disconnecting the sash cords.

1,662,620. SWING-SPOUT FAUCET. ERICH J. PATELSKI, Chicago, Ill. Filed Mar. 5, 1927, Serial No. 172,978. Renewed Feb. 2, 1928. 14 Claims. (Cl. 277—59.)

3. In a faucet of the character described, the combination of a base portion adapted for connection with a source of water supply and provided with a tubular extension closed at its free end, a plurality of spouts pivotally mounted on said extension to swing independently of each other, said extension having ports adapted to register with said spouts in one position of swinging movement thereof.

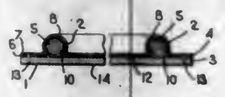


1,662,621. TEMPERATURE-INDICATING DEVICE FOR WAFFLE IRONS. LUDWIG REICHOLD, Winsted, Conn., assignor to The Fitzgerald Manufacturing Company, Torrington, Conn., a Corporation of Connecticut. Filed Nov. 3, 1927. Serial No. 230,784. 1 Claim. (Cl. 116—114.)

A temperature indicating device for waffle irons comprising a housing having an opening therein, a movable signal member located within the housing and adapted to move so as to be viewed through the opening, a normally straight thermostatic element resting on the upper face of the heating element of the upper member of the waffle iron, a standard secured to said thermostatic element intermediate its ends and extending up into said housing and carrying said signal member, said thermostatic element and said standard being so proportioned that the signaling member will assume a predetermined position relative to the opening when the heating element is at proper temperature for cooking a waffle.

1,662,622. DISK WHEEL. HERBERT WALTERS and ROMAN A. HOERMAN, Detroit, Mich. Filed May 16, 1927. Serial No. 191,902. 3 Claims. (Cl. 301—63.)

1. A wheel including a hub, a disk movable longitudinally of the hub and having an annular groove adjacent its periphery, a disk fixed on the hub and spaced from the movable disk, a laterally extending integral annular flange on the fixed disk adjacent its periphery to detachably engage at its free edge within said annular groove in the movable disk and peripherally space the



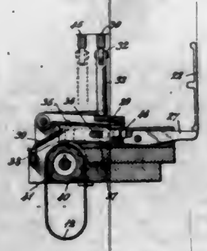
disks apart, said flange and peripheral portion of said disks forming a channel rim to receive a tire, and means on the hub for moving the movable disk toward the fixed disk and securing the same to the hub.

1,662,623. SAFETY WINDOW. ADOLF WEISS, East Pittsburgh, Pa. Filed Mar. 22, 1927. Serial No. 177,428. 2 Claims. (Cl. 20—48.)

1. A window comprising upper and lower slidably mounted window frames, inner frames concentrically mounted within said upper and lower slidably mounted frames, pins rigidly mounted on the end members of said inner frames and journaled on the end members of said slidably mounted frames for pivotally attaching said inner frames to said slidably mounted frames, a plate mounted on the end of the lower pin of said upper inner frame having a slot therein, and an arm mounted on the upper pin of said lower inner frame adapted to engage said plate, said arm and said plate being adapted to rotate in unison with the respective pins to which they are attached, said arm being positioned to register with the slot of said plate when both the inner frames are in closed position to permit raising and lowering of said slidably mounted frames and adapted to engage said plate when either of said inner frames is rotated to open position for preventing raising or lowering of said slidably mounted frames.

1,662,624. INSOLE. LORING Q. WHITE, Palm Beach, Fla., assignor to L. Q. White Shoe Company, Bridgewater, Mass., a Corporation of Massachusetts. Filed Apr. 12, 1927. Serial No. 183,166. 4 Claims. (Cl. 36—22.)

1. An insole comprising a leather layer, a layer of fabric having a fold formed therein adjacent the marginal edge, a cord in said fold, means securing the cord in the fold, and other means independent of the cord for uniting the fabric layer and the leather layer, said cord and fold forming an inseam-receiving rib, said cord being retained in place only by the fold and said first-named means.



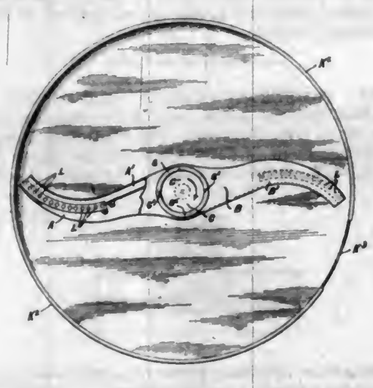
1,662,625. COMPOSITION OF MATTER. LIEBESKIND WILLIAMS, Philadelphia, Pa. Filed May 7, 1927. Serial No. 189,746. 6 Claims. (Cl. 134—58.)

1. The method of preparing white pigment, consisting in mixing and grinding 60 grams of zinc oxide, 2 grams of sulphur, 1½ grams of sodium carbonate, 1 gram of sodium chloride and ½ gram of ultramarine blue, heating the same in a closed, chemically inactive retort until all of the free sulphur has disappeared, stirring said mixture while it is being heated, cooling the product and grinding the same.

1,662,626. PROCESS FOR THE MANUFACTURE OF DIPHENYLGUANIDINE. HAROLD S. ADAMS and LUDWIG MEUSER, Naugatuck, Conn., assignors to The Naugatuck Chemical Company, a Corporation of Connecticut. Filed June 19, 1922. Serial No. 569,427. 7 Claims. (Cl. 260—125.)

1. A process of the kind described which comprises treating a suspension of a water in soluble symmetrical disubstituted thiourea in water containing ammonia with a compound of a metal capable of removing sulphur from the thiouren, and recovering a disubstituted guanidine.

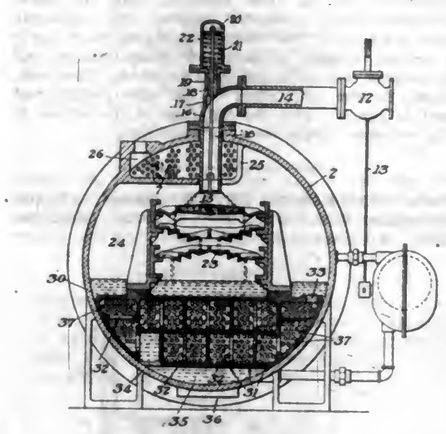
1,662,627. KNITTING MACHINE. ALFRED A. ADLER, New York, N. Y., and HARRY ALBERTMAN, Philadelphia, Pa., assignors to Jacquard Knitting Machine Co., Inc., Union Hill, N. J., a Corporation of New York. Filed Sept. 9, 1920. Serial No. 409,201. 72 Claims. (Cl. 66—50.)



1. The combination in a knitting machine, of a circular bank of stitch-forming elements, a pattern-controlling element, a plurality of feelers to co-act therewith, couplings extending from said feelers to control the action of said stitch-forming elements, and other means to actuate said couplings in accordance with the call of the pattern-controlling element on the feelers, said means being so timed with respect to the formation of stitches that said means can actuate each coupling intermediate the completing of loops by the respectively corresponding stitch-forming element and while other stitch-forming elements are completing loops.

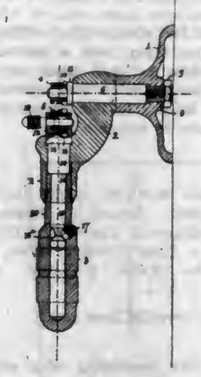
1,662,628. BRACELET END HOOK. KARL AUGENSTEIN, Cranston, R. I., assignor to Automatic Gold Chain Company, Providence, R. I., a Firm comprising Edwin F. M. Speidel and Albert R. Speidel. Filed Aug. 23, 1927. Serial No. 214,883. 3 Claims. (Cl. 24—236.)

1. A bracelet end hook comprising a body, a sheet metal shank with an opening therein extending from the body, said shank being formed into an open hook at its end, a sheet metal tongue for engaging the inner surface of said hook and closing the opening thereto by the inherent tension of its stock, a latch part on said tongue for extending through the opening in said shank and a detent on said latch part to snap over the edge of said opening and hold said tongue in open position.



1,662,629. APPARATUS FOR DISCHARGING PROJECTILES BY CENTRIFUGAL FORCE. BADEN FLETCHER SMYTH BADEN-POWELL, Sevenoaks, England. Filed June 6, 1927, Serial No. 196,768, and in Great Britain June 18, 1926. 7 Claims. (Cl. 89—10.)

1. Apparatus for discharging projectiles by centrifugal force comprising a central chamber, a rotatable shaft to carry said chamber, means for rotating said shaft, barrels carried by and radiating from said chamber, a trigger-operated stop to co-act with a ring forming part of the barrel casing, said ring having cut-away portions on its inner periphery to allow said trigger-operated stop to be moved and projectiles supplied to said central chamber to be discharged therefrom through said barrels by centrifugal force.



1,662,630. LIQUID-TREATING APPARATUS. HUGO BERQUIST, Swissvale, Pa., assignor to William S. Elliott, Pittsburgh, Pa. Filed Mar. 29, 1922, Serial No. 547,868. Renewed Dec. 29, 1926. 6 Claims. (Cl. 183—25.)

1. In a liquid treating apparatus, a container having an evaporating chamber therein, means for spraying liquid into said chamber to permit the release of air and gases from the liquid, means within said chamber for reducing the temperature of the liquid after the escape of the air and gases therefrom, and means within said

chamber for condensing the condensable portion of the air and gases released from the liquid, said two last mentioned means being connected in series.

1,662,631. APPARATUS FOR THE ENLARGING OF RINGS. FÉLIX BLOIS, Paris, France. Filed July 21, 1925, Serial No. 44,972, and in France Aug. 14, 1924. 1 Claim. (Cl. 80—5.)

In an apparatus for enlarging rings, a base, an axle, a ring supporting roller fixed on said axle, a handle rotatably secured on said axle, a roller support longitudinally movable in said handle, a spindle in said roller support, a grooved roller rotatably mounted on said spindle, intermeshing pinions associated with said ring supporting roller and said grooved roller to cause rotation of said grooved roller on movement of said handle about said axis, and means comprising rotation of the handle about its axis to move said support for adjustably positioning said grooved roller in relation to said ring supporting roller.

1,662,632. PHOTOGRAPHIC TRANSFER. EDWARD BLUM, Jr., and WILLIAM BLUM, Chicago, Ill. Filed Feb. 14, 1924. Serial No. 692,885. 1 Claim. (Cl. 41—22.)

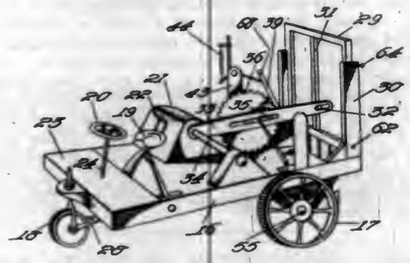
That improvement in making photographic transfers which consists in first dipping a strip of undeveloped printed carbon tissue in cold water, then pressing the film side of the wetted strip against one face of a rigid transparent plate, then drying the strip, then developing the film while the strip is on the plate and removing the backing of the strip during development, then drying the developed film, then applying a bronze coating to the back side of the developed film which will appear through the plate and the light spots of the film to form a background, and then applying a protective covering to the bronze coating.

1,662,633. CONCENTRATION OF BARITE. WALTER O. BORCHERDT, Austinville, Va., assignor to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Aug. 27, 1924. Serial No. 734,545. 16 Claims. (Cl. 209—166.)

1. The method of concentrating barite-bearing material by froth-flotation which comprises subjecting the barite-bearing material to froth-flotation in the presence of a barite-selective flotation agent containing soap and thereby effecting a substantial recovery of the barite in the resulting concentrate.

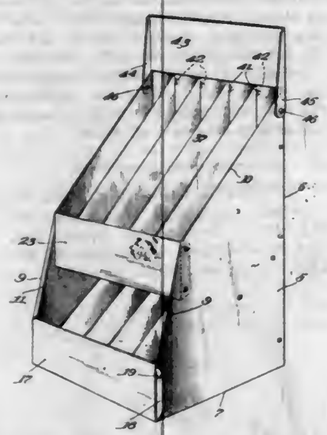
1,662,634. CONCENTRATION OF BARITE. WALTER O. BORCHERDT, Mountain Lakes, N. J., assignor to The New Jersey Zinc Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 19, 1927. Serial No. 227,363. 9 Claims. (Cl. 209—166.)

1. The method of concentrating barite-bearing material which comprises subjecting the barite-bearing material in the form of a pulp to a froth flotation operation in the presence of cotton seed oil pitch.



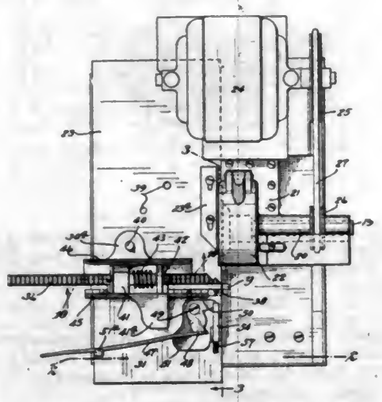
1,662,635. AUTOMATIC BRAKE. PAUL BURKE and ARTHUR ORLOFF, Green Bay, Wis., assignors to Northwest Engineering Corporation, Green Bay, Wis., a Corporation of Wisconsin. Filed Sept. 15, 1926. Serial No. 135,627. 5 Claims. (Cl. 188—82.)

1. In an automatic brake, the combination with a brake drum and a brake band therefor, of a pair of members movable relative to each other and having the brake band associated therewith whereby the band is automatically applied by the movement of one of said mem-



bers and independently released by the movement of the other member, and means for moving both members together to effect a complete automatic release of said brake band.

1,662,636. PLOW. PIETRO CANDREVA, Chicago, Ill. Filed Sept. 22, 1926. Serial No. 136,937. 4 Claims. (Cl. 97—36.)



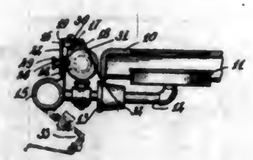
1. In a soil treating tool means for supporting a plurality of plowshares for combined vertical and reciprocating movement said means comprising a vertically movable frame, and means for imparting a vertical reciprocating motion to said frame said means comprising a beam, a slot in the beam, a driven gear wheel and a pin on the gear wheel operating in said slot.

1,662,637. CANDY MENU STAND. CHARLES CHILTON CHASE, St. Joseph, Mo. Filed Mar. 5, 1927. Serial No. 173,041. 9 Claims. (Cl. 211—126.)

9. In a menu stand of the class described, side walls having vertical rear edges, vertical portions at their front edges near the bottom, said edges being then directed upwardly and rearwardly at an inclination for a distance and then at an obtuse angle rearwardly to the top edge of the edges of the sides at the back, a brace member between said sides at the bottom of their rear edges, upper and lower brace members between said sides at the lower vertical portion and at the juncture of the inclined portions to set the upper brace member rearwardly from the lower inclined portions at the bottom, said braces having turned edges and slots in the top edges thereof with a flange at the bottom, bottom portions spaced apart between the sides and having their forward ends engaging the braces at the front and having the sides anchored to the sides of the stand and their rear edges directed upwardly and secured to said sides, the upper bottom portion extending downwardly at converging relation to the lower bottom portion providing upper and lower supports spaced apart, partitions on said walls and having their forward ends fitting the slots of the front braces and having tongues connected to said bottom walls and upwardly directed portions, to provide compartments running from front to rear, the lower compartment being accessible between the upwardly directed portions at the rear, and having their lower ends exposed in front of the upper compartments, and a sign member secured to the sides above the upper compartments at the rear edges of the side portion and adapted to contact with the top edge at its bottom to prevent rearward displacement of said sign.

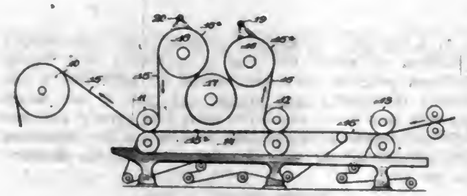
1,662,638. SLUG-SAWING DEVICE. GEORGE L. CURLE, Minneapolis, Minn. Filed Dec. 5, 1925. Serial No. 73,381. 4 Claims. (Cl. 29—69.)

1. In a sawing device, the combination with a base support, of a vise and a saw mounted on said base support, means for moving one of said mounted elements toward and from the other to produce a sawing action, said vise having clamping jaws, one of the vise members being mounted for straight-line sliding movement toward and from the other, and a self-releasing jaw-closing device including a hand piece movable in the plane of the vise-closing action and operative to close the vise only while subject to hand pressure, said lever having a shiftable base of reaction.



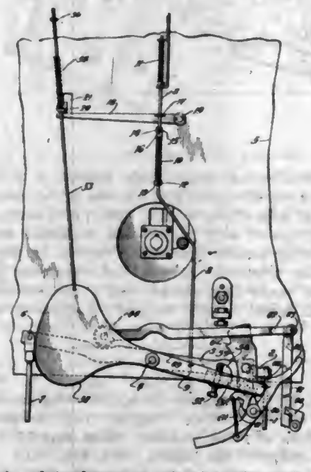
1,662,639. ENDLESS SCREEN BELT AND METHOD OF MAKING SAME. ROGER W. DISBRO, Cleveland Heights, Ohio, assignor to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 20, 1925. Serial No. 31,658. 7 Claims. (Cl. 24—33.)

1. A woven wire belt consisting of a strip of woven wire screen cloth provided with rebent end portions, such end portions being fastened to said screen and being cut away to provide alternated interlocking hinges, and being provided with fastening means adjacent each such cut-out portion, and a removable fastening member pivotally securing said hinges together.



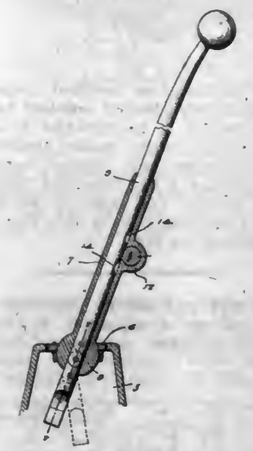
1,662,640. SAFETY JET GUARD FOR GAS RANGES. LOUIS GARRETSON, New York, N. Y. Filed Feb. 16, 1927. Serial No. 168,605. 3 Claims. (Cl. 126—42.)

1. The combination with a gas range having a top member, and a main gas pipe with valves, of a main guard provided with openings, extension members slidably arranged on the main guard, and also provided with openings, the said openings being in the vicinity of the valves, doors slidably arranged on the main guard and



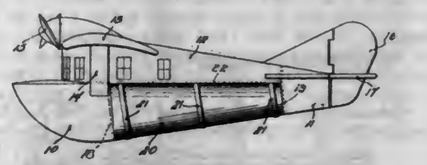
extensions, forming a closure for the openings, means for movably supporting the extension members to the main gas pipe, and a hook shaped clip secured on the main guard and engageable with the said top member.

1,662,641. PROCESS FOR SIZING PAPER. THOMAS HANS, Chicago, Ill., assignor to Container Corporation of America, Chicago, Ill., a Corporation of Delaware. Filed Feb. 21, 1927. Serial No. 169,857. 9 Claims. (Cl. 92—40.)



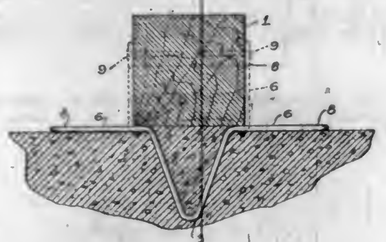
1. In the manufacture of paper in a continuous web, the process of sizing which includes the spraying of a sizing solution upon a surface of the advancing sheet at a point preliminary to its passage to the drying rolls.

1,662,642. COIN-SLOT CLOSURE FOR SCALES. GUSTAV F. HOCHRIEM, Chicago, Ill., assignor to Rhodes-Hochriem Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed June 26, 1926. Serial No. 118,672. 5 Claims. (Cl. 194—95.)



1. A coin slot closure mechanism for coin-controlled ticket printing scales comprising in combination a lever actuable by a weight being placed on the scale platform, an upright rod connected to said lever, a pivotally mounted arm having cooperative engagement with said upright rod, a second arm extending at substantially right angles to said first mentioned arm and cooperatively associated therewith, a movably mounted coin slot shutter engaged by said second arm and functioned by the movement of the latter to open or close the coin slot opening.

1,662,643. GEAR-SHIFTING-LEVER LOCK. JOHN LESTER HOSFORD, Boonville, Mo. Filed Dec. 17, 1926. Serial No. 155,450. 4 Claims. (Cl. 70—128.)

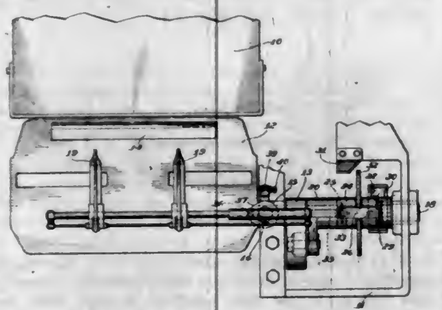


1. In a transmission shifting lever lock, an elongated sleeve universally mounted at one end in the transmission case, a shifting lever slidable in the sleeve, an extension pivoted to the inner end of the lever and adapted for engagement with the shifting mechanism of the transmission, said extension being rigidly connected to the lever when the same is moved partially within the sleeve so as to facilitate the shifting of the gears, said extension being free to swing with respect to the lever when the same is moved entirely out of the sleeve, for preventing the shifting of the gears and means whereby the lever may be rigidly locked in either position.

1,662,644. HYDROAIRPLANE. MILTON M. KARGER, Milwaukee, Wis. Filed June 27, 1927. Serial No. 201,726. 1 Claim. (Cl. 244—2.)

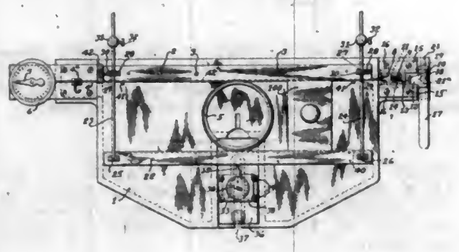
In a hydro-airplane the combination of a hull having longitudinally spaced prow and stern portions, partitions closing said prow and stern portions, a cabin above said prow and stern portions connecting the same, and a plurality of substantially circular tanks extending lengthwise beneath said cabin and between said prow and stern portions, said tanks being disposed at opposite sides of the longitudinal axis of said hull.

1,662,645. ANCHOR FOR FLOOR SLEEPERS. HENRY H. LAMPERT, Chicago, Ill. Filed Apr. 8, 1927. Serial No. 182,032. 7 Claims. (Cl. 72—101.)



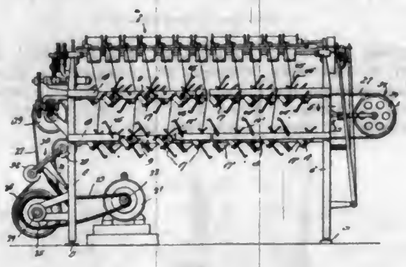
1. A device of the class described comprising a plurality of substantially identical members having anchoring portions adapted to be embedded in a support, a pair of substantially parallel spacing elements rigidly secured to said members, said members having seat portions for supporting a bar extending longitudinally of said spacing element, and fastening portions arranged on respectively opposite sides of said seat portions and adapted to embrace the bar.

1,662,646. STRAP FOR BELTS AND THE LIKE. MORRIS H. SKALETSKY, Brooklyn, N. Y. Filed Jan. 23, 1925. Serial No. 4,232. 3 Claims. (Cl. 154—48.)



1. A strap of the class characterized, comprising a unitary flat tubular seamless strip of normally stretchable fabric material, and a nonstretchable flat flexible strip within the tubular strip, said inner strip having its faces adhesively secured to the inner faces of the side walls of the tubular strip.

1,662,647. SHEET-DELIVERY DEVICE. WALTER H. SMITH, Pittsburgh, Pa., assignor to Miller Saw-Trimmer Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 15, 1926. Serial No. 116,138. 3 Claims. (Cl. 101—287.)

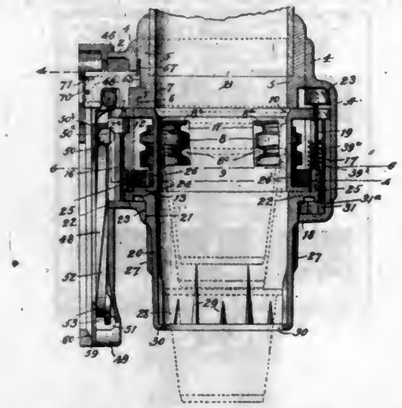


1. In a sheet delivery device, a delivery table, means for mounting said delivery table to permit it to be swung into and out of operative position, a sheet-delivering member, mechanism for actuating said member, releasable connection means between said member and said mechanism, and an interlocking device for preventing swinging of said table except when said connection means is released.

1,662,648. GAUGING MACHINE AND PROCESS FOR GAUGING PACKING RINGS. ROBERT B. WASSON, Cranford, N. J. Filed Aug. 13, 1921. Serial No. 492,018. 23 Claims. (Cl. 265—18.)

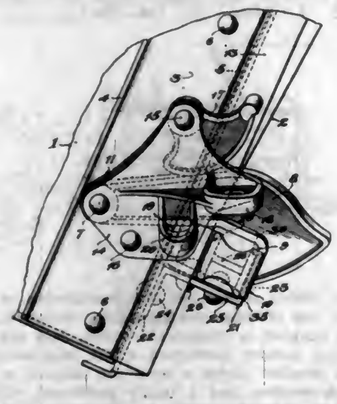
1. A machine for gauging packing rings comprising a platform on which the ring is supported, and travels between gauging operations, means for imparting a uniformly distributed load around the ring, a bar, means whereby said bar is enabled to move into parallel positions and to contact with the ring, and means for indicating the position of the bar, thereby indicating the diameter of the ring.

1,662,649. THREAD SPINNING AND TWISTING MACHINE. FRED C. WEBBER, Wilkes-Barre, Pa. Filed Dec. 18, 1926. Serial No. 154,577. 9 Claims. (Cl. 117—26.)



1. In combination, supporting means, a plurality of spaced, transversely arranged, horizontal belt pulleys carried by said supporting means, flyer units carried by the ends of certain of said pulleys and alongside one side of the supporting means, flyer units carried by the opposite ends of the alternate pulleys and alongside the other side of the supporting means, and a belt stretch or run movable at right angles to and contacting with said pulleys.

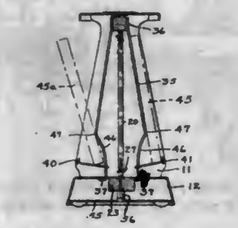
1,662,650. CUP DISPENSER. EDWIN G. WESSMAN, Boonton, N. J., assignor, by mesne assignments, to Individual Drinking Cup Company Inc., Easton, Pa., a Corporation of Pennsylvania. Filed July 20, 1921. Serial No. 486,071. 36 Claims. (Cl. 315—44.)



1. In an apparatus of the class described, a cup container, escapement mechanism for delivering cups singly from the container, and a tubular part at the lower end

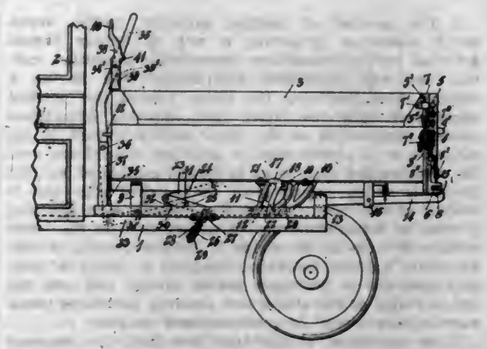
of the container adapted to receive and hold the cups as they are delivered from the container in position for withdrawal with a lower portion of the cup projecting

outside of the same, said tubular part being axially rotatable and adapted to be turned by hand to operate the escapement mechanism.



1,662,651. CAR-DOOR-MECHANISM. WILLIAM E. WINE, Toledo, Ohio. Filed July 27, 1927. Serial No. 208,809. 15 Claims. (Cl. 105—308.)

1. In a car door mechanism, the combination with a car having a hopper provided with a lading discharge opening, of a door for closing said opening, a reinforcing member extending along the side sheet of the hopper adjacent the discharge opening thereof, said member having a plurality of laterally spaced flanges substantially normal to the side sheet, and means for retaining the door in closed position involving a movable member and a fixed member, the movable member being secured to the hopper intermediate the spaced flanges of the reinforcing member.

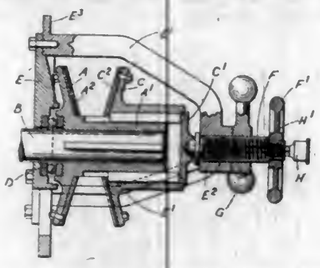


1,662,652. ELECTRIC TOASTER. ERNEST B. ZIMMER, Cleveland, Ohio, assignor to Liberty Gauge & Instrument Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 24, 1925. Serial No. 17,911. 4 Claims. (Cl. 53—5.)

1. In a device of the character described, the combination with a frame having a base, upright end members and a top, a heating element extending from the top to the base and substantially from one end member to the other, a bread rack extending from the top to the base and having an offset near the base, a bread rest extending outwardly from the rack above the base,

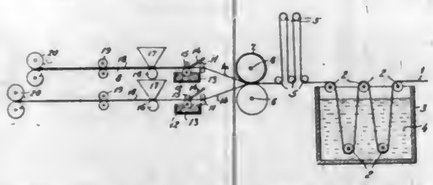
the offset being sufficiently recessed toward the element that bread supported on the rest may be tipped outwardly when the bottom inner edge of the bread is forced inwardly until it engages the offset portion of said rack.

1,662,653. DUMPING DEVICE. CHARLES F. YOUNG and EDMOND M. RIES, Covington, Ky., assignors to The Stewart Iron Works Company, Covington, Ky., a Corporation of Kentucky. Filed Apr. 2, 1924. Serial No. 703,742. 2 Claims. (Cl. 298—10.)



1. In a device of the character described, a support, a bed having a rocker on said support, said rocker having one end projected away from said bed, a compound-curved guide on said support, engaged by said end, and mutually engaging means on said rocker and said guide, respectively, engaging and disengaging during travel of said end in one of the curved parts of said guide, to lock said bed to or unlock said bed from said support.

1,662,654. EXPANDING PULLEY. GEOFFREY JOSEPH ABBOTT, London, England. Filed Oct. 9, 1926. Serial No. 140,636. 2 Claims. (Cl. 64—8.)

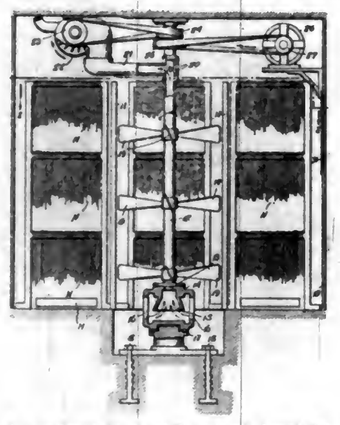


1. In an expanding pulley of the kind in which the oppositely inclined flange faces have alternate ribs and depressions, the combination of a flange adapted to be secured to a rotatable shaft, a second flange axially movable relatively to the first flange, means for adjust-

ing the relative positions of the two flanges, and means for supporting said adjusting means solely from the pulley shaft comprising a free member journaled on said

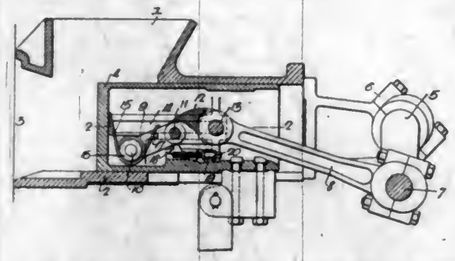
shaft, a framework rigidly connected thereto, and a boss therein coaxial with the shaft but axially spaced therefrom.

1,662,655. PROCESS AND APPARATUS FOR MANUFACTURING PREPARED ROOFING STRIPS. HERBERT ABRAHAM, New York, N. Y., assignor to The Ruberoid Co., New York, N. Y., a Corporation of New Jersey. Filed July 3, 1926. Serial No. 120,316. 5 Claims. (Cl. 91—68.)



1. The process of making prepared roofing strips which comprises saturating a web of flexible fibrous material with a bituminous saturating composition, cutting the web lengthwise into strips each having a notched edge, inclining the strips toward the notched edges and with the latter free, applying bituminous coating composition on the upper surface of each of the strips so as to permit same to gravitate toward and over the free notched edge so as to form a coating of varying thickness which extends over the notched edge and is thicker at said edge than at the opposite edge, applying a layer of bituminous coating composition on the lower surface of each of the strips to form a coating of substantially uniform thickness, applying a facing of mineral particles on the upper coated surface and over the notched edge of the strips, and severing the strips transversely into pieces of predetermined lengths.

4. In apparatus of the type described, the combination of means for cutting a web of flexible material into strips each having a notched edge, a pair of rolls each of uniform diameter throughout arranged with their axes disposed in inclined relation and disposed to receive the strips therebetween and with the notched edges of the strips free and in a lower plane than the opposite edge, and means to deposit a weatherproof composition on the upper surfaces of the strips so that the composition extends over the free notched edges and is shaped by the rolls to form a coating on the said upper surface which is of gradually increasing thickness toward the notched edges.

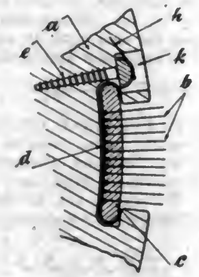


1,662,656. METHOD OF DRYING MACARONI, SPAGHETTI, AND LIKE DOUGH PRODUCTS. MAX ABRAMCHIK, Coney Island, N. Y. Filed Dec. 1, 1925. Serial No. 72,443. 4 Claims. (Cl. 34—19.)

1. A method of drying spaghetti, macaroni and the like dough products which consists in arranging said dough products in a substantially enclosed drying chamber in a lateral zone around a central zone which is free from said products, and forcing an air current downwardly through said central zone, while causing the downwardly directed air current to move away from

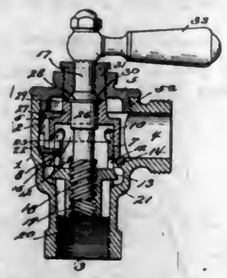
said dough products in a path spaced from the zone in which said dough products are located, the moisture in said lateral zone being free to diffuse towards and into said central zone.

1,662,657. SAFETY DEVICE FOR STOKERS. MAXWELL ALPERN, Philadelphia, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 2, 1922. Serial No. 604,493. 4 Claims. (Cl. 198—226.)



1. In a stoker mechanism, the combination of a fuel hopper, a ram chamber communicating therewith, a hollow ram adapted to reciprocate within said ram chamber, a track member positioned within said hollow ram, a driving member having a pivot pin adapted to engage said track member, and a toggle positioned within the hollow ram adapted under normal operating conditions to prevent movement of the driving member relative to the ram and to transmit the movement of the driving member to the ram and to yield under predetermined pressure conditions to permit the driving member to move relative to the ram to automatically reduce the length of the stroke of the ram when the ram contacts with an obstruction in the ram chamber.

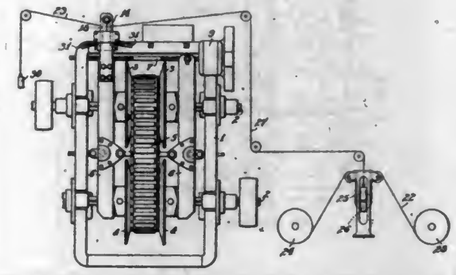
1,662,658. ROLLER FOR CLEANING AND STRIPPING THE CYLINDERS OF CARDING MACHINES OR LOOSENING FIBER THEREFROM. JAMES BANCROFT, Accrington, England, assignor to H. & B. American Machine Company, Pawtucket, R. I. Filed May 14, 1927, Serial No. 191,500, and in Great Britain Aug. 24, 1926. 1 Claim. (Cl. 19—108.)



For cleaning and stripping the carding of carding machine cylinders or loosening fiber therefrom, an eliminating roller of the kind having spaced-apart operating

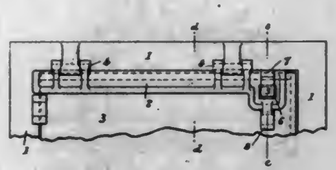
areas composed of headed pins passed through a backing adjacent to a foundation within slots in the roller-rim parts and having holding-down screws for attaching the backing and foundation to said rim parts, a foundation aforesaid of metal with turned-over edges gripping

the sides of the backing named, and spring-retained holding-down screws beyond the edges referred to, the heads of said screws in contact with said turned-over edges of the foundation for holding the same in position, substantially as herein set forth.



1,662,659. MODULATING VALVE. WILLIAM W. BIRNSTOCK, York, Pa., assignor to Vapor Heating Company, York, Pa., a Corporation of Pennsylvania. Filed Apr. 23, 1927. Serial No. 186,117. 7 Claims. (Cl. 251—156.)

2. A valve comprising a casing having a seat therein, a valve seat member adapted to engage said seat in the casing, a valve member cooperative with said seat member, a rotatable stem having a thread connection with the valve member and also having a collar fixed thereon and arranged to abut against said seat member, and an element operative to form a fluid tight joint with said collar on the stem and to hold the seat member against its seat in the casing.

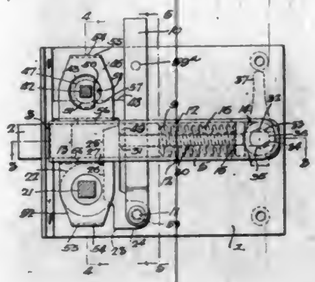


1,662,660. CONTROLLER FOR VARIABLE-SPEED TRANSMISSION. HARRY C. CLAY, Columbus, Ind., assignor to Reeves Pulley Company, Columbus, Ind., a Corporation of Indiana. Filed Feb. 25, 1927. Serial No. 171,017. 4 Claims. (Cl. 242—75.)

1. The combination with a variable speed mechanism, of an electric motor for operating said mechanism to cause the same to drive at varying speeds, a switch for controlling the operation of said motor including an arm movable by said electric motor, switch contacts mounted on said arm, a controller arm movably mounted on said first arm, switch contacts mounted on said controller arm arranged to co-operate with the first mentioned

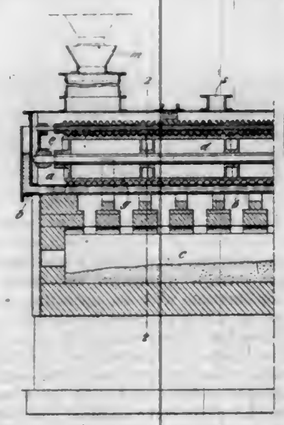
switch contacts and means for moving said controller arm to close said switch contacts and maintain said arm in a stationary position during the movement of said first mentioned arm to cause said contacts to move to open position.

1,662,661. CONTROL MECHANISM. ALBERT FREDERICK COATES, Bristol, England. Filed Aug. 17, 1926, Serial No. 129,750, and in Great Britain Aug. 21, 1925. 4 Claims. (Cl. 74—5.)



1. Control mechanism comprising a stationary member, and a movable member associated with said stationary member, in combination with an operating member pivotally mounted on said stationary member in the path of said movable member, means connected to said operating member adapted through movement of the latter to actuate an associated mechanism, and inter-engaging parts upon said movable member and said operating member, said inter-engaging parts being adapted positively to move said operating member into open position as the movable member begins to move and to hold said operating member in open position during further movement of the movable member, and said inter-engaging parts being also adapted positively to move said operating member into closed position as the movable member ends its movement in the other direction.

1,662,662. LOCK FOR AUTOMOBILE DOORS. NORMAN W. CUMMINS, Plymouth, Mich., assignor to The Yale & Towne Manufacturing Company, Stamford, Conn., a Corporation of Connecticut. Filed Apr. 20, 1926. Serial No. 103,293. 12 Claims. (Cl. 70—29.)



1. An automobile door lock, adapted for use on either right or left hand doors and comprising an invertible base plate; a bolt operatively mounted on said base plate at the longitudinal centre thereof; a handle operated retractor for said bolt operable from the outside of said automobile; a mounting for said retractor; identically

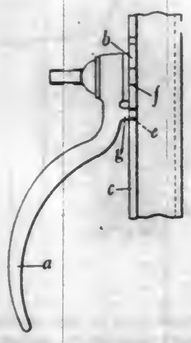
formed apertures, symmetrically positioned in said base plate, adjacent each side of said bolt, for operatively receiving said retractor and its mounting, at either side

of said bolt; and an abutment lock co-operatively aligned with said bolt, on said base plate, operable from the inside of said automobile.

1,662,663. HEAT TREATMENT OF MATERIALS FOR DISTILLING, DRYING, OR CARBONIZING THEM. ARTHUR MCDOUGALL DUCKHAM, DOUGLAS RIDER, and JOHN SIMKINS WATTS, London, England. Filed Jan. 12, 1925, Serial No. 2,011, and in Great Britain Jan. 17, 1924. 2 Claims. (Cl. 202—3.)

1. Apparatus for the continuous distillation of a subdivided solid material, comprising a horizontal trough-shaped vessel adapted to be heated, and having its lower portion substantially part-cylindrical, a cylinder mounted to rotate in said vessel on a horizontal axis parallel to the longitudinal axis of said vessel, with part of its periphery in close proximity to said part-cylindrical portion of the inner surface of the vessel, a screw thread carried by the cylinder and extending between the said cylinder and said portion of the inner surface of the vessel, means for feeding material to said thread, a scraping screw of diameter less than that of said cylinder, said screw having a thread intermeshing with and of hand different from the thread carried by the cylinder and adapted to remove material adhering thereto, and means for continuously rotating the said cylinder, and the said scraping screw with the same angular velocity in directions which are opposite in sense.

1,662,664. PROCESS FOR THE OXIDATION OF ALKYL-ARYL-SUBSTITUTED DITHIOCARBAMIC ACIDS TO THE CORRESPONDING DISULPHIDES. WALTER FLEMMING, Mannheim, Germany, assignor to Silesia Verein Chemischer Fabriken, Ida- und Marienhutte, Post Saarau, Kreis Schweidnitz, Germany. Filed Aug. 16, 1927, Serial No. 213,446, and in Germany Oct. 30, 1926. 1 Claim. (Cl. 260—16.)

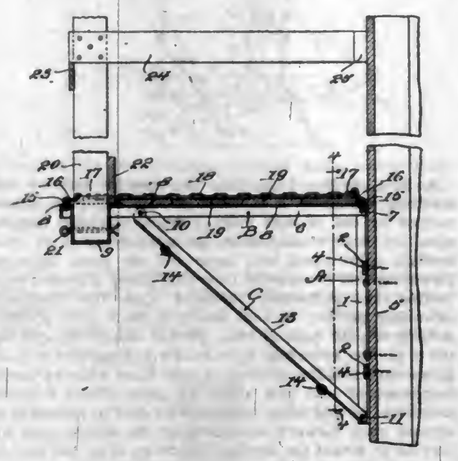


A process for the oxidation of alkyl-aryl-substituted dithiocarbamic acids to the corresponding disulphides, consisting in oxidizing the said acids in alkaline solution by a mixture of nitric oxide and atmospheric oxygen.

1,662,665. COUPLING FOR BEAD CHAINS. WILLIAM J. GAGNON, Bridgeport, Conn., assignor to The Bead Chain Manufacturing Company, Bridgeport, Conn., a Corporation of Connecticut. Filed June 25, 1927. Serial No. 201,541. 5 Claims. (Cl. 59—95.)

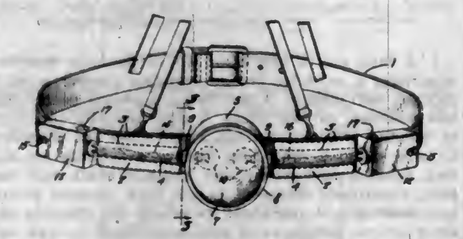
2. A coupling device for bead chains comprising a sheet metal plate apertured to accommodate a jump ring or the like, and to accommodate a plurality of chain balls, the aperture for the accommodation of the terminal ball of the chain corresponding substantially to the diameter of the ball, but receiving the latter with a drive fit, the plate offset intermediate the chain ball apertures to accommodate a link interconnecting the balls.

1,662,666. CASEMENT FASTENER. HECTOR HENRY GARRATT, Smethwick, England, assignor to Henry Hope & Sons Limited, Smethwick, England. Filed July 16, 1926, Serial No. 122,981, and in Great Britain Sept. 7, 1925. 1 Claim. (Cl. 292—202.)



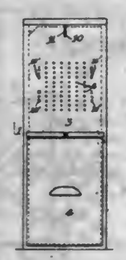
In casement fasteners, the combination of a handle plate having a peripheral portion which is symmetrical about a central axis, a pivot on said plate, a handle carried on the pivot, two pairs of symmetrically arranged complementary stops integral with the peripheral portion of the handle plate, and a projection on the handle adapted to co-operate with either pair of stops for limiting the handle movement, substantially as described, the pairs of symmetrically arranged complementary stops permitting the handle plate being attached in reversed positions.

1,662,667. BRACKET. JAMES F. GOLDSBORO, Fairchance, Pa. Filed Aug. 4, 1927. Serial No. 210,669. 1 Claim. (Cl. 304—38.)



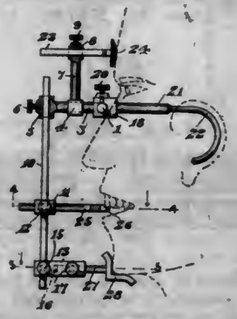
A bracket for supporting platform boards including a horizontal support member, a vertical back member adapted to be adjustably fixed on the face of a building

or the like and a brace member between the support and back member, all of said members being pivotally connected and one of the pivots being removable to permit of the members being folded against each other, the support member having spaced depending socket portions at the outer end thereof designed for the reception of uprights for a protective rail for the platform boards,



means passing through the socket for sustaining the uprights therein, a flexible element loosely connected to one end of the support member designed to be arranged over the boards and means for adjustably securing the flexible element to the second end of the support member for holding said flexible element in tight engagement with the boards.

1,662,668. LIGHT SUPPORT. JOHN N. GOSSETT, Sheridan, Mont. Filed Nov. 18, 1926. Serial No. 149,228. 1 Claim. (Cl. 240—59.)

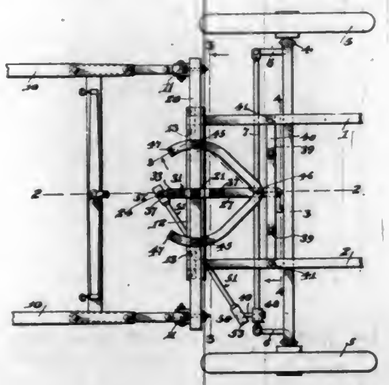


In a device of the character described, a belt, strips secured to said belt by spaced rows of stitching arranged in a manner to provide longitudinal loops, a lamp housing, spaced parallel loops formed with said lamp housing and receiving said belt for securing the lamp housing between said strips and centrally of the ends of said belt, a pair of battery casings having spaced parallel loops for securing the same to said belt upon opposite sides of said strips, covers formed with latching means for retaining batteries within said battery casings, lamp sockets disposed upon diametrically opposite sides of said lamp housing, conductors extending from said battery casings and passing through the longitudinal loops for connection with the sockets, lamps in said sockets, and means carried by said battery casings for controlling the passage of current through said conductors to said lamps.

1,662,669. CONTAINER FOR SEPARATING SLOTTED CARDS. GEORGE H. HALLETT, Jr., Lansdowne, Pa. Filed July 31, 1919, Serial No. 314,579. Renewed June 12, 1926. 11 Claims. (Cl. 129—16.1.)

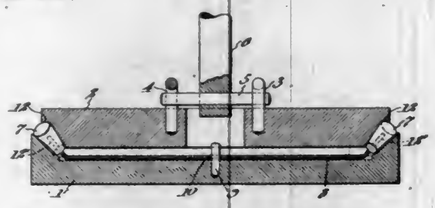
1. The combination, in card-separating means, of a container having an upper receptacle for the said cards, a removable drawer in the lower portion of said container adapted to receive said cards, and removable separating means between the upper receptacle and the drawer.

1,662,670. MEASURING INSTRUMENT. ARTHUR L. HARTER, Kokomo, Ind. Filed Sept. 19, 1927. Serial No. 220,527. 4 Claims. (Cl. 33—174.)



1. A measuring instrument for the purpose set forth comprising a supporting member provided with a nose bridge, a horizontally adjustable, graduated forehead abutment element, means for connecting said element with and for spacing it from said member, a vertically and horizontally adjustable, graduated tooth abutment element positioned below said member, a vertically and horizontally adjustable, graduated chin abutment element arranged below the tooth abutment element, a vertically adjustable, graduated bar connected with said member and common to said tooth and chin abutment elements for supporting them, and a pair of attaching elements carried by said member.

1,662,671. COMBINED DRAFT AND STEERING GEAR. HARVEY L. HEGLAND, Aitkin, Minn. Filed July 26, 1927. Serial No. 208,590. 5 Claims. (Cl. 280—103.)

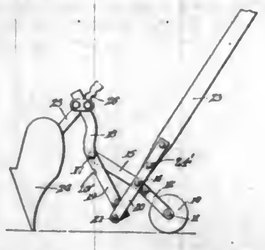


1. A combined draft and steering gear for horse drawn vehicles comprising a support adapted to be secured with the body of the vehicle forwardly thereof, a draft bar for connection with the shaft of the vehicle, pivotally connected with said support and adapted to be shifted by the animal on a change in the direction of travel thereof, a combined draft bar guide and steering arm actuating member extending forwardly and rearwardly

with respect to said bar and bodily shifted with the latter, means for connecting said member to said bar, a steering arm, means for connecting the forward end of

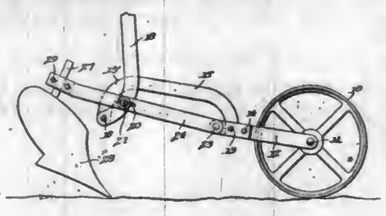
said arm to the forward end of said member, and means for connecting the rear end of said arm with the steering means for the front wheels of the vehicle.

1,662,672. METHOD AND APPARATUS FOR GRINDING. WILLIAM E. HOKE, Baltimore, Md. Filed Dec. 23, 1924. Serial No. 757,740. 12 Claims. (Cl. 51—278.)



1. The method of grinding articles having curved surfaces which consists in subjecting said articles to abrasion between relatively moving abrading surfaces at least one of which is a curved surface of revolution having the characteristic that through any point of the surface two rectilinear surface elements may be drawn.

1,662,673. GARDEN IMPLEMENT. FRANK HURKA, New York, N. Y. Filed June 10, 1922, Serial No. 567,868. Renewed Dec. 6, 1927. 4 Claims. (Cl. 97—58.)

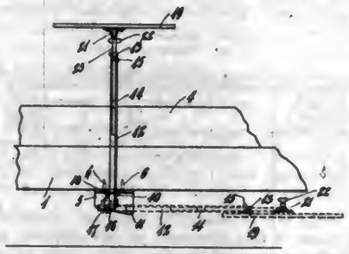


1. In a device of the class described, a pair of links pivotally connected, a rotatable ground engaging member mounted on one of said links, a beam secured to the other of said links, a ground penetrating tool mounted on said beam, a draft arm operatively connected to said links and engaging said beam, said arm upon movement actuating the beam to cause said tool upon forward movement of the device to penetrate the ground.

3. In a device of the class described, a pair of links pivotally connected, a rotatable ground engaging member carried by one of said links, a beam pivotally mounted upon the other of said links, the pivot being at an intermediate point along said beam and the beam extending forwardly and rearwardly from said pivot, a ground penetrating tool mounted upon the rearwardly extending portion of said beam, a draft arm pivotally secured to said links and having a portion extending downwardly and operatively connected to the forwardly extending portion of said beam whereby pivotal movement of said arm about its pivot effects a pivotal movement of said beam to cause said tool to penetrate the ground upon forward movement of the device, said arm serving as means for moving the device after the tool has penetrated the ground.

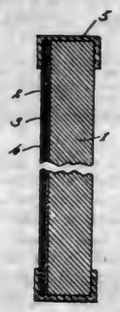
4. In a device of the class described, a pair of links pivotally connected, a rotatable ground engaging member carried by one of said links, a beam pivotally mounted upon the other of said links, the pivot being at an intermediate point along said beam and the beam extending forwardly and rearwardly from said pivot, a ground penetrating tool adjustably mounted upon the rearwardly extending portion of said beam, a draft arm pivotally secured to said links at their pivotal connection and having a portion extending downwardly and connected to the forwardly extending portion of said beam whereby pivotal movement of said arm about its pivot effects a pivotal movement of said beam to cause said tool to penetrate the ground upon forward movement of the device, said arm serving as means for moving the device after the tool has penetrated the ground.

1,662,674. GARDEN IMPLEMENT. FRANK HURKA, Ballston Spa, N. Y. Filed June 24, 1924. Serial No. 722,087. 18 Claims. (Cl. 97—59.)



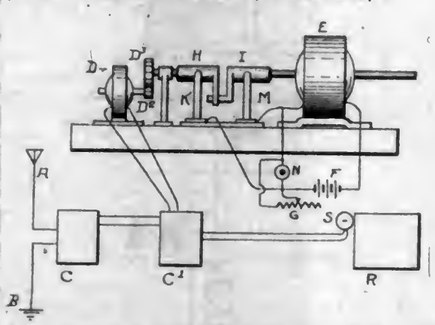
1. A hand garden implement tool of the class described comprising a rotatable ground engaging member, a shaft carrying said member, a tool beam, a ground penetrating tool mounted on said beam, a link pivotally connected at one end to said beam and at its other end connected to said shaft, a draft arm having a fulcrum on said link, between said ground tool and said shaft, said arm being operatively connected to said beam whereby pivotal movement of said arm about its axis in one direction will effect pivotal movement of said beam about its own axis to cause said tool upon forward movement of the implement to penetrate the ground.

1,662,675. BED TABLE ATTACHMENT. HARRY C. INNES, Cincinnati, Ohio. Filed Dec. 9, 1926. Serial No. 153,612. 3 Claims. (Cl. 45—82.)



1. In a bed table attachment, a table element, a standard to which said table element is connected, a bracket of L-shaped cross-section to be attached to the lower edge of a bed rail by one member of its cross-section which is horizontal, with the other member vertical and in from the outer edge of the rail, an eye bolt turning in said vertical member on an axis at right angles to the rail, said standard having an ear extended inward and pivoted to said eye bolt, and said standard extending upward past the outer side of the rail, means

on said bracket horizontal member between which said ear engages when said standard extends upward as aforesaid, and means on said bracket vertical member

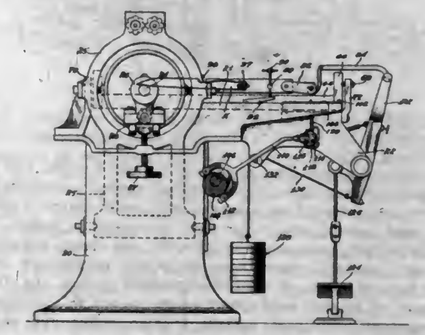


between which said standard engages when swung down into a horizontal plane by turning of said eye bolt, and inward on said plane by turning of said standard on said eye bolt.

1,662,676. OUTDOOR SIGN. WILL C. JAMES, Norwood, Ohio, assignor to The Kemper-Thomas Company, Norwood, Ohio, a Corporation of Ohio. Filed Oct. 29, 1923. Serial No. 671,406. 5 Claims. (Cl. 91—67.9.)

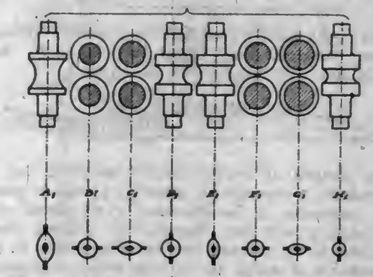
1. The process of manufacturing an outdoor sign, consisting first in filling the interstices of a fiber board sheet, by capping them with an insolubilized casein, secondly coating the board with an ink receptive medium, thirdly decorating the sign with a suitable announcement, fourthly varnishing the board.

1,662,677. ROTARY RELAY. CHARLES FRANCIS JENKINS, Washington, D. C. Filed July 21, 1924. Serial No. 727,271. 4 Claims. (Cl. 172—293.)



3. In combination, a power motor, a control motor, a rotatable contact member driven by each motor, said contact members co-acting to close a circuit to control the speed of the power motor, and means independent of said contact members for closing said circuit.

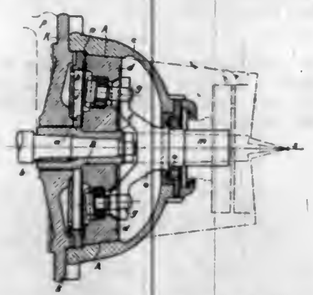
1,662,678. HOOK BAR FOR FOOTING MACHINES. NATHANIEL JUDSON, New York, N. Y. Filed Sept. 30, 1927. Serial No. 223,107. 4 Claims. (Cl. 66—149.)



1. In a hook bar for footing machines, a body, a clamping structure connected to said body, said clamping structure including a yielding stationary jaw and a yielding movable jaw, manually actuated means for moving the movable jaw away from the stationary jaw, and automatically acting means for moving the movable jaw toward the stationary jaw.

1,662,679. CUTLERY GRINDING AND POLISHING MACHINE. HEINRICH KESSEL, Haan, Germany. Filed Apr. 27, 1927, Serial No. 187,092, and in Germany May 2, 1924. 12 Claims. (Cl. 51—115.)

8. In a machine of the class described, the combination of a pivotally mounted cradle, said cradle being carried on a pair of adjustable centers so that the pivotal axis of the cradle may be shifted, work-holding means reciprocable upon said cradle, said means comprising a pair of plates adapted to hold the pieces of work on their outer faces, a rigid cross-piece and resilient means normally tending to move said plates toward each other; means to reciprocate said work-holding means, means to spread said plates apart during a portion of their stroke, adjustable means to rock said cradle, and adjustable means to swing said plates outwardly during a portion of their reciprocatory stroke.



1,662,680. METHOD OF ROLLING DOWN HOLLOW BODIES. GUSTAF ABRAHAM LINDGREN, Sandviken, Sweden. Filed May 1, 1924, Serial No. 710,468, and in Sweden May 9, 1923. 2 Claims. (Cl. 80—62.)

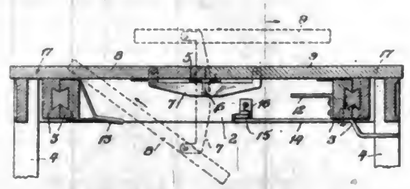
1. The method of rolling hollow billets without a hard mandrel for producing hollow bodies with circular channel consisting in first rolling down said billet to a

substantially oval shape, then rolling down said oval shaped billet with the longer axis of the oval as the pressure axis to a substantially round shape, then rolling down the billet, maintaining the same pressure axis as in the foregoing pass to produce an oval shape thereby augmenting the ovality of the hole, and then rolling down the billet with the longer axis as the pressure axis to produce a round shape.

1,662,681. FRICTION WHEEL GEAR. WALTHER LINDNER, Dusseldorf-Grafenberg, Germany, assignor to Hohenzollern Aktiegesellschaft fur Lokomotivbau, Dusseldorf-Grafenberg, Germany. Filed Mar. 10, 1927, Serial No. 174,368, and in Germany Mar. 6, 1926. 16 Claims. (Cl. 74—34.)

1. In a friction gear, a central conical friction roller, a conical rolling race, at least three conical intermediate rollers in frictional engagement with said central roller and said race, journals for said intermediate rollers, a rotatable body carrying said journals, and means adapted to exert an axial pressure on peripheral portions of the end face of each of said intermediate rollers for the purpose of holding said intermediate rollers in frictional engagement with said central friction roller and said rolling race.

1,662,682. MEDICINE DROPPER OR SYRINGE. JOHN URI LLOYD, Cincinnati, Ohio. Filed Mar. 29, 1926. Serial No. 98,068. 3 Claims. (Cl. 128—233.)

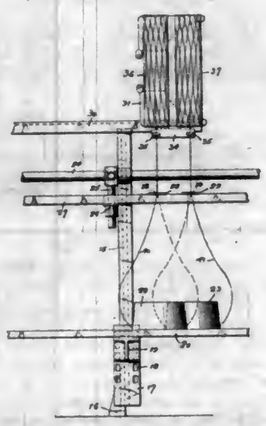


3. As a new article of manufacture, a dropper comprising a collapsible member and a tubular member attached to the collapsible member at its one end and provided adjacent its opposite end with a reduced bore, said last mentioned end being enlarged and extended to provide a cup with an enlarged mouth, said cup, when inverted being adapted to hold, by adhesion, a minim of ordinary liquid and to discharge the contents of the cup-like portion upon actuation of the collapsible member.

1,662,683. SEAGOING LOG RAFT. JOHNSTON PUGSLEY PORTER, Portland, Oreg. Filed July 30, 1926. Serial No. 125,998. 4 Claims. (Cl. 9—15.)

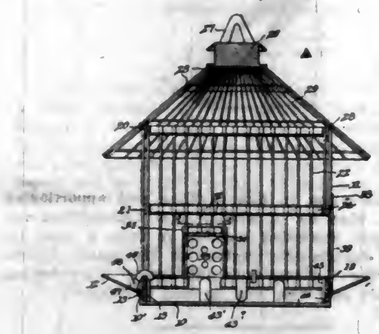
1. The method of constructing a sea-going log raft which consists in arranging a plurality of logs in parallel relation transverse to the direction of movement of the raft, attaching said logs together by passing one or more cables freely through one or more series of apertured members of which one of each series is secured to each log, suspending a cable or cables beneath a number of said logs independently thereof, and securing said upper and lower cables to leading and following logs.

1,662,684. COLLAPSIBLE TABLE. FRANCIS M. SANDERS, Brooklyn, N. Y. Filed Mar. 17, 1927. Serial No. 176,221. 3 Claims. (Cl. 45—112.)



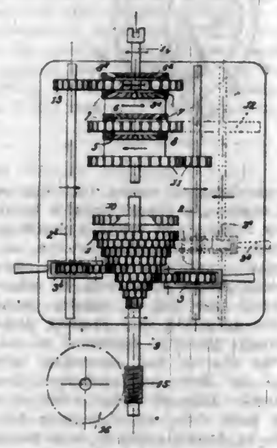
1. A table of the character described, comprising movable sections, a leaf composed of two sections, and members pivotally mounted between their ends on the table sections and pivotally connected at their ends to the edges of the respective leaf sections whereby the movement of these members causes the leaf sections to be positioned one above the other in a plane below the table top, or positioned in alinement in a plane flush with the table top.

1,662,685. METAL RAILROAD TIE. ERNST G. TRICHART, Duquesne, Pa., assignor of one-half to Henry Howden, Homestead, Pa. Filed June 16, 1927. Serial No. 199,289. 3 Claims. (Cl. 238—43.)



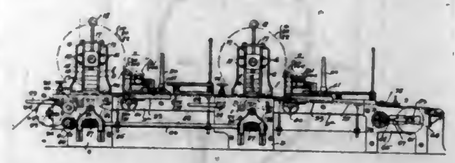
1. In combination with a metal railroad tie having loops at its ends and base flanges within the loops, of a block for the loop end of the tie fitting between the side members of the loop and having laterally projecting upper end portions overlying the upper edge of the body portion of the tie.

1,662,686. SKEINING APPARATUS. CHARLES S. THOMPSON, Ridley Park, Pa., assignor to The Viscose Company, Marcus Hook, Pa., a Corporation of Pennsylvania. Filed June 15, 1927. Serial No. 199,046. 3 Claims. (Cl. 242—53.)



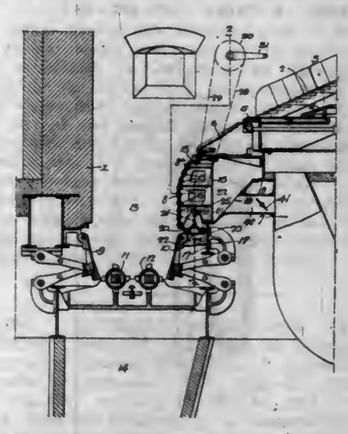
1. In a skeining machine, a reel, a traverse cooperating with said reel and having a plurality of guides for forming a plurality of skeins on the reel, a plurality of fixed guides for leading the thread to the traverse guides, means for supporting a plurality of thread masses below the stationary guides, said traverse guides in their median positions and their respectively cooperating fixed guides and thread masses having their centers substantially in parallel planes normal to the reel axis and median to their respective skeins.

1,662,687. CELLULOSE BIRD CAGE. ROSS L. TULLIS, New Haven, Conn. Continuation of application Serial No. 693,828, filed Feb. 19, 1924. This application filed Mar. 19, 1926. Serial No. 96,076. 7 Claims. (Cl. 119—17.)



1. A bird cage having a frame structure formed from cellulose ester stock with the parts thereof secured together by direct adhesion, and bars of a cellulose ester secured to said frame parts.

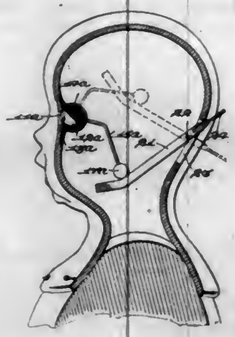
1,662,688. CHANGE-SPEED GEAR BOX OR UNIVERSAL DIVISOR. GEORGES VEBER, Epinal, France, assignor to Société des Etablissements Singrün, Epinal, France, a Corporation of France. Filed July 28, 1926, Serial No. 125,538, and in France July 29, 1925. 5 Claims. (Cl. 74—34.)



1. A change speed gear, comprising a frame, a drive member, a stepped wheel gear driven thereby, a number of countershafts journalled in said frame, a tumbler gear slidably mounted upon each of said countershafts and adapted to engage with any one of the toothed wheels of the stepped wheel gear, a planet gear comprising a number of planet gear units, one of the sun wheels of one of the planet gear units being fast with one of the sun wheels of the next planet gear unit, a driven member fast with one of the sun wheels of one of said planet gear units, a gear driven by one of the countershafts adapted to actuate that one of the sunwheels of the first planet gear unit, which is not fast with the sun wheel of the second planet gear unit, a gear driven by each of the other countershafts and adapted to actuate the planet-pinion carrier of each of the planet gear units.

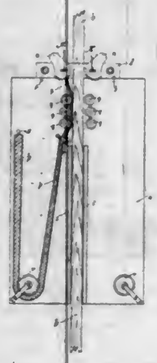
1,662,689. PRINTING MACHINE. WILLIAM H. WALDRON and LYNN B. CASE, New Brunswick, N. J., assignors to John Waldron Corporation, New Brunswick, N. J., a Corporation of New Jersey. Filed Oct. 18, 1926. Serial No. 142,331. 1 Claim. (Cl. 101—181.)

In a printing machine of the class described, a printing unit comprising side frames; a print roll rotatably mounted in said unit; a color carriage slidably mounted on said side frames and comprising primary slides, adapted to said side frames; a color pan secured to said primary slides; secondary slides slidably mounted on said primary slides; a color roll rotatably mounted in said secondary slides; a feed roll engaging said color roll; bearings slidably mounted on said secondary slides in which said feed roll is rotatably mounted; means for adjusting said sliding bearings on said secondary slides; mans for adjusting said secondary slides on said primary slides; and means for moving said secondary slides and the adjusting means therefor, relative to said primary slides.



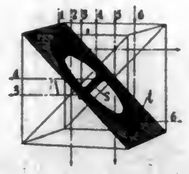
1,662,690. SIFTINGS DUMP FOR STOKERS. ANTHONY E. WEINGARTNER, Bethlehem, Pa., assignor to American Engineering Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 6, 1923. Serial No. 617,295. 2 Claims. (Cl. 110—165.)

1. The combination in a stoker having tuyères, a stationary curtain structure and an ash pit; of a transversely extending collecting chamber disposed below the



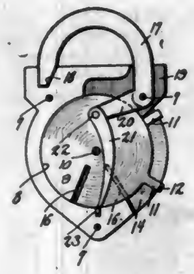
tuyères and to one side of said stationary curtain structure, having a series of outlets opening into the ash pit; a series of valves normally closing said outlets; an operating shaft extending through the chamber and projecting at one side of the stoker; flexible members connecting said shaft with the valves; and means for turning the shaft at will to unseat the valves and permit the discharge of material from the chamber into the ash pit.

1,662,691. DOLL HEAD. JAMES COLLORD WHITE, Sewickley, Pa., assignor of one-half to Winifred Scott White and one-half to Mary Thorn White, Sewickley, Pa. Filed Dec. 28, 1925. Serial No. 77,905. 2 Claims. (Cl. 46—40.)



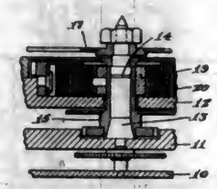
2. A doll head of hollow form having eye sockets, eyes independently movable in said sockets, and each provided with a weighted controlling arm within the head arranged to shift the eye by gravity in accordance with the position of the head, and manual means for separately shifting each of the eyes independent of the gravity controlling arms, said means being engageable with the said controlling arms at a point within the head and said head having openings at the rear thereof through which the said manual controlling means project exteriorly of the head, for the purpose described.

1,662,692. SAFETY DEVICE FOR MINE SKIPS, LIFTS, AND THE LIKE. JOHN ADSERO, Messina, Transvaal, South Africa. Filed Nov. 5, 1926. Serial No. 146,497. 3 Claims. (Cl. 187—88.)



1. A safety device for mine skips, lifts and the like including a skip body and guides therefor, bearing members on said body, a plurality of lengths of tapered cable passing between the guides and the bearing members, and means actuated in response to breakage or slackness of hauling gear for the skip body to cause the tapered cable to become firmly wedged and to bring the skip to a stop.

1,662,693. OPTICAL SYSTEM. MICHAEL ASTAFIEV, Chelsea, London, England. Filed Jan. 21, 1926, Serial No. 82,805, and in Great Britain Jan. 26, 1925. 7 Claims. (Cl. 88—1.)



7. In combination in light-dividing and apportioning apparatus a plurality of similar light transmitting triangular prisms assembled together to form a cube, reflecting and transmitting regions on the planes formed by the interfaces of said cube and opaque non-reflecting regions within said cube and on said interfaces.

1,662,694. LOCK. WILLIAM E. BARTMESS, Kenwood Okla. Filed Oct. 7, 1926. Serial No. 140,170. 5 Claims. (Cl. 70—112.)
